NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same: and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JAN. 5TH, 1895.

SUMMARY OF NEWS.

THE Atami *jinrikisha*-tramway is now open from Atami to Yoshihama.

THE bright, clear weather which ushered in the Christmas Holidays still continues.

YOKOHAMA was profusely decorated during he New Year's holidays.

COUNT OKUMA'S mother, a venerable lady of over four-score years and ten, died during the week.

A PROJECT is on foot among Englishmen of Yokohama to give a St. George's Ball on the 23rd April.

PAST GRAND MASTER John C. Smith, of Illinois, lectured on "Oddfellowship" at the Masonic Hall on Friday.

THE police fire brigades of Yokohama, after going through a series of drills, paraded the Settlement on Friday.

THERE have been several big fires in Kobe during the last ten days, and the damage done is estimated at thousands of dollars.

OWING to the Emperor's absence in Hiroshima, the usual New Year's ceremonies did not take place in the Imperial Palace, Tokyo.

THERE fires occurred in Yokohama during the week, the most serious being that in the compound of No. 94, Settlement, a *momban's* house being destroyed. The others were in Japanese town.

FUJITA'S Hotel, Miyanoshita, was largely patronised by the Staffs of various Legations in Tokyo during the Christmas holidays.

H.I.H. THE CROWN Prince paid his New Year's visit to Their Imperial Majesties the Empress and Empress-Dowager on the 1st inst.

AN eleven of Visitors met the Y.C. and A.C. at football under Association rules on Wednesday, and were beaten by eight goals to one.

THREE houses were destroyed by fire at Asakawa-mura, Minami-tama District, Tokyo, on the last day of the year. One man was burnt to death.

NINE houses in Otowacho, Koishikawa, Tokyo, were destroyed by fire on New Year's day. An old women, aged 89, was burnt to death in this conflagration.

IT is expected that the revision of the Treaties between Japan and the United States, France, Germany, and Russia will be completed during this month.

THE Bank of Japan issued convertible notes to the amount of *yen* 2,800,000 on the 29th, and *yen* 1,200,000 on the 30th ult., making a total of *yen* 4,000,000.

THE latest dispatch from Port Arthur states that a Headman has been appointed at that Port, and an independent local administration is now carried on there.

A SALOON-KEEPER named Frame, shot an American sealer named Watts with a revolver during the course of a quarrel on Monday afternoon. Frame is still at large.

THEIR Imperial Highnesses Prince Tsune and Kane have contributed *yen* 100 to the Ladies' Nurse Society formed by some members of the Red Cross Society.

THE Emperor of China has summoned a Supreme Military Council, with Prince Kung at its head, to take into immediate consideration the desperate straits of the Empire.

THE number of dysentery cases reported in the Empire up to the end of last year was 154,000, of which 36,000 were fatal. This is a decrease of 13,000 cases and 5,000 deaths as compared were the previous year.

SOME Athletic sports organised by the ship's company of H.M.S. *Plover* took place on Thursday on the Cricket-ground. Walking against eight of the sailors, Hancock, the professional, was beaten in eight laps by 25 seconds.

MR. HASHIMOTO KIYOSHI, of Nagasaki, who obtained permission to raise the wreck of the Chinese man of-war *Kwang-yi*, which sank during the fight off Phung-do, has salved three guns from the ship. The guns are now in Saseho.

FROM the commencement of the War up till the 6th of December the casualties among the Japanese soldiers, totalled 780. Disease was more fatal than were the bullets and swords of the enemy, 430 dying from the former cause and only 350 from the latter.

COUNTS YAMAGATA and Saigo, Viscounts Kabayama and Shinagawa, Lieutenant-General Kawakami, and several other civil and military officers visited Head-quarters at Hiroshima on the 1st inst. to pay congratulations to His Majesty the Emperor. Counts Ito and Kuroda, Viscounts Watanabe, and Marquis Saionji, Ministers of State, and Higashikuze, and other members of the Privy Council, now in Tokyo, sent their messages of congratulation by telegraph.

THE number of successful applicants in 1894 at the examinations for physicians, dentists, and chemists, was as follows:—249 physicians, 12 dentists, and 26 chemists in Tokyo, 56 physicians and 8 dentists in Kyoto; 23 physicians at Nagasaki, and 23 chemists in Osaka.

H.I.M. THE EMPEROR has been pleased to bestow a decoration of the Second Class of the Order of the Rising Sun on Major-General Meckel, formerly German Military Instructor to the Japanese Army, in recognition of his services. The Emperor of Germany has received the grand insignia of the Order of the Chrysanthemum.

REUTER telegraphs:—An agreement has been entered into between the Governments of Great Britain and Japan, extending for six months the period fixed by the recent Anglo-Japanese Treaty for the conclusion of a supplementary convention providing for the conversion into specific duties of the *ad valorem* rates named in the Tariff annexed to the Treaty. Lord Randolph Churchill has rallied somewhat from his recent attack of illness, but the doctors give no hope of restoration to health. The British Revenue Returns for the last three months of the year just closed show a large increase, which is encouraging evidence of the revival of trade in reality. A German Party is preparing for an anti-British crusade concerning the state of affairs in Samoa. The Press in Germany demands German tutelage. The German Embassy at Paris, in consequences of the repeated attacks made by the Press, announces officially that there have been no dealings whatever with Dreyfus. A Hova outpost has been fired on by a French cruiser in Antongill Bay. The Hovas lost three men killed and withdrew. A French man-of-war has captured a Hova fort near Tamatave. The Wazili capital, on the north-west frontier of India, has been occupied with but slight opposition, by the expedition despatched against the tribe. General Mercier, French Minister of War, has introduced a bill punishing by death any treason or espionage on the part of officers or soldiers.

As a general rule there is little to be said about the Import trade at this period, restricted transactions being the regular outcome of the holidays. Business has not been entirely neglected, however, and indications are not wanting that an early resumption will take place, and activity be resumed in the course of a few weeks. The outlook for Yarns and Shirtings is fair, as well as for a variety of Cotton goods; and in Woollens, while Mousselines and Italians are wanted, most other lines are neglected, and Blankets have at length ceased—almost—to attract any attention. Metals are not in great request, and the demand for certain kinds has fallen off. The Kerosene market is strong and prices are firm, though without quotable change. Sugar is quiet, and holders are waiting for customers. The Silk business is in a healthy condition. The stock of exportable parcels has been much further reduced than was expected a month ago, and Japanese manufacturers have taken a lot of Silk off this market suited to their purposes. A steady, if not large, business has been done in Waste. There is nothing to report in the Tea trade beyond the fact that the stock of leaf remaining is only about a thousand piculs, and that is of [illegible] quality. Exchange has

URBANA-CHAMPAIGN

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

During the past week the vernacular Press, true to the time-honoured custom of Japan, has written much about the departure of the old year and the advent of the new. It will be sufficient for the purposes of these columns to reproduce the *Mainichi Shimbun's* remarks on the New Year, since what it and the other papers say are nearly alike both in tone and substance:—"The New Year has come to renew everything. We cannot but feel glad. The flow of pleasurable sensation has limits, however. We can not drink the New Year's wine freely, for we find many a lesson of temperance in the facts that His Majesty is at Hiroshima superintending affairs of war in person, that there are no New Year's ceremonies and entertainments in the Imperial Household, and that the country's loyal and brave generals and soldiers are enduring great hardships and privations in Manchuria. Yet another thought strikes us, namely, that at no time have we ever had so much cause to rejoice, and so much reason to congratulate ourselves. Hitherto Europe was blind to Japan's true greatness and apt to slight her. Visitors from the civilized West saw the beauty of the rivers and mountains of Japan and did not grudge her the pretty appellation of the 'Paradise of the East.' They praised the works of her painters and sculptors, and called her the leader of Art in Asia. Briefly, Europe loved but did not respect Japan. The Europeans befriended the Japanese but did not fear them. The history of the past thirty years of foreign intercourse has made Japan known to the West only by her Fujiyama and her Lake Biwa, by her temples at Nikko and her brocades of Nishijin. But the war has wrought a sudden and complete change in Europe's attitude toward Japan. This New Year's Day of the 28th year of *Meiji* is the beginning not only of a new year, but also of a new era of Japanese greatness. An old saying has it that the embryo of the year is its opening day. The aphorism must be altered in the present case, the first day of 1895 contains a century in embryo."

* * *

The *Kokkai* urges the Government to take measures to invest itself with competence to hold the Civil Service Regulations in abeyance for the time being. These Regulations may be necessary in the case of employing men at home. But in procuring able officials for the occupied districts in China, work for the successful performance of which innate talent is much more valuable than any amount of book knowledge or any degree of documentary dexterity, the Government ought to set itself free from the trammals of the rules, if it at all desires to prove faithful to the State it serves. Not a few other vernacular journals, provincial as well as metropolitan, have expressed similar views in commenting on the New Year's Day. Indeed, some among them have gone the length of advocating the total abolition of the Regulations in question.

* * *

The *Yomiuri* writes much about the characteristics of France and Frenchmen, and comparing the former with Japan and the latter with the Japanese, declares that the two nations are born friends. Then, referring at some length to what French public opinion says of the present war, the Progressionist organ offers a tribute of gratitude to France in terms that remind one of Bacon's celebrated essays. In conclusion, the *Yomiuri* writes:—"We do not think, however, that the French are the only nation whose character and disposition resemble those of the Japanese, nor do we think that France is the only impartial judge of the Japanese-Chinese War. Among the many nations in the world there may be others that cherish the sentiments and opinions held sacred by the Japanese. But their voice is not nearly so loud as that of France in expressing their sympathy.

* * *

The *Nippon* has an elaborate essay in which it declares that a State, in order to be truly great, must be both rich and strong. Wealth coupled with strength deserves the fate of ancient Carthage, and strength shackled by the fetters of poverty can raise a country no higher than the status of Italy at present. The Independent organ emphatically advocates an increase of the navy and the commercial marine, as well as the encouragement of navigation to distant countries. These steps it considers the most necessary and hopeful that Japan can take, if it seeks to attain the position of a really great State. The extent of the measures is explicitly stated and the expenditure required to cover it is estimated at some 8,000,000 *yen* annually.

* * *

Speaking of the rumour that the Pekin Government has appointed an envoy to the Court of Japan to sue for peace, the *Jiji* takes it to be trustworthy, but attaches very little importance to the fact. It thinks that, however skilfully the envoy fulfils his mission, he is sure to encounter opposition from the ignorant Princes of the Blood and other high personages on his return to the Celestial Court, and to find his necessarily painful services utterly abortive. Peace will never be a *fait accompli*, until China sends an Imperial Prince powerful enough to overcome the foolish opposition of conceited Mandarins, or until she receives with due honour a Plenipotentiary from the Court of Japan.

* * *

It is to be frankly acknowledged, writes the courageous *Kokumin*, that International Law is Europe's gift to the world. But no nation has ever so fully recognised the sacredness of its principles and so faithfully carried them into execution as the Japanese. It is now patent to the whole world that the Emperor has distinctly ordered the nation to obey the tenets of International Law, and that the Japanese Army and Navy have succeeded in keeping within the bounds of that Law. Not a few provisions that existed before the present war, in the minds of European jurisconsults as mere ideal rules for regulating the intercourse of Christian States, have now been carried into practice by the Japanese. Europe, it is true, has given birth to International Law, but Japan has contributed vigour and binding force to its tenets. "We therefore suggest that a meeting of Representatives of all the Powers be held in Japan, after this war, for deliberating and deciding upon advisable additions and amendments in connection with this important Law." The same journal gives the following advice to the literary men of Japan:—"Now that Japan has emerged upon the stage of the world, the talent and learning of not a few of her scholars being worthy of a far greater share of the world's attention than those of Henry Norman or Edwin Arnold, they should frequently send their writings to European and American magazines and newspapers that they may thereby place Japan in her true light before the surprised eyes of the world."

* * *

The *Jiji*, which, as our readers know, is more profoundly solicitous than any other Metropolitan journal about the future of Korea, writes as follows of the progress of administrative reforms in the Peninsular Kingdom:—"Of late we have heard much to make us believe that Korean reforms have shown signs of progress, but we think nevertheless that their consummation will by no means be easy. The measures suggested by Count Inouye are as good as the occasion requires. No better seem possible whoever be the statesman framing them. They are excellent prescriptions for curing the sick politics of Korea. It is, however, extremely hard to conceive that the Cabinet, a group of quack doctors, will prove themselves competent to practically apply the recipes given by such a physician as Count Inouye. Although, by the recent changes in the *personnel* in the Ministry, Boku Eiko and Jo Kwohan have obtained portfolios, it is at best doubted whether they are placed in such a position as will enable them to carry out their designs and wishes to the full. Equal uncertainty exists with regard to the Tai Wŏn-kun's retirement and the Queen's abstention from interference in Administrative and Court affairs. The Korean Government and Court are like a den of evil demons, for every member of each is perpetually engaged at or small [illegible] the intriguer's rank, power, and influence. Even the Tonghak rebellion is said to have its source in the sinister machinations of one or more of these demons. Add to this the far more advanced stage of corruption prevailing in the Provincial governments, whose officials are all tyrants, regarding the people as no higher beings than horses, cows, or pigs. To have recourse to a metaphor, the case of Korea is that of a highly refractory son, whom a stern father may happen to correct, but a fond mother always spoils. Under these and other equally unfavourable circumstances, Korean reforms seem impossible of achievement unless Japanese statesmen are placed in all the important posts of both the Central and Provincial Governments. Such an extent of interference may be condemned as more than protection. But stern facts speak in its favour. The Korean Government, if left in the hands of Koreans, must fail from financial embarrassment, if not from any other cause. The Japanese Authorities must before everything grasp the reins of finance, and, at the same time, Japan must furnish some millions of money to her all but bankrupt *protegé*. Young and educated Koreans, placed in inferior Administrative posts, under the guidance of Japanese superiors, may be gradually initiated into civilized methods and usages.

EDITORIAL NOTES.

DISTRESS IN PEKIN.

ACCORDING to the Tientsin correspondent of a Tokyo contemporary, very great distress prevails at present in the Chinese capital. Not only has the price of ordinary necessities reached a fabulous height, but actual famine does not appear far distant for the poorer classes. The reason of this is that the peasantry of Chihli have either been largely drafted into the army or have else deserted their homes and fields out of sheer panic, with the result that the markets are very scantily supplied with food, vegetables in particular being difficult to procure. Moreover, thousands of these panic-stricken people have made their way to Pekin, where they live a hand-to-mouth existence, or else take to criminal courses in order to earn a livelihood. The Chinese residents of the capital are further said to be suffering greatly from the unlicensed greed and downright cruelty of the recently levied troops now stationed in and about Pekin. Instances of theft in broad daylight, of kidnapping of young women, of rape and even of murder, are by no means rare, the lawlessness of the "city's defenders" being absolutely without bounds, while nobody seems to have any control over their conduct. The calling for seamen to protect the various Foreign Legations is thus a most necessary step; even at present, remarks the correspondent, it is dangerous for a foreigner to walk abroad: and should the success of the Japanese arms continue and the combined armies approach Pekin, it is more than probable that the great city will fall an easy prey because of the disorder within the walls. Rapid preparation is being made, it is finally alleged, for the immediate flight of the Emperor and other members of the Imperial Family.

THE STORY OF THE GENMU GATE.

ACCORDING to the latest information given us by the vernacular papers, the story of the Genmu Gate heroism at the battle of Phyŏng-yang requires to be considerably modified. The popular version is that Harada Jukichi was the hero who scaled the wall and threw the gate open, but we are now told that there were twelve soldiers in all who undertook the dangerous task, all of whom are no less worthy of recognition than Harada Jukichi. Lieut. Mimura of No. 6 Company arrived first at the gate, writes Goto Tatsukichi, one of the 12, from Takushan to his elder brother in Kanaya, Shizuoka. Only twelve soldiers had followed their leader, so rapid was his march. When the Lieutenant found the gate so strongly bolted on the inside that it was beyond the power of twelve men to force it, he commanded his

Digitized by Google Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

himself. Jumping down on the other side the twelve intrepid soldiers led by the gallant Lieutenant at once rushed at the defenders and killed three of them. The rest, however, fired at them from a distance and it was desperate work for the Japanese to keep their ground. Twice the Lieutenant ordered that the rest of the Company should be summoned from without. While Surgeon Kakishima was away carrying out the command, one of the soldiers was wounded and another killed. The Lieutenant, however, still held on, and at the first opportunity ordered Harada Jukichi to unbolt the gate and fling it wide open. Just as this was accomplished the other men of the Company arrived to the rescue of their comrades, and together with other soldiers who had followed, they rushed at the defenders and the position fell into their hands. One other of the twelve men was killed, however, before the rescue-party came up to the place.

A SWISS BOY AND MARSHAL YAMAGATA.

MANY are the letters, write the Tokyo papers, that reach Marshal Yamagata from unknown persons in the west, the purport of them being invariably complimentary to the valour and generalship of the Marshal. One of these epistles, lately received, was quite amusing, inasmuch as the sender is a little Swiss boy. The juvenile correspondent wrote to this effect :—"To his most venerable Excellency Marshal Yamagata. General, I am a common school boy but eight years old. My name is Werter Schultz (?) and I am living in Berne. Switzerland I find on the map to be not so big as Japan. I am very glad that you are to the Chinese what my Swiss forefathers were to their foes, and I am also glad that the brave Marshal has always won victories wherever he fought. I hope that you may subjugate the big Chinese Empire and break down the walls that surround it, for I think it is on account of the walls that I have not yet got a Chinese postage stamp for my album. I think you are very kind. Would you then be so good as to spare me a few of the Chinese stamps that you must find plentifully among the spoils you take in China." The Marshal was mightily amused when he looked at this innocent letter, and at once gave orders that some stamps should be sent to the little boy.

A CHANCE SHOT.

WHILE storming the first line of forts at Port Arthur, a soldier belonging to the 24th Regiment raised his rifle to fire at an unusually conspicuous Chinaman. Just as he was about to fire, a bullet from the enemy's side came whizzing on and, marvellous to relate, entered the barrel of his own gun as smoothly and neatly as if the muzzles had been placed mouth to mouth. Of course there was an explosion, and the soldier's piece was shattered to the stock, but without his receiving any injuries whatever. A fractional variation to the right or left would have caused the hostile bullet to enter his head or face, so that his escape was nothing short of miraculous. He preserved the stock of his now useless weapon and afterwards exhibited it to his colonel, who permitted him to keep it as a memento of his narrow escape. It is probably the first instance of the kind on record.

REGULAR SERVICE TO TALIEN.

THOUGH Talien is one of the places occupied by the Japanese, the opening of a steam service thither would, says the *Jiji*, be a very risky affair while the war is going on. It is of course out of the question that any Company aiming simply at profit should undertake the service. We cannot therefore admire too much the chivalrous public sentiment of the Yusen Kaisha when we learn that it has resolved to accept the risk. Merchants and goods-owners, on hearing this news, expressed great satisfaction, and many of them at once began to procure goods to be shipped to Talien. But while the *Higo Maru* was loading at Jinsen, a telegram arrived from Head-quarters at Hiroshima to the effect that the steamer was not to proceed to Talien. Great was the consternation among shippers and merchants when they were told of this injunction and both they and the Company are, it is said, endeavouring to obtain consent for their scheme. The opening of such a service is of the greatest necessity, especially on account of the coolies who have to be supplied with articles through their inspectors. These latter, however, not being rich men, it is impossible for them to take with them a large enough stock of things necessary for the coolies. They therefore give money instead which, however, does not serve the same purpose owing to the want of commodities. The coolies being thus in a distressed condition, the speedy opening of a regular service to Talien is of the greatest importance.

CUSTOMS RETURNS.

THE following is a summary of the Customs Returns for November showing the foreign trade of the empire for the month :—

	1893. SILVER YEN.	1894. SILVER YEN.
Exports	8,987,347 370	11,025,199 760
Imports	8,252,398 550	10.026,488.960

ODDFELLOWSHIP.

ON Friday evening Bro. General J. C. Smith, Past Grand Master of the Grand Lodge of Illinois, I.O.O.F., and the present Scribe of the Grand Encampment of the same State, gave a lecture in the Masonic Temple, Yokohama, under the auspices of the Far East Lodge, No. There was a very sparse attendance of the general public. Bro. D.D.G.S. E. V. Thorn introduced the distinguished visitor to the N.G. Bro. L. Ph. von Heinert, who then vacated he chair, and Bro. Smith addressed the meeting upon the benefits accuring from membership of the Order of Oddfellows. He had joined the Order in his early manhood and had risen through its various grades until the Brethren had conferred upon the highest honours that could be given in the Order, at least in his State. Having referred to the great antiquity of Freemasonry, and Bro. Smith said that Oddfellowship, unlike Freemasonry, was entirely an outcome of the present century, notwithstanding all that Oddfellow orators might argue to the contrary. It was a belief generally entertained that Oddfellowship originated in England, but he had found, after diligent research, that Oddfellowship existed in New York several years before it was known in England. It was on the records that a few actors had organized a Shakespeare Lodge of Oddfellows in New York in the year 1806. Now the Manchester Unity of Oddfellows in England, the parent of the present Oddfellows' Lodges in the U.S., did not take its rise until 1812. The speaker then explained how that an English Oddfellow, named Thomas Wyldie, a coachbuilder's blacksmith, with three other Oddfellows, one a member of an unrecorded body in America, organised the Washington Lodge, No. 1, in Baltimore, obtaining a charter from the Duke of York Lodge, Preston, England; and this afterwards became the Sovereign Grand Lodge of the United States. From this small beginning the Order has risen till now 1,000,000 active members were on its rolls; its income was $7,000,000 annually, and its registered disbursements $4,000,000 annually, which was only a part of its charity. As an instance of the benevolence of Oddfellows, the speaker alluded to the fact that on the occasion of the great fire at Chicago, the Order contributed towards the relief of the distressed there $135,000. The grand principles of independence, thrift, and charity were then expiated upon, in the course of which many instances were given of the benefits which members of the Order had received on the battlefield, travelling by rail, steamboat, by land or sea, benefits which were only obtained through their possession of the signs and tokens of the Order. Bro. Thorn having thanked the speaker, the meeting dispersed.

GERMANY AND THE NEW CZAR.

THE probable course which will be followed by Czar Nicholas II. has very naturally become a prolific field for speculation. The European press is burdened with deductive opinions on the subject. More especially is the probable attitude of the Czar towards Great Britain, France, and Germany a subject of extensive speculation. As to the Czar's relations towards Germany, we find an interesting article in the *Hamburger Nachrichten*, from which we reproduce the following :—Under the last two Czars, says the *Nachrichten*, good fortune had forsaken the Imperial family of Russia. Alexander II. breathed his last under a Nihilist bomb, and the fate of his successor, who has now died, was also cruel. True, Alexander III. was the first of the House of Romanoff in whose reign there was no war, and the world knows what a debt she owes for the maintainence of peace to the deceased monarch, who was personally averse to all shedding of blood. But the internal affairs of his empire gave him little satisfaction, and his end was highly tragic. Now his son, Nicholas Alexandrovich, has ascended the Russian throne as Nicholas II. What will be the fate of this youthful ruler of 26 years? How will Russia's future shape itself under his reign? What political course will the new Czar pursue, —how will it affect European conditions, war, and peace? These are questions with which the whole world is at present occupied, and rightly so, for the shifting of the situation in Europe, during the past few years, has naturally transferred the political centre of gravity to St. Petersburg. We may have to count with this situation for some time to come, and for this reason we have all the more cause to acquaint our-

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

selves with the person who has now become the ruler of Russia. As yet the new Czar appears to Germany in no unfavourable light. From the little that has so far become known of *him* we may conclude that he is not unfriendly towards the German Empire. Upon his union with a German Princess, and the family relation between himself and the Royal House at Berlin, we lay not much stress, as such connections, in our time, exert little, if any, political influence. But what has become known of his attitude toward Germany when visiting this country justifies the assumption that he *is not* without sympathy for the German people and the German army, and that if he is more inclined towards West-European ideas than was his father, such ideas are not to be regarded as specifically French. Moreover, the young Czar belongs to a generation conscious of the fact that Germany has become a great Power, which must be regarded as an unchangeable *fait accompli*, and that the former disconnection of Germany, and her consequent impotence, must be regarded as things of the past. It is also significant that the French papers have frequently spoken of the danger to their projects of *révanche* because the heir to the Russian throne evinced special preference for the German language. This may not signify much; though it justifies the supposition that the Czar cannot be regarded as a special friend of France, and supporter of French chauvinism, against Germany. Outside of this, we believe that for the time being Nicholas II. will follow the precedents of his father. This will be in keeping with the manifesto he has issued, in which he says that he is conscious of the legacy of Alexander III., and that his sole aim will be to peaceably develop the power and glory of Russia, and to be constantly mindful of the happiness of his subjects. Such proclamations, of course, are never binding upon subsequent determinations; these always depend on the course of political events. But for the present there is no ground to doubt the good intentions of the monarch, and that he desires peacefully to carry out this programme. Very much will depend, however, on the power of resistance that the new ruler may possess against the divergent and combating influences that will, if possible, be brought to bear upon him from all sides. We can only hope that like his father, he will find sound precedents for his determinations for the well-known interests of Russia. Without doubt the interests of Russia point to the maintainence of peace in Europe and the friendship of Germany, for without these two the aims of Russia in Asia and in the Balkans will scarcely be realized. We hope German policy will aid the new Czar in maintaining friendly relations with this country. Emperor William II., when toasting the new Czar at Stettin, has already referred to the traditional relation and brotherhood in arms (*Waffenbruederschaft*) between Germany and Russia. Our policy should be, that in all matters in which we are not directly concerned, we give Russia a free hand to act, and that in all such matters we never give the appearance of favouring her opponents. Then our position, to guard our own interests, will be all the stronger without cause to fear strained relations. And then we need make no concessions in order to be treated as valuable friends at St. Petersburg. At any rate, we Germans have no cause to distrust the sincere motives of the young Czar. We wish him a successful reign, free from a fate unkind to himself, his house, and Russia. May Russia reach her goal both at home and abroad. A strong and mighty Russia with which we are on friendly terms is the best pillar we could wish for ourselves in Europe.

A PORT ARTHUR EPISODE.

AFTER Chinchow had fallen and the Japanese Army was ready to march on Port Arthur, the Japanese officers decided, by way of diversion, to send a letter to the Chinese Generals in command at the latter place, advising them to surrender. An officer who had been for some years a military *attaché* in the Japanese Legation in Pekin, countersigned the letter, of which two copies were sent, one by a native, the other by a prisoner of war. The letter was to the effect that as the Japanese Army, 50,000 strong, was about to attack Port Arthur, believed to be but poorly defended by raw levies, and that as it was decreed by Heaven that China should be vanquished in this war, as amply proved by the battles of A-san, Phyông-yang, the Yellow Sea and so forth; the defenders of Port Arthur had better give up any attempt at resistance. They would then be able to enjoy the hospitable treatment extended by Japan to her prisoners of war, which would be better than undertaking the hopeless task of defence and causing the unnecessary slaughter of Chinese soldiers. It was feared that the letters would not reach the Chinese Generals, but much to the amusement of the Japanese officers both of the copies sent were found among the documents seized in the Chinese camp in Port Arthur. They also discovered an answer, which must have been drawn up by the Chinese Generals, though it had apparently never been despatched. It was couched in bombastic and grandiloquent terms, and attributed the defeats sustained by the Chinese since the commencement of the war, not to the valour of their antagonists, but to defective preparations and an unlucky choice of generals and *so forth* on China's part. It warned the Japanese officers not to be over-confident and not to underrate the strength of the foe. An account of their brief military career is then given and a statement made that the 30,000 men under them were ready to defend their positions to the death, all being of one heart. They would fight with the water in their rear, a famous disposition from ancient times, making the soldiers desperate and victorious. Success was always said to attend the righteous cause, which of course is China's, Korea having been a dependency of the Middle Kingdom for two centuries. The letter concluded by asking for information as to the date on which the Japanese intended to fight, as they, the Commanders of the garrison, would then march out from their positions at the head of their troops and engage in a pitched battle.

THIS YEAR'S PELAGIC SEALING.

THE official statement regarding the pelagic sealing of 1894, compiled from log-books sworn to, has been forwarded to Ottawa, London and Washington. Data is given as to the latitude and longitude in which seals were secured, and a chart accompanies the many tables of statistics on which is traced the blood-red trail of the hunters. This being the first season since the international complications arose, in which sealers had access to Behring Sea, they spent from the 1st of August to the middle of September, strictly observing the law prohibiting the use of firearms under the watchful supervision of United States' gunboats, and confining themselves to the use of spears. Only about half of the fleet were able to secure spearsmen, and these did remarkably well. Despite this and other interferences, the total for the year is the largest on record, the catch of the fifty-nine vessels being 294,474 this year's skins, against 70,332 for the fleet of fifty-five in 1893, and 45,383 for the sixty-five schooners in 1892. There were engaged this year 818 whites and 518 Indians, last year's crews including 847 whites and 432 natives. Divided in sections, the catch of the Canadian fleet this season as compared with last is as follows:—British Columbia catch for 1894 was 11,703, for 1893, 20,113; Japan coast catch, 248,993; 29,206; Copper Islands, 7,487; 12,013; Behring Sea catch, 26,341; blank; totals, 294,474; 70,332. It will thus be seen that the Behring Sea catch made all the difference. Despite the magnitude of the catching, vessel owners are still complaining. They say that with three breaks in the season they are forced to hold their crews together, and taking the whole fleet into consideration, its operation has shown a margin of loss to owners, four or five of whom have recently sold their vessels to thrifty Indians. One of the most important features of the whole report is the statement showing how many of the seals taken in Behring Sea were bulls and how many cows. The figures the Collector has obtained on oath go to show that the proportion of bulls is far higher than had been claimed by some who fear the extermination of the seal herds, and the conclusion arrived at is quite different from that pointed to by figures sent from San Francisco to Washington a few weeks ago on the catch delivered at that port.

SUGGESTIONS OF THE "KOKUMIN-NO-TOMO."

THE *Kokumin-no-Tomo* has two suggestions to make in connection with the war. One is that Their Imperial Majesties the Emperor and Empress should make a tour through Europe and America, and the other, that the scope of the 4th Domestic Exhibition to be held in Kyoto, be enlarged and its opening postponed till the conclusion of the war. The tour of the Imperial Pair through the West needs no special explanation, observes the periodical; it is simply to show Japan's greatness and to make her one of the Powers of the world. While Western nations are still full of admiration of Japan, her Emperor and Empress should travel abroad with all suitable pomp, and thus elevate the status of this country to a great height. The time settled for the opening of the great Kyoto Exhibition will most likely coincide with the termination of the war, and it is therefore extremely desirable that the period should be deferred a little so that Western people, already dazzled by the glorious achievements of the Empire, may have time to come over and see the Exhibition. Its opening should be a triumphal commemoration.

THE WAR.

ON the subject of the war with China, the *Miyako Shimbun* has a paragraph that is interesting. "Japan must strike," remarks our contemporary, "*is* a saying always in the mouths of the people, and there are those who contend that Japan could have gone to war with China long ago, as this country is not one to tamely brook such international policy as it has ever been China's delight to pursue. But the announcement of hostilities was, in the first instance, not by any means of Japan's seeking. That she would take a step the necessity for which was literally compelled had long been apparent. Every year nearly one hundred memorials have been sent in to the Chinese Throne urging at once the necessity of declaring Korea a *bond fide* dependency of China, and striking a decisive blow at Japan, in order to force this country to relinquish the Ryukyu Group and cripple its trade. China has been for over two decades longing to declare war with Japan. In the Formosan War it was with the greatest difficulty that China's hostile interference was prevented by the foreign Powers; and in the present instance one has only to cast a glance as the diplomatic correspondence immediately preceding the war to see that China was wholly opposed to any half-way measures and eager to throw down the gauntlet. The whole Tsung-li Yamên has for many years been in favour of decisive action against Japan, believing that this Empire could speedily be wiped out or set aside as impotent. We have only done as the Chinese hoped we should, declared war with an opponent more than a dozen times our size—but with a (from a Chinese standpoint) wholly unexpected result.'

A NEAT SCHEME.

THE *Yamato Shimbun* has to tell of a certain Tokyo man who, because of his great need of ready money wherewith to worthily usher in the New Year and observe the appropriate ceremonies, struck upon the rather neat idea of stealing buckets from as many kitchens as he might be able to enter unawares and then selling his misappropriations for sums so small that every one would be glad to buy. Having evolved this plan from his inner consciousness, and by dint of painstaking stealth and peculative *legerde-main*, he managed to get together over three hundred and sixty buckets by the 25th ultimo. The best of these he piled upon a cart and set out in the capacity of an itinerant cooper, ply-

Digitized by Google UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

ing his trade with honest zeal. He had managed to get rid of about half when Nemesis, in the shape of a police-detective, spotted him, and all his plans were shattered in a moment. A large number of buckets are now awaiting identification at the Asakusa District Station, while the enterprising cooper is chewing the cud of bitter regret in an adjoining cell.

WITH NAKED HANDS.

A few days ago we noticed an instance of remarkable bravery on the part of a body of Japanese coolies suddenly attacked by fugitive Chinese soldiers. Now the *Yamato Shimbun* narrates an incident of no less surprising a nature. Two days after the fall of Port Arthur, a Japanese commissariat station, about thirty Chinese *li* from the Port, was attacked by some Chinese soldiers, numbering about 800 men all told. Fifty Japanese soldiers were on guard at the station and these men fought with unflinching valour until their ammunition began to get short. Nothing less than dying to a man seemed to be the inevitable fate of the little troops of defenders, when the Captain in charge of the commissariat was approached by several of the commissariat coolies, who stated that they had a request to make. There were seven hundred of these men who has acted as porters, cooks, and what not. Not one of them was armed; but their representatives begged for permission to sally out against the Chinese with their naked hands. They might, the men declared, be able to drive back the attack for a while, or else divert the attention of the Chinese until other aid came. In default of all else, this request was somewhat reluctantly granted, and with wild cheers the Japanese threw themselves on the astonished Chinese. Troopers were pulled from their horses, swords wrenched from the grasp of foot-soldiers: in a word, the coolies, backed by the fifty soldiers, not only repulsed the Chinese but killed thirty of the number, took twice that many prisoners, and put the whole attacking force to flight. Five of the coolies were killed and wounded in this savage onslaught. If the *Yamato* is correct in its statements, this is certainly one of the most remarkable scenes of the war.

PILOT CHARTS OF THE NORTH PACIFIC OCEAN.

We have received from the Hydrographic Office of the Bureau of Navigation in Washington, specimens of the pilot charts of the North Pacific Ocean prepared in that Department under the direction of Commander Charles D. Sigsbee, U.S.N., Hydrographer. They are beautiful sheets, compiled in such a manner as to afford a mass of information in the clearest and briefest form. One of the charts showing the average tracks of storms over the northern hemisphere is particularly interesting. We note that the lines indicating the routes of the storms for the various months of the year begin to converge to the south of the Japanese islands and gather into a perfect sheaf between Yezo and the Aleutians. A corresponding convergence is observable on the opposite side of the hemisphere; that is to say, between the British Islands and the United States. Very curious, too, are the investigations recorded as to the intermittent character of sound emanating from a steam fog signal. The source of sounds appears to be surrounded by a belt varying in radius from one to one and a half miles from which the sound seems to be entirely absent. There is reason to think that the waves of sound travel in a series of eliptical segments, the sound being most audible at the points where these segments are cut by the surface of the sea. We need scarcely say that these charts are invaluable to masters of ships navigating the North Pacific.

OFFICIAL MERCHANTS.

The Moji correspondent of a metropolitan daily brings grave charges against the *go-yō-shōnin*, or merchants accustomed to supply the Government. The attack is mainly directed against a well-known Tokyo firm, mentioned by name, and two others who remain anonymous. It is alleged that in the matter of supplying Japanese quilts (*futon*) for the soldiers afield the greatest swindle has been detected. The *futon* are sold to the military authorities for two *yen* fifty *sen* each, and are outwardly attractive. Inspection, however, shows that they are filled with rotten cotton and sawdust, so that they become valueless after having been used two or three times. It is a burning shame, writes the correspondent indignantly, that the contractors cannot be held legally responsible for their unpatriotic cheating. One of the other firms supplied a lot of tinned *rakkyo*, that most evil-smelling vegetable of the leek variety, whose use is said to be as wholesome as the taste is strong. On being opened nearly all of the *rakkyo* was found to have been put up raw, or else so inadequately pickled that it was absolutely inedible. Whole mountains of the stuff have been thrown away. "I predict," concludes the correspondent, "that when our brave soldiers have polished off the whole lot of pigtails they will return to Japan,—but not to lay aside their arms. Their next step will be to exterminate the whole fraternity of *go-yo-shōnin*: the men that have sent them bad beef and rotten vegetables; that for the sake of gain would keep them cold at night and chilly by day; that care nothing for the health and comfort of this country's brave defenders, so long as their purses get heavier."

CHRISTMAS FESTIVITIES.

A second Christmas Ship entertainment was given at the Seamen's Free Reading Rooms, No. 82, Settlement, on Friday evening, and proved equally as attractive as the one held on Christmas night. One hundred and twenty seamen put in an appearance, one-twelfth of the number being British blue-jackets and the remainder merchant seamen. The programme consisted of vocal and instrumental music, recitations, etc., with short addresses from the Chaplain and his wife. The Christmas Ship was brilliantly illuminated with coloured candles, and at the close of the entertainment its cargo of gifts was discharged. Refreshments were then served. After a farewell song, with a rousing chorus, cheers were heartily given for the promoters of the entertainment. It was announced that a New Year's ship entertainment would be given at the mission on the evening of New Year's Day.

CURIOUS SPECULATION.

The special meeting of the British Cabinet, which was called during the vacation season, gave rise to an enormous amount of speculation as to the probable cause of the call. In this the papers at home and abroad have freely indulged. Among others, the *Wiener Tagblatt* has a long leader on the subject, in which it ransacks the political world for a reason why the British Cabinet was so suddenly called together. In the following we reproduce that portion which refers to the war, and the political situation in Eastern Asia:—The Japanese, says the *Tagblatt*, have gained great victories, both by land and sea. The situation of the great Celestial empire has become desperate. It seems Japan is determined to strike a fatal blow. But of what concern is it to Europe, whether China is ruined or not? However, the English are concerned, and the Russians perhaps even more that the English. The Russians too have cast a longing eye on Korea, which has now been conquered by Japan. But the Russians want even more than Korea. After they have completed their Siberian railway they may also want China. It seems Japan has anticipated them. Intervention on the part of Russia would at once be followed by intervention on the part of England. The latter can never permit Russia to proceed alone, inasmuch as there are not merely political but immense commercial interests at stake which England must protect. Perhaps the English Cabinet had received information to the affect that Russian troops were about to enter China from the north. Possibly the Russian fleet, which had concentrated at Vladivostock, has proceeded into Chinese waters. For what purpose? To separate the combatants? To bring pressure to bear in favour of negotiations for peace? Or, in case the Chinese empire is dissolved, to tear off pieces for the Russian empire? At all events, England has every reason to be on its guard and never permit Russia to proceed alone in this matter. True, Russia may have submitted a proposal to unite with England in the negotiations between China and Japan, and to use joint force if necessary rather than that the worst should happen to China, or that Japan should develop into a leading power in Eastern Asia. Such joint action would also be a very serious affair, and would require exceedingly careful consideration, all of which may have justified the meeting of the British Cabinet.

PRICES IN PORT ARTHUR.

We note in the columns of the vernacular press an instructive comparison of the prices ruling in Tokyo and Port Arthur with regard to certain indispensable commodities, though not strictly necessities. There are, a correspondent states, but two *sakaya*, or dealers in native wine, in the port, and they are able to sell their wares at fabulous prices. On the 16th instant there was not a bit of Japanese tobacco to be got anywhere for love or money, though a lot was shortly expected. The following table gives a fair idea of the scarcity of pretty much everything:—

	Price in Tokyo.		Price in Port Arthur.
Brown sugar, per lb.	6- 7 *sen*	...	70 *sen.*
Large slice of bread	1 *sen*	...	5 *sen.*
Japanese *saké*, per *go*	3- 4 *sen*	...	15 *sen.*
Beer, per bottle ...	13-16 *sen*	...	1 *yen.*
Cheap *tenugui* (towelling) the piece	3 *sen*	...	18 *sen.*
Ordinary cigars, each	10 *sen*	...	60 *sen.*
Package of 50 cigarettes	20 *sen*	...	80 *sen.*
Cotton handkerchiefs, each	2 *sen* 5 *rin*...		17-18 *sen.*
Large oranges, each	8 *rin*...		10 *sen.*

Even these enormous prices are paid, continues the correspondent, eagerly, as there is a keen competition for goods of the above kinds. If the would-be buyer does not present himself quickly, the chances are that everything will be sold out before he reaches the shop. Persons using sugar in cookery, according to the Japanese style, are nowhere to be found; salt is the condiment, and fish boiled in salted water are not at all nice, grumbles the correspondent. There is evidently a fine opening in Port Arthur for merchants of all sorts.

A STRANGE FIND.

On the morning of the 27th ultimo a strange discovery was made in the fine garden surrounding Mr. Iwasaki Yanosuke's residence at Surugadai, Tokyo. This was the corpse of a man of about thirty-five, in an advanced stage of decomposition. The body was dressed in a coarse shroud. The theory of the Kanda police is that some one must have brought the body through the creek in a boat to the foot of the garden, which runs down to the water's edge. To judge from the appearance of the corpse, which was greatly emaciated, poverty must have been the incentive for the act, the relative or relatives being too poor to defray the cost of proper obsequies, and hence leaving it on the premises of a wealthy man.

NEW YEAR'S GIFTS FOR THE SOLDIERS.

The advent of the New Year is causing renewed activity among patriotic Japanese who are not insensible of the great services rendered by the armies afield. For the last few days gifts of all descriptions have been forwarded to the War Department, begging that they should be sent on to the soldiers in time for the first three days of January. The Authorities themselves have placed an order with the Fugetaudo for twenty-four *koku* weight of *mochi*, white and red, that description of rice-dough or rice-bread which is considered indispensable at New Year's time—like our own Christmas plum pudding or the American turkey and cranberry sauce at Thanksgiving. It is said that a large proportion of the voluntary contributions

Digitized by Google Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

had to be rejected, owing to their quickly perishable nature; yet packing cases of cakes, vats and tubs of wine, mits and socks, tobacco and cigarettes, note-books and cigarette holders, pictures, newspapers and magazines, have been forwarded to the front by the cartload. A ladies' association in Yokohama (*Fujin Jippei Kwai*) has sent in five hundred warm blankets; another association in Osaka has presented several hundred weight of cakes and a quantity of *mochi*: in a word, the people the country over have been thinking of the soldiers who have to spend their holiday surrounded by semi savage enemies and exposed to the exceptional rigour of a Manchurian winter.

ITEMS FROM PORT ARTHUR.

FROM correspondence published in several Tokyo journals we learn that the Chinese proprietor of the largest local theatre has, from the outset, shown himself especially willing to serve the Japanese. He has not only contributed a large sum to the Red Cross but has just finished building a bath-house in Japanese style, which attracts enormous crowds of patrons, the receipts being something fabulous, although the comparatively low price of three *sen* only is charged for a bath. The Chinaman is reported to be making money hand over fist says the *Yomiuri*.

* * *

On the other hand, the *Miyako's* correspondent relates that the pickets and outposts around Port Arthur are suffering greatly from the cold, which falls every night far below zero. No less than twenty-eight soldiers have already had to lose either ears, hands, or feet, in consequence of frost-bite, those first to suffer, strange to say, being men that have come from the central or northerly provinces of Japan. The Hiroshima and Kyushu men seem to stand the cold better, which is quite contrary to what had been expected. Several pickets have already been found frozen to death at their posts. The scarcity of fuel is severely felt in many places, the soldiers sometimes going so far as to burn up camp-requisites and even indispensable wooden articles. In Port Arthur things are better and fuel is not too scarce.

TWO CONTRIBUTORS.

EAGERNESS to contribute towards the comfort of the soldiers in the field, is manifest among all classes of Japanese citizens. The subscription-list opened by the *Yorozu Choho*, for instance—subscriptions from two *sen* and above being acknowledged and the names of the contributors printed in full—has reached a total of over fifteen thousand *yen*, by far the larger portion of this sum having been sent in by poor people, the students of primary schools, peasants, and the like. When unable to make gifts of money, many people use most of their leisure moments in knitting mittens and socks, canning toothsome food, sewing warm under-garments, or otherwise striving to show their deep interest in the welfare of those that are doing so well in the field. Two cases in point are instanced by the *Yomiuri* and *Miyako Shimbun*. The first is that of the wife of a Captain of Engineers, whose husband is now in Berlin. This lady has dismissed her one servant and retrenched her expenses to a minimum, and by so doing has managed to buy sufficient wool to knit five hundred and thirty pairs of warm gloves. In the other case, an old man of eighty years of age, residing in Iidamachi, Tokyo, has with his own hands made over seven hundred pairs of straw sandals of a novel kind. The soles are of double thickness and the tips are supplied with a sort of leather covering to keep the toes warm. These are by no means isolated instances.

AN OFFICIAL NOTIFICATION ABOUT A DISHONEST CONTRACTOR.

ON the 29th ultimo, the Headquarters at Hiroshima issued the following notification with respect to a certain dishonest contractor:—A statement having appeared in the latter part of December in the *Moji Shimbun* and the *Chu... Shimbun* to the effect that the majority of ...oxes of canned meat lately carried by the ... *Nagoya Maru* to Talien were filled with stones, the Commissariat Department at Head-quarters summoned the purser of that steamer and also the Superintendent of Military Warehouses at Ujina to the Office on the 29th ultimo, in order to question them as to the authenticity of the statement. The purser's reply was as follows: On the 20th ultimo the steamer left Ujina for Talien with a number of troops and provisions on board. She reached her destination on the 25th, and at once began to discharge her cargo. As the boxes of canned meat were being transferred from the ship to the lighters, three of them fell by accident and, striking against something hard, were broken open. A startling fact was then revealed. In one of the three boxes thus broken a number of big stones had been laid in the upper part and cans were found in the bottom only. The box bore the name of the contractor, Henmi Katsuzo, Sanyodo O-denmacho, Ichome, Tokyo. It was at once sent to the Commissariat Office at Talien, together with a minute account of what had happened to it. On receiving this information from the purser of the steamer, the Inspector-General of the Commissariat Department at once conveyed instructions to the branch office at Talien to undertake the strictest possible scrutiny of all the boxes supplied by the same contractor, and to forward a report on the result of the examination. At the same time, the Superintendent of the military ware-houses at Ujina was instructed to undertake a similar inspection of all the cans sent by the same contractor and his partner Seiyodo, should any of them be still remaining unshipped in the ware-houses. The packing of stones in the box had evidently been intentional, but should it be found that the fraud was limited to the single box broken by accident it may have been the doing of coolies on board the steamer. The statement in the two local papers that the majority of the boxes were filled up with stones is not correct, and judgment must be suspended until the receipt of a report from Talien. The Inspector-General, however, asked the War Department to refrain from buying the cans of the two contractors implicated until the facts of the case had been thoroughly elucidated. A minute examination of all the meat sent in by the Army contractors in quite impossible owing to the limited number of officials at the Commissariat Department. What is now done is simply to take out at random three or four cans from a box containing a hundred, and these selected cans being opened, their contents are regarded as a fair sample of the whole.

NEW YEAR PICTURES.

THE *Jiji Shimpo* delights the patriotic souls of its readers by two New Year's pictures. The first is comparatively unimaginative. It represents a colossal Chinaman prone on agonized face, pig-tail floating behind, long-taloned fingers extended over the fragments of a splintered lance, and over him, one foot on his neck, sword in hand, and in the act of shouting victory, a Japanese officer. The legend, of course, is *Nippon Teikoku Bansai*. The second picture is more interesting. In the car of a balloon, burst or dropping from the clouds, sits a Chinaman mortally terrified, clinging for life to guy-ropes, many of which have parted from metal sockets inscribed with the names of Phyŏng-yang, Port Arthur, Feng-hwan, Talien, and so forth. This delination, spirited and vivid, is headed "Crisis."

THE NEW YEAR IN TOKYO.

THE capital has worn an unusually festive appearance for the last few days. Of course, the *jour de l'an* and the immediately preceding and following days are always marked with a white stone in the Japanese calendar, and Tokyo is never slow to do full honour to the occasion. But this time in particular the decorations seem to be prettier and on a larger scale than ever before, the reason being that the people have been eager to close befittingly a year of such wonderful successes, and welcome in no less becoming manner the hoped for still greater triumphs of the future. In a large number of ... plum-trees have already blossomed, thanks to the continuence of sunshiny weather, and so the floral decorations in nearly every house have been exceedingly attractive. More than this, business has been brisk of late, so that private as well as public rejoicings have been quite *en règle*. The *ennichi* in several parts of the city towards the end of the month, notably that of Go-to Inari in Kanda District and the Kompira Shrine in Shiba, were attended by great crowds of sightseers and purchasers, these open-air, semi-religious fêtes bearing a strong general resemblance to the German *Jahrmarkt*. No house so humble but has its bit of pine, draped with ferns and the pretty *yuzuriha* at the door way, in humble imitation of the large and beautiful *kadomatsu* of the wealthier residents. Tokyo has, on the whole, presented a very charming appearance. The spirit of the well-known ode on these "gate-pines" (*kado matsu*) has been well rendered by Sir Edwin Arnold:—

> The gate-way pines we plant
> Are milestones of life's road,
> Marking the stages passed;
> And glad the way for some,
> And sad for some the way.

THE BOWES MUSEUM.

AMONG Liverpool's wealthy and public-spirited citizens Mr. J. S. Bowes is conspicuous for his patronage of Japanese art, and for his liberality in introducing his fellow residents to beautiful specimens of this country's artistic work. Mr. Bowes is well known as the author of most useful works on Japanese porcelain and pottery, enamels, lacquers, and so forth; works that have done more than any other books to familiarize the public with Japan's capacities. In 1890 he opened a fine museum, attached to his private house, Streatham Towers, Prince's Road, Liverpool, and we have just received a copy of his "Handbook to the Bowes Museum," a pretty book, cleverly illustrated, excellently printed, and written so as to convey much information in little space. The Museum is a noble room, 120 feet by 45, opening at one end into a picture gallery where a choice collection of Japanese paintings, chromoxylographs and so forth are shown. It is, of course, impossible to form any adequate idea of such a place from mere plans on paper, but we can, at all events, perceive that Mr. Bowes has brought together a magnificent collection of the finest Japanese work. "The museum is open gratis on each week-day throughout the year: April to September, from 3 to 5 p.m.; October to March, from 2 to 4 p.m.; and from 3 to 5 p.m. on the first Sunday in each month from April to September. At other hours on week days admission may be had from the Prince's Road entrance, on purchase of a card at the door, price one shilling each visitor, the proceeds being devoted to charity." Liverpool is very fortunate. We wonder when any wealthy Japanese will develop sufficient solicitude for public art education to build, furnish, and throw open a similar museum.

THE "OBERON."

THE Chinese naval authorities have had another opportunity slip through their fingers, although it must be admitted that the "fortune of war" was somewhat against them. They had received information that the steamer *Metapedia* had entered the China Sea loaded with contraband of war. Some of their war-vessels sighted the ship and followed her for a time. A typhoon unfortunately swept down and the *Metapedia* was lost sight of. When the gale abated the *Oberon* appeared in the offing and the Chinese officials at once boarded her. Nothing contraband was found on board, and after apologies for the mistake, the *Oberon* was allowed to proceed. The *Metapedia* is at present unloading at Yokosuka.

THE CHAUTAUQUAN ASSOCIATION OF JAPAN.

ON the 15th of last month the Dai Nippon Chugak'kwai, or Chautauquan Association of Japan, published the first number of a magazine that is henceforth to be issued monthly. This is a novel publication, for its columns are principally filled by essays, poems, and letters written by the members of the Association, who

Digitized by Google Original from UNIVERSITY OF ILLINOIS URBANA-CHAMPAIGN

are all, or nearly all, young people. The total number of those that subscribe to the course of instruction is now little short of five thousand, and the popularity of the scheme is constantly increasing. This is, however, not only ascribable ■ the excellence of the instruction supplied, but also to the fact that the Prince Imperial takes a lively interest in the course, and H.I.H. Prince Kitashirakawa acts ■ a most efficient and kindly patron.

HOW TO COMMEMORATE JAPAN'S TRIUMPHS.

Some weeks ago a foreigner suggested in the columns of the *Jiji Shimpo* that, as one way of commemorating Japan's triumphs, the main thoroughfare of Tokyo should be reconstructed, and, ■ in the case of Paris, statues and such things should be erected on both sides. The *Keisai* also offers a proposal. It condemns the erection of triumphal arches and such things as merely decorative and wholly unnecessary in Tokyo. What it would have is an elevated railway connecting the Terminus of the Tokaido line with the proposed site of the Central Station, that is to say, with the open space in front of the Imperial Palace, and it suggests that the new railway be called "the Triumph Railway." Simultaneously with this transfer of the Shimbashi terminus to the castle grounds, the Uyeno terminus of the Nippon Tetsudo Kaisha should also be moved to the same point, thus bringing the two termini into connection. Not merely from the standpoint of time, but also from that of cost, the *Keisai* thinks it extremely advisable to put this scheme into practice at once, in order that the line may be finished in time to carry the Emperor and his victorious army when they return to Tokyo. The conclusion of the war will undoubtedly witness a rapid development of prosperity in Tokyo, and an immense rise in the price of land, making it well-nigh impossible to undertake any such work. Our contemporary concludes by saying that the benefits to be derived from the construction of the proposed railway are too well known to need re-capitulation, and that the present is just the time to put this much talked-of scheme into execution.

DEATH OF KOHITSU RYOETSU.

Kohitsu Ryoetsu, unquestionably the greatest art connoisseur of modern times, is dead. His opinions on old caligraphic specimens, pictures, and swords were invaluable. Every piece of old art considered good was invariably brought to him for identification, and specimens which were thought by their owners to be of but small value became treasures after the great critic had passed a favourable verdict on them. Kohitsu, like almost every Japanese artist or art-artizen of genius, was very simple in his habits. It is said, writes the *Nippon*, that when he was employed in the Imperial Museum, he only received 10 *yen* a month, but seemed perfectly satisfied with that scanty remuneration. A certain merchant desirous of patronizing him, told him that if he were contented with pay of 10 *yen* a month, he could well afford to engage his services. Kohitsu accepted the merchant's offer as he could in this way have far more leisure than when employed in the Museum. At the outset of his new engagement he received 50 *yen* as pay for five months, but little by little the amount was reduced till at last he was only paid four or five *yen* a month. Kohitsu, however, was entirely indifferent to the matter, being perfectly contented if he had enough to buy the necessaries of life. His disinterestedness was specially noticeable when he was engaged in his favourite work of judgment. When any counterfeit piece supposed to be of great value was put before him his habit was to keep perfectly silent. A certain high official once asked Kohitsu to examine an art specimen that he wanted to sell to a wealthy merchant for a high price. Kohitsu saw at a glance that it was not genuine and kept his customary silence. The official promised him 50 *yen* if he would pass a favourable verdict, and even increased his offer to 100 *yen*, but to no purpose. The connoisseur was silent to all such bad proposals, but the official gave up his solicitation, full of admiration for Kohitsu's uprightness. Japan has indeed lost a treasure and will greatly miss the valuable judgment of the great connoisseur on old art objects.

U.S. CONSULAR FEES.

Over the signature of the U.S. Consul-General the following notice, dated Jan. 1, 1895, has been issued:—

Until further notice the following tariff is established for the collection of fees at this office. Invoices should be made out in Silver Yen, which for the purpose of this notice are estimated as equivalent to 47 cents, U. S. Currency.

	Yen.
For Invoice Certificate	5.32
For Extra Copy of Invoice	4.26
For Currency Certificate	2.13
For Landing Certificate	5.32
For Bill of Health	5.32
For Endorsement to Bill of Health	1.06
For Personal Effects Certificate	1.06
For Emigration Manifest	.53

To avoid delay in transacting business at this office, persons paying fees are requested to present the exact change.

REUTER'S TELEGRAM ABOUT THE TARIFF.

Reuter has been at some trouble to send us a long telegram about an arrangement of very little importance. The Protocol annexed to the Anglo-Japanese Treaty provides that a Supplementary Convention relating to the conversion into specific duties of the *ad valorem* rates named in the Tariff annexed to the Treaty, shall be concluded within six months from the date of the Protocol. The latter being dated July 16th, 1894, the six months expire on January 16th, 1895. That period, being obviously too short, has been extended for six months, namely, until July 16th, 1895. Such is the news sent by Reuter. Probably the agent that telegraphed it did not understand the matter, and imagined that some big question was involved.

NOTICE TO MARINERS.

The following Notice to Mariners, referring to a danger in the Amoy District of the China Sea, has been issued from the Coast Inspector's Office of the Chinese Imperial Maritime Customs:—Notice is hereby given that Captain H. W. Hogg, of the steamer *Taisang*, reports that at 8.16 a.m. on the 15th instant and low water of a spring tide, the wind N.E., force 7, sea very rough, his ship touched some danger with Chapel Island bearing S. 67° E., true, distant 4½ miles, where the Admiralty Chart No. 1,760 shows between 10 and 11 fathoms.

THE JAPANESE LANGUAGE AND FOREIGN UNIVERSITIES.

A Japanese medical student at the University of Edinburgh, says an American paper, recently claimed the privilege of being examined in his native language, which by the rules is allowed to all foreign students who are not French or German. The faculty was not put out, but found one of its own members who could examine him. Harvard University for two years past has accepted Chinese as a substitute for Greek at admission from Japanese students.

NAVAL NEWS.

The *China Mail* of the 24th ult., says:—H.M.S. *Gibraltar* (Captain A. McLeod) left Singapore for Hongkong on Friday night or Saturday morning, and is expected to arrive on Thursday next. The *Peacock* arrived on Sunday from Shanghai and the *Archer* is expected soon. Both vessels pay off prior to recommissioning for another term on the China Station. The *Tweed* paid off on Friday last, and has gone back to her old quarters near the Torpedo Depot at Kowloon.

EARLY PLUM BLOSSOMS.

We hear from Atami that the season there is so mild and so far advanced that the trees in the celebrated plum garden bid fair to be in full bloom by the middle of this month.

MR. KOMURA JUTARO.

Mr. Komura Jutaro has been appointed Chief of the Political Business Bureau in the Foreign Department in succession to Mr. Kato, lately despatched as Japanese Minister to England.

THE OATH OF THE KING OF KOREA.

Count Inouye's programme for the reform of Korea is being steadily carried out, and we are now informed by the *Kokumin* that the King has taken oath to cause the said reforms to be made. The oath was proclaimed on the 10th of November (Korean Calender) under the countersignatures of the Ministers of State. It consists of six Articles, all of which touch on questions of fundamental importance. The first and third embody the most radical changes in Korean affairs. The former declares that while proclaiming herself free from any assumption of power on China's part, most strenuous efforts should be made by Korea to establish her independence on a firm basis, to accomplish the grand work of restoration and to maintain the dignity of the Court. The third Article is to the effect that careful provision should be made against the usurpation of power by any person on the ground of his being a relative of the Queen, and that the Ministers of State should strive to do away with the old trouble of multiplicity of administrators. The second article is in connection with securing the peace and stability of the Court; the fourth, with the responsibility owed by the Ministers of State to the King; the fifth, with the preferment of men of ability, while the last treats of the abolition of caste. It is said that Count Inouye has been charged by the King with the task of supervising the management of the domestic and foreign affairs of Korea. The King's oath was accompanied by several supplementary provisions, one of which disposes of the Queen's meddling in Government matters in a very brief manner, saying that she should confine herself to giving help in affairs connected with the Court and not interfere with those of the State. The prospects of Korean reform are therefore very good at present.

FINE ARTS EXHIBITION IN KYOTO.

One of the enterprises that the citizens of Kyoto have decided to undertake in the coming Fourth Industrial Domestic Exhibition, is to display collections of representative specimens of fine arts products, ancient and modern, in large numbers. The plan is to collect art products by eminent artists that lived since the era of *Tenryaku*, that is to say, eleven hundred years ago. Visitors will thus be enabled to compare the ancient fine arts of Japan with those of the present day, and to note what changes have taken place since that remote period. This special display will be held for 67 days, between the 25th of March and the 2nd of June. It will be in the Imperial Gardens. The samples will be arranged in sections, thus: *Tenryaku* and *Fujiwara* periods; *Tang*, *Sung*, *Yuen* (Chinese dynasties) and *Kamakura* periods; *Ashikaga* and *Toyotomi* periods; *Tokugawa* period; *Ukiyo* paintings; *Ming* and the present dynasty of China; the *Meiji* era. The objects shown will be pictures, caligraphic specimens, glyptic wares, porcelains, cloissoné wares (shippo), dyed woven fabrics, embroideries, metal works and lacquer works. Persons desirous of displaying specimens from their collections are invited to send a list to the Office by the 10th of March. Charges for transportation and arrangement will be borne by the Office; but the exhibitors are required to defray the cost of any special decoration employed in exhibiting their contributions. The exhibits will be carefully protected, and except in cases of unavoidable calamity, as fire and so forth, the Society will undertake to make good a certain part of the loss in the event of any accident befalling the object while under exhibition. To persons lending specimens letters of thanks will be forwarded when the undertaking is concluded, but to temples and shrines a certain remuneration will be given.

The bones of all flying birds are hollow and filled with air, thus combining the greatest strength with the greatest possible lightness.

WAR NEWS.

SATURDAY, DECEMBER 29TH.

According to reports previously received, the important town of Kaiping was occupied by the left wing of Lieut.-General Katsura's forces on the 20th of December, having been evacuated by General Sung and his army of 10,000 on the 17th and 18th instant. But a telegram sent from Hiroshima at 8.40 p.m. on the 27th inst., and published by the *Nichi Nichi Shimbun*, says that no official report of the place's capture has yet been received, as would certainly have been the case had Colonel Sato's regiment obtained possession of it a week ago. On the contrary, Kaiping is supposed to be still garrisoned by no less than 20,000 men, who have assembled there from Fuchow and other places. The *Hochi Shimbun* gives a telegram despatched from Hiroshima on the same day as that quoted above, but nearly 8 hours earlier, to the effect that there are no Chinese troops in Newchwang, and only a few remaining in Kaiping. Of the two reports, that of the *Nichi Nichi* would command credence under any circumstances, and is, moreover, the later. It should be mentioned here that whenever Japanese telegrams or newspapers speak of Newchwang, they refer to the old Chinese town, 30 miles distant from the modern Newchwang, where there is a foreign settlement. The modern town is always called Yingkow, or Yingtsz. Of course, if it be true that twenty thousand men still hold Kaiping, we must modify our comments upon General Sung's strategy. The original account made it appear that he had allowed himself to be cut off from the northern half of the Chinese line of defence—stretching 80 miles from Kaiping to Laoyang—and that he had no choice but to evacuate Kaiping, a week too late, and endeavour to force a way past the Japanese front at Haicheng. In a sense that remains true. If his place was on the northern part of the line, with the object of covering the approaches to Mukden, he ought not to have been *found in* Kaiping when Katsura severed the line 40 miles further north, at Kaiping. But there is the alternative hypothesis that Sung's march, which ended so disastrously at Kangwasai—not Hungwasai as previously printed—may have been dictated by the project of attempting to recover Haicheng. The direction of his front at the time of his encounter with Oseko's forces was not inconsistent with that supposition. We do not think the idea tenable, however, in view of the fact that Sung has actually made his way toward Laoyang. After his defeat at Kangwasai, he himself with the larger body of his remaining forces, retired upon Newchwang, and being joined by Ma's troops, in garrison there, retired to Tienchwangtai, a town 20 miles from Yingkow on the coastwise road leading toward China proper. Tienchwangtai lies on the western bank of the Liao river, which, being there very wide, constitutes a good defence. The other remnant of Sung's men, having fled in the first place to Yingkow, subsequently pushed on to the west, and effected a junction with the rest of their comrades at Tienchwangtai. Thence, according to the latest reports, the whole force managed to make their way toward Laoyang. The *Yomiuri*, which publishes the telegram containing this information, adds that Sung's men moved by the main road, from which we infer that they headed, in the first place, to Newchwang, and thence marching northward, struck the main road beyond Haicheng. The same telegram says that the Chinese forces at and about Laoyang aggregate 30,000. If that be so the position in south-western Manchuria is very interesting. The First Army has gradually been recruited until its full strength is believed to be somewhere in the neighbourhood of 40,000. Hence the left wing under Lieut.-General Katsura can not exceed 20,000 nominally, and seeing that he has to preserve communications with Taku-shan, 93 miles distant, it is not possible that he have more than from ten to twelve thousand available for any operation at the front. se that he has an army of that size in Hai- in the centre of the enemy's line of defence, then there are thirty thousand Chinese troops on his right, distributed along the 40 miles of road leading to Laoyang, and twenty thousand on his left in Kaiping, also 40 miles distant, at the southern point of the line. In such a position there are great opportunities for a General to make brilliant coups, but there are also great opportunities for an active enemy to inflict disaster upon him. The apparent solution of the situation would be a movement of the Second Army up the Liautung peninsula against Kaiping and Yingkow (Newchwang). Until quite recently, such a movement was generally believed to be in progress, but we now know that the Second Army never pushed farther north than Fuchow, and that the regiment left to garrison that place subsequently fell back to Port Adams. The inference we draw from the absence of any attempt to utilize the Second Army in cōperation with the First, is that the troops of the former are being reserved for some independent operation that requires their concentration in the vicinity of Talien Bay.

The *Nippon* has a Hiroshima telegram to the effect that the ships of the Peiyang Squadron, appreciating the impossibility of remaining much longer in Weihaiwei, seem to be planning an escape to Woosung, near the mouth of the Yangtsz. Our contemporary, always ready to credit any story that reflects on foreigners, adds that the war-ships of a certain Power are doing everything possible to facilitate the escape of the Chinese Squadron. If Admiral Ting really wants to get to Woosung, we do not believe that he need experience much difficulty. It is almost impossible for the Japanese to blockade a strongly fortified harbour like Weihai-wei in the winter, and the entrance to the Gulf of Pechili is 110 miles across.

We find in the *Kokkai* various statements as to the forces prepared by China for the defence of Mukden and Shanhaikwan, but as the source of authority seems to be Shanghai, and as stories on such topics seldom survive more than a few days, we refrain from reproducing them. Their gist is that the Chinese Authorities are experiencing serious difficulties.

It is stated that up to the 25th instant there had been no change in the situation at Fenghwan, and in its immediate north and east.

The *Yomiuri* says that although Port Arthur has become a Japanese naval station to all intents and purposes, it is not called a naval station, but a base of operations (*Konkyochi*). Over 250 civil and military officials, who are to administer the place, left Hiroshima by the *Bankoku Maru* on the 26th instant.

A telegram from Shanghai says that a mutiny occurred among the troops at Weihaiwei, owing to the failure of the authorities to give them their pay. The trouble was with difficulty settled on the 26th instant.

The same message (published by the *Nichi Nichi Shimbun*) reports that great fears of a Japanese attack are entertained at Shanghai, and that the Viceroy Chang Chitung is engaged in making an inspection tour of the fortified places in his district. A foreign expert of the Customs, whose name appears to be Muirhead, is said to have been engaged to teach strategy and tactics to the Viceroy's troops.

The *Nichi Nichi* tells a story of a Chinese soldier at Port Arthur. Disdaining to join his comrades in their attempt to escape by swimming, he advanced, nearly naked, to the front of the nearest Japanese force, seated himself on the ground, and crying out that he was a soldier, bade the troops cut off his head and present it to their General. Thinking that the man must be mad, the troops pushed him away, whereupon he became very angry, and proceeding to the 15th Regiment repeated the manœuvre, accompanying his request with abuse. This time he found a soldier to comply with his challenge, but it took two blows to decapitate him, and after the first he is said to have raised his head and glared round him. It is a pity that such brave men should be so badly led.

MONDAY, DECEMBER 31ST.

The *Yomiuri Shimbun* has a long paragraph about the Chinese ships-of-war, but we learn nothing from it except that the *Yoshino Kan*, on her latest reconnoitering expedition, found ten Chinese ships behind the island of Liu-kung, at the entrance to Wei-hai-wei. They were the *Fing yuen*, the *Chen-yuen*, the *Tsing-yuen*, the *Chi-yuen*, the *Ping-yuen*, the *Kwan-ping*, the *Chen-tung*, the *Chen-pia*, the *Chen-nan*, and the *Chen-poh*. Among these the last four are coast-defence ships, with a speed of not over 5 knots. They are, however, heavily armed, each of them carrying five 26-centimetre guns. The *Lai-yuen* has not yet been seen, but it is beyond doubt that she was in dock at Port Arthur until shortly before the fall of that place. She had all her woodwork destroyed by fire at the battle of Haiyang, and her fighting capacity is now considered insignificant. The *Yoshino Kan* has been fired at several times by the forts at Weihaiwei, but not one shot has hit her.

A telegram from Shanghai says that although the Chinese ships are not at all in a condition to do battle with the Japanese, the Government in Pekin has no idea of the fact. It imagines that the Peiyang Squadron would win a decisive victory could it meet the enemy, and it has ordered that the ships must go at once in search of him. That is an apocryphal story.

The *Kokkai* has a telegram sent from Shimonoseki under date of the 28th instant at 1 p.m., to the effect that General Ma Shangch', acting under instructions from the Viceroy Li, has organized a force, called the Shangtsz army, consisting of 2,000 infantry recruits, 800 cavalry from Tientsin, and 500 artillery. These 3,300 men he carried by *transports* to the mouth of the Liao river, and landed them on the 17th instant. After landing, the troops were set to throw up *fortifications* in which five guns were mounted. On Ma's arrival, General Chang Kao-yuen, at the head of 1,500 men who had been previously stationed at the Liao's mouth, proceeded by the Hwanho to Mukden. We find some difficulty in crediting these statements. The Liao river is usually blocked by ice from the middle of November to the middle of March, and to land troops at its mouth on the 17th December seems an impossible operation. As for the Hwan river, it must be completely frozen over by this time, so that the idea of General Chang's carrying 1,500 troops to Mukden by such route requires explanation.

The Japanese press naturally attaches importance to the rumour that dissensions have broken out in the Chinese Government with reference to the question of peace. The rumour, if not true, is at all events cleverly constructed. It puts the Empress-Dowager, Prince Kung and the Viceroy Li in the same camp as advocates of peace at any price, whereas the Emperor, General Liu, and General von Hanneken are equally stout in their advocacy of war. Prince Kung has always been a pacific factor in China's councils, and it is evident that the Viceroy Li has no longer anything to gain, but may lose a very great deal more than he has already lost, by the continuance of the war. On the other hand, Generals Liu and von Hanneken are personally interested in keeping the sword drawn. We do not wish to impute motives, but General von Hanneken himself must know thoroughly well that the war has made him, and that its continuance will probably bring him further favour and emoluments. His advancing of a protracted struggle must therefore be viewed by the public with suspicion. Granting, however, as we are very ready to admit, that he is actuated solely by solicitude for China's benefit, the difficulty is to see how he can hope to improve her position by maintaining the war. Troops can not be organized or effective preparations for resistance made, in the face of the enemy. If peace is now restored, China, if she be capable of taking any lesson to heart, will already have learned that unless she remodels her whole military system, she must remain always at the mercy of her neighbour. In that event there would be plenty for General von Hanneken to do. It is not necessary that China's bitter experiences should be multiplied. There is, however, a possibility that General von Hanneken may have succeeded,

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

or may be about to succeed, in obtaining the services of a large number of German officers. We believe that he was undoubtedly authorized to take such a step, and he may estimate its consequences much more highly than the general public is disposed to do. Whatever General von Hanneken does, however, we can only repeat what we wrote on the eve of this war, namely, that wherever the Japanese find the Chinese they will beat them. The sooner peace is restored, the less danger is there of a crisis involving the disintegration of the Chinese empire.

Lieut.-General Nodzu's account of the battle of Kangwasai on the 19th instant is now published. It is dated the 27th instant, and must therefore be taken as the latest available intelligence. It will be remembered that some doubt existed as to whether Major-General Oseko's force had marched with the expectation of meeting the enemy, or whether it was simply moving south toward Yingkow when it fell in with Sung's troops. The point is now cleared up. Sung with his ten thousand men probably marched out of Kaiping on the 16th instant, for on the 17th intelligence was brought to Lieut.-General Katsura in Haicheng that they had reached Tashihchiao, a town about midway between Kaiping and Hai-cheng (20 miles from each.) Thence they advanced northward, and, on the 19th, showed in considerable force on the west of Haicheng. Katsura resolved to attack. On the 19th he moved forward a considerable body of troops with that intention. But the more advanced forces of the enemy (at Liukungtien and Kaichiatien) retreated at his approach, and he accordingly halted the main part of his troops at Palihotsz, sending forward only three battalions of infantry, one troop of cavalry, and three batteries of artillery under Major-General Oseko. The ground was covered with snow, and marching was very difficult, the cold also being severe. Oseko's total force numbered 1,721 infantry of all ranks, 161 cavalry, and 12 guns, supposing his battalions to be of their full nominal strength. But it is most improbable that he had more than a total of 1,500 men actually under his command. His orders were to advance as far as Kangwasai, about 10 miles from Haicheng, while the main body of the troops halting at Palihotsz commanded the road from Kaiping. Oseko's scouts reported the presence of the enemy in great strength a little to the westward of a place called Hachiaho, that is to say, some 5½ miles distant from the hamlet at which the main body of the Japanese troops had halted. This intelligence having been carried to the hamlet (Palihotsz), the forces there were put in motion, one battalion only being left to guard the Kaiping high-road from the south. Meanwhile, Oseko's troops had come into action between 12 and 1 p.m. The enemy, 10,000 strong, stationed in Kangwasai and the woods westward of that place, resisted stubbornly. The fight continued between these very unequal forces until past 4 o'clock, when the Japanese reserves reached Hachiaho, within two miles of the battle ground. By that time Oseko had succeeded in driving back the enemy's right wing, and taken possession of the position occupied by it. His artillery was immediately re-inforced by 8 guns, and at the same time Major-General Oshima was sent against Kangwasai. Daylight was now waning and Oshima resorted at once to the bayonet. Four charges completely demoralized the enemy. They broke into two, one body flying northward toward Newchwang (the old city), the other and larger section, southward toward Yingkow (new Newchwang). The immediate destinations of these two bodies are given in the official report as Lanchiken and Kaokan, respectively. The enemy had thrown up defensive works in front of Kangwasai and mounted 7 or 8 guns, so that it is not altogether correct to call the affair a battle entirely in the open, as has hitherto been done. The Chinese loss is estimated at from 200 to 300 killed and about twice as many wounded. The Japanese loss, as already reported, was 54 killed and 358 wounded. Lieut.-General Nodzu speaks of the Chinese resistance as very stubborn, and says that they held their ground until the Japanese reserves came into action. But we have to note that from about 12.30 p.m. until past 4 o'clock, the combat was between 1,500 Japanese and 10,000 Chinese, the former being the attackers, and that, despite such a glaring disparity of strength, the right wing of the Chinese was dislodged. No one can claim much credit for Sung's men under such circumstances. The official report has only this to say about the conduct of the Japanese:—"That despite the snow and the great difficulty of manœuvring, such a powerful foe was broken and defeated, must be attributed entirely to the virtue of His Majesty the Emperor and to the loyalty of all ranks." The troops gave three shouts of "*Teikoku bansai*" (long live the empire) as they took possession of the enemy's position at Kangwasai. The portion of Sung's forces that retreated toward Yingkow (new Newchwang where the foreign settlement is) turned westward before leaving that place and halted, some at Kenchiayinfang, and some at Tienchwangtai, on the western bank of the Liao river. Our readers may remember that according to reports published by vernacular newspapers and translated in these columns, the fugitives that chose the northern road to old Newchwang were said to have been joined by the garrison of that place under Ma, and to have pushed on to Tienchwangtai, there effecting a junction with the remnant under Sung. The same journals added that Sung subsequently contrived to carry out his original intention of leading the whole body northward to join the forces between Haiching and Laoyang. All those statements must now be considered erroneous. The official reports speaks of Sung's beaten troops being distributed along the coast road from Kenchiayinfang to Tienchwangtai, and says nothing whatever about the section that headed for Newchwang, or about a subsequent junction of the two bodies of fugitives, or of Sung managing at a later date to push northward past Haicheng; and as the official report is dated the 27th instant, the other stories must evidently be abandoned. Sung's purpose—supposing it to be as stated above—appears to have been frustrated, and he and his 10,000 men are almost out of the field, for the present at all events. After the battle one battalion of Japanese troops was left in Kangwasai and the rest returned to Haicheng. The hardships endured by the troops in such operations must be terrible. For example, the main body of the troops had to march 24 miles through snow on the 19th, one half of the distance being covered after the battle, that is to say, after dark. On the other hand, it certainly must be placed to Sung's credit, as it seems to us, that under such rigorous climatic conditions he left Kaiping and undertook a march of at least 50 miles northward. Further, looking at the place where the battle occurred, it would seem that Sung's intention was not to march past Haicheng on the west and effect a junction with the troops massed northward of Haicheng, but that his real purpose was to bar Katsura's passage by the direct road to Yingkow. The fact that he intrenched himself at Kangwasai constitutes conclusive proof, we think, that a rapid and unobserved march northward was not his purpose. There are two ways of reaching Yingkow (new Newchwang) from Haicheng; namely, the direct road viâ Hachiaho and Kangwasai, and a more circuitous route *viâ* the main road to Kaiping, in the first instance, and subsequently by a cross-road from Tashihchiao. Posted at Kangwasai, some six miles from the point where the Newchwang direct road joins the main-road to Kaiping, Sung practically held both routes, for he actually blocked the one, and could strike at the flank or rear of an enemy marching by the other. We cannot doubt, therefore, that when he led his 10,000 men from Kaiping and marched to Kangwasai, his idea was to bar the progress of Katsura's forces toward Yingkow. It was a sound and enterprising conception, but Sung has no troops capable of effectually checking the Japanese. With regard to his line retreat, it is to be noted that the portion of his [illegible] now at Kenchiayinfang still covers the approach to Yingkow by the direct route from Haicheng, while the portion that has retreated to Tienchwangtai is out of the immediate sphere of operations.

The *Nippon* publishes a telegram from Shanghai, under date of the 29th instant, to the effect that Admiral Fremantle, leaving the *Caroline* at the Saddles, has proceeded with 11 ships to Woosung and anchored there near the forts, sending about 1,000 armed men ashore and relieving them every 48 hours. The telegram adds that the Chinese southern fleet is lying near the British Squadron.

In the same paper we find a telegram from Hiroshima saying that the Tonghaks in Chôlla-do are developing considerable strength. They have erected a Kingdom, calling it Kanan, and have elevated one of the nobles of the locality to be its sovereign, appointing Ministers and other administrative officials.

Wednesday, January 2nd.

The *Official Gazette*, for a long time past, has published minute records of the number of deaths occurring among the Japanese troops abroad. We have collected the figures from July 16th up to December 6th, with the following results:—

		Total.
Died in Korea.		
Killed in battle	219	
Died of wounds	38	 663
Died of disease	406	
Died in China.		
Killed in battle	72	
Died of wounds	21	 117
Died of disease	24	
Grand total		780

It will be observed that disease was more fatal than were the bullets and swords of the enemy, 430 dying from the former cause and only 350 from the latter. Altogether, it has been one of the most bloodless wars ever fought, so far as the victors' casualties are concerned. A campaign of six months' duration has produced only 350 deaths in battle—excluding the navy. The point is well worthy of consideration by journals like the *Kokumin Shimbun*. No one desires to detract from the merits of the Japanese troops or the excellence of the Japanese military organization, but an enemy that does not succeed in killing more than 350 of its foes—especially when they invade its territory—in six months' fighting, can only be called contemptible, and certainly to defeat such an enemy, however, signally, furnishes little proof as to the real capacity of the victors.

The *Jiji Shimpo* speaks of General Sung's recent march from Kaiping to Kangwasai as an attempt to escape northward, lest he be caught between the First and Second Japanese Armies. We do not take that view. The position chosen by Sung to halt his forces and throw up entrenchments is inconsistent, we think, with any hypothesis of mere retreat. Posted at Kangwasai, he effectually barred the progress of the Japanese army to either Yingkow or Kaiping. Had he desired to simply avoid an encounter with the Japanese and effect a junction with the Chinese troops massed to the north of Haicheng, he could easily and safely have marched by Newchwang (the old town), leaving Haicheng 12 miles on his east. By heading toward Kangwasai, he evidently intended, if not to attempt the recovery of Haicheng, at any rate to obstruct the southward passage of the Japanese. It was a plucky and well conceived operation, and if Sung's troops had been able to stand their ground, his strategy would have been thoroughly justified.

The *Yomiuri* describes the latest stratagem of the Japanese to procure exact information as to the number of the enemy's vessels in Wei-hai-wei. A certain vessel, evidently one of the converted cruisers, received orders to re-paint with the utmost possible despatch. About three hundred men were employed to accomplish the task, and when it was done, she hoisted the Chinese flag and started for Weihaiwei pursued by a Japanese man-of-war. The pursuing vessel fired several shells at the disguised cruiser, and the people in W[illegible]

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

wei, completely taken in by the stratagem, signalled the flying steamer to enter the port. How far she availed herself of the invitation, our contemporary does not say, but she succeeded is ascertaining that the *Chen-yuen*, the *Ting-yuen*, and six other ships-of-war were lying at anchor in the harbour.

The record of encounters between the Japanese and the Tong-haks has been uniformly characteristic of the remarkable superiority of organization and discipline to mere numerical strength. Time after time we have heard of handfuls of Japanese, soldiers or gendarmes, overcoming ten or twenty times their number of rebels. The most striking instance, however, is that related in the *Jiji Shimpo* of the 31st ultimo. It occurred at Chhöngju. On the 9th of December at 6 a.m. a body of Tong-haks estimated at over twenty thousand, attacked that place (lat. 36° 41, long. 127° 38 in the province of Chhungchhöng). It was defended by only 19 Japanese soldiers, but they managed to put their assailants to flight, capturing a quantity of their weapons and ammunition. Ensign Kuwahara, who arrived at Fusan in the closing days of December, is responsible for this remarkable story.

The Emperor, says the *Nichi Nichi Shimbun*, has addressed to Lieut.-General Nodzu the following message :—

We profoundly appreciate and applaud the loyalty and courage shown by a portion of the troops under your command, in attacking, and carrying on for several hours in the snow near Hai-cheng a fierce and triumphant conflict with a strong and resolute foe.

Lieut.-General Nodzu, telegraphing from Antung under date of the 29th ultimo, speaks in most satisfactory terms of the disposition shown by the people in the conquered districts of Manchuria. Confidence is said to be completely restored. Merchants and artificers have resumed their business, their wives and children living with them without fear; Japanese money is taken freely in exchange for commodities, and everything required for the troops is furnished gladly, not excepting labour. The Lieut.-General declares that the Manchurians are far superior to the mean and cunning people of Korea. At Antung, Fenghwan, Suiyen, Takushan, and so forth, everything is quiet and orderly, the inhabitants pursuing their usual avocations and the markets being well supplied. We learn incidentally from this message that the important town of Kwantien is also in Japanese occupation, for General Nodzu says that its citizens were from the first well disposed, and that they frustrated the attempts of the local militia to assemble there. Kwantien lies 48 miles westward of Fenghwan as the crow flies.

The *Shogyo Shimpo*, justly as we think, comments on the fact that the Chinese troops are massed in great strength in Laoyang and its vicinity. Our contemporary says that General I, whose forces recently advanced from Saimatsui as far as Yimiaushan, with the idea of recovering Fenghwan, has his head-quarters in Laoyang, which place is also the basis of the troops holding the Fenghwan-Laoyang road and the Motien Pass. Laoyang, according to the *Shogyo*, has already been reconnoitered by the First Army, and an attack upon it may be expected soon.

The latest intelligence from Weihaiwei, says the *Chiuo Shimbun*, is that the Chinese vessels anchored there are 15 torpedo-boats and thirteen men-of-war, including the two ironclads.

News begins to come from China that the much talked-of mission of H.E. Chang, who was nominated ambassador to sue for peace, is likely to remain in the lap of the future, for some time at all events. Our information is too vague to be accepted as conclusive, but the prospects of peace certainly have not improved during the past few days.

Thursday, January 3rd.

This morning we are almost completely without war news. The only piece of intelligence published by the vernacular press is an item in the *Yomiuri* relating to telegraphic communication between the First and Second Armies. The head-quarters of the First Army are in command of Colonel Mihara, had moved out Antung, and those of the Second at Chinchow. A wire was laid between the two places some weeks ago, but for some reasons not explained messages could not be sent along it until the 30th ult. at 3.25 p.m., when the first telegram passed over satisfactorily. Pitszwo is mentioned as the point to which the wire has been carried in the Laotung Peninsula, and from Pitszwo to Chinchow is 43 miles, but we imagine that Chinchow also has been brought within the circuit. By the completion of this line intelligence from Talien can be obtained in 24 hours.

In the absence of intelligence from the seat of war, the vernacular press publishes some interesting details as to the composition of the Japanese forces now operating abroad. They consist of three whole Divisions, namely, the First, Third, and Fifth, and one half Division, namely, the Sixth. Some of the troops are in Korea, but the great majority are in Chinese territory. A Division (*Shidan*) consists of two Brigades (*Riyodan*); a Brigade, of four Regiments (*Rentai*), and a Regiment, of three Battalions (*Daitai*). A Division is commanded by a Lieut.-General, a Brigade, by a Major-General, and a Regiment by a Colonel. The Ninth Brigade of the Fifth Division under Major-General Oshima was the first to embark for foreign service. It landed at Chemulpo on the 12th of July and marched on the following day to the vicinity of Sōul, where it encamped. On the 25th of the same month this Brigade was marched against the Chinese troops at Asan, and on the 29th it won the victory of Sōnghwan. Subsequently it formed part of the column that that moved against Phyŏngyang, at the capture of which stronghold it played an important though not altogether faultless part. A month later it crossed the Yalu, and is now quartered in Chiulien and Antung. Of Major-General Oshima we have heard nothing since the taking of Phyŏngyang. The truth is that he does not appear to have won credit only. He gained the battle of Sōnghwan, but allowed the greater part of the Chinese troops to escape unscathed, and he fought splendidly at Phyŏngyang, but not in strict accordance with the plan of his Commander-in-Chief, for he imparted to an attack intended to be feigned an element of reality that involved a heavy and needless sacrifice of lives. In the last battle fought (Kangwasai) the finally victorious troops were commanded by a Major-General Oshima, but not the Oshima spoken of above. The Tenth Brigade, forming the second half of the Fifth Division, and under the immediate command of Major-General Tatsumi, entered Sōul on the 19th of August. A portion of it, with which was Lieut.-General Nozu, the Commander of the Division, had landed at Fusan, the rest at Chemulpo. This Brigade was present at the taking of Phyŏngyang, and marching northward immediately afterwards captured Chiulien on the 26th of October and Fenghwan on the 29th of the same month. Its head-quarters were established in Fenghwan, and it thenceforth played the principal part in various minor engagements, always led by Tatsumi, than whom no commanding officer has earned a higher reputation in this war. The Brigade now has its outposts in the neighbourhood of Lienshankwan, 40 miles north of Fenghwan. The Third Division, like the Brigade of which we have just been speaking, marched to the scene of operations in two parts, one entering Sōul on the 15th of August, and one landing at Gensan at the end of the same month, where a portion of it went into quarters and a portion under the command of Colonel Sato marched at once to the attack of Phyŏngyang. The Gensan Brigade was commanded by Major-General Oseko, and the Sōul Brigade by Major-General Oshima, the whole being under Lieut-General Katsura. After the capture of Phyŏngyang the two Brigades of this division were reunited, and marched northward to the passage of the Yalu, the battle of Hushan and the taking of Chiulien whence Oseko's Brigade was once more separated and despatched westward to Takushan. Marching from Takushan on the 15th of November, this Brigade, acting in concert with a portion of the 10th Brigade, which, under the

of Fenghwan for the purpose, attacked the Chinese in Suiyen, captured that place on the 18th of November, and marching out of it on December 9th, took part in the battle of Tomuchang, and there joining forces with the Sixth Brigade under Oshima, captured Haicheng on the 13th of December. This Third Division now forms the Left Wing of the First Army. By it was won the battle of Kangwasai on the 19th of December. The First Division, commanded by Lieut.-General Yamaji, landed at Hwayuenkow, in the Liaotung peninsula, on the 24th of September. It took Chinchow on the 6th of October; Port Arthur on the 22nd of November, and Fuchow on the 3th of December. The Division is now encamped in and about Chinchow. The Twelfth Brigade (Mixed Brigade) under Major-General Hasegawa, accompanied the First Division to the Liaotung peninsula, and participated in the capture of Port Arthur, which place it is now garrisoning.

The *Hochi Shimbun* has an article explaining the difference between a battle in the open and a battle under-cover, for which expressions it introduces us to the convenient terms *Soguen* and *Yotaisen*. It speaks with enthusiasm of the valour and *élan* shown by the Japanese troops at Kangwasai, the only open fight in the war; praises the Chinese soldiers for standing their ground against three bayonet charges, and claims that battles in the open are specially adapted to the qualities of the Japanese soldier.

Friday, January 4th.

Funayama Ichinosuke, a private in the Third Regiment of the line, is now included in the little band of heroes whom Japan delights to honour. At the assault of Port Arthur he is said to have been the first to mount the parapet of the Itszu-shan fort. Turning to his comrades, he gave a stentorian shout of *Tenno Heika Banzai* (long live the Emperor), and then danced forward, followed quickly by the rest of the battalion. We take this from the *Yorozu Choho*, a paper seldom quoted.

The *Shogyo Shimpo* says that the Second Army is organizing a force to advance northward up the Liaotung peninsula, and attack Kaiping and Yingkow (modern Newchwang), thus coming into cōoperation with the Left Wing of the First Army. Our contemporary adds that this junction of the two forces will be the prelude to a great operation. As to the latter prediction, we have nothing to say, but it is certain, as more than once stated in these columns that to construct an intelligible and feasible plan of campaign in the south of Shingking, a second force, operating in the neighbourhood of Kaiping and Yingkow, is urgently needed. That would free Katsura's troops to turn northward against the Chinese massed between Haicheng and Laoyang. At present the Left Wing of the First Army is playing a simply auxiliary part. It serves to guard the Liaotung peninsula against an ingress of enemies from the north, but for independent purposes it is virtually useless, whereas a northward advance of a portion of the Second Army from Chinchow would completely metamorphose the situation.

In the *Miyako Shimbun* we find an interesting statement of the spoils taken by the Japanese armies from the commencement of the war to the close of December. The guns are :—

At Sōnghwan	8
At Phyŏngyang	48
At Chiulien	78
At Fenghwan	5
At Chinchow and Talien	129
At Port Arthur	330
At Suiyen	6
At Haicheng	4
Total	607

These guns our contemporay values at 2 million *yen*. As to small arms, the figures are :—

At Sōnghwan	83
At Phyŏngyang	1,165
At Chiulien	4,395
At Chinchow and Talien	621
At Port Arthur	1,086
At Chinchiahotsz	50
Total	7,400

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

These are valued at 30,000 *yen*. Next comes the big-gun ammunition, namely:—

At Phyôngyang	840 rounds.
At Chinlien	36 384 rounds.
At Chinchow and Talien	2,468,200 rounds.
At Port Arthur	96,317 rounds.
Total	2,601,741 rounds.

This total figures at 3 million *yen*. As for small-arm ammunition, we have:—

At Phyôngyang	560,000 rounds.
At Chinlien	43,000,660 rounds.
At Chinchow	33,814,000 rounds.
At Port Arthur	84,125 rounds.
Total	77,458,785 rounds.

The value of this big total is given as 100,000 *yen*. Then we have rice:—

At Sôughwan	200 *koku*.
At Phyôngyang	4,600 ,,
At Chinlien	4,015 ,,
At Fenghwan	5,537 ,,
At Chinchow and Talien	2,605 ,,
Total	16,957 ,,

This is valued at 50,000 *yen*. The other items are 368 horses (valued at 2,000 *yen*); bullion and coin, 1 million *yen*; tents 3,326 (valued at 30,000 *yen*); flags 477; ships (21 valued at 100,000 *yen*), the details of this last item being:—

At Kwaynenkow.....15 junks.
At Talien ..... 1 steamer (30 tons).
At Port Arthur ..... 2 steamers, 2 sailing vessels, and 1 dredger.

Men-of-war 3, namely:—

On July 25th .....1, the *Tsaochiang*.
In Port Arthur .....2, the *Mintsu* and *Haiching*.

The value of these three is put at 1 million *yen*.

In addition to the above there are quantities of miscellaneous articles, as drums, swords, spears, trumpets, bayonets, carts, tools, saucepans, boilers, torpedoes, mining apparatus, gunpowder, boots, umbrellas, clothes, surveying chains, harness, &c. The total of the values noted above is 7,312,000 *yen*. If we add the value of the fortifications machines and works at Talien and Port Arthur, the total will not fall short of 70 million *yen*.

The *Cheya* publishes a telegram from Fusan to the effect that the Tonghaks in Chôllado are developing great strength. They number many tens of thousands and almost all the inhabitants are with them, only a few places standing aloof. They have made their head-quarters at Shyonchyong, and are engaged in a strong attack upon Sashogaug. Two hundred Japanese troops started for Chôllado on the 30th ultimo. Chôllado is the south-western province of Korea.

TWO FIRES IN KOBE.

About 2.30 a.m. on Tuesday, fire broke out at No. 36, Division Street, Kobe, on the premises occupied by Mr. A. Michel, wine and spirit merchant and general provision dealer. Commencing somewhere on the back premises, the fire must have been smouldering for some time before it was discovered, as when the alarm was given the back of the house was well alight and there was little hope of saving the building. Efforts were therefore mainly directed to saving the adjoining premises, consisting of a godown stored with sugar, and Messrs. Thompson & Co.'s drug store just across the narrow turning leading from Division Street into the Japanese town. These efforts were fortunately successful. Messrs. Thompson's premises, though scorched, are practically uninjured, while the godown is also safe. A fire which broke out on the premises of Messrs. Strachan & Co. at No. 1, caused by sparks carried across the street by the wind, was also extinguished by the efforts of the foreign brigade. A considerable number of Japanese brigades also rendered assistance, and were successful in keeping the fire within bounds—a most fortunate circumstance, considering the crowded nature of the locality and the immense destruction which would have been caused had the fire extended.

KOREAN NEWS.

It appears from what the *Jiji's* Sôul correspondent writes, that Count Inouye is steadily winning the confidence of the Korean Court. Already since his assumption of the office of Japanese Representative in Korea, he has had audience of the King eight times, and on each occasion he submitted matters of such importance that the conversation lasted from three to seven hours. It seems that the immemorial Court usage is now laid aside for Count Inouye, and even the Queen does not think it contrary to etiquette to see the illustrious well-wisher of Korea. On the 20th ult., for instance, the Count obtained audience of both the King and Queen at the same time, and had an important conversation for some hours with the Royal couple. They were much struck by his remarks and are said to have declared that they had never before heard anything so instructive and interesting. The *Jiji* thinks that they might well make such a comment, inasmuch as they had been accustomed to hear words of flattery and adulation. In fact, absolute confidence is now placed in Count Inouye, and he was asked on the above occasion to lend his assistance to the utmost for the benefit of the Court and the country. He appears to be regarded no longer as an alien, but in the same light as a Korean subject zealous for the reform of the state and the stability of its independence. Side by side with this increase of Count Inouye's credit, Boku Yeiko, the new Home Minister, is also gaining favour at Court. That is of course due primarily to the good offices of Count Inouye, who, on every available opportunity, has not failed to plead on behalf of Boku. The King and Queen had thus been somewhat softened toward Boku, and his representation for the welfare of the country on the second occasion of his audience with the royal couple—so earnest, it is said, that he was carried away by zeal and could not restrain his tears—still, further inclined the King to view him with consideration and confidence.

The result was that when Count Inouye waited upon the King on the 20th, his Majesty is said to have declared that Boku had lately become loyal and sincere, whereupon the Count spoke strongly on Boku's behalf, declaring that his loyalty was not a new thing but had been deeply inscribed on his heart from the outset. If the King had failed to discern it, the fact was due to the misrepresentation of malicious persons.

The same correspondent says that the Tai Wôn-kun is no longer connected even with the management of the Court, severance of his connection with it having been brought about by a divergence between his views and those of Count Inouye in connection with drafting the Law of the Royal Household. The Count maintained the necessity not only of having such a law being drafted, but also of supplementing it by a law declaring the Royal succession unchangeably fixed. To that the old Prince objected, on the ground that to settle anything about the Royal succession while the king was still reigning over the country would be inauspicious. No wonder that the opinions of the two are always liable to clash when their minds are so differently constituted. After the Count had succeeded in convincing the old statesman of his misconception, he advised him to sever his connexion even with Court affairs, and the Tai Wôn-kun assenting, he is henceforth to play the rôle simply of a venerable Prince with no official power whatever. The work of purifying the atmosphere of the Court has been started and by way of commencement several hundred eunuchs and maids of honour have been released from service. So extensive was the clearing out that rumour declares the Queen to be without even one attendant to put charcoal into the brazier in her room. The first Royal ordinance was published in the new style on the 21st of November (Korean calendar). It fixed the forms in which Notifications issued hereafter from the various sections of State are to be drafted.

THE EXTENSION OF THE JAPANESE NAVY.

Now that China has been virtually brought to Japan's feet and the latter country has obtained ascendency in the East, a certain Japanese Admiral is said to have told a representative of the *Mainichi*, that in his opinion the Navy should in future be at least quadrupled. The Navy in its present condition has been found strong enough to conquer that of China, but it must be strengthened sufficiently to enable it to overpower the Eastern fleets of England, France, and Russia. The number of war-vessels should therefore be increased, and a law of conscription for seamen enacted so as to have a reserve in readiness, as is the case in the Army. The question of augmenting the number of war-ships requires careful deliberation. About seven years ago, when Japan had only one iron-clad, the *Fuso*, and China caused the two iron-clads, the *Chen-yuen* and the *Ting-yuen* to be constructed, an opinion was held by some that Japan should also procure two strong iron-clads. That, however, was not the view taken by the Admiral in question. He argued that if Japan wished to prepare for any rupture with China, she ought not to follow the latter's example, but ought to expend the same amount of money on the purchase of a number of cruisers. The cost of one iron-clad of 10,000 tons is equivalent to that of three cruisers of from 4,000 to 5,000 tons each, but when it comes to fighting, it is needless to say that three cruisers are far more useful than one iron-clad. His opinion prevailed in the end, and the result was the construction of the *Naniwa*, *Takachiho*, and *Unebi*. A few years after, the construction of ironclads was again advocated in some quarters, but once more the idea was overruled, and the *Matsushima*, *Itsukushima*, *Hashidate*, *Yoshino*, *Chiyoda*, and *Yayeyama* were built. Who knows what the result of the battle of Yellow Sea might have been had Japan had only one or two ironclads instead of such ships as the *Matsushima*, *Itsukushima*, *Yoshino*, *Naniwa*, and others. The Admiral is afraid that the decision of the Diet to construct two ironclads of above 10,000 tons each was a mistake, and thinks that perhaps it would be better to have in place of them eight or nine cruisers of from 5,000 to 6,000 tons equipped with powerful ordinance. The order has, however, already been given and cannot be withdrawn. Moreover, ironclads will be necessary for purposes of defence when an adequate number of cruisers has been completed. The Admiral considers that Japan should procure about a dozen more cruisers of over 5,000 tons each, equipped with the best guns.

JAPAN'S NEW NEEDS.

The *Hochi* and the *Kokumin* (from the pen of Mr. Kawajima, M.P.) write about the above topic. Now that Japan has won the sovereignty of the East, writes the *Hochi*, and has become the guardian, so to say, of China, the extension of her Army and Navy becomes a necessity. It is absolutely essential that two divisions of troops be stationed in the districts Japan has occupied in China, while at the same time the Navy should be enlarged by at least 150,000 tons within the decade to come. Estimating at the rate of 1,000 *yen* per ton, we have a total of 150 million *yen*, or 15 million *yen* per annum. Further, the expenses required in Port Arthur, Talien, and many other places; the expenses involved in stationing troops, in re-organizing the system of the Army, in strengthening the defences of the empire:—all these and many other concomitant items will amount to at least 35 million *yen* annually. In other words, the ordinary yearly outlay, now about 80 million *yen*, will have to be increased to 120 million *yen* or thereabouts. Against this development of outlay, the *Hochi* has to suggest that as the foreign commerce of the country is growing more and more prosperous, it would be possible to realize an addition of about 8 million *yen* from custom duties on goods imported from abroad, even though a general tariff of 8 per cent. be the maximum. Moreover,

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

a yearly surplus of about 12 million *yen* will accrue after 1896 out of the state revenue, so that the sum to be supplied from new sources is reduced to about 15 million *yen*. How this deficiency is to be obtained the *Hochi* has nothing to say.

Mr. Kawajima enlightens us on the subject. He suggests that the new sources from which funds to meet the additional outlay may be obtained are amending the income tax, the imposition of a tax on capital, and on tickets of admission to theatres, &c., and the monopoly of *saké* and tobacco. Mr. Kawajima's idea about the amendment of the income tax is simply to enlarge its scope, not to raise the rate. He suggests that in future income tax should be made the standard for gauging the national or prefectural or district taxes. Preliminary inquiries for the purposes of this tax should be left to each *shi*, *cho*, or *son*, and the final settlement should be in the hands of national or local inspectors, as the case may be. Further, the income tax should be divided into two kinds, namely, a professional tax and a property tax. In the former all incomes derived from professions of every description should be included, while the latter should be assessed on bonds, shares, lands, houses to let, and so forth. The professional income tax should be graded into 10 classes, the lowest at the rate of $\frac{1}{200}$ of the income, the next higher at $\frac{1}{150}$, then $\frac{1}{125}$, and so on. Moreover, each class should be subgraded according to localities. The three Municipalities of Tokyo, Kyoto, and Osaka should come under the 1st grade, and Kanagawa, Aichi, and Hyogo, for instance, should be grouped under the 2nd grade, of the same class. The property income tax should also be subdivided into 10 classes, the lowest at the rate of, say, $\frac{1}{150}$, as in the assessment of the income tax now in force. Taxes on capital should be imposed on the dividend paid by a bank or company, at the rate of, say, $\frac{1}{200}$ or $\frac{1}{150}$. The property tax is assessed on incomes derived from the properties of wealthy men, but the tax on capital should be independently levied on the net profits of banks or firms, being thus quite distinct from ordinary income tax. Tickets of every description, from tickets sold by steamship or railway companies, to entrance tickets to places of amusement, should be subject to inspection by tax collectors, and a suitable impost should be assessed, say, at the rate of $\frac{1}{100}$ of the price of the ticket. As to the *saké* and tobacco monopoly, Mr. Kawashima suggests that either all the *saké* brewed should be bought up by the Government and then sold at a certain fixed rate; or *saké* and other liquors, whether for sale or for home use, should be placed under very strict control and the tax upon them levied with all rigour. Together with the introduction of the above changes in the taxation of the country, national taxes on carriages and waggons, horses, and so forth, and local taxes on business pursuits should be abolished. Mr. Kawashima does not say how far the Revenue of the State would be increased by the changes he indicates, and we remain, therefore, entirely uncertain whether his proposals are altogether in the air, or whether he has accurately calculated their practical results.

THE NEW YEAR.

So far as Yokohama and its immediate neighbourhood was concerned, 1895 has been ushered in with bright sunshine and a genial warmth of temperature, a happy augury we hope for the ensuing twelvemonth. The year just closed has been fairly prosperous for most, if not all, of those connected with the trade of the port—the depreciated dollar notwithstanding—and complaints as to the poorness of business are happily the exception and not the rule. This no doubt accounts for the more than usually lavish street decorations in all the principal quarters of the native town. The Motomachi has seldom looked prettier than on New Year's Day, nor have the gaily dressed crowds that thronged this as well as all other thoroughfares presented a happier appearance. All-sions to the war were plentiful, but in no case obtrusively so, among the principal designs over the house-doors, and if any member of His Majesty's land or sea forces chanced along he received an amount of hospitable attention which proved in some cases more than could easily be uprightly sustained. The usual hearty good-humour of "Shogatsu" prevailed on every hand, though two or three *jinrikisha* men and *sendoes*, who had been indulging not wisely but too well, went in for some displays of fisticuffs during the morning to the scandal of more peaceable passers-by.

FOOTBALL.

YOKOHAMA V. VISITORS.

Considerable interest was taken in the football match played on Wednesday afternoon, when the Y.C. & A.C. met a team composed of visitors, and officers and men from H.M.S. *Plover* and the P. & O. steamer *Ancona*. The latter team were naturally at a disadvantage, being composed of men who have seldom an opportunity of playing, and although they were beaten by eight goals to one, yet, all things considered, their game was very good. In the first half six goals were registered against them to *nil*, but upon Lias changing over to their side things became more equal and they managed to notch a point. The Visitors kicked off, but their lines were quickly menaced, Sutter planting the ball almost in the mouth of goal, but the leather passed outside. Soon after McNeill scored the first goal. Mair obtained the next after being stopped once in his attack by the Visitor's goal-keeper; Morriss took the third goal, McNeill, the fourth, Mair the fifth, and Pinckney the sixth. Upon resuming at the change of ends, Lias went over to the Visitors and proved a tower of strength, the ball being much more frequently in the near vicinity of Kenyon's goal. McNeill made the seventh point for Yokohama, and then Walker succeeded in obtaining the only goal for the Visitors, after some very pretty play by Rogers. It having been decided to play an extra ten minutes, the Yokohama team added another goal to their score through the agency of Morriss. Sides:—

FIRES IN YOKOHAMA.

Three fires in Yokohama is the record for the first twenty-four hours of the New Year. The first was discovered about half-past six o'clock on Tuesday morning, by one of the Yokohama Fire Brigade's patrols, upon the premises occupied by Messrs. Sale & Co., at No. 94, Settlement. The Brigade turned out in force with hose and stand-pipes. Arrived at the scene of the outbreak, it was found that a small *momban's* house was on fire, and the flames were attacking the wooden shutters of the main building. The fire was put out within a quarter of an hour, but there can be no doubt that had the Brigade not arrived as quickly as they did, the loss would have exceeded the house just mentioned.

About 6 o'clock on Tuesday morning the second fire occurred at No. 11, Nichome, Horaicho, and a godown was destroyed. At 1.45 on Wednesday morning the alarms were again set ringing. This time the outbreak was situated in Masago-cho, near the fish market. It evidently originated at the fourth house in this street. The wind was blowing strongly at the time, but the Y.F.B. and the police and native brigades managed to get the conflagration under control within an hour, there being a good supply of water handy. Seven houses were destroyed and three partially damaged.

RELIGIOUS NEWS FOR THE LATTER HALF-YEAR.

A good many changes have taken place in the religious world of Japan, observes the *Waseda Bungaku*, in the latter half of 1894. In the first place, as already noted, Buddhism and Christianity appear to be gradually approaching each other in some respects, as indicated by the movements of the Unitarian sect of Christians and the so-called progressive section of Buddhists. The views of the former are embodied in its organ, the *Shukyo*, and those of the latter in the *Bukkyo*. Both sections believe in the compatibility of faith and reason, and aspire to found their religions on the firm basis of rationalism, and both aim at reconciling their creeds to the rationalistic ideas of the generation. The notion that Christianity can be adapted to the Japanese, and that it is not inconsistent with the principle of nationality, has set up a barrier between the pastors of advanced views and those of orthodox principles. In the same way the Buddhists of original and progressive spirit declare that the teachings of Gautama are not pessimistic but embody the principle of activity. The present war with China and the victories achieved by the Japanese have, strange to say, given a practical impetus to these views of Christians and Buddhists. Both assert that the right is on Japan's side. As an instance of this we may mention, says the Waseda magazine, the dismissal of several foreign pastors in the *Friend Kyokai* for having condemned the actions of some Japanese clergymen who joined the Army, in obedience to a demand for their services, as against the principles of humanitarianism, while on the part of the Buddhists Messrs. Ouchi and Koga are never weary of justifying, both in pamphlets and periodicals, the present expedition of Japan against China as a righteous undertaking in the cause of justice. Among the Christians prominent men, such as Messrs. Oishikawa, Honda, Iwamoto, Matsumura, and Harada have established a Society with a view to propagating Christianity outside Japan and endeavouring, *first of* all, to diffuse the teachings of Christ in Korea. On the side of the Buddhists the various sects of Jyodo, Shingen, Nichiren, with Mr. Osu Tetsuzen of the Nishi Hongwan Temple at their head, are eager to bring about the spread of Buddhism in Korea and have despatched many distinguished priests to that country for the purpose. Both Christians and Buddhists appear to hold the view that the course to be pursued in Korea is to cause evangelists to undertake the work of instruction and to make religion and education complementary to each other. Some Buddhists are also anxious to preach to the soldiers and prisoners-of-war, but the Christians seem to entertain doctrinal scruples in the matter. The adherents of both religions are, however, equally earnest in the celebration of religious ceremonies for those who have been killed in battle and in prayers for the success of the Japanese arms. Though endeavouring to extend their influence abroad, they do not neglect to strengthen their foothold at home. The Young Men's Christian Association intends to enlarge the scope of its local churches so as to make them educational and social at the same time, and the Otani Sect of the Hongwan Temple has established five ordinary middle schools in the country. Other changes have taken place, or are about to take place, in connection with Japanese Buddhism. A prominent priest in the Sodo Sect, Mr. Onichi Choan, has announced his intention of founding a new branch called the *Kyusei-kyo* or Salvation Sect. The establishment of a new Buddhist sect is approved of on many sides. Altogether, concludes the *Waseda Bungaku*, the latter half of the past year has been of great activity in the religious circles of Japan.

We may here note what the *Kokumin-no-Tomo* has to say about the latest work of Mr. Yokoi Tokio, a prominent Japanese Christian. The book is entitled "The Problem of Christianity in Japan." The first half, remarks the Tokyo journal, treats of the history of Christianity in Japan, while in the second

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

part the writer gives his views upon that religion. He strongly denounces the old theology. About three years ago Mr. Hanamori Tsurin published a pamphlet called "The present and future of Christianity in Japan." His advanced views started the majority of Japanese Christians and the work met with loud disapproval. Mr. Yokoi goes a step further than Mr. Kanamori. His view is that Christianity should resemble Unitarianism as much as possible. Otherwise it cannot gain a fooling as a religion in Japan.

CHINESE NEWS.

The *North China Daily News* states very positively that "Their Excellencies Chang Ying-huan, ex-Minister to the United States, Spain, and Peru, now Chinese Senior Vice-President of the Board of Revenue, and Shao Yu-lien, ex *Chargé d'Affaires* at St. Petersburg, Governor of Formosa, now transferred to be acting Governor of Hunan, have been appointed Joint Ambassadors to Japan to enquire what terms Japan will demand to bring the present war to an end." That is probably the most correct—though accidentally correct—description of the envoys' purpose, namely, to ask what Japan wants. But such a method of suing will never restore peace. Concerning the route to be taken by the envoys in coming to Japan, we read that Shao Yulien was in Shanghai on December 24th, and Chang was expected to travel overland from Pekin to join him. It is about a month's journey overland, we believe, from Pekin to Shanghai.

The same Journal has the following:—

Owing to the continual drafts of troops which have been sent north from the Yangtze Valley, and the tardiness with which raw levies have been raised, the many towns in that quarter are virtually without protection of any kind. This state of affairs has emboldened the numerous lawless characters always to be found in the neighbourhood of the riverine ports, to band together for the purpose of robbery and violence, the houses of those reputed to be wealthy, and pawnshops having a special attraction for these worthies. Last week an armed band of about three hundred robbers attacked a pawnshop in a small town not far from Hankow. A forcible entry was made into the establishment, the shopmen were bound and gagged, and the robbers succeeded in carrying off money and valuables amounting to upwards of Tls. 10,000. The robbers retired to the hills with their booty, none of the local troops venturing to interfere with them.

Canton has subscribed and forwarded to Pekin 2 million taels out of a contribution of 5 millions that the city is required to make to the war chest.

It is interesting to learn how the Chinese report operations that have lately been occupying our attention here. Our readers remember General Katsura's march from Sui-yen on the 9th of December, the subsequent fight at Tomucheng, and the capture of Hai-cheng. Here is the Chinese manner of stating the case:—

According to despatches recently received from General Sung Ch'ing, the Chinese generalissimo of Manchuria, the country north of Kinchou, trending north-east towards Kaichou (Kai-ping) is now held by General Chang of Têngchou (Chefoo) and General Hsü, whose joint forces number some 12,000 men. On the 13th instant a force of Japanese marching westwards from Hsiuyen (Sui-yen) attacked General Hsü's entrenchments at a place a few miles east of Kaichou. The enemy was finally repulsed with the loss of between 500 or 600 men. The main army under General Sung Ch'ing, recently reinforced by the whole of the Ming division, are now encamped a short distance north of Hai-cheng protecting the road to Liaoyang and Mukden, and Generals Nieh and Lü with some 8,000 men are still at Motienling, threatening Fênghuangch'eng, so as to cut the enemy's communications with Korea.

How on earth General Nieh and Lü, posted on the top of a pass some 60 miles from Fenghwan can be "threatening" that town, is a riddle that the Chinese may be left to solve. But in truth the knowledge of the war possessed by the Chinese public is very curious. The Kiukiang correspondent of the Tsungli Shang Pao Shanghai paper writes:—

The Chinaman is one of the most wonderful creatures that exist. His general make up passes the wit of man to describe. On the one hand he is matter-of-fact to a degree and concerned only with his present temporalities, and the present war shows he has another side and that he is blessed with a magnificent (!) imagination. The overwhelming victories won by Celestial troops over the despised dwarfs have only served to stimulate his powers. In this city anyone walking along the street will see booksellers plying their trade in a way that would put English and American newsboys to shame. Armed with a bundle of illustrated cartoons and a gong, he attracts attention by shouting "Great victories over the foreigners—the French utterly defeated—sketches by the eye-witnesses," etc., etc. It appears that on the 8th day of the present moon the French fought a great battle with the Chinese and were repulsed on sea and land, losing 13 men-of-war in the naval action and so on. All the news comes as good cheer for the New Year! But where do all these lies, so well defined as to detail, come from? That the Chinese after suffering a few minor defeats have startled the world by their feats of arms the natives believe, and so do foreigners, but foreigners and natives unfortunately look at these same "feats of arms" from different standpoints.

Your correspondent a few days ago asked an intelligent native what was the latest news from the north. He replied, with what Mark Twain would call "childlike confidence," "Oh, the Russians have been overcome in a series of engagements by our troops and have retreated beyond the border!"

Generals Chang Kuei-t'i, Cheng Yun-ho, and Chang Kuangtsai, upon whom the responsibility of losing Port Arthur fell, have been leniently treated by the Emperor of China in deference to representations by the Viceroy Li. They managed to escape with the remnants of their troops to the outposts of the army under Sung, or to Kai-ping, where General Chang Kaoyuan commands. An Imperial Decree, issued on the 22nd of December, says:—

It cannot be denied but that the Generals responsible for the loss of Port Arthur are deserving of the most severe punishments. We are, however, willing to stretch a point since the officers referred to in Li Hung-chang's memorial have been trying their best to atone for their past offences. We therefore simply punish Chiang Kuei-t'i, Ch'eng Yün-ho, and Chang Kuang-ts'ai by depriving them of rank and titles, and allow them to serve under Sung Ch'ing, for the present, in order to give them a chance to redeem their characters. If, however, they be indeed so lost to the feeling of shame as to show cowardice in the future, then Sung Ch'ing is hereby commanded, without the necessity of any further reference to us, to behead these three men at once in accordance with martial law."

The *North China Daily News* says:—

The Chinese authorities have now in their possession duplicated copies of the likenesses of one hundred and eighty Japanese alleged to be the emissaries of their government now scattered over the maritime coast towns of China and the Yangtze littoral. These likenesses contain the faces only of the subjects and are a quarter of an inch square attached to each other by some photographic process so as to form one sheet, fourteen inches long and about a foot broad. A few of those unmounted sheets were found upon the persons of certain spies captured last November by the native authorities, and having been reproduced are now being sent out broadcast to the civil and military officials of this empire, in order to enable them to identify any strangers or suspicious characters who may fall into the hands of the mandarins. These photographs are numbered and were acknowledged by the captive emissaries to have been given them by the Japanese Intelligence Department for the purpose of identifying one another when occasion arose.

The vernacular press in China is doing everything in its power to induce the Government to prolong the war. It interprets Japan's war loans as evidence that she is seriously embarrassed for funds, and it alleges that she can not find men to send abroad, where as China has millions of taels and tens of thousands of troops always at command. The Pekin authorities are assured that if they only hold out, Japan must soon be found suing for peace.

Here is an example of China's method of raising a war loan:—"Orders have been received from the high provincial authorities at Canton, [illegible] your intention to introduce [illegible] reforms

from Pekin, instructing them to collect Tls. 5,000 from each of the first-class pawnbroking establishments in Kuangtung, and Tls. 3,000 each from the smaller establishments of a similar nature, of which there are no fewer than 1,400 in the province." The pawnbrokers doubtless belong to the peace party.

The Wunieh correspondent of the *North China Daily News*, writing on the 24th of December, says that there was a panic in that city, the advent of the Japanese being daily expected. People were leaving the place in great numbers.

So firm a hold have these mere reports over the people that it has affected them in that which is dearest to the heart of most Chinamen—their pockets. The reason the Japanese are coming here is that they wish to seize the large stocks of rice of which there are always large quantities on hand and especially at this time of the year. Consequently, this staple of life has taken a drop, that in a foreign market would prove fatal to many. The day before yesterday the best quality of polished rice sold for $3.23 per picul. At 4 o'clock yesterday it was varying from $2 50 to $2.72, and is to-day equally unstable. Pork in the stalls has gone down more than 2 cents per pound in 18 hours. While as for ducks, chickens, game, etc., for which this is usually a splendid market, no one wants them, and of course they are, even in the natives eyes, ridiculously cheap. In fact, practically a financial panic prevails, for which there is no reason whatever. Banks refuse to acknowledge drafts for large sums, though on the best security, while the percentage on those that are paid is very high. Articles that a few days since would be taken in the pawnshops at fair prices are now not wanted at all, and those that are taken are at only about one-third the usual price. Gold yesterday morning was sold readily for $50 per ounce, but to day can scarcely be had at $66. Raw silk has not escaped. It is to-day from 1½ cents to 3 cents per lb. cheaper than yesterday morning. On the other hand, unpolished rice has a tax now of 30 *cash* per picul—whereas before there was none. Salt—a government monopoly—has gone up, and so, looking at the whole case, it is a hurly-burly as complete as might be.

But I am glad to say that reports against foreigners in general have died out almost. And while the upper classes are in panic the masses are standing by in comparative indifference, many saying that if the Japanese do come they will be safe. In fact, those who should naturally control and lead seem to have lost their heads entirely.

The following Imperial Decree has been published in Pekin:—

The missionary chapels and associations at the capital have been in existence for many years, and the members thereof have done their work quietly and unobtrusively, hence it is but right that they should be protected and looked after in accordance with our treaties with their respective countries. As we are now plunged in a war with the Eastern Wojen (Japanese) it is also necessary to make it known that the war has nothing whatever to do with the various countries of the West. But owing to the fact that on this particular year there will be larger crowds than usual from without entering the capital to witness the Imperial birthday celebrations, it is to be feared that the ignorant might be filled with suspicion without just cause, and, moreover, rowdy characters might take it into their heads to create disturbances on the slightest pretence, hence it is but right that proper precautions be taken to prevent such possibilities. In view of this, therefore, we hereby instruct the Commander of the Peking Gendarmerie and the Police Censors to issue instructions to their subordinates to be diligent in their patrolling duties and take extra precautionary measures to protect the missionaries in question. Should any lawless characters trump up pretences to seek a quarrel with the former, full permission is now granted to arrest the disturbers of the peace and submit them to severe punishment. Any laxity, indeed, will not be overlooked by us.

We take the following from the *North China Daily News*:—

The following extraordinary edict has been kindly furnished us as coming from official circles in Pekin:—

Wêng T'ung-ho, Li Hung-tsao, and Wên T'ung-shih memorialised the Emperor lately suggesting the removal of the capital westward. In reply the young Emperor is said to have issued an edict, the purport of which was this:—When we first took charge of the affairs of the empire it

Digitized by Google UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

Suddenly and unexpectedly the Japanese have broken the peace, taken away our Korean dependency and taken possession of the borders of our empire. We have sent our generals with their armies to punish the Japanese and drive them away, but we never intended to disturb the peace of the Japanese empire. This our ancestors and foreign nations all know. Little did we expect that the generals were incompetent and the soldiers insubordinate, so that the Japanese gained victory after victory and place after place till our ancestors in their very graves are disturbed. This is because we are unworthy and have employed unfit men. If, however, the worst came and the Japanese got the sacred altars, then there remains nothing for us but to perish with them. When that time comes may you reverently escort the Empress-Dowager westwards and elect a worthy man to be the Emperor, and to look after the sacred altars of our ancestors and wipe off this disgrace.

It appears that this edict was issued to those within the Palace precincts nearly a month ago, but has only just been known outside.

We (*Japan Mail*) venture to doubt whether any such Decree as the above was issued.

The Chinese do not fight well or manage warlike affairs well, but they seem, nevertheless, to entertain a strong contempt for cowards and incompetents, as the following extract from the leading Shanghai journal shows:—

The remains of the late Lin T'ai-tsang, Senior Commodore of the Peiyang fleet, and captain of the ironclad *Chenyuen*, who committed suicide owing to the accident to his ship when entering Weihai wei, arrived at Foochow, the native city of the deceased, on the 17th of November. The funeral was far from what would have happened if the deceased had died with his face to the enemy, many of the inhabitants of the city even going so far as to spit at the coffin. According to despatches received recently from Foochow this was politeness compared with what took place when the remains of the late Fong Peh-kien, the Captain of the *Tsiyuen*, executed for cowardice at the Yaloo naval battle, were taken to their last resting place the other day. Stones were thrown at the funeral procession and attempts were made by the mob to smash the coffin, the people declaring that such cowards had no right to be buried in their town, etc. After considerable difficulty the coffin was rescued and taken back to the temple where it had been placed since its arrival from the North a month ago. A few days ago another funeral took place under cover of the darkness and the remains of the unfortunate Captain were quietly buried in a special plot of ground.

AMERICAN NEWS.

The Texas and Pacific Railroad has been the scene of another train robbery, the thieves securing $140,000 in money gold bullion, which was being carried from San Francisco to Washington and Texas, and Texas Pacific agents' remittances.

The robbery is quite remarkable in one respect —the messenger's iron safe was thrown from the train and carried away.

The train is due here at 6.05 o'clock, and when nearing Mary's Creek it was brought to a sudden standstill by a danger signal on the trestle. The instant the train came to a stop the robbers sprang up from the bushes at the side of the track near the engine and jumped into the cab. They covered the engineer and fireman with their revolvers and ordered that the train be banked up. This was done.

The robbers ordered the fireman to burst in the front door of the express car. The fireman refused to obey at first, but being threatened with death he finally consented, bursting the door in with a pick. The largest of the men stood guard over the fireman and engineer while the other two went into the express car.

Fort Worth is the end of the express run, and all the safes are usually opened when nearing the city. The robbers, it seems, knew this, and while one covered the messenger the other went through the safes. When the robbers had finished their work they mounted their horses, told the engineer he could go on, and then rode off leisurely in a north westerly direction.

The Nicaragua trouble continues to develop new complications. Its latest feature is that President Zelaya's officials have ignored the treaty with Great Britain and have named General Cabeza to be Governor of Mosquito, his brother being appointed Governor of Corn Island. Cabeza, upon assuming office, issued formal invitations to a State banquet to the officers of H.M.S. *Mohawk* and to the officers of the U.S.S. *Marblehead*. The former at once declined, but the latter accepted and were welcomed with a salute of 21 guns. One of Zelaya's most recent acts has been the seizure of property belonging to the Moravian missionaries in Mosquito. This is expected to lead to serious complications with Great Britain.

The Moravian mission is a large and influential one. The Bishop and nearly thirty clergy have conducted a mission among the Mosquito and Sarna Indians. At the time they purchased their holdings from the Government of Mosquito it was with the full approval of Great Britain. The deeds were duly registered in London. Great Britain, it is reported, has promised them protection and full redress.

Nicaragua is practically under a dictatorship. Under the new condition formulated by General Zelaya, the President, any one denounced by the Government of Nicaragua as unfriendly to it may be fined $50,000 or have his property confiscated.

The members of the National Live Stock Exchange are taking active measures to secure redress against the prohibitive legislation of foreign countries, especially Germany, in the matter of American cattle. They are sending a memorial to Congress praying that steps be taken to placate the foreign countries in question. Delegates of the Exchange recently met at St. Louis and adopted a form of memorial concerning which the following paragraph conveys full information:—

The presentation of the paper was preceded by an explanation of its purpose, viz.:—"The obtaining of relief through Congress from the unfortunate embargo placed upon a few American products, namely live stock, dressed beef, and hog products on account of duties imposed by our recent tariff act upon raw and refined sugars from Germany, France, Belgium, Denmark and Austria, thus practically closing these markets to us, a continuance of which means disaster to the farming and live-stock interests of this country."

The paper goes on:—"From 1849 to a very recent date we have enjoyed a large business with those countries, particularly Germany and France. This was undoubtedly because of the fact that in the tariff no duty was imposed by the United States upon raw sugar. Under those conditions these countries could well afford to adapt their farm lands and their efforts to raising beets for sugar production and to depend almost entirely upon us for their animal food supply.

"Heretofore we have been enabled to send our products to them while they in turn sent raw and refined sugar to the United States. The recent placing of a tariff on raw sugar has destroyed this commerce, for it is an unquestionable fact that the action of these countries is wholly and entirely due to the attitude of our tariff measures in relation to the exportation of sugars, and it must be conceded that our live stock and dressed beef shipments will continue to suffer so long as the present laws on sugar are in force.

"The excuse which is given by these foreign countries for their action in excluding our animal products is on account of the Texas fever, but this is understood to be a mere subterfuge. From 1890, when the exchange of commerce went into effect, up to a recent date, these countries had not discovered an unhealthy animal among all the cargoes which we have exported nor a diseased piece of meat. Indeed, the rigid inspection in this country which is given to all such products before shipment affords sufficient guarantee of the quality and condition of all our animals and products, especially when coupled with the fact that the best grades of cattle and dressed beef are shipped abroad. In fact, we do not export Texas cattle.

"The motive of the foreign countries mentioned is found in the fact of our placing this obnoxious tax on their raw and refined sugars, and should this be removed or modified at once we know that there would be no further fault found with our hogs.

"We urge immediate action on the part of Congress toward repealing the duty on raw sugar and modifying that on refined, thus restoring our pleasant commercial relations with these countries. Also the farming districts of this country will be very greatly crippled and our live stock interests very badly injured, as our home production is not sufficient to absorb more than a small percentage annually of what we raise. Millions of dollars' worth of cattle and hogs and their products have been handled annually from this country to Germany and other countries, and unless the existing embargo is raised from our cattle, dressed beef, and hog products, the loss of this outlet will be very great and cause irreparable injury to us.

An extraordinary charge has been preferred by an old man, formerly a clerk in the New York Controller's Office. He says in effect that 15 million dollars' worth of city bonds have been sold, the proceeds appropriated and duplicate bonds forged. The accusation sounds incredible, but it is apparently viewed seriously for a committee has been organized to investigate it. The informant's name is Matthew Jephson O'Rourke who is described as an old, vindictive, testy person.

We read in the American journals of an extraordinary use of the portable telephone. A certain Dr. Janns of Chicago had been blackmailed for a long time by Attorney Toas. There figured in the affair a letter, the writing of which Janns was anxious to induce Toas to confess. The Attorney, though frank enough about the matter when Janns only was present, kept his mouth close sealed at other times. Janns accordingly fitted into his hat a small telephone connecting with a large instrument in a barrister's office at which a detective and a stenographer were stationed. Janns then carried his mechanical hat into the blackmailer's room, and the latter, seeing no witnesses present readily made fatal admissions that were carefully listened to by the detective and copied by the stenographer. That is the story. We don't understand it. To pray into one's own hat is an old custom, but to converse into another man's is a novelty.

A telegram from Washington dated December 6th says:—

The Senate in executive session to-day referred the new Japanese commercial treaty to the Committee on Foreign Relations without reading. It is understood that there will be no opposition to this treaty by the Pacific Coast Senators for race reasons.

President Cleveland has reconsidered his original decision and has agreed that an American Delegate shall accompany the Turkish Commission appointed to enquire into the Armenian outrages. Turkey was naturally anxious that some Christian Power should be represented on the Commission since its finding would otherwise carry comparatively little weight, and as the European States were all more or less tainted with suspicion of partiality, the Porte turned to America. What further occurred is best described by quoting Secretary Gresham's own words:—

"The United States having declined to join in the committee, the Porte was obliged to yield to the extent of permitting the European governments to name commissioners. Up to this point the Government has been in doubt as to the reality of the reported outrages.

"The Turkish Government had declared positively that the Armenian affair was nothing but a rebellion, and that it had been suppressed in a legitimate manner. There had been a battle, some sixty or seventy Turkish soldiers had been killed, and the rebels had lost 500 or 600 men.

"But at this juncture came reports from trusted agents discrediting official reports of the Turkish Government and affording reason for the belief that the Armenians had been terribly outraged.

"Then Great Britain appealed to the United States, in the interest of justice and to insure a report above suspicion and above contravention by the Turks themselves, to appoint a member of the committee of inquiry. This appeal turned the tide and induced the President to reconsider his first decision.

"But to any appearance of entanglement with other Powers which might in the end result in making the United States an active party to a controversy with which it is contended we have properly nothing to do, it was decided that the American representative should, while accompanying the committee, act with absolute independence, should hear what he could in Armenia, and instead of joining in the conclusions of the committee should make a separate report to the State Department."

Trouble of a serious nature threatens between Mexico and Guatemala.

City of Mexico, December 7.—The last reports from the Guatemalan frontier state that a Mexican Colonel, a member of the staff of General Lullane, has been assassinated by the Guatemalans, and it is reported that a company of 170 Mexicans had a skirmish with 400

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

Guatemalan guerrillas, in which two Mexican soldiers were killed. This particular body of mounted Guatemalans is reported to be still hovering about the vicinity of the Mexican troops, but it is believed that after making the attack they retired to the Guatemalan side of the international line.

The Connecticut Supreme Court has delivered a judgment that strikes at the root of one of the oldest tenets of British justice. It has hitherto been regarded as an action of jurisprudence that a person accused of a crime cannot be put in jeopardy a second time after having been once acquitted by a jury. According to the view of the Connecticut Supreme Court, however, this principle was based entirely upon the great cruelty of the old English common law: a man having once escaped the clutches of such a law, it was universally felt that he ought not to be again brought within its grasp, But the law having now been greatly modified, the Connecticut tribunal thinks that a criminal ought not to benefit by the former practice which is obviously opposed to the satisfaction of justice. The Court accordingly ordered the re-trial of Dr. J. E. Lee who had been acquitted of murder by a jury.

The prospects of the Nicaragua Canal are distinctly brighter. Senator Morgan has introduced a Bill for its construction, and "it is reported from the House of Representatives that the entire Committee on Interstate and Foreign Commerce is favourable to the canal, and that Speaker Crisp, who controls the Committee on Rules, also favours it, and therefore that no delay need be apprehended when the bill comes up in the lower house."

The latest attempt to restore royalism in Hawaii proved an utter fiasco. Its details have been divulged by one Katzer, a young Austrian, who up to August last was a corporal and battery clerk of Light Battery F., Fifth United States Artillery. His term of service having expired, Katzer sailed for Honolulu, and on the voyage seems to have offered himself in a general sort of way, in the capacity of fighting plotter, to the commissioners sent by Queen Liliuokalani to Washington, who happened to be on board. It was arranged that an attempt should be made to seize the palace. The silliest feature of the whole affair is a pretence that in the event of the conspirators' being able to obtain possession of the palace, now a barracks, a force of blue-jackets and marines would be landed from H.B.M.S. *Hyacinth* to assist them, and under the order of Acting Commissioner, Consul-General Hawes—our old friend, Mr. A. J. Hawes—would be stationed about the city, ostensibly for the protection of British subjects and their property but really to render moral assistance to the ex-Queen and her adherents. That of course is all nonsense. The rest of the story may be learned from the following:—

The plan was to make the assault at 9.45 p.m., the hour when the native band usually plays at the hotel. The plotters counted on about 250 men, half armed with rifles and revolvers and the rest with rifles. A few picked men, uniformed as mounted policemen, were to gain entrance to the palace grounds from Richards-street on an order purporting to come from Marshal Hitchcock. This part of the scheme, it is said, was tested by Katzer and found on repeated trials to work easily. These men were to throw open the gates after "silencing" the men on guard. A hundred men carrying revolvers were to rush up the main drive—forty to capture the cannon on the porch, and sixty to seize the gun-room in the basement, and then engage the soldiers in a hand to-hand fight as they tumbled out of their quarters. Then the rabble gathered for the evening concert was to rush in and add to the confusion.

Meanwhile, the riflemen were to seize and hold the sixty-eight guard posts, and five details of three men each, armed with pistols, were to capture the Cabinet Ministers in their houses, while a party of twenty seized the telephone stations and then the police station, if possible.

Katzer's plan was approved and adopted, and he was assigned to the duty of leading the attack on the palace. The nearest that it came to execution was on the night of October 20th, but the Royalists, according to Katzer, lacked the "sand." He and Nolan could find only a dozen men with nerve enough to be fully trusted, so the attack was not made, and after a week or two of waiting the plotters, finding that they were likely to be [illegible] arrested, left without the formality of a public farewell.

"Commissioner Hawes," said Katzer, "did not talk to me in person, but through Rickard. It was to the latter that he promised the indirect support of marines from the *Hyacinth*, and the promise was a cautious one, made in reply to a hypothetical question as to what would be done in case case of an uprising. It was generally understood among the Royalists that the representative of England, which had not then recognized the republic, would take advantage of any outbreak to land troops and help Liliuokalani re-establish her rule."

Admiral Walker, in his report to the Navy Department on Hawaii, advocates the annexation of the islands. He does not express that opinion in so many words, but his whole argument tends in that direction. Not the least interesting part of the report describes the Admiral's views as to England's action in Hawaii:

The report deals more especially with the political situation in Hawaii, and the subject is treated in the thorough manner that might be expected in an important document from an officer of Admiral Walker's ability and experience. Particular attention is given to the past and present foreign influences at work in the Islands against the interests of the United States, and to the relations and duty of this country in Hawaii.

What England has tried to accomplish, first through Consul-General Wodehouse and afterward through his successor, Mr. Hawes, in the interest of Liliuokalani, is fully set forth in the report. It is shown that Mr. Wodehouse arrayed himself against the annexationists from the start and that he persistently adhered to this line of action. Mr. Wodehouse kept up his opposition to the annexationists even after the ex-Queen was dethroned and the Provisional Government was established. He was a partner in all the intrigues looking to the restoration of the dissolute monarch even after he had been formerly accredited to Mr. Dole's Government. Evidences of this fact are set forth in the report. The impression is conveyed that England's Minister was prepared to go to practically any extreme in furthering the restoration of the ex-Queen and thereby benefiting his own Government.

Mr. Hawes had succeeded Mr. Wodehouse shortly before Admiral Walker reached Honolulu. In his report the Admiral removes all doubt as to the belief that Mr. Wodehouse had been working with a distinct purpose, and that his course was in line with the policy of his superiors in London.

Here is what the *San Francisco Chronicle* has to say about the revised Treaty between the United States and Japan:—

The Cleveland Administration is taking to itself great credit for the negotiation of a new treaty with Japan, though it is known to every person of average intelligence that Japan has stood ready for a number of years to readjust its relations with the United States on terms, practically, of our own dictation, or, more properly, suggestion. Japan has long regarded this country as its friend par excellence, and we could have had anything in reason that we asked. The new treaty, as it goes to the Senate for approval, is distinctly not to the advantage of this country, but this is not to be understood as meaning that it embraces any special element of unfairness to this country. The point of objection, if any there be, is that we have not been granted special privileges to which, under our amicable relations with Japan, we were fairly entitled.

Taken as a whole, the treaty is fair and just to both the contracting parties. It is true that Article 2 contains the "most favoured nation" clause, but the same article provides that the stipulations therein contained do not in any way affect the laws, ordinances, and regulations with regard to trade, immigration of labourers, police and public security which are in force or which may hereafter be enacted by either of the two countries; so if the United States shall deem it necessary or expedient to restrict Japanese immigration it will be at perfect liberty so to do.

The consular courts and courts of mixed jurisdiction which have prevailed in Japan under former treaties are done away with, and wisely. They have outlived their usefulness, since Japan has become sufficiently civilized to conduct judicial proceedings in accordance with Occidental ideas of jurisprudence. Most of the Judges of the Japanese courts at the present day have been educated abroad and have learned and embraced the principles of law and justice as understood in Europe and America. One who studies this treaty carefully will find little in it to condemn and much to commend.

Mr. James Creelman's attempt to convict Mr. de Guerville of a plot to bring about his murder—for that is the sensational form that the affair now takes—elicits the following sympathetic remarks from the *San Francisco Chronicle*:—

The story told in a morning contemporary of the plot against the life of James Creelman, an American war correspondent in Korea, does not seem credible. No newspaper man would conspire against the life of a comrade, because he would know that his offence could not remain hidden, and that the knowledge of it would blacklist him in his profession from the Atlantic to the Pacific. It may be that Mr. Creelman is honest in his belief that he was placed in grave peril by a comrade, but the public will look upon the story with doubt, especially since it has leaked out that Creelman was taking his ease in his Yokohama hotel when he claimed to be on the battlefield of Ping Yang. A man with so little conscience as to represent that he was at the front with the victorious Japanese army when in reality he had not left his comfortable quarters in Yokohama cannot be trusted when he comes to speak of his personal adventures. What made Forbes, McGahan, Millet and others great war correspondents was their truthfulness fully as much as their daring and endurance. If they had been given to lying or false pretences they would never have reached the front rank of their profession.

We take the following from an American exchange:—

Washington, December 12th.—The following statement was issued from the Japanese Legation to-day:—"The Japanese Minister expresses the strongest disbelief in the reports of atrocities alleged to have been committed by the Japanese troops at Port Arthur. He does not hesitate to denounce as unqualifiedly false the statement contained in one account telegraphed from Yokohama that there was an unrestrained reign of murder at Port Arthur for three days after its capture, and that practically all the inhabitants were butchered in cold blood.

"The reputation of Marshal Oyama, whose orders to his troops against excesses of any kind were of the strictest nature, and the discipline maintained in the Japanese army, in his opinion, renders such a state of things impossible. He believes, therefore, that these reports are exaggerated and thinks that the official report of what has really happened, which will certainly be made public, will prove them to be so. The Legation has as yet no definite advices upon the subject beyond a report that a number of Japanese labourers, who had been armed with swords for their own protection, entered the town during the battle and were guilty of some excesses. After the fights at Chinchow and Talien-wan, the Japanese dead were found decapitated and otherwise horribly mutilated. It is possible that the Japanese labourers, inflamed by these atrocities and intoxicated with the liquor found in the town, may have done the things alleged while the fight was going on, but the officials at the Legation report their disbelief, and are certain that the culprits will be summarily and quickly dealt with.

"The circumstances attending the capture of Port Arthur show that something of this kind might easily have happened. It was not until late on the afternoon of November 21st that the right wing of the Japanese army entered the town. Some of the forts forming the coast defence still held out and the battle practically continued all night and until 10 o'clock the next morning. It may have been that during this interval excesses were committed by camp followers, but it is not believed by the Japanese Minister that they could possibly have been of the nature or of the extent described in the cablegrams."

DOCUMENTS SEIZED IN PORT ARTHUR.

The following documents from Admiral Ting, Kung, Superintendent of the Port Arthur Dockyards to Earl Li and to Taotai Shing of Tientsin, were seized by the Japanese when Port Arthur fell into their hands:—

DESPATCH TO THE VICEROY LI. (NO DATE.)

Of the ships damaged in the battle of the Yellow Sea, the *Ping-yuen*, *Kwang-ping*, *Chi-yuen*, and *Ching-yuen* suffered least, and it is expected that by attending to their repairs with the utmost promptitude, they will be ready for use in about two weeks. The *Ting-yuen* and *Chen-yuen* had their propellers, batteries, anchor gear, and so forth injured. It will therefore be impossible to complete their repairs in a thorough manner before

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

the end of the month after next. The *Lai-yuen's* stern is almost broken in half, her store-rooms are burnt, and many of her iron beams bent by heat. She can not be ready in less than two months. In short, there is not a single ship seaworthy at present.

DESPATCH TO THE VICEROY LI. (NO DATE.)

The battle fought off Ta-tung lasted three hours and was more terrible than any to be found in the Naval records even of Western countries. The ships of both sides were considerably damaged, especially those of the enemy. The enemy retired first, so that victory may more or less be said to have rested with us. Had not our rear become disordered, the entire victory would have been ours. Rewards and punishments must be dealt out with strict justice in war. As those who ran away in a craven manner have received the treatment they deserved, it is to be highly desired that those who rendered distinguished services during the fight be suitably rewarded.

TELEGRAPHIC MESSAGE AS TO THE PERIOD OF COMPLETION OF THE REPAIRS OF THE "CHI-YUEN," "KWANG-PING," AND "PING-YUEN." (NO DATE.)

It is needless to say that though it is impossible to check the enemy's movements positively, it is important to defend the Port from the outside so as to impress on the enemy the fact that we are not cowards enough to be entirely at his mercy. The purport of the Imperial order that officers and mechanics should attend promptly to the work of reparation on pain of being severely punished, will be borne in mind by everyone connected with the repairs of the ships. The refusal of Chili to sell her warships to China in spite of the preliminary agreement having been made, is probably due to Japan's instigation. Admiral Ting is recovering from his wound, &c., &c.

DESPATCH TO TAOTAI SHING. (NO DATE.)

In reply to yesterday's telegram urging that the repairs of the *Ching-yuen*, *Chi-yuen*, *Ting-yuen*, and *Kwang-ping* be carried out with the utmost promptitude so that they may be enabled to put out to sea and engage in the defence of the coast, we now state that the *Kwang ping* will be in readiness by the 2nd, the *Ping-yuen* by the 3rd, the *Chi-yuen* and *Ching yuen* by the middle, and the *Ting yuen* and *Chen-yuen* by the end, of the month. The *Lai-yuen* having been seriously damaged, her repairs will not be completed till the middle of October. We are of opinion that as our torpedo-boats and other important accessories are not sufficient, it will be impossible to cooperate with the land forces unless all the ships now undergoing repairs are in proper order. The six warships would be ready to engage the enemy provided his strength were not greatly superior. Of course they will be obliged to stand against the enemy's fire, however disadvantageous the odds may be to them, but as the enemy's ships are of greater velocity, our vessels will be subjected to great hardships whether victorious or otherwise. The steel bottoms and steel belts of the batteries of the *Ching-yuen* and *Chi-yuen* are entirely destroyed, the shells for the *Ping-yuen* have not yet arrived, and for the three quick-firing guns of the *Kwang-ping* there are only 30 rounds of ammunition left. Moreover, the guns of the various ships are more or less damaged, and only a few of them can be used. We think that in order to make good this loss, no better plan can be pursued than to purchase two more ironclads and eight cruisers. The law of neutrality stands in the way, but should cost be disregarded and men freely bribed with money, it might not be difficult to procure ships. The addition of those vessels to our Navy would make it possible for us to be victorious over the enemy sooner or later. The sea being now closed, so to say, to our Navy, even if our Army be victorious, the enemy's Squadron will doubtless attempt to descend upon the ports along the coast and harrass the defenders. As the Viceroy must be filled with deep anxiety, any unnecessary particulars likely to vex him will not be mentioned.

The letter concludes with a petition to the Taotai to exert himself in order that the suggestion about the purchase of additional ships should be carried into effect.

DESPATCH TO TAOTAI SHING. (NO DATE.)

We have received yesterday's message enjoining that the damaged vessels be promptly repaired and put to sea for purposes of defence. The repairs are being attended to night and day without neglect. The steel bottoms and belts of the batteries of the *Ching-yuen* and *Chi-yuen* are in a very bad condition, and unless they are repaired it will not be possible to use their guns. The shells for the *Ping-yuen* have not yet arrived, while there are only 60 rounds of ammunition left for the three quick firing guns of the *Kwang ping*. It is useless to keep up a contest with the enemy. Were the repairs of the four ships completed, they would be able also [illegible] sea and undertake the defence of the coast, but their speed being far inferior to that of their antagonists, it is impossible to hope for victory. Moreover, as the enemy excels in daring exploits we are debarred from assuming the offensive and giving battle to him, for it is apparent that if a challenge were given and a fight ensued the result would simply be that we should hand over our ships to the foe. From the first our Navy was far from strong, and it is now still weaker on account of having lost four ships by burning, sinking, and stranding. It is true that we have still the *Ting yuen*, *Chen-yuen*, *Lai-yuen*, *Ping-yuen*, *Chi yuen*, *Ching-yuen* and a few others, but of these the *Ping-yuen* is extremely slow in her movements, while the repairs of the *Lai-yuen* will not be completed till the middle of October. The two guns on each ship are very badly injured. The loss of one or two cruisers at this juncture would be a grave calamity. I thought at first that as soon as my wound was healed I should resume my duties on board, and as soon as all the ships were repaired, would try another decisive engagement with the enemy, no matter at what odds, with the idea that the obligations owed by me and my colleagues to our country would only be fulfilled by our sinking to the bottom with our ships. Upon calmer reflection, however, I see that such a desperate venture would not benefit China in any way. Japan will get next year two iron-clads of 10,000 tons each. It is necessary therefore that China should procure by some means or other four more ships, two at least of which should be a grade higher than Japan's new vessels. China should also procure 8 additional first-class cruisers of greater velocity, if possible, than the *Yoshino*. Should their speed be slow, the mere addition of three or four ships would do no good to the defences of the country.

The letter then urges that sanction be obtained from the Emperor and the project carried promptly, for which purpose the necessary funds should be raised either at home or abroad.

SILVER.

It will interest our readers to examine the following extracts from American journals (reproduced by the *Literary Digest*) in connection with the defeat of Congressman Bland, the great champion of silver in the United States:—

THE LOGIC OF EVENTS AGAINST SILVER.

"It [the election] settles the question in favour of the single standard, at least until the nations of the world agree upon a ratio for the free coinage of the two precious metals. . . .

"Our farmers do not want to take pay for their cattle, hogs, corn, wheat, oats, butter, etc., in dollars coined from fifty cents' worth of silver. Our working men do not want their wages paid in silver dollars freely coined. Those who are almost hopelessly in debt may desire silver-coinage in order to lighten the burden; but those who depend on the progress of business and the development of industry for prosperity do not want conditions unsettled by opening the mints for the coinage into dollars of silver bullion worth only fifty cents in the markets of the world. This will be unpalatable to many earnest and worthy men, but the logic of events has decided the day against them."—*The News* (*Rep.*) *Des Moines.*

SILVER COMING TO THE FRONT.

"The silver question now comes to the front. . . .

"The Republican Party will neglect this duty at its peril. If it shall hesitate and doubt and consider, there is something like certainty that the Democratic Party will seize the opportunity and raise the standard of bimetallism. Let Republicans observe the condition of popular feeling in the West and the South, and estimate the consequences to them if their party shall be forced to assume the championship of British gold monometallism. The Democrats, absolutely without fixed principles of any kind, will be eager to drop the Free Trade cause which brought them to defeat, and to take up a silver cause which has high promise of victory. The time for Republican decision is the present time. Let the question be presented fairly to the Nation so that the matter be fairly understood. Let the leaders of the party and the influential newspapers proclaim without fear the truth concerning which they have been shuffling and evasive, and let us have before the year closes a positive and authoritative declaration that the Republican Party stands for the quick remonetization of silver by any safe means that are available."—*The Manufacturer* (*Rep.*), *Philadelphia.*

SILVER NOT SNOWED UNDER FOR GOOD.

"It is a poor idea, indeed, that cannot manage to gather some comfort to itself out of such a mass of election returns as were precipitated on the country last week. But we fear we must [illegible] notice as particularly silly the conclusion of *The New York Evening Post*, *The Financial Chronicle*, and other papers that the silver movement was snowed under for good and all. There is not the slightest evidence anywhere to show this, we are sorry to say. Mr. Bland was beaten, to be sure. But so was Mr. Wilson, anti-silver; and so were Mr. Springer, anti-silver; and so were Bynum of Indiana, Johnson and Outhwaite of Ohio, and a whole long list of Democrats in other States who voted in the House to repeal the Silver Act. We might with a good deal more reason conclude from this that the people were trying to punish those responsible for the repeal of the Sherman Law.

"Equally inconclusive is the argument built up on the fact that the Ohio Democrats declared for free silver and were utterly annihilated; while the California Republicans went the same way and were also beaten. This would prove absolutely nothing, even did we fail to take into view the facts that the railroad issue turned the scale in California, and that the Republicans of Ohio declared in favour of a free silver and customs-union with some other nations. The Republicans of Pennsylvania declared for a $40 per capita currency—which was worse than any free silver demand—and scored the biggest victory of all. Does it follow that the country wants that monetary policy adopted? The Kansas Republicans spoke for free silver and were victorious. The Colorado and South Dakota and Michigan Republicans did the same and swept all three States. It would be as reasonable to conclude from this that the whole country was hot for the remonetization of the white metal. Furthermore, throughout the South, where the Democrats saved most of the pieces, the anti-silver policy of the Administration has been most strongly antagonized by the Democracy.

"What the mind of the majority of the people is toward this question of silver still remain to be determined."—*The Republican* (*Ind.*), *Springfield.*

THE REPUBLICANS MUST RESTORE SILVER.

"It is the duty of the Republican Party to anticipate a complete victory in 1896, and to be ready to make prompt and good use of the power that will then be put in its hands. It is time at once to begin in the national forum the shaping of the policy that shall bring salvation to the currency. The financial issue forces itself to the front and cannot be thrust aside. The people expect the Republicans in Congress to settle it. They must not be disappointed. The fact that Grover Cleveland still hangs like a millstone on the neck of reform does not alter the duty of the Republicans. It is for them to give the country thoroughly to understand that Cleveland is the only obstacle to the rehabilitation of silver."—*The Journal* (*Rep*), *Detroit.*

SILVER PLAYED A SMALL PART.

"The silver issue played some small part in the Congressional canvass, and was mentioned and then by speakers who were expatiating in general on Republicanism or Democracy, but it can hardly be said that the result turned on this point. We presume that the same is true in other States, with this qualification, that the Republican Party has a reputation for its devotion to the principles of sound currency, which must have contributed its share to the swelling tide of Republican popularity."—*The Bee* (*Ind. Rep*), *Omaha.*

"The recent elections, especially those in the South and the West, were as much a repudiation of the Cleveland currency-policy as of the Cleveland Tariff policy. The gold loan caps the climax of the Administration's unpopular policies. Congress will perform a great national service by declaring, in the people's name, that the Administration's financial programme has been vetoed at the polls and will be reserved at the earliest possible moment.

"With Mr. Cleveland on its hands, neither this Congress nor the next will be able to enact a Silver Coinage Law. But the action of Congress in passing it, even though Mr. Cleveland vetoes it, would have an important and valuable influence on the monetary situation. It would be a formal declaration to Europe that the United States was not permanently represented as to its fiscal policy by Mr. Cleveland, and that as soon as it can unload the present Executive it will revert to the true sound-money basis on which it stood until 1873."—*The Recorder* (*Rep.*), *New York.*

"One would think that any reasonably clear thinker would see that the lesson of the futile bond-issues is that the limited stock of available gold should be given aid in performing its functions as money of ultimate redemption rather than to have other duties added to those it is already incapable to perform. There is not enough gold in the world to do the world's work is the simple fact, and if a great nation like this double the burden already laid upon gold nothing but calamity can result. Silver must be brought to the aid of gold."—*The Times* (*Dem.*), *Chicago.*

THE ARMENIAN MASSACRE.

RUSSIA has always been able to urge in justification of her wars with Turkey that they were undertaken with the object of delivering from intolerable oppression a large number of Christians labouring under the misfortune of being Turkish subjects. But if other Western Powers credited that philanthropic design on Russia's part, they invariably interfered to prevent its full consummation. It is true that something was accomplished. The Christians in Bosnia, Eastern Roumelia, Bulgaria, Thessaly, and the Herzegovina were rescued from the immemorial suffering inflicted by the tyranny of the Porte, and obtained the blessing of security of life and property. But the Berlin Congress interposed its veto to prevent the CZAR'S retaining his conquests in Asia Minor, and he was obliged to restore to Turkey a large portion of the Armenian territory won by him. The result was that some two millions of Armenian Christians were replaced for an indefinite period under Turkish tyranny, and it is they that were the victims of the recent massacres. The *Philadelphia Press* has the following interesting information on the subject:—

"Armenia unfortunately is not inhabited by Armenians. In the tract where these massacres have occurred, Armenians are not over a fourth of the population. In the eight provinces, or vilajets, usually counted as Armenia, there are of all creeds 3,979,019 souls, and of these 587,285 are Armenians, according to Turkish statistics. Accepting the fullest claims of Armenians, not over thrice this number are found in this region, or about a third of the population. . . .

"In the rugged highlands and elevated plateaux which constitute North-eastern Turkey are scattered the last remnants of a race which once played a great part in the history of the region. Their villages are intermixed with Kurds, the most warlike race of Western Asia. The Armenians are unarmed, cowed by oppression, for centuries the unresisting prey of the savage brutality of their neighbours. The Kurd is armed, predatory, and savage, and has for centuries ravaged these Armenian villages at will, save as some Kurdish chief gave protection in return for ordered taxes as heavy though less cruel than the plunder of his followers.

"Sixty years ago, when Turkish regulars first crushed these chiefs, the plight of the Armenians was improved. Villages grew, population increased, emigration began, and Armenian education was organized. Political agitation began, and the demands of 'Armenia' for autonomy commenced. The Turkish Government increased both its taxes and oppression. The European Powers protested. The fourteenth article of the original Treaty of San Stefano provided for a Russian occupation of the region until Armenian autonomy was secured. The sixty-first article of the Berlin Treaty exchanged this for the pledge, guaranteed by the Powers, that Turkey would organize a local police, reduce the Kurds to order, and protect Armenians from pillage. The Cyprus Convention between England and Turkey gave England a special charge and ward over Armenian rights, which since 1879 has been asserted yearly by every English foreign minister in turn—Lord Salisbury, Lord Granville, and Lord Rosebery.

"Turkey has, meanwhile, sought only to crush budding revolution and let reforms go. The Kurds have been left free to ravage. Four years ago they were armed and organized as an irregular cavalry. 'Hamadish,' and it is doubtless these half-organized freebooters to whom these atrocities are due. For six or seven years past the Turkish policy has been to crush all education, to arrest and imprison educated Armenians, and by winking at Kurdish plunder drive out the Armenian population, which has been pouring into Russia, where 1,000,000 Armenians are well, contented, and happy, though enjoying neither civil nor religious liberty."

As for the massacres, the first reports of them seem to have been exaggerated, as is invariably the case. Six thousand men, women, and children were said to have been killed by the Turkish soldiers, and sensational details were added of women ravished and children bayonetted. But the terrible total is now reduced to two thousand, a large enough figure in truth. The unfortunate Armenians, perpetually raided by the Kurds, seem to have been unably to pay the taxes demanded by the Turks, who shamefully neglect the first duty of a Government, namely the protection of its subjects against pillage and murder. The Governor of Bililis, apparently glad of an excuse to oppress the Christians, took advantage of a collision between them and the Kurds, ordered his troops to suppress the Christians, and the result was a cruel massacre. Writers in Europe and America are plainly of opinion that the affair may re-open the Eastern Question. If the young EMPEROR of Russia, moved by the prayers of the persecuted Christians, follow the example of his grandfather, and sends an army into Asia Minor despite the Berlin Treaty, it will be hard to say that he deserves censure. The Powers talk of united action, but of course no step will be taken until the result is known of a commission of inquiry appointed by the SULTAN. NICHOLAS II. sees himself confronted by the old problem on the very morrow of his accession. His manner of dealing with it will furnish a guage of his capacity and disposition.

A NATIONAL NEED.

ACCORDING to the ethical teaching of SCHOPENHAUER, the springs of action are of three kinds: first, pure egoism; secondly, pure malevolence—that is the positive desire to injure others independently of desire for our own advantage; thirdly, sympathy. In a rational being, conducts pringing from either of the two former impulses is immoral, but conduct based upon the emotion of sympathy is of true moral worth. In this view, SCHOPENHAUER differs notably from KANT, who regards sympathy as a weakness, and calls those actions alone virtuous that are based, not upon the emotions, but upon the abstract idea of duty. Without entering into the merits of this controversy, which is not likely to be settled for a good many centuries, let us examine further the views of SCHOPENHAUER, since these are more to our present purpose than those of KANT. Sympathy—we wish we had a truly English equivalent of the German *mitleid*, instead of the Greek *sympathy*, less forcible to a Teutonic ear—sympathy, then, according to SCHOPENHAUER, manifests itself as two different virtues: the sentiment of justice, on account of which a man represses the activity of his egoism and his malevolence as soon as he perceives that their exercise is injurious to others; and the love of humankind, on account of which a man strives as far as lies in his power to alleviate or to remove the suffering of others. Thus sympathy is the foundation of all true morality.

The good of another must be the pure motive of the moral act, just as in a man's egoistic act his own good is his single aim. But how is this possible? To understand fully SCHOPENHAUER'S answer, it is necessary to be familiar with the main principles of his philosophy, to have read the books in which, with all the magic of his marvellous style, he sets before us a semi-oriental mysticism with the clearness and simplicity of a geometrical demonstration; but briefly his answer is this. Each man sees himself subjectively, others objectively only; but by the power of reflection it is possible to each man to recognize that in its innermost nature his own being is identical with the being of those others whom he is compelled to contemplate from such a different point of view; and for him who recognizes this, the barriers that separate one individuality from another fade and disappear. Then the man says to himself, as he contemplates the suffering of another: "Thou it is, thou thyself, that sufferest there." This is the true nature of sympathy; and in this manner it is that we can understand how the feeling of sympathy extends to other animals besides man. This last point was regarded by SCHOPENHAUER as an especially valuable element of his ethical doctrine, and it is on this that we chiefly wish to dwell.

It is noteworthy that the feeling of sympathy with the suffering of animals, and moral efforts, based upon that sympathy, for the relief or prevention of their suffering, derive little support from the teachings of Christianity. In the Judaic Scriptures, indeed, there are several references to the duty of treating animals with kindness and consideration: but in the teaching of CHRIST himself there is not, so far as we can remember, any reference whatever to the question; and the greatest of the Apostles, referring for illustrative purposes to the Hebrew text, "Thou shalt not muzzle the ox when he treadeth out the corn," asks, almost contemptuously, "Is it for the oxen that GOD careth?" And the general tendency of Christian doctrine is to fix an impassible gulf between man and other animals.

If we wish to find in religion the prototype of the views of SCHOPENHAUER, the source, indeed, in great measure from which they were derived, we must turn our faces to the East, we must go to India and examine the doctrines of Brahmanism. The Brahmanic theory of Metempsychosis endows with a vivid significance one that appeals to the popular mind, the mystical teaching of SCHOPENHAUER. Tell a peasant who is ill-treating his horse or his dog that it is in truth himself who suffers the pain that he is inflicting, and he will laugh in

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

your face: but tell him that some day he will be reborn in the form of the animal that he is now ill-treating, and, in a country in which this doctrine is one of the common-places of daily life, your words will not be without effect. This theory of transmigration was adopted into Buddhism, of which, in connexion with the doctrine of *Karma*, it forms indeed a most essential part; and on this no doubt depends, as well as on the gentle, loving nature of SAKYAMUNI, the great stress that is laid in Buddhistic teaching on the duty of kindness to animals. In illustration of this teaching, we may quote, from the *Dhammika Sutta*, a precept to which no parallel can be found in all the literature of Christianity:—"Let no lay disciple destroy, or cause to be destroyed, any life at all, or sanction the acts of those that do so. Let him refrain from hurting any creature, both those that are strong, and those that tremble in the world."

Such being the outspoken utterances of Buddhism, it is somewhat surprising to find that in Japan, a country in which for so many centuries Buddhism was the dominant faith, there is so little recognition of our duties towards animals, so little evidence of any desire to assist in the great movement for the prevention of cruelty to animals, the growth of which this century has witnessed in the West There, indeed, the growth is of this century only; for, as might be inferred from what we have already said, the idea that animals have rights is a result of the general progress of enlightenment rather than of the influence of Christianity; and the lateness of the recognition of the rights of animals will not surprise those who recollect that little more than thirty years ago in the United States, and little more than sixty years ago in the British colonies, there existed a class, not of animals but of men, who had no legal rights whatever. But the movement of which the abolition of slavery was one of the fruits was a general broadening and deepening of the conception of duty; and a noteworthy result of that movement has been the granting of legal rights, not to all men merely, but to all other animals. For in most of the countries of the West there are laws by which one who wantonly or thoughtlessly ill-uses an animal is punished as swiftly and as surely as if the sufferer were a man. But in this matter Japan lags behind the rest of the world, and her Codes contain no recognition of the rights of animals.

Is this because Japan has no need of such laws; because her gentle and kindly inhabitants display an invariable tenderness also towards animals? Unfortunately this is not so; for all foreign observers will agree, and all Japanese who devote attention to the matter must admit, that there is in this country a large amount of preventible cruelty to animals. And the reason of this cruelty is not difficult to find: it is not mainly egoism, for the Japanese are, as a rule, a singularly unselfish people; it is not malevolence, for the Japanese are naturally kindly, and we see in Japan less wanton and deliberate cruelty than we see in many countries of the West; the cause lies simply in this, a lack of sympathy with animals, a lack of the power of representing in the mind the pain that animals suffer. In this respect, unquestionably, SCHOPENHAUER is right; it is the wider power of sympathy that men have gained, the keener understanding of animal suffering, the pain that those of cultivated sensibilities feel when they see or think of a fellow-creature, however lowly, in pain—these things it is that have led to the agitation for the prevention of cruelty to animals. Here, at least, sympathy has been the mainspring of moral action.

We have *no* desire at this moment to enumerate instances of the kind of preventible cruelty to which we refer that may commonly be witnessed in Japan. Those of our readers that have already devoted attention to the subject will at once think of many; and those whose attention we hope to arouse, among whom we would more especially mention the leaders of Japanese thought, will find them wherever they choose to look. But lest we should seem to some of these last to be making many words about a small matter, we shall allow ourselves to mention one concrete instance which recently came under our notice, and which for the price of two *sen* any one may have the opportunity of studying for himself. When the visitor enters the Zoological Gardens at Uyeno one of the first houses to attract his attention will be that of the elephant. Let him examine the manner in which this unfortunate animal is tied. Round both the fore-legs are wound many feet of iron chain in a figure-of-eight coil, binding the feet closely together and to a wooden upright. The right hind-leg is also chained, and so chained that it is drawn somewhat backwards, and it is quite impossible for the animal to stand in an easy posture. The chains lie on the bare skin, and the skin even of an elephant must be galled by an iron chain. But the galling of the chains is a minor matter compared with the constraint they exercise. Let the spectator try for a moment to forget those barriers of which SCHOPENHAUER speaks, the barriers that separate one individuality from another; let him project his personality into the body of the elephant. Let him feel his limbs racked with cramp by the unvarying posture, with no rest by day or by night; let him wearily get all the relief that is open to him by swinging to and fro like a pendulum his one free leg, and by striking himself on the forehead with his trunk; and all the while, hour by hour, day by day, let those chains of iron bite into the limbs they stiffen—will he then, that spectator, when he resumes his proper individuality, go away, as did all those who looked at the elephant while we ourselves were going through the experience we have just described, with no thought but one of wonder and amusement at the strange, big beast? We hope not, we believe not. That spectator will have felt as we felt when we made ourselves mentally one with the suffering elephant, that death would be better than such a captivity; that an animal so dangerous that it must be chained as we have described for days together, and released only for an hour or two at long intervals when a sufficient number of men can be got together to allow of this being done without too great hazard, should, for its own sake and for that of those who suffer in seeing its suffering, be speedily released from its misery by a painless extinction. And we trust that that spectator, and others who, without having seen what we have described, can none the less sympathise with our aims, will undertake to form a society to deal with the whole subject of cruelty to animals in Japan. Such a society would agitate for penal legislation in the matter; it would educate public opinion; it would appoint inspectors to report flagrant cases of cruelty; it would, when the necessary laws have been enacted, undertake the expense of prosecution. If some of the leaders of Japanese thought will take steps for the formation of such a society, they will receive, we feel confident, much sympathy and support from foreigners resident in the country. And such a movement will do far more than the successful prosecution of a great war to raise Japan to the place she is eager to occupy as one of the leaders of enlightenment and civilization.

CORRESPONDENCE.

THE JAPANESE NEW TESTAMENT TRANSLATION.

TO THE EDITOR OF THE "JAPAN MAIL."

Sir,—Rev. J. M. McCaleb's exceptions in his letter to your paper to the translation of Acts VIII. 33, and 1 Timothy III. 11 are well taken.

As to the former passage no authority for the insertion of *tadashiki* can be found, either in the Greek (New Testament text and Septuagint) or in the original Hebrew from which the passage is taken. English and continental translators also give no countenance to such a translation. Luther, Allioli, de Wette, Knapp, van Ess, and Griesbach, the Vulgate, as well as the late Revised English Version, will be consulted in vain. The same is in a still higher degree true of the second passage, where the Greek text, the Vulgate (Ed. Clementina), and all later translators known to me fail to afford justification for the word *yoshitsuki*. This word and *tadashiki* may or may not give a correct interpretation of the verses quoted—this is a question by itself and not relevant to the issue raised by the Rev. McCaleb—but there seems to be no really decisive authority for the present translation, and *stare decisis* wherever reasonable is a good maxim in law and out of it.

Both passages ought to be carefully looked into when the present New Testament translation is to be revised, which may be at no distant day, for in human achievements *nihil est ab omni parte beatum*.

Respectfully,
Tokyo, December 28th. EPSILON.

THE OUTLOOK FOR CHRISTIANITY IN JAPAN.

AN ADDRESS DELIVERED BEFORE THE TOKYO CONFERENCE, DECEMBER 6TH, 1894.

In preparing this address for publication, some changes have been introduced, both in the form and in the thought. These changes consist chiefly in the introduction of certain illustrations which, owing to the pressure of time and other reasons, were necessarily omitted. They do not, however, affect the substance of the address.

In appearing before you this afternoon in response to the urgent invitation of certain friends, I must not be understood as presuming to pass a dogmatic judgment upon the very complicated situation which confronts us. Even a satisfactory analysis of this situation is, for the present at least, beyond our reach. Certainly I shall not attempt any thorough-going analysis, but shall content myself with the more modest task of setting forth certain opinions which have gradually formed themselves in my mind, together with a few of the considerations upon which those opinions are based. If, in doing so, I fail to dwell upon what some call "spiritual" forces, it is not because I ignore them or underrate them. It is simply that I am forced to limit myself to one side of a great subject, a subject so great, indeed, that even with this limitation, it cannot be treated adequately in the time at my disposal. You will not, however, infer that I admit that the forces with which this address deals are in any proper sense less spiritual than those to which that term is sometimes restricted. As I have thought over this subject, the words of Christ have stood out before my mind in letters of burnished gold,—"My Father worketh hitherto." God is in His world; its forces are His and the ultimate goal of their operation is the establishment of His Kingdom of righteousness and peace; and the movements which I shall endeavour to describe are simply the methods of a Divine Providence working in human society.

I will not claim the right to declare "those things which are most surely believed among us," and yet as I have personally gained much encouragement from the considerations which I am about to set forth, I am not without hopes that they may so far commend themselves to others, that they too may gain similar encouragement.

In the first stage of the missionary work, which roughly speaking may be said to have closed with the year 1871, the prospect was far from bright. After twelve years of labour the results were small, the opportunities for evangelistic effort few and the opposition bitter and persistent. In the next stage, which may be said to have closed with the year 1890, the restrictions were in large degree removed, and the progress of Christianity was encouraged rather than hindered by those in positions of authority. So rapid was the growth, that the most sanguine prophecies of the final victory seemed by no means incredible. During the third period now current, it is seen plainly that the growth was less healthy than had been supposed, and that the brilliant promise of former years cannot be realized for many years to come. While thus frankly admitting that we have in the past underestimated the difficulties which oppose the progress of Christianity, is it not possible, on the other hand that, impressed as we naturally are by these difficulties, we lose sight of those auxiliary forces, the sappers and miners of the Christian army, if we may call them so, which are destroying the foundations of the trusted strongholds of our opponents? Their operation is unobtrusive and is easily overlooked, but yet its efficiency can hardly be over-estimated. It will be my main purpose this afternoon to enumerate some of these auxiliary forces and indicate the part which, in my view, they are playing in the drama now unfolding itself before us. First of all, however, I shall endeavour to set before you, possibly with unnessary fulness, certain features of the present situation which must be borne in mind throughout this discussion.

The first feature which I wish to mention is the lack of a vivid sense of personality on the part of the Japanese people. This lack may be emphasized unduly. Mr. Percival Lowell has, as I think, so emphasized it in his book "The Soul of the Far East." Still, that the sense of personality has developed more slowly in Japan than in most western countries must be admitted. This slower development has been in large degree owing to the influence of Buddhistic and Confucian philosophy, and has served to make the people less responsive to the appeals of Christianity. A prominent Japanese scholar, who is also well read in the philosophical literature of the West, not long since denied in my hearing that there was among his countrymen any conscious longing after a personal God. The deep yearning after communion with a personal God embodied in that pathetic utterance of Professor Clifford, I quote from memory, "I have seen the sun go down on a soulless heaven; the great companion is dead," would seem to have been quite foreign to his mind. The late Professor Romanes, in a period of great despondency, wrote to a friend that with the loss of his faith "all the worth passed out of life." The Psalmist in like distress cried out:—"Oh that I knew where I might find him!" Such a longing after God is dependent upon a vivid sense of personality. This sense of personality is the natural concomitant of theism and has been markedly developed in the West since the Protestant Reformation. Where it exists, it predisposes the heart to faith. In so far as it is undeveloped, faith must suffer.

In earlier years we did not notice this undeveloped sense of personality. Our attention had not been called to the matter, and it was natural to attribute to superficial causes what was due to a different habit of mind. Moreover, since all such national characteristics are relative, and are not evenly distributed through the nation, there were early brought in contact with the missionaries some, at least, whose mental habit was inclined towards faith. Then again, the necessarily direct relations of the missionaries to the individual Christians during the first years served to foster in their Japanese associates the development of this sense of personality which Dr. Martineau has called the great gift of the West to the East. In those days when the work was small, nearly every Japanese Christian was in close relations with some missionary, and was able in a degree to see spiritual things through the eyes of his foreign teacher. Now, however, our relations are necessarily more remote. We come near to individuals still, but so far as the great mass of the 100,000 Christian Japanese are concerned, they hardly come within the circle of the personal acquaintance of any missionary. This is not on the whole to be regretted. It is eminently fitting that the growth of Christianity, both as an organization and as spiritual life, should be a natural, unforced growth. The immediate result might seem better if we could transplant our own faith into the hearts of our Japanese hearers as freely as in other days, but that is impossible, and it is doubtless well that it should be so.

During the past few years, the old philosophies have seemed to be re-asserting themselves. Even in Christian circles the attempt is made to trim Christianity to the measure of a pantheistic faith. In a recent number of the *Rikugo Zasshi* there appeared an article which has been described by a Japanese reader as nothing more nor less than the old Confucian philosophy of the Tokugawa days clothed in Christian phrase. The writer, apparently an agnostic as regards the existence of a personal God, ridiculed as idolaters all who insist on the existence of such a God, as an object of faith and worship. Men of this class emphasize ethical Christianity, but their grasp of the personal element is weak. Their faith can not rise to the passionate loyalty of a Bernard of Clairvaux, and in the face of a strong social movement it fades away, as their loyalty to the chiefs of their old clans in the short space of twenty-five years has faded out of sight. This rapid decadence of the sense of loyalty toward the feudal lords is, I may remark in passing, of much significance. As a social force it no longer exists. Keen observers, not foreigners only but Japanese statesmen as well, were at one time deeply anxious lest even the sense of loyalty towards the Emperor should be seriously weakened by the political controversies of the day. Happily that danger has passed away. The war now in progress has been the means of bringing the Emperor much nearer to his people. It has given opportunity for the manifestation of personal traits which have won for him the affectionate, the personal, regard of his subjects. Loyalty is no longer directed mainly to the *Mikadothum*, as a German observer has expressed it, but to the Emperor himself. Without underrating the impressive exhibitions of devotion which have marked the history of Japan in the past, it certainly will not be denied by any well-informed student of history, that the moulding force of the principle of loyalty upon life and character would have been far greater if there could have been added to it a larger element of that personal reverence and affection which, as now directed towards His Imperial Majesty, is, I believe, one of the greatest blessings incident to the present war. The same causes which rendered this loyalty weak in a time of great political excitement, have served also to sap the foundations of religious faith in many minds, and to causes analogous to those which have revived and ennobled that loyalty, we may look for much help towards a deeper and brighter faith in a personal God.

Another feature of the present situation which I will notice is the sensitiveness of the Japanese people to the great world movements of the age. This is, perhaps, owing in part to their long seclusion, but there are other reasons to be assigned for this very abnormal degree of sensitiveness. The most important of these lies in the smallness of the educated class and the gulf which separates it from the mass of the people. This gulf is gradually closing as the result of the common school system; but the scholars of Japan still live in a world relatively remote from the mass of their countrymen. There are those among them who have gained an enviable place in the world's estimation. There are many others, less known but not less worthy, who have been initiated into the cosmopolitan guild of scholarship. While they are not less patriotic than their countrymen, their minds are open to the currents of the world's thought, and owing to their, as yet, relatively small numbers, the resistance to these currents is less marked than in the case of their European compeers. In the Christian community this sensitiveness to the world movements is very strong. It has often been said that the Christians are found chiefly among the lower classes. There could not be a greater mistake. The whole Christian community numbers not far from 100,000, that is, about one-fourth of one per cent. of the total population. I think I am quite within bounds in saying that 25,000 of these are *shiuoku*, who constitute five per cent. of the population. This means that there are five times the normal number of *shiuoku* among the Christians. In a recent Cabinet, one minister was a Christian, besides two or three vice-ministers, the Chief Justice of the Supreme Court and several judges of the Court of Appeals are Christians. In the first Diet twelve members were Christians, including the President of the Lower House and the Chairman of the Committee of the Whole—sixteen times the normal proportion. In the Upper House, the proportion was about six times the normal. In the later Diets the number of Christians has varied. In the present, I think there are seven Christians, including the Vice-President of the Lower House. In the Imperial University, both among the professors and students, the proportion is also several times above what would naturally be expected. This disproportionate number of men of education and influence among the Christians, taken in connection with the smallness of the educated class in the country at large, will, I think, account for the amenability of the leaders of public opinion in general and the Christians in particular to the great world movements of the age.

Let me refer to some of these in the order in which they have attracted my attention. The first which I will mention is the evangelistic movement, which was at its height during the two decades closing with 1890. There was great enthusiasm all over the Western world. The missionary societies were unusually prosperous. The Young Men's Christian Association took on new life. The Christian Endeavour movement began and attained to great proportions in all English speaking countries. In Germany the evangelistic efforts of Dr. Stöcker and Counts Bernsdorf and Pückler met with large success. A prominent Japanese statesman who visited Germany during this period told the late Dr. Neesima that the Emperor William, Prince Bismarck, and the Grand Duke of Saxe-Weimar, if I mistake not, all expressed to him their great interest in the progress of Christianity in Japan. He further said that though he had formerly believed that religion with these men was a mere matter of political expediency, he was now convinced of the sincerity of their faith and the earnestness of their evangelistic purpose. Here in Japan not merely the missionary body, but very many teachers in the Government Schools entered heart and soul into evangelistic service. Japanese returning from America, England, and Germany brought with them in some degree the same spirit. It was natural that this enthusiasm should spread, and that the whole community should be in a condition of great expectancy. That this enthusiasm has been to some extent dulled must be confessed—not merely in Japan, but in other parts of the world. In my judgment, this is owing partly, if not mainly, to the readjustments which have followed the general acceptance of the theory of evolution. The attention of the Church is occupied more largely than at any other time during recent years with the intellectual aspect of religion. Many men who would otherwise be leaders of evangelistic effort, are giving themselves to the solution of the new problems of theology. It is not strange that in such a time of intellectual ferment there is some letting down from the high standards of evangelistic enthusiasm of more peaceful days. The great movement has slackened, and we feel the lack of its stimulus and support. It has slackened, but it has not ceased.

Another movement which I will notice is that which leads towards nationalism. It is seen in

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

Russia in the persistent effort to secure homogeneity throughout that great empire. A similar tendency has manifested itself in Germany. In America and Australia, the agitation against immigration is but another form of the same spirit which induces an emphasis of the national as against the universal. The so-called reaction in Japan is, as I believe, a result of this wide current which has affected so strongly the national life of nearly every country of the West. It takes on a special form in Japan and combines with itself certain reactionary tendencies excited by the rapid growth of the Christian community in numbers and influence, but it is none the less a part of the same movement. This tide has gained greater momentum here chiefly because of the less degree of inertia which the small educated class possesses; but even in other lands, its influence has led to a strange blindness to the principle of unity in history. The late Prof. Green of Oxford seemed inclined to deny the unity of Christianity, so great was his insistence upon the national element in the Christianity of different countries. To us who can take our position in a sense outside of the civilization of Europe, such emphasis of the national seems strangely forced; but it is not to be wondered at that many of our Japanese associates should be impressed by it and stimulated to originate in Japan a distinct form of Christianity. This purpose on their part is due to a misreading of history through an over-estimate of the part which national characteristics have played in the development of Christianity.

Another of these world movements is the liberal movement in theology. As distinguished from the rationalism of the latter part of the eighteen and the first half of the current century, liberalism is a new movement and has only become a factor of special power in England and America, at least, within very recent years. However much we may be convinced that its positions are extreme and untenable, we must admit that it has a part to play in the great scheme of Divine Providence. It will doubtless lead to a more just and symmetrical view of God in his relations to His world. Extreme though this movement has shown itself in the West, it has yet, so far as the Church at large is concerned, been restrained by important checks which are lacking in Japan. The first of these checks is found in the dependence of the leaders of public opinion upon the general sentiment of the community. The second of them is the influence of mysticism upon even many advanced theologians. Along with this mysticism there is a strong sense of personal loyalty to Christ displayed even in the most unexpected quarters. Some of the most impressive tributes to Christ have come from the lips of men whose theories about His person seem to us to render personal loyalty impossible. John Stuart Mill's eloquent words illustrate the deep hold which the personality of Christ has had, and has still, upon minds which intellectually speaking are very far removed from us.

In Japan these checks, so far as they exist at all, operate more feebly, and, as I have already said, we see interpretations put upon the doctrines of Christianity which appall many men who are in full sympathy with the so-called new theology. The liberal movement in the absence of these restraints has gained an exaggerated impetus which justly awakens much anxiety, not because we are doubtful of the final issue, but because we are impressed with the sad losses to individual faith and to the immediate well-being of society which must be caused by this strong tide. Allow me to say in passing, that, knowing as I do the representatives of the new theology in Japan, I feel, radical though their views may sometimes seem, that on the whole, they are acting with us as a conserving force in Japanese society.

In what I have said of the extreme position of the Japanese in matters of theology, while I had in mind certain leaders of thought among the Christians, my main purpose is to indicate the general trend of thought in educated circles. I believe the great body of the Christians while less assertive still cherish the faith delivered to them.

What then is the outlook for Christianity? Are the high hopes of other years to be utterly lost? While the forces which are in operation against the missionary work seem at times so strong and their effects so lamentable, what are the sources of hope and encouragement?

I have already indicated my belief that there are such sources of hope. They might be all summed up in one, namely, the well-recognized tendency towards unity which is to be seen in the general progress of modern civilization. Our attention has often been called to the fact that whereas in ancient times, there were many and varied civilizations, in these modern days civilization is essentially one. Over and above all distinctions of nationality, the principle of unity is conspicuous in the social life of the West. The rate of progress may vary, but history moves on along essentially the same lines in the different countries of Europe and America. Japan, in joining hands with the nations of the West, has become a partner in their history. In spite of much that is untoward in that history, its main current is in the direction of Christianity. The spirit of Christianity becomes year by year more manifest in it. In view of the increasing intimacy of Japan's relations to the Western world, however much she may emphasize her own past, her future is inseparably bound up with that of her new allies. The volume of influence which comes to her from them is to be the controlling factor in her history. The times are past never to return when any nation, however favourably situated, can erect barriers to stay the tide which makes for unity. The inertia of an immense mass of population, as in China, may seem for time to resist successfully, but even that empire must sooner or later give way.

As regards Japan, the progress of the past thirty years indicates how strongly she has been moved. I am aware that some maintain that the changes around us are superficial and have hardly affected the mass of the people. I confess I do not know the meaning of the term *superficial* when used in this connection. I am not so much impressed as some by the material evidences of civilization, the steamers, railways, telegraphs, electric lights, though these in many ways are affecting the social, and indirectly the spiritual life of the people; but I am profoundly impressed by what I have seen in twenty-five years of careful observation of the social life of the people. Let anyone read Mr. Mitford's reproduction of the story of Sakura Sogoro and compare the utter helplessness of the lower classes in those days with the freedom now enjoyed throughout the land, and it will be impossible for him to call these changes superficial. There is a new principle at work in the very foundations of society, and there is not a man or woman in Japan who does not feel its influence. Look at the changed relations of the different classes to one another. The privileges of the *samurai* under the old régime meant the oppression of the poor. Only ten days ago I visited a valley in the north-western part of Musashi, where the peasants once actually belonged to the soil, with no liberty worth mentioning. In the family also the same principle is at work, and the limitations of the paternal authority are many and various. There is not a child in Japan but which lives a markedly different life from that of the children of thirty years ago. The whole atmosphere which he breathes is permeated by the new thought of the value of the individual. He is bound to grow up with a ripe sense of personality.

Some have thought to break the force of these considerations by asserting that in practice all these changes lag far behind the theory. This is true in all lands, but it is no small matter to have a high ideal represented in the laws of the land. Moreover, it must be admitted by all candid men that the practical working of the laws shows an immense gain. My time will not allow of extended illustration, but one case often occurs to my mind in this connection. It was this:—Some years since a man felt himself aggrieved at a ruling of the Minister of the Department of Agriculture and Commerce and appealed to the courts against it. He lost his case, it is true, but his right to appeal was recognized as well as the right of the courts to review, within limits, the acts of the executive officers of the Government. Whatever criticisms may be legitimately passed upon the courts by foreign observers, and I concede that some of these criticisms have much weight, the fact remains that they have won the confidence of the Japanese people to an extent which can hardly be overstated. Even in the case of political contests, where the courts have intervened, there has been a remarkable acquiescence in the equity of the judicial decisions. I have repeatedly listened to similar testimony from men most bitterly opposed to the Government. There could hardly be a more impressive indication of the influence this new conception of the rights of the individual is exerting upon the public sentiment of the nation than is exhibited in the practical working of the judicial system. Thus beneath the surface agitations which seem adverse to the interests of our work, there is a current which in important respects is favourable to it—a current which is a part of the one great stream of modern history.

Through what channels does this influence from the West flow?

The first which I will mention is that afforded by the missionary work. I do not claim that this is the most important, but simply that the influence of the missionary is great and is important. There were, according to a late report 776 adult foreigners connected with the missionary work. Each one of these has a circle of influence larger or smaller. Some of them are very widely known, and have an influence which any man might covet. There were according to the same report 824 organized Christian congregations. Adding to these the less organized communities and evangelistic stations, at a low estimate, we may say there are more than 1,200 places where Christianity is regularly taught, not to speak of many others which are occasionally visited. In the Protestant schools alone there were reported 7,393 scholars. If we suppose each scholar to spend four years in school, we have over 1,800 young men and young women going out of these schools each year, and in spite of many discouragements the number of scholars in these schools is increasing. Allowing everything that can reasonably be asked, and we have here a large body of young people who for a considerable time have kept before their minds the Christian idea of God in his relations to mankind. They may not all accept this view in its entirety, but it is sure to affect in an important degree their conception of life and its duties. As they go out into the world they will have a share in moulding the public sentiment of the nation.

The circulation of the Scriptures has reached large proportions. At a low estimate over a million copies have been distributed within the past thirty years, and about 75,000 copies during the present year. Naturally this circulation has been attended with some waste, but a very large number of thoughtful readers has been found even outside the Christian community. Not long since, at a public meeting in the interest of one of the irregular Shinto sects, a speaker had much to say about the Lord of Heaven (*Tenteі*). His sect is nominally polytheistic, but here he was preaching monotheism. There is no question, but that he found his monotheism in the New Testament. As a matter of fact, he was rebuked by the next speaker for his Christian opinions, but this very man, confessedly hostile to Christianity, then delivered a discourse upon sincerity in religion, the thought of which was really taken from the Sermon on the Mount, and which contained several almost verbatim quotations from the sixth chapter of Matthew. Thus men inimical to Christianity illustrate its influence upon society and are directly propagating its truths.

Again we may mention the foreign communities as an important auxiliary. I am not unaware of the dark side in the life of these communities. At times it seems dark indeed, and we are inclined to agree with a Japanese writer who recently declared them to be the greatest existing obstacle to the spread of Christianity; but lay what stress we may on this dark side of the picture, it cannot be denied that these communities have stood for some important truths, and by their emphasis upon these truths have done incalculable service to Japan. They have been an object lesson, for one thing, of the value which we of the West set upon the individual. No doubt this stress upon individualism has often been excessive; but without it, we may well question whether the recent legal and judicial reforms in Japan would have been possible. Then we may confidently say, that in spite of much laxity of morals, which I certainly have no purpose to excuse or palliate, there have been exhibited in these communities examples of the Christian family of the most attractive type. Further, the Christian ideal of commercial honour, after making all allowance which the severest critic can ask, is clearly to be read in the life of these foreign settlements. Eminent Japanese writers have at different times conceded all that I assert. What they have recognized amounts, in the aggregate, to a lesson of inestimable value. Further still, while many speak lightly of material civilization which these communities in an especial sense may be said to represent, in my judgment, it is tributary in many ways to the general movement, which is tending to increase the sympathy of the Japanese people with Western thought. This is too large a subject to be dealt with in passing, but I may say that it is no mere accident that has made the races which possess in its ripest form the idea of personality, at the same time the foremost in material civilization. We find still another auxiliary in the literature of Europe and America. This literature is being widely disseminated, partly in its proper dress and partly by means of translations. A walk through the streets of Kanda in Tokyo, where the book-stalls are so numerous, will convince anyone of the great number of those who are busied with foreign books. On the editorial tables of the capital will be found the best of English and American periodicals. One editor of my acquaintance subscribes for seventeen such periodicals, including, the *Spectator*, the *Speaker*, the *Nineteenth Century*, the *Contemporary Review*, the *Forum*, the *Political*

Science Monthly, the *Nation*, etc. In some measure his own subscribers get the benefit of his reading. The schools, too, are stimulating the circulation of this literature which embodies our sense of personality.

It is claimed by some that this literature after all only touches the surface of Japanese society. This is a great mistake. Its influence is seen in the most unexpected quarter. Some time since I had occasion to pass from one of the Joshu valleys to another. My road lay over a rugged mountain path and as *jinrikisha* were not to be had, I arranged for a farmer's son to carry my luggage. As we walked along he told of his home life and how in his leisure hours he was reading the poetical books of the Old Testament. He had also read Tennyson's "Enoch Arden" and some of Longfellow's poems. My objective point was a village of a few hundred houses on the Mikuni Kaido some half a dozen miles from the summit of the pass. In these days there is little travel along that way and one might suppose that the influence of western thought would be scarcely felt. On my arrival I was invited by my host, a young man of twenty-three or four, to spend the night at some hot springs near-by, and in the evening he invited in one of the village schoolmasters who was a graduate of the Prefectural Normal School. Though he could not talk English, he was, I found, a great reader of English books. He had read in English translations Guizot's "History of France" and also his "History of Civilization." He had read Carlyle's "Heroes and Hero Worship," one or more of his biographies, besides considerable of the writings of Lord Macauley. In the same village was another schoolmaster, a graduate of Mr. Fukuzawa's School, also a reading man. There were besides these, two graduates of the Doshisha, both of whom were men of intelligence and industrious readers of English books. At the request of these young men, after my return home I sent up two recently published lives of Washington. I do not maintain that these students were in a position to gain all from their books that one of us might gain, but their minds were nevertheless busied with English thought. The children who came to them for instruction could not fail to catch, in some degree, their spirit. All school teachers in Japan may not be equal to this standard, but hundreds of men are going out from the normal schools with a similar taste for foreign literature and are disseminating through their scholars thoughts which are dominated by a radically different theory of God and of nature from any which prevailed in olden time, and the leaven of these thoughts is working in the minds of tens of thousands of children.

The influence of foreign literature is strikingly illustrated by the development of the Japanese language. A new vocabulary has grown up. Japan finds her philological materials chiefly in a Chinese quarry, but she builds up her verbal structures to meet the needs of modern—cosmopolitan—thought. The rapid growth of this vocabulary is evidence of the firm hold these thoughts have already gained. Some of these new words are very interesting, for they indicate not merely new ideas, but a new habit of mind. Such a word is *katachi-tsukuru*, meaning to *form*, as a substitute for the verb *to be*. But more than the new words certain changes in the idiom deserve our attention. All students of Japanese grammar know how the genius of the old language rebels against the use of an inanimate thing as the subject of a transitive verb, either in the active or the passive voice. Under the pressure of foreign literature, however, the stiff rules of the old speech have had to yield. In modern writing the usage as regards these points conforms very nearly to the English standard. Gradually this spirit of grammatical independence is finding its way into the colloquial. How often of late have we heard the boys cry out, *Ryōjunkō ga senryō serareta* (Port Arthur has been taken)! A Japanese of thirty years ago would hardly have so used the passive voice. To do so involves a breach of two important rules of the old grammar, but the new wine has burst the old bottles.

To my mind all these changes represent a Divine Providence. They do not necessarily mean the triumph of Christianity in the near future, but they do mean a more congenial attitude of mind, a more fertile soil in which to sow the seed of Christian truth, a healthier growth and a more vigorous plant. The direct work goes on receiving ever increasing support from those deep-seated forces which are guided by our Father's hand, our Father "who worketh hitherto."

But it may be said these mental and moral tendencies must needs require time—perhaps hundreds of years—to reach their goal. This, many assert, is the lesson of history. Is it not possible, however, that we may read the lesson too literally, and forget the new conditions of life and the more rapid progress which they imply? Some years ago, when in company with the late Prof. Whitney the conversation turned upon the development of language, he referred to the common school system of Italy and its influence upon the Italian language, intimating that it had within a few years induced changes in the local dialects which in former days would have been impossible. Japan has been introduced into the family of nations. She feels her community of interest more and more strongly every year. The influence of these new ties is exerted directly upon her. With almost weekly mails, and daily messages from the centres of western life, she is brought very near to her sister nations. As I sat in that mountain hotel to which I have referred I heard for the first time, perhaps within sixty hours of the event, that the Home Rule Bill had passed the second reading in the British Parliament. Thus the very pulse-beats of the world's life are felt in the remote valleys of Japan. Under such circumstances progress must be rapid.

How far particular organizations of Christians will prosper we may not know, but that the Spirit of Christianity is to rule in Japan we cannot doubt. Even now outside the Christian Church are many who believe in a personal God. The Great Companion whom Clifford lost, they have found. I believe that these and a multitude of others, the results of the influences I have sought to describe, the fruit of our Father's work, will ere many years recognize Him in the face of Jesus Christ and cry out with Thomas: "My Lord and my God."

LETTER FROM CHICAGO.

(From our own Correspondent.)

Chicago, December 9th.

A new life of Joseph Hardy Neeshima, by Rev. J. D. Davis, D.D., of the Dōshisha, is announced by Fleming H. Revell and Co., of this city.

Percival Lowell's "Occult Japan" is out, published by Houghton, Mifflin and Co. It is practically a reprint of his papers on "Esoteric Shinto," read before the Asiatic Society of Japan. The book is a valuable contribution toward the understanding of Shinto, and will prove particularly useful to students of comparative religion.

Another interesting contribution along the same line is Nobuta Kishimoto's article on "Shinto" in the December *Popular Science Monthly*.

Lieut. E. B. Rogers has an illustrated article on "The Japanese Theatre," in the December number of *Outing*.

C. T. Wyckoff, formerly a teacher in Osaka, and afterwards in the Dōshisha, is pursuing post-graduate work in history and political science at the University of Chicago.

Most of the magazines contain often large advertisements of a "new Japanese perfume," called "Matsukita du Japon Parfum," sold by the Crown Perfumery Co., of London.

At a recent meeting of the Sons of the Revolution in this city, Judge Waterman, who had just returned from a visit to Japan, was one of the speakers. The Chicago *Herald* reported his remarks as follows:—

Judge Waterman dwelt on the changes in the meaning of patriotism at various periods of history, and was glad he could say that the time had come when no patriot, in loving his own country, was required to hate another land. The time had come when the true patriot was just as anxious that his country should do justice to other people as that she should be justly dealt with. The speaker referred to the treatment of Japan by the United States, holding the Perry expedition and its results contrary to the rule of right which permits every nation to run its own internal affairs. "Saloons are not common in Japan," he said, "and drunkenness among the natives rare; yet, on the various 'concession grounds' ■ the ports, foreigners sell liquor in sixteen different languages and the Japanese Government under the treaties can neither license, restrain, nor abolish." Judge Waterman referred to the treaty clause requiring all foreigners to be tried, for offences committed on Japanese soil, before consular instead of native Courts. Americans, he declared, would not stand such treatment though the nations of the world united to enforce it. "An honest man," he concluded, "pays his debts because he ought to, not because others do. The United States ought to abrogate this treaty without conditions, no matter what other nations do."

The war in the Orient has not, of course, passed unnoticed in the present session of Congress. In the House of Representatives a resolution by Mr. Blair, of New Hampshire, calling for the correspondence between the U.S. and China with reference to the war, was referred to the Committee on Foreign Affairs. A similar disposition was made in the Senate of Mr. Lodge's resolution calling for information concerning the two Japanese students who had been surrendered to China.

The new treaty with China has at last returned to this country: it was sent around by way of Europe instead of across the Pacific. Secretary Gresham and Minister Yang Yu have exchanged final ratifications; so that the promulgation is expected soon. "The appearance of Mrs. Yang Yu at a formal dinner given by her husband, the Chinese Minister, in Washington, recently was a very important event in her life. From the Chinese point of view this made her a very advanced woman. It was the third step in her progress toward liberty—the first having been taken when she appeared at a Legation reception, and the second when she attended a state dinner at the White House."

The new Republic of Hawaii has now been officially recognized by the United States, Great Britain, France, Russia, Italy, Belgium, Mexico, Guatemala, and soon will be recognized also by Germany and Peru.

As there have been two skirmishes on the frontier of Guatemala and Mexico, and several Mexicans have been killed, the condition of affairs is more serious than ever, and war is anticipated between the two countries.

For two or three days lately the bold headlines of the daily papers called attention to a serious dispute and probable war between the United States and Great Britain over the Mosquito territory; but it now transpires that there was no difference of opinion at all.

Rumours of revolutions come from Nicaragua and Argentina, and of restored peace in Venezuela and Brazil. It is said that in the latter country the menaces of foreign foes has united the internal factions.

Refugees from Armenia have reached Athens and confirm the report of horrible massacres. The Turkish Government, however, claims that the Armenians massacred were rebels and bandits, and quotes Dr. Cyrus Hamlin, ex-President of Roberts College, to prove the existence of a "Revolutionary party among Armenians." Dr. Hamlin, however, claims that his article has been misunderstood and misrepresented.

Chile has at last succeeded in setting her cruiser the *Esmeralda*, to Japan for more than $1,000,000. Chile first sold the vessel to Ecuador, which then transferred her to Japan.

Col. W. C. Oates has taken the oath of office as Governor of Alabama, and has control of the Capital. Captain Kolb was also sworn in, and delivered an inaugural address; but has not been able to perform any other duties of Governor.

The official vote of Tennessee is at last published, and gives Henry Clay Evans (Republican) a plurality of 841 for Governor.

Edward H. Strobel, of New York, has been transferred from the Ecuador mission to that of Chile.

The following is an important and significant statement:—

Washington, December 5.—Chairman Babcock, of the Republican congressional committee, ventures to predict that McKinleyism will not be revived in Congress. "The McKinley bill," he says "did not have the support of one Republican in five when it passed. It was responsible for the Republican defeat in 1890, and that defeat was one of the strongest expressions of the intelligence of the American people. This widespread intelligence is one of the most gratifying things to me as an American citizen. Our people will cross party lines when they think that it has not dealt fairly with them. There was a deep seated prejudice against the McKinley bill. It was regarded as too friendly to the manufacturers and not sufficiently in the interest of the people, and they put the party out of power that was responsible for the legislation. The average American citizen believes in proper protection, but he believes still more in the principle of fair play, and that principle they thought, was violated in the McKinley bill."

When asked why the people did not seem to be satisfied with the work of the present Congress in the way of tariff legislation, Mr. Babcock said:—"The present bill is not a Democratic bill. It is really a protection measure, for the Republicans added to it after it went to the senate something like 250 amendments. It is not such a bill as the Republicans would have framed, nor does it suit the wishes of the extreme Democrats. It is highly protective in some particulars, more so than the McKinley bill, while touching the extreme of free trade in other directions. We shall have the house and the President in 1896. Meanwhile, we shall see how the present law works and it will be time enough to smooth out its crudities and make it what it ought to be."

The obituary list this time includes several prominent persons: Congressman A. J. Campbell, of New York; ex-Governor Leon Abbett, of New Jersey; ex-Governor Bowie, of Maryland; ex-Governor ("War Governor") and ex-Senator Joseph E. Brown, of Georgia; and Rev. Henry M. Stows, D.D., the eminent Presbyterian clergyman of New York City. One son of Dr. Stows is Charles B. Stows, who was formerly a professor in the Imperial University, Tokyo, and is now a member of the New Jersey Assembly.

The trustees of the Central Church of this city have extended a call, with practical unanimity, to Rev. N. D. Hillis, of Evanston, Ill., to take Dr. Swing's place. Mr. Hillis is only 35 years old, a liberal minded Presbyterian, an able preacher and an active worker.

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

The calender of the University of Chicago for the current quarter is just out, and shows an enrollment of exactly 1,000 students.

Japanese girls have annually the *Hina-matsuri*, or Dolls' Festival; and Chicago is now enjoying a Dolls' Bazaar, at which are exhibited hundreds of dolls of all sizes, countries, and epochs.

Yale defeated Princeton at foot-ball by a score of 24 to 0. In a billiard match in this city Ives is far ahead of Schaefar, and has made two wonderful "runs" of 334 and 359.

Another train robbery must go on record. It occurred near Fort Worth, Texas, on the Texas and Pacific Railroad, and netted bandits more than $100,000, part of it in gold bullion.

R. G. Dun and Co.'s trade report says:—"It is difficult to detect any change in current business. Prospects for business after January 1st are quite generally considered more hopeful; in some branches there are larger orders, and the Westbound shipments of merchandise are a little larger, but the working force naturally diminishes near the end of the year, and the holiday traffic brings just now a temporary activity which is not of much general significance."

President Cleveland's message to Congress is a voluminous document which occupied nine columns in the *Chicago Herald*. It has not been so favourably received as his previous messages, because, perhaps, it does not contain anything extraordinarily important. There are some who think that, owing to his indisposition, he did not write it all, but left a great deal to his subordinates. He mentions the new treaties with China and Japan, and speaks appreciatively of "the Japanese Empire of to-day" as "no longer the Japan of the past." He recommends strongly a new system of finance as a necessity.

SAILORS' ATHLETIC SPORTS IN YOKOHAMA.

The ship's company of H.M.S. *Plover* carried out a short programme of Athletic sports on the Cricket-ground on Thursday afternoon. The weather was most genial and a good many spectators were on the field. Each event was gamely contested, and much delight was evinced when it was found, that in spite of one "break," the sailormen had beaten the professional, Hancock, in a two-mile walk. Prizes were contributed for the various events by Messrs. Lane, Crawford, & Co., Messrs. Kelly & Walsh, Messrs. Arthur & Bond, and Messrs. Curnow & Co. Details:—

100 YARDS. (Scratch.)

A. Bryan (Blue-jacket)..... 1
R. Johnston (Marine) 2
F. Penny (Hospital Corps)..... 3

Six started. Bryan, who has a splendid action, soon opened out from his competitors and won easily. Time, about 12 secs.

WALKING MATCH. (Start 3.35 p.m.)

A. Johnson	37.40	Hancock	37.35
R. Jordan	40.30	Hancock.....	40.14
A. Clarke	43.23	Hancock.....	42.55
S. Roderick	46 01	Hancock.....	45.39
R. Johnston	48.24	Hancock.....	48.18
F. Penny	51.04	Hancock.....	51 05
J. Collins (disqualified)		Hancock.....	53 41
J. Campbell	56.17	Hancock.....	56 42

The amateurs only walked one lap each. In the first round Hancock obtained a lead of 5 seconds, which he increased in the next lap to 16, or about 60 yards. Roderick, the fourth man, fell even further behind. Then Johnston took up the contest and quickly began to overhand the professional. At the top corner he had drawn up well, but Hancock pulled up again and got in with 20 yards to spare. Penny, the sixth man, soon reduced the distance, and at the side gate drew level. At the far top corner Hancock was a little to the bad, but he stuck gamely to the task and was only one second behind as Collins started off. This competitor, unfortunately broke into a trot, though quite unconsciously, and the last man, Campbell, had to forego all the lead and start level with Hancock. The new-comer has a very good style and at once forged ahead, increasing the distance steadily. Coming down the straight he gained still more and eventually finished 25 seconds to the good, amid rousing cheers. Time 21.17.

ONE MILE FLAT RACE. (Scratch.)

A. Clarke 1
A. Johnson 2
R. Jordan..... 3

Ten started, but only three finished, the others dropping out, some in the first and the rest in the second lap. Several of the men in their eagerness [illegible] the ground and the finishing were received by [illegible]s of derisive applause. The winner romped in with 70 yards to spare, about 80 yards seperating second and third. Time, 6m. 9s.

VETERANS' RACE. (Over 17 years in H.M. Service.)

W. Toms (Blue-jacket)..... 1
A. Collings (Chief stoker) 2

Both veterans have served the Queen for over twenty years, but this did not deter them from entering pluckily for the race, which was once round the ground. The blue-jacket got ahead at the first corner, and going along the top was left to continue the race all alone, Collings retiring. Time, 1m. 43s.

THE NEW TREATY WITH THE UNITED STATES.

Washington, December 8th.

The following is the text of the new Japanese treaty which was signed November 22, 1894, between the United States and the Empire of Japan. There is also connected with it a protocol signed on the same day relating to certain political matters of mutual concern. President Cleveland, in transmitting the treaty to the Senate, makes no comments. Secretary Gresham's note to the President is of the same character. The message was transmitted to the Senate December 6 and referred to the Committee on Foreign Relations. The treaty is as follows:—

The President of the United States and His Majesty of Japan being equally desirous of maintaining the relations of good understanding which happily exist between them by extending and increasing the intercourse between their respective states, and, being convinced that this object cannot better be accomplished than in revising the treaties hitherto existing between the two countries, have resolved to complete such a revision, based upon the principles of equity and mutual benefit, and for the purpose have named as their plenipotentiaries, that is to say, for the President of the United States of America, Walter Q. Gresham, Secretary of State for the United States, and for His Majesty, the Emperor of Japan, Jushii Shinichiro Kurino of the Order of the Sacred Treasure and of the Fourth Class, who having communicated to each other the full powers found to be in full and due form, have agreed and concluded the following articles:—

Article 1.—The citizens and subjects of each of the two high contracting parties shall have full liberties to travel or reside in any part of the territories of the other contracting party, and shall enjoy full and perfect protection for their persons and property. They shall have free access to the courts of justice in pursuit and defence of their rights, they shall be at liberty equally with native citizens or subjects to choose and employ lawyers, advocates, and representatives to pursue and defend their rights before such courts and in other matters connected with the administration of justice they shall enjoy all the rights and privileges enjoyed by native citizens or subjects. In whatever relates to rights to residence and travel, to the possession of goods and effects of any kind to the succession to personal estates, by will or otherwise, and the disposal of property of any sort and in any manner whatsoever which they may lawfully acquire, the citizens or subjects of each contracting party shall enjoy in the territories of the other the same privileges, liberties, and rights, and shall be subject to no higher imports or charges in these respects than native citizens or subjects of the most favoured nations. The citizens or subjects of each contracting party shall enjoy in the territories of the other entire liberty of conscience and subject to the laws, ordinances, regulations, shall enjoy the right of private or public exercise of their worship and also the right of burying their respective countrymen according to their religious customs in such suitable and convenient places as may be established and maintained for that purpose. They shall not be compelled under any pretext whatever to pay any charges or taxes other or higher than those that are or may be paid by native citizens or subjects of the most favoured nations. The citizens or subject of either of the contracting parties residing in the territories of the other shall be exempted from all compulsory military service whatever, whether in the army, national guard, or militia, and from all forced loans or military exactions or contributions.

Article 2.—There shall be reciprocal freedom of commerce and navigation between the territories of the two high contracting parties. The citizens or subjects of each of the high-contracting parties may trade in any part of the territories of the other by wholesale or retail in all kinds of produce, manufactures and merchandise or lawful commerce, either in person or by agents, singly or in partnership, with foreigners or native citizens or native citizens or subjects; and they may own or hire and occupy houses, manufactories, warehouses, shops, and premises which may be necessary for them, and lease lands for residential and commercial purposes, conforming themselves in the laws for lease and customs and regulations of the country, like native citizens or subjects. They shall have liberty freely to come with their ships and cargoes to all places, ports, and rivers in the territory of the other which are or may be open to foreign commerce, and shall enjoy, respectively, the same treatment in matters of commerce and navigation as native citizens or subjects, or citizens or subjects of the most favoured nation, without having to pay taxes, imposts, or duties of whatever nature and under whatever denomination levied in the name of or for the profit of the Government, public functionaries, private individuals, corporations, establishments of any kind, or greater than those paid by native citizens or subjects, or citizens or subjects of the most favoured nation. It is, however, understood that the stipulations contained in this and the preceding article do not in any way affect the laws, ordinances, and regulations with regard to trade, immigration of labourers, police and public security which are in force or which may hereafter be enacted in either of the two countries.

Article 3.—The dwellings, manufactories, dwelling-houses and shops of the citizens or subjects of each of the contracting parties in the territory of the other, and all premises pertaining thereto, destined for the purpose of residence or commerce, shall be respected. It shall not be allowable to proceed to make search or a domiciliary visit to such dwellings or premises, or to examine or inspect books, papers, or accounts, except under the conditions and with the forms prescribed by the laws, ordinances and regulations for citizens or subjects of the country.

Article 4.—No other or higher duties shall be imposed upon the importation into the territory of the United States of any article the produce and manufacture of the territory of his Majesty the Emperor of Japan, from whatever place arriving, and no other or higher duties shall be imposed on the importations into the territories of his Majesty the Emperor of Japan, of any article the product or manufacture of the territories of the United States, from whatever place arriving, than on the like articles produced or manufactured in any foreign country, nor shall any prohibition be maintained or imposed upon the importation of any article, the product or manufacture of the territories of either of the high contracting parties, into territories of the other from whatever place arriving, which shall not equally extend to the importations of the like article being the product or manufacture of any other country. This last provision is not applicable to sanitary and other prohibitions occasioned by the necessity of protecting the safety of persons or of cattle, or of plants useful to agriculture.

Article 5.—No other or higher duties or charges shall be imposed in the territories of either of the contracting parties on the exportation of any article to the territory of the other than such as are or may be payable on the exportation of the like article to any other foreign country; nor shall any prohibitions be imposed on the exportation of any article from the territories of either of the two high contracting parties to the territory of the other which shall not equally extent to the exportation of the like article to any other country.

Article 6.—The citizens or subjects of the high contracting parties shall enjoy in the territories of the other, exemption from all transit duties and a perfect equality of treatment with native citizens or subjects in all that relates to warehousing, bounties, facilities, and drawbacks.

Article 7.—All articles which are or may be legally imported into the ports of the territories of His Majesty, the Emperor of Japan, in Japanese vessels, may likewise be imported into those ports in vessels of the United States without being liable to any other or higher duties or charges of whatever denomination than if such articles were imported in Japanese vessels, and reciprocally, all articles which are, or may be, legally imported into the ports of the territories of the United States in vessels of the United States may likewise be imported into those ports in Japanese vessels without being liable to any other or higher duties or charges of whatever denomination than if such article were imported in vessels of the United States. Such reciprocal equality of treatment shall take effect without distinction, whether such articles come directly from the place of origin or from any other place. In the same manner there shall be perfect equality of treatment in regard to exportation. In the same export duties shall be paid and the same bounties and draw-

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

backs allowed in the territories of each of the high contracting parties on the exportation of any article which is or may be legally exported therefrom, whether such exportation shall have taken place in Japanese vessels or in vessels of the United States, and whatever may be the place of destination, whether a port of either of the high contracting parties or of any third power.

Article 8.—No duties or tonnage, harbour, light-house, quarantine or other similar or corresponding duties of whatever nature or under whatever denomination, levied in the name and for the profit of Government perfunctories, private individuals, corporations, or establishments of any kind shall be imposed on the imports of the territories of either country or upon the vessels of either country which shall not equally and under the same conditions be imposed in the like cases on national vessels in general or vessels of the most favoured nation. Such equality of treatment shall apply reciprocally to the respective vessel from whatever port or place they may arrive and whatever may be their place of destination.

Article 9.—In all regards the stationing, loading, and unloading of vessels in the ports, basements, docks, roadsteads, harbours or rivers of the territories of the two countries, nothing shall be granted to national vessels which shall not be equally granted to the vessels of either country.

Article 10.—The coasting trade of both the high contracting parties is excepted from the provisions of the present treaty, and shall be regulated according to the laws, ordinances, and regulations of the United States and the Japanese governments respectively. It is, however, understood that the citizens of the United States in the territories of his Majesty the Emperor of Japan, and Japanese subjects in the territories of the United States, shall enjoy in this respect the rights which are or may be granted under such laws, ordinances, and regulations to the citizens of subjects of any other countries.

A vessel of the United States laden in foreign countries with cargo destined for two or more ports in the territory of Japan, may discharge a portion of her cargo at one port and continue her voyage to the other port or ports of destination where foreign trade is permitted, for the purpose of landing the remainder of her original cargo there, subject always to the laws and customs regulations of the respective countries. The Japanese Government, however, agrees to allow all vessels of the United States to continue as heretofore for the period of the duration of the present treaty to carry cargoes between the existing ports of Osaka, Nijita, and Ekisminato.

Article 11.—Any ship of war or merchant vessel of either of the high contracting parties which may be compelled by stress of weather or by reason of any other distress to take shelter in a port of the other shall be at liberty to refit therein, to procure all necessary supplies and to put to sea again without paying any dues other than would be paid by national vessels. In case, however, the master of a merchant vessel should be under the necessity of disposing of a part of his cargo in order to defray expenses, he shall be bound to conform to the regulations and tariffs of the place to which he may have come. If any ship of war or merchant vessel of the high contracting parties should run aground or be wrecked upon the coast of the other, the local authorities shall inform the Consul-General, Vice-Consul, or Consular agent of the district of the occurrence. Or if there is no such Consular officers, they shall inform the Consul-General, Consul, Vice-Consul, or Consular agent of the nearest district.

All proceedings relative to the salvage of Japanese vessels wrecked or cast on shore upon the territorial waters of the United States shall take place in accordance with the laws of the United States, and reciprocally all measures of salvage, relative to vessels of the United States wrecked or cast on shore in the territorial waters of His Majesty, the Emperor of Japan, shall take place in accordance with the laws, ordinances, and regulations of Japan.

Such stranded or wrecked ship or vessel, and all parts thereof, and all furniture and appurtenances belonging thereto and goods and merchandise saved therefrom, including those which may have been cast into the sea or the proceeds thereof sold, as well as papers found on board such stranded or wrecked ship or vessel, shall be given up to the owners or their agents when claimed by them. If such owners or agents are not on the spot the same shall be delivered to the respective Consuls-General, Vice Consuls, or Consular agents upon being claimed by them within the period fixed by the laws, ordinances, and regulations of the country, and such consular officers, owners, or agents shall pay only the expenses incurred in the preservation of the property together with the salvage or other expenses which would have been payable in like cases in case of a wreck of a national vessel. The goods and merchandise saved from the wreck shall be exempt from all duties of customs unless cleared for consumption, in which case they shall pay the ordinary duties.

When a vessel belonging to the citizens or subjects of one of the high contracting parties is stranded or wrecked in the territories of the other, the respective Consul-General, Consuls, Vice-Consuls, and Consular agent shall be authorized in case the owner, or master, or agent is not present to lend their official assistance in order to afford the necessary assistance to the citizens or subjects of the respective States. The same rule shall apply in case the owner, master, or other agent is present, but requiries such assistance to be given.

Article 12.—All vessels which according to United States laws are to be deemed vessels of the United States, and all vessels which according to Japanese laws are to be deemed Japanese vessels, shall for the purpose of this treaty be deemed vessels of the United States and Japanese vessels respectively.

Articles 13.—The Consuls-General, Consuls, Vice Consuls, and Consular agents of each of the high contracting parties residing in the territories of the other shall from local authorities obtain such assistance as can by law be given them for the recovery of the deserters from vessels from their respective countries. It is understood that this stipulation shall not apply to the citizens or subjects of the country where the desertions take place.

Article 14.—The high contracting parties agree that in all that concerns commerce and navigation any privilege, favour or immunity which either high contracting party has actually granted or may hereafter grant to the Government ships, citizens or subjects of other States, shall be extended to the Government, ships, citizens or subjects of the other high contracting party gratuitously, if the concession in favour of that other State shall have been gratuitous, and on the same or equivalent conditions of the conditions, if the concession shall have been conditional, it being their intention that the trade and navigation of each country shall be placed in all respects by the other on the footing of the most favoured nation.

Article 15.—Each of the high contracting parties may appoint Consuls-General, pro-Consuls, or Consular agents in all the ports, cities and places of the other, except in those where it may not be convenient to recognize such officers. This exception, however, shall not be made in regard to one of the high contracting parties without being made likewise in regard to every other power. The Consuls-General, Consuls, Vice-Consuls, and Consular agents may exercise all functions and shall enjoy the privileges, exemptions and immunities which exist now or may hereafter be granted to the consular officers of the most favoured nation.

Article 16.—The citizens or subjects of each of the high contracting parties shall enjoy in the territories of the other the same protection as native citizens or subjects in regard to patents, trademarks, and designs upon fulfillment of the formalities prescribed by law.

Article 17.—The high contracting parties agree to the following arrangement:—

The several foreign settlements in Japan, shall, from the date this treaty comes in force, be incorporated with respect to the Japanese communes, and shall henceforth form part of the general municipal system of Japan. The most competent Japanese authorities shall thereupon assume all municipal obligations and duties in respect thereof, and the common funds and property, if any, belonging to such settlements shall at the time be transferred to the said Japanese authorities.

When such incorporation takes place existing leases in perpetuity upon what property is now held in the said settlement shall be confirmed, and no conditions whatsoever other than those contained in such existing leases shall be imposed in respect of such property.

It is, however, understood that the Consular authorities mentioned in the same are in all cases to be replaced by the Japanese authorities. All lands which may have been previously granted by the Japanese authorities free of rent for the purpose of said settlements shall be subject to their right of eminent domain, be permanently reserved free of all taxes and charges for the public purposes for which they were originally set apart.

Article 18.—This treaty shall from the date it comes into force be substituted in place of the treaty of peace and amity concluded on the third day of the month of the seventh year of Kayeim, corresponding to the 31st day of March, 1854; the treaty of amity and commerce concluded on the 19th day of the sixth month of the year of Ansei, corresponding to the 29th day of July, 1858; the tariff conventions concluded on the 16th day of the fifth month of the second year of Keio, corresponding to the 25th day of June, 1866; the convention concluded on the twenty-fifth day of the seventh month of the eleventh year of Meiji, corresponding to July 25, 1878, and all arrangements and agreements subsidiary thereto concluded or existing between the high contracting parties, and from the same date such treaties, conventions, arrangements and agreements shall cease to be binding, and in consequence jurisdiction exercised by the courts of the United States in Japan and all the exceptional privileges, exemptions and immunities there enjoyed by citizens of the United States as a part of, or appurtenant to such jurisdiction, shall absolutely and without notice cease and determine, and thereafter all such jurisdiction shall be assumed and exercised by Japanese courts.

Article 19.—This treaty shall go into operation on the 17th day of July, 1895, and shall remain in force for the period of twelve years from date. Either of the high contracting parties shall have the right at any time after eleven years shall have elapsed from the date it goes into operation to give notice to the other of its intention to terminate the same, and at the expiration of twelve months after such notice is given this treaty shall wholly cease and terminate.

Articles 20.—The treaty shall be ratified and the ratification thereof shall be exchanged either at Washington or Tokyo as soon as possible, and not later than six month after signature.

In witness whereof the representative plenipotentiaries have signed the present treaty in duplicate, and have thereunto affixed their seals.

Done at the city of Washington, the 22d day November, in the eighteen hundred and ninety-fourth year of the Christian era, corresponding to the 22nd day of the eleventh month of the 27th year of *Meiji*.

[Seal.] WALTER Q. GRESHAM.
[Seal.] SHUICHIRO KURINO.

The protocol attached to the treaty deals in other subjects of general interest between the two countries, and provides that one month after the ratification of the treaty the import in respect to merchandise imported into Japan shall cease to be binding—and gives some details governing the passports of citizens of the United States in Japan.

SHOOTING AFFRAY IN HONMURA ROAD.

An American named George Watts, a seaman belonging to the British schooner *W. P. Hall*, was shot on Monday afternoon about 1 o'clock by a saloon keeper named J. A. Frame. It appears that Watts had been a boarder at Frame's house, which he recently left, and this seems to have engendered some ill-feeling between the men. Watts went into Frame's saloon at tiffin time, on Monday, and shortly afterwards a pistol shot was heard. Some men rushed into the bar-room where they found Frame doubled-up on a bench with Watts standing over him. Watts then made off. Frame stated that he had fired into the floor. There being no sign of the bullet, attention was turned to Watts who had taken shelter in a house lower down the street, when it was discovered that he had been shot through the left leg, the bullet lodging in the right limb. The wounded man was immediately taken to the hospital as he was bleeding profusely. Frame, who claims to be an American, is not recognized by the United States Consulate-General, while the British Court equally refuses to acknowledge his nationality, although the man protests that he was naturalized in Australia and used his vote. Under the circumstances, the police authorities applied to their own Department of Justice, and on Monday, Frame, whose right name is supposed to be James Mc-Adoo, was arrested by Japanese officers of the law. Frame was formerly in Shanghai, where he shot a coloured man named George Lemon. A Preliminary Judge having examined Frame at the Police Station, he was released, pending trial, until which time he will be under surveillance.

CHINA AND JAPAN.

The Times of November 7th publishes the following in its leading columns:—

How despondent is the view of the situation held by the Chinese authorities may be judged from the news we publish this morning. To the representatives of all the Powers, convened at the Chinese Foreign Office on Sunday, Prince Kung calmly avowed the complete inability of his country to withstand the Japanese attack, and made appeal for their assistance in bringing about some agreement for the termination of the war. He went on to indicate as the basis of

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

negotiation the willingness of China to abandon her claim to the suzerainty of Korea, and to pay a war indemnity to Japan. This appeal, as appears on the face of the reported transaction, and as the Chinese Government has taken pains to state with unmistakable emphasis, is made formally and officially. It cannot be too clearly understood that it is thereby broadly distinguished from whatever suggestions may previously have been made, or whatever aspirations for peace may previously have been uttered on behalf of China. It is matter for congratulation that we now have what has hitherto been wanting—a well-defined and trustworthy *locus standi* for any Powers that may see their way to furthering the restoration of that tranquillity in the Far East which is of such high importance to all European nations having relations, commercial or other, with that quarter of the globe. A formal and official offer of concessions, fitted at least to serve as a basis of negotiation, is the first and indispensable condition of any attempt to bring the war to a close. But it is only the first step in a path which is by no means free of formidable obstacles, and we shall avoid the risk of painful disillusionment if we bear this fact steadily in mind. The attitude of the French Government is already indicated in a telegram which we publish to-day, and it may without serious risk of error be taken as typical of the reception which every cautious diplomatist will be disposed to give to the Chinese appeal. M. Hanotaux shows no disposition to play a leading part in dealing with the Chinese proposals, but at the same time intimates that he will give the most favourable consideration to any course which secures the approval of the Great Powers. While every civilized nation is undoubtedly anxious to see the war terminated, the situation is much too difficult, and conflicting considerations are much too delicately balanced, to permit of anything like impulsive espousal even of so good a cause as that of peace. While in a general way all the Powers have an interest in the restoration of tranquillity, they have many private and divergent interests, one or other of which is sure to come into active operation upon any attempt to force the pace. Aspiration after peace is one thing, but practical acceptance of some specific and concrete proposal for procuring peace is quite another. We are far from affirming that the Chinese appeal and the reception to be given to it by the Powers will not provide a way out of the present difficulty. We sincerely hope that it will; but we desire to avoid the hasty assumption that, because the first step is taken, the goal is certainly within reach.

Whatever concerted action may be taken by the Powers in response to the Chinese appeal must be expected to lie wholly within the somewhat limited sphere of good offices. It is almost unnecessary to say that anything of the nature of intervention is excluded by practical considerations of the most stubborn character. No self-respecting Power can assume an authoritative attitude, unless it has fully counted the cost of making its authority respected in the last resort. We are not concerned to decide whether, if there were only China and Japan and one Great Power in the world, it might be possible and wise for that Power to insist upon peace. As a matter of fact there are several Great Powers having interests in the Far East, so that it is a practical impossibility for any one Power to act with the least implication of compulsion in the background. The idea that the Great Powers could be induced collectively to take the authoritative attitude which is impossible for any one among them may be dismissed as chimerical in the present condition of affairs. Japanese statesmen would indeed do well to remember that a point may be reached at which the collective interest becomes more powerful than all private interests put together. But, though there is a limit somewhere to the permissible expansion of Japan, it does not at this moment affect the course of practical politics. The solution of the actual difficulties must be approached with recognition of the fact that neither intervention, nor even mediation, between China and Japan is at present practicable, although there is room for the good offices of interested Powers acting in concert. In calculating the chances of immediate or proximate success for any negotiations that may be set on foot, it is very important to remember that, while China is in a hurry, Japan's interests lie in the direction of procrastination. The natural resource of her diplomatists at the present time is undoubtedly what are known as *négociations dilatoires*. However courteously she may listen to representations, she cannot forget that she is in the midst of combinations which promise to result in placing China much more completely at her mercy. The impending attack upon Port Arthur is of itself an important factor in the determination of Japanese policy. It is practically admitted by Prince Kung that China has no serious hope of defending the place, and it is certainly believed by the Japanese that its capture is inevitable. With such a blow ready for delivery, it is not to be supposed for a moment that Japan will be in any hurry to accept even such proposals as she may think fairly adequate. When the weather compels the suspension of military operations she will probably be more disposed to listen to suggestions from without, but in the meantime she is bent upon making the most of the opportunities remaining, being well aware that, if further successes bring no other permanent reward, they will at all events justify enhanced demands for indemnity.

It may be doubted, apart from these considerations, whether the actual Chinese proposals can be considered adequate. It is all very well for China to abandon her suzerainty over Korea, but the simple withdrawal of her claims makes no provision for the future government of that country. Yet it is precisely the disorganized and turbulent condition of Korea which was the ostensible cause of the war. Japan cannot be content with a simple withdrawal of claim which leaves Korea without any recognized suzerain. She will naturally demand the frank recognition of her overlordship and her right to exercise a more than nominal authority. It is evident from the accounts of our Correspondents that Korean does not contain the elements of self-regeneration. The nobles are divided by hereditary feuds as well as by more recent differences of opinion, and they have no notion of settling a quarrel by anything short of bloodshed. Government in any practical form does not exist, and the very conception of reform has yet to be instilled into the Korean mind. Whatever vestiges of authority may have existed have been shattered by the war, and the chaos cannot be reduced to order by the mere renunciation of Chinese claims. The Japanese will naturally hold it their right to undertake the reconstruction of the Korean State, and, in addition to the right of conquest, they can undoubtedly plead their proved and very remarkable aptitude for assimilating and practising the conceptions of Western civilization. Yet though the Japanese claims are very strong, and though there is no visible chance for Korea except in Japanese tutorage, it is very far from certain that perfect harmony will be found to exist among the Great Powers upon the question of giving Japan effective control. There is no need to labour the point at this stage. It is enough to indicate that the Chinese offer, as it stands, does not go far enough for Japan, and that upon the amended offer, which might satisfy Japan, there is ample room for such differences of view among the Powers as would preclude any very effective presentation of a joint opinion.

ATTEMPTED ASSAULT IN KOBE BY A JAPANESE SOLDIER.

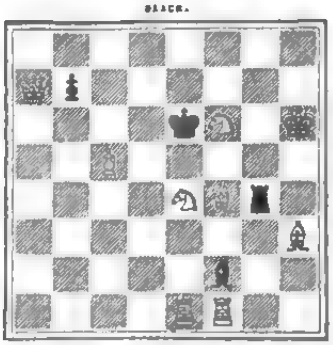
On Wednesday a Japanese soldier, infuriated by drink and the desire for revenge, made an attack upon foreigner at the Seamen's Home, Kobe, which, had it not been for the quickness with which the assaulted man evaded the blow aimed at him, might very easily have proved fatal. Shortly after 2 o'clock in the afternoon Mr. H. Lackmann, who is employed at the Seamen's Home, was standing at the door in Division Street, when hearing a rush across the street, he turned, and saw a Japanese soldier making for him with a naked sword bayonet in his hand. Quickly jumping on one side and thus avoiding the blow, Lackmann retreated into a room on one side of the hall, where Mr. Scofield, the manager of the Home, and two lads were sitting, and quickly closed the door. The soldier followed him and attempted to enter, but finding the door was held fast, began to stab at the panels with his bayonet. The two lads thereupon jumped out of window and went for the police, while Mr. Scofield went to Lackmann's assistance in holding the door. Evidently the soldier was fully aware that the door was being held against him instead of being secured by a lock, as the stabs were directed at the panel above the lock just in the place that a man would usually stand in preventing a door from being opened. Fortunately none of the thrusts took effect on the two men within the room, who stooped down and held the door from below.

After stabbing at the door twenty or thirty times, some of the thrusts completely penetrating the panel, the soldier desisted from the attack, and then Mr. Scofield got out of window and went to the front with the object of securing the man. As soon as the soldier saw Mr. Scofield, however, he came towards him and held out his hand, saying in broken English that he had no bad feeling towards him, but wanted to kill the other man, the fat man. At this point Mr. Eastham, the representative of Messrs. Dobson and Barlow, happened to pass, and seeing there was a disturbance endeavoured to induce the soldier to go away quietly. The man offered no objection, and Mr. Eastham took hold of his arm and led him away to the Club Hotel, where he was given a drink. Unfortunately no effort was made to detain the man, it not being known at that time how serious the affair was, and he was allowed to leave the hotel without opposition, and had not been arrested up to a late hour on Wednesday night.

The soldier, who belonged to the 20th Regiment (Osaka), told the crowd that assembled outside the Seamen's Home while the disturbance was going on, that he had formerly been a jinrikisha-man in Division Street, and that some time ago the foreigner struck him a blow in the face, of which he still bore the scar. He had therefore determined to kill the foreigner before going to China. Mr. Lackmann says he recognises the man as a former jinrikisha-puller in Division Street, but emphatically denies ever striking him. All he did was on one occasion to act as interpreter between the jinrikisha-man and some Russian sailors with reference to the payment of fare, for which the man appeared to bear him a grudge.

The police did not come upon the scene until the disturbance was over and the soldier had gone away—in fact Mr. Scofield had to go to the new police station near the Paper Mill before he could secure assistance. The police then became active enough, visited the premises, carefully examined the door, took down the names of the persons engaged, and inquired fully into the circumstances of the affair. They believe they will have no difficulty in arresting the man from the description given them.—*Chronicle.*

CHESS.



(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets at the Club Hotel, No. 5, Bund, on Monday and Thursday in each week from 5 to 11 p.m.

The Tokyo Chess Club meets at the Tokyo Hotel every Friday from 1 to 11 p.m.

Problem No. 159.
By F. R. Gittins.

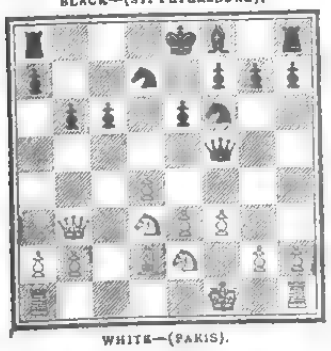
BLACK.

WHITE.

White to play and mate in two moves.

Paris v. St. Petersburg.

The telegraphic match between the chess circles of Paris and St. Petersburg, which was adjourned for the holiday season, was to be resumed on the 15th of September. The positions are shown in the diagrams below. The next moves have been sealed and intrusted to the keeping of Baron Albert de Rothschild of Vienna, who acts as umpire.



THE PARIS GAME.

BLACK—(PARIS).

WHITE—(ST. PETERSBURG).

Lasker (news of whose illness was cabled from London, 22nd Oct.) was taken with typhoid fever and when last mail left home was an inmate of St. Thomas's Hospital, London. His brother the Doctor went over from Germany to be with him and the fever seemed to be taking a favourable course. We hope that long ere this the new Champion is in good trim once more.

Mr. Stubbs' End-Game.

Several correspondents have informed us that this puzzle is unsolvable "unless there is a catch in it." We append the author's solution, which we consider is perfectly legitimate and free from trickery. It must be remembered that an end-game differs from an ordinary problem in this respect—that in the latter no moves have been made when the position is submitted to the solver, while the former is supposed to be the result of actual play, and to get at the possibilities of the position it is necessary to know something of the moves already made.

Mr. Stubbs explains his puzzle as follows:—

WHITE.	BLACK.
1—P takes P en pas	1—P takes P
2—B takes P mate.	

A study of the position will show that Black's last move must have been P from Kt 2 to Kt 4. The Black K cannot have moved from Kt 2 because that square is guarded by two White pawns. It is obvious that the Black ■ cannot have moved from any other square. The Black R and the Black P on B 2 cannot have moved. The Black P on Kt 4 cannot have come from Kt 3, because the White K would have been in check and could not be on R 5. It also could not have taken a piece and gone from B 3 or R 3, because they are already occupied by White Pawns. Therefore the Black P must have come from Kt 2 and can be taken *en passant*.

Game No. 201.

Played in the *Staats Zeitung* Cup Tournament at the recent meeting. A very pretty game.

WHITE. Showalter.	BLACK. Albin.
1—P to K 4	1—P to Q 3
2—P to Q 4	2—P to K Kt 3
3—B to Q 3	3—B to Kt 2
4—P to Q B 3	4—Kt to Q 2
5—Kt to K 2	5—P to K 4
6—P to K B 4	6—Q to R 5 ch.
7—P to Kt 3	7—Q to R 6
8—Kt to Kt sq.	8—Q to K 3
9—Kt to B 3	9—P to K R 3
10—Castles	10—P takes B P
11—B takes P	11—P to K Kt 4
12—B to Q 2	12—Kt to K 2
13—Kt to R 3	13—Kt to Q Kt 3
14—Kt to Q Kt 5	14—K to Q sq.
15—B takes P	15—P takes B
16—Kt takes Kt P	16—Resigns. (a)

(a) Black had a bad game from the early part, P to Q 3 being poorly continued with P to K Kt 3 instead of P to Q B 4 and P to Q Kt 3. The following moves would probably have occurred had the game been played out:—16....., Q to Kt 3; 17—Kt takes B P ch., K to Q 2; 18—P to K 5, Q to R 4; 19—P to K 6 ch., K to B 3; 20—Q takes Q, R takes Q; 21—Kt to Q 8 ch., K to Q 4; and 22—Kt takes B P mate—a grand design.

Game No. 202.

Played in the South Australian Tournament.

11—Kt to Q 4	11—B takes Kt mate.

We clip the following from the Chicago *Times*:—"Professor Peipers of San Francisco is a strong chess player. He is one of the mightiest chieftains on the Pacific Coast, and from his belt dangle the scalps [of Zukertort, Showalter and many doughty but lesser chiefs. He now resides at Los Angeles, Cal., as also does the champion chief of all American tribes, S. Lipschutz. Chief Peipers fought many battles with the medicine man of the Los Angeles tribe, and almost invariably won. But he persistently refused to cross tomahawks with Champion Chief Lipschutz. So the bad Indians, who wanted very much to see a duel between the two, one day played a joke on Chieftain Peipers. Champion Chief Lipschutz was hidden in the wigwam adjoining that of the medicine man. Chief Peipers, who, by the way, is deaf, played in the medicine man's wigwam. The latter called out the moves made by Peipers; Lipschutz called out his own move and the doctor made them against Peipers. The doctor won the first game and was complimented by Peipers on his good form. But when he also won the second game Chief Peipers arose and said: "Doctor, you have improved a knight in strength since we played last. If you played like this all the time you could hold your own against Lipschutz." Tableau.

LATEST TELEGRAMS.

[Reuter "Special" to "Japan Mail."]

London, December 29.

An agreement has been entered into between the Governments of Great Britain and Japan, extending for six months the period fixed by the recent Anglo-Japanese Treaty for the conclusion of a supplementary convention providing for the conversion into specific duties of the *ad valorem* rates named in the Tariff annexed to the Treaty.

London, January 1.

Lord Randolph Churchill has rallied somewhat from his recent attack of illness, but the doctors give no hope of restoration to health.

The Revenue Returns for the last three months of the year just closed show a large increase, which is encouraging evidence of the revival of trade in reality.

London, January 2.

The Rescript of the Emperor of Russia, appointing General Shouvaloff Governor of Warsaw, re-affirms his earnest desire for peace and equals his father's policy in that direction.

(From the "N.-C. Daily News.")

London, December 28.

The column sent against the Waziri tribe destroyed the defences of two Waziri positions on Saturday.

The Dutch expedition in Lombok has been disbanded but two regiments remain to garrison the island.

London, December 27.

Fatal conflicts have been taking place between the white men and the negroes in Alabama and Georgia, and the militia have been called out to restore order.

The *entente cordiale* between Great Britain Russia is looked upon with favour in St. Petersburg, especially because it is hoped that it will have an important bearing on affairs when the time comes for a settlement between China and Japan.

(From "Le Courrier d'Haiphong.")

Paris, December 15.

The obsequies of Count Ferdinand de Lesseps were attended by a vast concourse.

M. de Munster has visited the President and conveyed to him the regret of the Emperor William at the death of M. Burdeau (the President of the Chamber) who made himself most valuable at the Berlin Labour Conference.

December 16.

The obsequies of M. Burdeau were imposing. The President attended the ceremony at the Palais Bourbon.

The documents delivered up by Signor Giolitti have caused a sensation at Rome. Parliament has been prorogued.

December 17.

Signor Crispi has stated the prorogation is in order that the Chamber may recover its calm. The sensation is profound all over Italy; 150 Opposition deputies have protested.

(From Japanese Papers.)

Matsuyama, January 2.

At a review of artillery, which took place on the parade ground to-day, two Chinamen, said to be spies, were discovered among the spectators, and both were arrested on the spot.

Shimonoseki, January 3.

A Ninsen correspondent, writing under date of the 29th ult., states that Chung-hwa in Phyŏng-an-do is disturbed by the Tong-haks, and a state of anarchy prevails there. It is

REPORTS.

The German steamer *Nürnberg*, Captain H. Walter, reports :—Left Hongkong the 24th November at 4 p.m. and arrived at Yokohama the 30th December at p.m.; through the Formosa Channel had strong N.E. monsoon and rough sea; from Tutuabout up to Van Diemen Strait strong N. and N.W. winds, increasing to a fresh gale with high sea; thence to port fresh N.W. winds and moderate sea.

The British steamer *Victoria*, Captain J. Panton, R.N.R., reports :—Left Tacoma, Wash., the 12th December at 6 a.m., and Victoria, B.C., the 12th at 10.20 a.m.; experienced strong head winds and high seas throughout the passage; crossed the meridian on the 24th, and passed Inuboye-saki the 2nd January at 5 a.m. Arrived at Yokohama at p.m.

The American steamer *City of Rio de Janeiro*, Captain J. T. Smith, reports :—Left San Francisco the 13th December at 4.13 p.m. Arrived at Yokohama the 3rd January at 4.55 p.m. Passage, 19 days 19 hours 14 minutes; had westerly winds and head sea most of the passage.

LATEST COMMERCIAL.

IMPORTS.

Business has been naturally restricted by the New Year holidays; but the outlook all round is fair for an early resumption of trade in 1895. Grey Yarn and Grey Shirtings are in a good position, and fair dealings have been made. Nothing done in T. Cloth, T.-Reds, and Indigo Shirtings. A few small lots of Lawns, Velvets, Prints, and Cotton Italians have moved. In Woollens there are small sales of Mousselines and Italian Cloth, but other kinds including Blankets, are at a standstill.

COTTON PIECE GOODS.

	PER PIECE.
Grey Shirtings—8½ lb., 38½ yds. 39 inches	$2.25 to 2.90
Grey Shirtings—9lb., 38½ yds. 45 inches	2.50 to 3.25
T. Cloth—7lb., 24 yards, 32 inches	1.60 to 1.90
Indigo Shirtings—12 yards, 44 inches	1.70 to 2.35
Prints—Assorted, 24 yards, 30 inches	2.00 to 3.75
	PER YARD.
Cotton—Italians and Satteens Black, 32 inches	0.16 to 0.21
	PER PIECE.
Velvets—Black, 35 yards, 22 inches	7.25 to 9.50
Victoria Lawns, 12 yards, 42-3 inches	0.85 to 1.00
Turkey Reds—2.0 to 2.4lb., 24/25 yards, 30 inches	1.60 to 1.70
Turkey Reds—2.8 to 3lb., 24/25 yards, 30 inches	1.80 to 2.00
Turkey Reds—3.8 to 4lb., 24/25 yards, 32 inches	2.25 to 2.55
Turkey Reds—4.8 to 5lb., 24/25 yards, 32 inches	2.75 to 3.05

WOOLLENS.

	PER YARD.
Flannel	$0.30 to 0.50

METALS.

Some enquiries for Bar Iron; both spot and forward being in request. Other sorts quiet. Wire Nails—Buyers have supplied their wants at auction sales of damaged cargo ex steamer *Irene*. Tin Plates again lower in price.

	PER PICUL.
Flat Bars, ¾ inch	$3.60 to 3.70
Flat Bars, ½ inch	3.70 to 3.80
Round and square up to ¾ inch	3.60 to 3.80
Iron Plates, assorted	3.90 to 3.95
Sheet Iron	4.90 to 5.10
Galvanized Iron sheets	9.00 to 9.25
Wire Nails, assorted	5.75 to 6.00
Tin Plates, per box	6.50 to 6.75
Pig Iron, No. 3	1.65 to 1.70

KEROSENE.

Market strong and prices firm without any quotable change. Deliveries at the close of the old year were good, and the stock is now below 500,000 cases. Fresh arrivals and new bargains are expected shortly.

Chester	$1.75 to 1.77½
Comet	1.72½ to 1.75
Devoe	—
Russian Anchor	1.73½ to 1.75
Russian Moon	1.70 to 1.72½

SUGAR.

Generally quiet and slow. Brown—Arrivals exceed sales and dealers hold back looking for lower prices when trade reopens after the New Year holidays. White—Market dull with small sales, but prices unaltered.

	PER PICUL.
Brown Takao	$4.20 to 4.30
Brown Manila	4.90 to 5.00
Brown Daitong (New)	3.45 to 3.50
Brown Canton	3.70 to 4.25
White Java and Penang	6.60 to 6.70
White Refined	8.50 to 9.00

EXPORTS.

RAW SILK.

A good business marked the demise of 1894, many transactions being entered for delivery after the New Year holidays. Prices all round are up, the low exchange assisting holders in this respect. Stock generally is much reduced; the native manufacturers retiring coarse Re-reels and Common Kakeda for their own use.

"MONEY,"

A JOURNAL OF BUSINESS AND FINANCE.

PUBLISHED EVERY WEDNESDAY MORNING.

Annual Subscription, post free, 15s., in the United Kingdom. Ditto, 17s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

Cable Address: Dinero, London.

"**MONEY**" is a fearless critic and exposer of all shams, frauds, and swindles.

"**MONEY**" is the Journal for Investors, Speculators and Business men.

"**MONEY**" is a thoroughly up-to-date Weekly Record of all Financial and Business Matters.

"**MONEY**" is not subsidised by any financial association, clique, or syndicate, but is absolutely free, independent, and honest.

BALANCE SHEETS of Assurance, Banking, Manufacturing Shipping, Trading, and Trust Companies, are fearlessly and impartially criticised in "**MONEY.**"

THE MONTHLY FOREIGN AND COLONIAL EDITION, called "MONEY AND TRADE," is published on the last Wednesday in each month, and is forwarded direct to the Foreign Agents and Correspondents of all the leading English Merchants, and to all the large Wholesale Buyers and Storekeepers in the Colonies, India, China, Japan, South America, and other countries.

"**MONEY AND TRADE**" enjoys a very large circulation in all Foreign Markets where English goods are sold; and, as it goes direct into the hands of the Wholesale and Retail Buyers, it offers unique advantages to advertisers.

November 3, 1894.

THE GREATEST WONDERS OF MODERN TIME.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In I short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. Couper, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a tea spoonful of Ointment was worth a fowl and any quantity of peas and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors the throughou World. May 21st, 1890.

ATKINSON'S
WHITE ROSE
The most admired of all Perfumes. Other odours pall upon the sense but Atkinson's "White Rose" is ever fresh and sweet.
ATKINSON'S
EAU DE COLOGNE
Recommended by a number of eminent physicians as the best for delicate use in a region of world-wide fortifications. Use only Atkinson's Eau de Cologne, which is the finest of all Perfumes.
J. & E. ATKINSON,
24, Old Bond Street, London.
CAUTION! Only genuine with shield-shape Bottles, Red Label and Trade Mark, a "White Rose," and address in full.

January 13th, 1894. 1y.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JAN. 12TH, 1895.

SUMMARY OF NEWS.

THE war news of the week is very scanty.

MR. MUROTA YOSHIBUMI has been appointed Japanese Consul-General in Mexico.

MR. WATANABE FUKUSABURO has been elected President of the Yokohama Town Assembly for the year.

THE amount of public subscriptions acknowledged by the Naval Department reached *yen* 481,406.315 on the 6th inst.

THE Englishmen of Yokohama have decided to give a St. George's Ball on their national Saint's anniversary, April 23rd.

MR. INOUYE KI, ex-Minister of Education, who is dangerously ill, has been promoted to the peerage with the rank of Viscount.

FIVE doctors, two dispensers, thirty nurses, and one pay-master of the Red Cross Society, left Ujina on the 5th inst. for the seat of war.

A thief broke into a watchmaker's shop in Tokyo, on the 4th inst., and got away with thirty-nine silver watches, valued at about 200 *yen*.

DURING December last the Kanagawa Kenchō issued passports to 47 Japanese wishing to proceed to Korea, and 174 Japanese who returned home from foreign countries during the month were 174; most of these came from Hawaii.

SKATING was indulged in on Sunday and Monday on the Skating Club's Pond, near the Bluff, but the rain of Wednesday destroyed the ice.

THE Budget for the 28th fiscal year of *Meiji* shows a total estimated revenue of *yen* 90,300,700.453, and an expenditure of *yen* 89,757,415.73.

MR. J. W. FOSTER, ex-Secretary of State in the U.S. Government, has accepted the appointment of Foreign adviser to the Chinese Envoys of peace.

MR. G. H. SCIDMORE gave an illustrated lecture on Fiji and its People on Friday evening, at the fortnightly meeting of the Yokohama Literary Society.

A JAPANESE coolie working on board the steamer *Nestor* in Yokohama harbour on Sunday, fell into the hold and received injuries from which he died the same day.

THE death is announced of Mr. Iwashige Iwaho, one of the ablest Public Procurators of the Supreme Court, which took place in Tokyo on the 2nd inst.

JAPAN total foreign commerce rose to 230 millions last year, exceeding the average by 30 per cent. The imports were 113,246,084 *yen*, and the exports 230,728,035 *yen*.

THE shareholders of Messrs. Deakin Bros., Limited, have resolved to wind-up the company voluntarily. A liquidator, Mr. C. H. Fearon, was appointed on Wednesday.

THE Government has decided to sell the transport *Fusan Maru*, 2,362 tons, to the Osaka Shosen Kaisha. The steamer is to be paid for in fifteen annual installments.

A SERIOUS landslip took place at Miyagawamura, Fuin District, Toyama Prefecture, on the 28th ult. Three women were more or less severely injured, and two were killed.

MR. OKOSHI, late Japanese Consul-General in Shanghai, and formerly of the London Consulate, succeeds Mr. Megata as Superintendent of he Yokohama Customs House.

THE Government has issued instructions that all beef supplied by army contractors is to be rigidly inspected. Only a few of the old contractors have had their contracts renewed.

THEIR Imperial Highnesses Princes Arisugawa Taruhito and Takehito and Princess Fushimi Toshi-ko are in mourning through the death of Countess Ii Yoshi-ko, wife of Count Ii Naonori.

THERE have been several fires in the native quarters of Yokohama this week. About forty houses in all have been destroyed. Two firemen received severe injuries at one conflagration.

THE Korean foreign loan has been refused by the Japanese banks and private capitalists. It is expected that the Japanese Government will now have to advance the money from the War Fund.

THE Nippon Yusen Kaisha is to receive a charter from the Government authorising them to run a line of steamers between Kobe and Talien, *via* Ujina, Shimonoseki, Ninsen, Taidong, and Tatung.

COUNT ITO made a studiously moderate speech at the reassembling of the Diet after the New Year recess, in which he expressed the hope that all the Government during the present crisis. Only legislation of an urgent character will be discussed this session.

THE P.M. steamer *City of Rio de Janeiro* struck a rock near Van Dieman's Straits, coast of Kiushu, at midday on the 6th. She was beached and temporarily patched before proceeding on to Nagasaki. The passengers and crew are safe.

IT is stated that a number of Aino in the Hidaka Province of Hokkaido intend to apply to the Government for permission to follow the Japanese expeditionary army as coolies. Should their request be accepted the services they could render in North China would be very great.

IT is stated that the Government has decided to accept the request of the Yokohama Town Assembly to prolong for the following three years the time within which the Assembly have to pay back money borrowed from the Government on behalf of the Water-works.

REUTER telegraphs:—An expedition from Batavia against the Karagasen will probably start in January. T.I.M. the Czar and Czarina meditate making a tour of the Empire next year. M. Lanessan, Governor of Indo-China, has been recalled from his post, on account of his having divulged official documents to the Press. The death is announced of the poetess Christina Georgina Rossetti, at the age of sixty-four. News has been received from St. Petersburg that the Russian Government has decided to settle the Pamirs question by great concessions, viz., agreeing to rectifying the map whereby the Chitral road, and the so-called Jonoff road are conceded to Great Britain. A Russian official mission has started for Abyssinia on a visit to the Negus and petty chiefs, taking with them superb presents. Captain Dreyfus of the French Army, has had his epaulettes stripped from his shoulders and his sword broken in the presence of 5,000 troops of the Paris Garrison. Prince Hohenlohe has paid a visit to Prince Bismarck in compliance with the request of Emperor William, who follows shortly on a similar errand. M. Rousseaux goes to Tonquin as Resident-General. The Red Cross Society of Great Britain has voted the sum of £500 to the Red Cross Society of Japan.

THERE is not much movement yet in Imports, and, especially in Textiles, matters are decidedly quiet. A few small purchases of Yarns and Shirtings have been effected, but little else has been done. The Metal trade in general is dull, though future prospects are said to be good. There is little or no alteration in the value of the various kinds of Sugar on the market, but arrivals have exceeded sales, and both Whites and Browns of all brands are unchanged, except perhaps Manila sorts, which may be called a shade lower. The large settlements recently made in the principal Export have considerably reduced the stock of Silk on offer, especially that of fine-sized parcels. Prices are full and firm, and as the general stock is now down to 11,000 piculs, and most of the Filatures and Re-reeling factories are closed for the winter, it appears that present prices are likely to be maintained in view of the fact that heavy arrivals must now cease for the time. Waste Silk has only seen a small business, and values are practically unchanged. As there is nothing left on the Tea market but the remnants of a small stock of inferior leaf, business in this staple may be said to be finished for the season. Exchange remained steady at [illegible] last week's [illegible]

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The Diet has met again after the New Year's holidays, but nothing momentous or exciting having yet taken place in either House, the comments of the vernacular press are dull and apathetic. The papers are not, however, silent as regards the hopes they entertain of the Legislature. What the *Niroku* says in one of its leaders headed "The Responsibility of the 8th session of the Diet," may be reproduced as a fair example of the general tone:—"The responsibility of the Diet in the present session cannot be better stated than by repeating our old argument that the Diet will disgrace itself should it neglect, because of the war, to oppose or challenge any measure or procedure demanding such action. Some argue that the exceptional exigencies of the time, both belligerent and diplomatic, must be given precedence over affairs relating to internal administration. That is a dangerous opinion, tending to further alienate the people's minds from domestic matters, which already receive from the public an amount of attention far smaller than is compatible with their importance. Can it be for the benefit of the State that the people should be diverted from home questions? In our opinion it is next to impossible that diplomacy should yield good fruits side by side with a stunted growth of home politics. To say nothing of the advisability of considering the Budget in full, does not the Diet find in the Ministers' past and present doings anything to call in question? Has it nothing to ask about the future? A spiritless peace with the Government would doubtless be satisfactory to the Ministers, but would not be consistent with the best interests of the State. Let it be observed, however, that nothing is farther from our thoughts than sympathy with a Lower House enslaved by narrow party-feeling."

* * *

The *Mainichi Shimbun* declares it to be of immense importance, for making Japanese influence felt by Orientals, to diffuse the Japanese language among the Koreans and Chinese. For the achievement of that object, writes the Progressionist organ, the Japanese must first study the tongues of their unprogressive neighbours. It is needless to say that education must be invoked to secure lasting results in such a matter. But a means promising more speedy though less permanent success may be found in the development of commerce with those countries. Our contemporary urges its nationals to take the first opportunity to study Korean and Chinese, on the commonplace but reasonable ground that to teach others one must first learn himself. Not a few other Metropolitan journals write in favour of having Korean and Chinese inserted, at an early date, in the curriculum of commercial, military, and other schools.

* * *

The appointment of a second Chinese embassy to sue for peace has evoked voluminous comments from several of our Tokyo contemporaries. The *Yomiuri* writes:—It may be a matter of much concern to the tottering Chinese Government to send ambassadors to sue for peace, but Japan takes little stock in such proceedings. In the present war Japan has an aim to achieve, and the whole nation is a unit for its achievement. Until it is achieved, China may send any number of peace envoys without producing any effect upon her foe. Speaking of the alleged absence of any territorial concession in the terms Chang, the Chinese Ambassador, is supposed to be entrusted with, the Progressionist organ declares that it is easy to foresee the fate awaiting his mission as well as the destiny of the State he serves. The pain thus far inflicted on the old Mammoth State by the Japanese forces seems insufficient to awaken her morbid senses to a proper understanding of her situation. This train of thought leads our contemporary to conclude its argument by urging the A[illegible]es abroad to employ all possible expedi[illegible] the Province of Pechili and se[illegible] of Pekin. On the supposition that an armistice must necessarily precede a treaty of peace, the *Niroku* is painfully anxious about the conditions that the Authorities intend to impose before agreeing to a suspension of belligerent operations. The *Kokkai* says that China is behaving like a veritable tyro in politics if she imagines, as she apparently does, that the war can be concluded by sending men like Chang and Cho, the latter of whom is known to have been guilty of the savagery of putting rewards upon Japanese heads. Prince Kung and the Viceroy Li themselves, in the opinion of the Independent organ, are the only persons by sending whom the Celestial Emperor can hope to bring the war to an early termination. The *Kokkai* does not fail to urge the forces in China to march onward with unabated speed.

* * *

The *Kyoiku Jiron* (Educational Times) which, as our readers know, is one of the best educational magazines published in Tokyo, gives the following as the views expressed by the present Minister for Education in an interview with its representative a few days ago:—

1.—WHAT SHOULD JAPANESE EDUCATIONALISTS KEEP IN MIND AT THE PRESENT JUNCTURE?

It is plainly observable that the Japanese have of late had their self-confidence established as to the position they occupy among the nations of the world. Before the new treaty between Japan and Great Britain was signed, and before the Japanese forces had had their strength put to the test in a foreign war, the people of this country could not believe in the degree of development they had attained. Although the rapid strides made by Japan of late years in civilization were indisputable, she could not fully depend upon the substantiality and genuineness of her progress, in view of the short period that had elapsed since she emerged from old-time seclusion. The completion of the new treaty with Great Britain testifying the altered attitude of Europe towards her, and the present war showing the strength of the Japanese Army and Navy to be considerable, have made the Japanese at once believe in their country's real force and genuine civilization. It rests with ourselves to establish a permanent title to self-confidence and to display it in our future work. Well directed education and nothing else will lead us along the right path to the achievement of our ambition. Education alone can justify our belief that we are a civilized people as regards both moral and intellectual development.

2. THE ENCOURAGEMENT OF THE STUDY OF SCIENCE.

Just as I am naturally disinclined to bigotry in religion, so I hold by the liberal element in education. To prevent misconception, let me state that when I speak of religion, I do not refer to any particular faith, but to religious fanaticism in the broadest sense. If I hold it a prime object of education to inculcate in the minds of the young a belief in the sacredness of national spirit (*yamato damashii*), I am nevertheless indisposed to give overwhelming importance to that point. I am deeply impressed with the valuable aid science has conferred upon modern civilization. Science is harder to grasp than religious or moral ideas and tenets, and for that reason it is not liked by persons of ordinary intellectual calibre. I deem the spread of science to be an object demanding the special attention of educationalists.

3.—THE STUDY OF FOREIGN LANGUAGES.

Upon this head the Marquis states his willingness to encourage foreign languages in general. He gives the preference to English, supporting his view by an exhaustive statement of reasons. His Excellency takes up another topic, "Female Education," and asserts his zeal for its encouragement, owning frankly that Japanese women are below their Western sisters in the scale of intellectual development. The interviewer notes distinctly that the above are the opinions of Marquis Saionji as an individual, and not the views he may hold as Minister of State for Education.

* * *

We refer briefly to several topics touched upon by the vernacular journals. The *Nippon* writes much about the ban of suspension, the pain of which no other journal, metropolitan or provincial, has so often experienced as itself. Our readers being already conversant with the *Nippon's* views as to the proper mode of controlling newspapers and magazines, we need not reproduce its writings here, spirited and well stated as they are. The *Kokumin* says that China is Turkey, Korea is Egypt, and Japan is Great Britain minus England's symptoms of decrepitude and corruption. Our contemporary, with its usual intrepidity of opinion, adds that in the three Oriental countries thus considered, there lie, hidden from ordinary observers, great designs, large plans, and vast germs of fortune! The same journal refers its readers to the following tables, and compares the rapid growth of Japan's productive capacity to the springing up of bamboo shoots:—

EXPORTS AND IMPORTS DURING THE YEARS 1893 AND 1894.

	Exports (in *yen*).	Imports (in *yen*).	Total (in *yen*).
1894.....	113,246,084...	117,482,951...	230,728,035
1893.....	89,712,861...	88,257,170...	177,970,031
Difference in favour of 1894 ...	23,553,223...	29,244,781...	52,758,004

The total for the year 1894, namely, *yen* 230,728,035 is proved by the following table to be double that of 1887:—

	Exports in *yen*.	Imports in *yen*.	Total in *yen*.
1894.....	113,246,084...	117,482,951...	230,728,035
1887.....	52,407,881...	51,699,770...	104,107,451

"Is not that rare progress?" ask the *Kokumin*. "The excess of imports over exports (in 1894) is an inevitable consequence of the fall in the gold price of silver and the war with China. The *Yomiuri* urges the Diet now in session to take steps to have a Special Committee for State Defences organized at an early date, and to take care that it shall include, besides technical experts, some Ministers of State and Members of Parliament. The *Niroku* is wroth with the now well-known evil practices of the so-called official merchants that supply stores to the forces abroad, and advises the Authorities to punish all officials that entered into contracts with culpable merchants. The *Choya Shimbun* urges, as one of the best means of regenerating Korea, that newspapers be published in the Korean language.

EDITORIAL NOTES.

THE EMPEROR.

It is needless to say, writes the vernacular press, that the person filled with deepest anxiety for the success of the Japanese arms is the Emperor. His indefatigable zeal in attending to war affairs and his earnest solicitude for the welfare of his soldiers and seamen fightings abroad, are well known to every person in the realm. No wonder that the Emperor is regarded with respect approaching worship by the soldiers and seamen; no wonder that every victory achieved by them is invariably attributed to their Sovereign's virtue. On the 1st inst., writes the *Yomiuri*, when the high dignitaries, civil and military, now in Hiroshima waited upon the Emperor to tender the congratulations of the season, his Majesty caused one of his chamberlains to bring an ordinary uniform worn by a soldier of the second rank. He then took off his own uniform and put on the rough garments of the common soldier. Thus attired, he walked in the precincts of his residence for some hours, and finally turning to his attendants, said:—"What privations the soldiers in Manchuria must be suffering. Nothing must be left undone to alleviate their hardships." How much the soldiers will be moved when these tidings reach their ears, can be easily imagined by any one acquainted with the temper of the Japanese troops. The Emperor is magnanimous, and though naturally anxious for the success of his empire's arms, harbours no resentment against China and the Chinese. It is said that when the news of the capture of Port Arthur reached him, his satisfaction was not unmixed; on the contrary, he observed to his attendants that the same news must cause deep sadness to the Chinese Emperor. He sympathized even with misfortunes of the enemy.

SOME NOVEL DISHES.

The Jiji[illegible] is well and favourably known [illegible] in the outlying portion of Hongo District, not far from Nezu. It is largely patronised not

Digitized by Google Original from UNIVERSITY OF ILLINOIS URBANA-CHAMPAIGN

only on account of the picturesque situation and surroundings, but also because of its medicinal baths, the water being the same as that of the famous thermal springs of Isobe, whence it is brought in large vats. Since the date of the great festivities at Uyeno Park, the Jinzentei has added three novel dishes to its bill of fare, to the great amusement of the guests. The first is a "Port Arthur Fry," which consists of slices of pork, cut so as to vaguely resemble a China-man, done in bread-crumbs and sesamum oil, with dried seaweed (*nori*) similarly fried, and three or four *kuwai*, a sort of water-chestnut, the stems being retained so as to look like Chinese heads. The second *plat* is still more elaborate, and rejoices in the name of "Triumph." This is simply a dish of *daikon* and carrots, the white and red vegetables being so arranged as to portray the Imperial Standard. The third and last delicacy is known as *nottori shiru*, or "Storming Soup." It is a not-at-all-bad soup composed of balls of forced pork. Of course the pork is in reference to the term *buta* so scornfully applied by the Japanese to their foes.

PULSOMS BIOGRAPHY.

THERE can be no doubt that the lately deceased mother of Count Okuma was a remarkable old lady. She preserved her mental and physical vigour to an age beyond that allotted to ordinary people. Still that by no means justifies the publication of a long-winded biography, such as has been appearing for several consecutive days in the *Yomiuri* and other *Kaishin-to* organs, composed of the most common-place and uninteresting anecdotes. When the old lady found, on one occasion, that her grand-son had a larger orange than the one she possessed, she insisted on an exchange being made; and when a rat had once bitten her finger she went out into the garden and got some healing leaves which she applied to the hurt. But that is what any body might do: there is nothing of the heroic or unusual in such storiettes, of which the *Yomiuri*, in particular, seems to know no end. The *Choho* and *Nippon* are vastly amused with this style of indirect flattery, and call the biographers "machine-writers," who have to do as they are bid. To the disinterested observer it really seems that the publication of such items defeats rather than assists the purpose for which they are penned. The laugh is deservedly against the *Yomiuri* and its *Kaishin-to* colleagues.

NEW YEAR'S ADVERTISEMENT.

IT is the custom of a good many people in Japan to insert advertisements in the columns of the best known papers to the effect that "they are unable to personally visit all their friends and therefore chose this method of thanking one and all for their many favours and wishing them, most respectfully, a Happy New Year." This year, in particular, the changes have been rung on the above words, and hundreds upon hundreds of good citizens have adopted this easy mode of paying calls; but some of the advertisements have been very amusing reading. One lusty patriot in a central province made the following announcement:—"Not having had time hitherto to worthily celebrate the victories of our brave soldiers in Korea and China, I propose doing so during the first three days of the New Year. As I shall doubtless drink many cups of *sake* in their honour I shall probably be physically unable to pay or receive calls. I beg all friends and acquaintances to take this honest statement in good part." An-other, somewhat sybaritic, advertiser says: "The paying of New Year's calls is a very good custom and one that all should observe. But as I have been very busy during the past year, I intend to stay at home and sleep (*Yasumu*) for a week or thereabouts instead of calling on my friends. By doing so I shall gain fresh strength to execute their kindly commands in the New Year." Finally, a third writes as fol-lows:—"There are so many people whom I should visit that it would be impossible for me to finish all calls even in ten days' time. If I tried to call on my friends, I should have to omit many, thereby possibly arousing ill-feeling in some quarters. So I shall personally pay no calls whatever, and take this opportunity to," etc. Some people, however, both adver-tise and pay calls, as witness the following:—"I have run around the town for three days until I am too exhausted to pay any more calls. I beg those friends whom I have not yet seen to excuse my negligence, and to believe that I most heartily wish them a Happy New Year."

SLIGHTLY MISLED.

IN *Truth* of November 15, that witty man-about-town "The Linkman," likewise well known as "Marmaduke," has led his "dear Lady Betty" sadly astray, or else someone has been serving up to his willing ear a gossipy but un-true tale of the big earthquake of June 20, which he has taken the first opportunity to retell. This is what he writes:—"Mr. Trench, the recently-appointed British Minister to Japan, only reached his post a few weeks ago, and his first experience of Tokyo in his new capacity cannot be regard-ed as a good omen, for the British Legation has been razed to the ground by an earthquake that occurred since his arrival. It seems, however, singular that so important an item as the de-struction of a British Legation should not have been communicated by the Press Agencies to the papers. Fortunately for Mr. Trench the Legation House at Tokyo is Government pro-perty, so that whatever loss he may have in-curred by the catastrophe is not expected to be serious.' What a pity the tale is not true and that the genial "Marmaduke's" surprise at his sole possession of this choice item of news can not be shared by us out here. By-the-way, Mr. Trench did not reach Tokyo till August 20th, two months after the great shake-up of June. Bunders are evidently not the monopoly of the China ports.

OUTRAGE ON THE RAILWAY.

LAST Friday afternoon, just as the train from Tokyo was nearing Kyoto Station, and was slowing down—about 3 o'clock—a shot was fired into the first-class carriage, in which Messrs. Voigt and Geslien were sitting. Just before the shot broke the window, Mr. Voigt had for-tunately risen from his seat, otherwise he would certainly have been killed, the shot as it was passing a few inches in front of him, exactly where is head would have been had he remained sitting. Mr. Geslien, who was lying down, got several glass splinters in his face. The ball could not be found, but it was clear that only a shot could have penetrated the glass with sufficient force to leave merely a circular hole. The police at Kyoto Station were in-formed of the occurrence as soon as the train arrived, and are instituting inquiries, but with what result is not yet known. It is stated that a similar occurrence, which took place some time ago near Maibara, has never been satis-factorily explained.—*Kobe Chronicle.*

MATSUNAGA O-RYU.

AMONG Japanese musicians, as well as among actors, there are a few that have achieved na-tional fame, and beyond whom, like the seventh heaven in Mohammed's paradise, there is no going. Yamase is unexcelled as a player of the *koto*; Araki as a performer on the *shaku-hachi*, that most melodious of Japanese wind-instru-ments; Kowasa is the chief of *tokiwazu* singers; and Kineya Rokusaburo is *facile princeps* of *samisen*-players and singers of *naga-uta*. The last-named has not only won celebrity but actual wealth by the magic of his music, and his im-mediate family is not less gifted. Some fifteen or sixteen years ago he was desirous of finding a suitable husband for his daughter, then a young lady of not only unusual good looks but also of remarkable skill in playing the *samisen*, and withal endowed, from a Japan-ese standpoint, with the most witching and dulcet of voices. Many desirable suitors sought her hand, but she would have none of them, declaring that she would wed only with a man, if such might be found, who was her match in singing and playing the *samisen*. After considerable search, the father learned that there was a young musician living in Kanda District, Tokyo, named Matsunaga Tetsugoro, of most exceptional talent. He, Danjuro, thought there was none to compare with him, and always engaged him as an accompanist when he had to dance on the stage. Without informing Tetsugoro of his intention, Kineya invited him and the most celebrated profes-sional instrumentalists to a great feast at Uyeno. During the course of the entertain-ment Kineya proposed that Tetsugoro should match his skill against that of his, Kineya's, daughter. The young man would have declin-ed this public test of his ability, but finally consented, and then began a contest which still lingers in the memory of Tokyo musicians. After playing for some hours the assembled guests declared that there was really no choice between the two, both being unquestioned masters of their art. Immediately upon the conclusion of the feast, Kineya suggested that Tetsugoro should become his son-in-law, a proposal which was eagerly accepted. Three years later, after having spent this time in ut-most harmony with his gifted wife, Tetsugoro died, leaving one daughter, Oryu. This young lady is now fourteen years of age, a skilled musician of the highest order, and, to judge from what the vernacular papers state, of ravishing beauty. Young as she is, she has already received innumerable offers of marriage, from not only wealthy commoners but even noblemen of high rank and means. To all overtures both the mother and daughter have replied with an emphatic negative. To-wards the end of last year, however, the son of a Viscount residing in Bancho, Tokyo, happen-ed to see and hear the young beauty at an entertainment. He was at once captivated and sent the steward of his family to make proposals for a betrothal so soon as the young lady should arrive at a marriageable age. The steward was instructed to offer a large dowry, a separate and fine establishment for the mother, and not to take "no" for an answer. So kind were the promises made, and so generous, that the mother has been at her wits' end to know how to avoid the alliance; but a few days ago the young musician requested permission to settle the matter herself. Dressed in her finest, she proceeded to the residence of the nobleman in question. On being admitted, with every mark of admiring respect, she began: "You have, Sir, been so kind as to solicit my hand in mar-riage. I am fully persuaded that your inten-tions are honest and most flattering to me, who am but the daughter of a townsman (*chonin*) and hence unworthy of the honour proposed. But it is my firm intention either to marry a millionaire like Mr. Iwasaki or Mr. Shibusawa, or else a man of my own station in life who can assist me in the profession I have chosen. You, Sir, I regret to say, are not rich enough to suit me; besides, although a nobleman, your rank is still low. I must therefore refuse to admit your addresses. Thanking your for your kindness hitherto, I beg that in future all communication between us shall cease." This was definite, and the nobleman disenchanted. But the Tokyo papers can find no words too extravagant to praise the conduct of the young lady, who thus refuses ease and rank to live for her art alone. They claim that she is as spirited and disin-terested as she is beautiful.

THE KYOTO EXHIBITION.

THERE has latterly been a good deal of talk concerning the Domestic Exhibition to be held this year in Kyoto. As our readers may re-member, the date of the opening was last year fixed for April, 1895, or a little less than three months from the present date. It is now alleged, however, that it will be almost if not quite impossible to get everything ready by the ap-pointed time, and some of the chief promoters have been advising the postponement of the open-ing until June. This idea has, on the other hand, been opposed by those eager to be ready, at any cost, at the appointed date. There is finally a third and very influential party, who declare that, as many vernacular newspapers have urged, it would be far wiser to postpone the Exhibition for another year, or [illegible] until the

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

war is successfully completed. Several of these gentlemen, particularly silk men, again propose that the Exhibition should not be limited to domestic manufactures but should be given the nature of a World's Fair, so that this following close upon Japan's ultimate triumph over China, might worthily usher Japan into the position she has so long merited, besides attracting a greater or less number of wealthy foreigners to her shores. Viewed in the light of an industrial fair, it certainly would be better to postpone the date until there was a greater likelihood of a larger concourse of foreign visitors.

METALS.

Messrs. S. W. Royse & Co. in their report dated November 24th, 1894, say:—There is at present a pronounced dulness in the Iron Trade. Prices of both Scotch and Cleveland Iron have drooped, though only slightly, since the beginning of the month, and there is very little business passing just now for any position. Most consumers have their requirements well covered for some little time ahead, and with the prevailing dulness and the end of the year approaching they are naturally not caring about making further purchases at present. Nevertheless, shipments from both Glasgow and Middlesbrough during this month are fairly good, and compare favourably with those for the corresponding period of last year. The total shipments from Glasgow since the beginning of this year, however, are over 50,000 tons less than during the corresponding period of 1893. Copper has lost some 20 shillings per ton during the month, and is weak at present. Tin has quite given way, being some £5 per ton cheaper, but is now firmer. Spelter also is some 10-per ton lower, but is now firm. Lead has given way slightly, and is steady at present.

FOOTBALL.

Saturday's football game was characterised by some good play on the part of the younger members, and much better combination prevailed than at any match during the season. The sides were captained by Messrs. Pearson and Lias, and the latter's men won by three goals to none. Two goals were secured in the first half and one after the change of ends, the scorers being McNeill, Smith, and Morriss. The teams were as follows:—Pearson's side—A. C. Read, goal; B. H. Pearson and E. O. Kenyon, backs; H. E. Campbell, H. Pinckney, and C. W. Arnould, half-backs; J. Penny and K. F. Crawford, left forwards; H. R. Mair, centre; W. H. Brackenbury and W. Young, right forwards. Lias' side—W. D. S. Edwards, goal; F. J. Lias, and F. E. Elliott, backs; W. Sutter, H. Drummond and W. Moss, half-backs; E. H. Hickman and G. B. Smith, left forwards; D. McNeill, centre; E. R. Morriss and A. Johnson, right forwards.

A SAD TALE.

A piteous story of a father murdering his own child through stress of poverty is reported by the vernacular papers. The man's name is Nita Minoru. He is fifty-three years of age and a native of Gumma Prefecture, but was residing in Tokyo when he committed the deed. He had seven daughters, the eldest 25 and the youngest, the unfortunate victim, only eight years old. Till about 20 years ago, Minoru was a well-to-do Government official, drawing a salary of 80 *yen* a month. On the amendment of the official organization in 1885 he was one of the employés dismissed with a view to retrenching Government expenses. He then turned his attention to mining matters, in which he was already initiated, having been connected first with the Mining Bureau of the Department of Public Works and afterwards with that of the Department of Agriculture and Commerce. For the purpose of carrying on his business more advantageously, he went with his family to Hokkaido. Fate seemed, however, to be against him: he failed in all that he undertook, so that a few years ago he and his family were obliged to return to Tokyo. The first thing resolved on by the unfortunate man and his wife on their return to the capital was to lessen the number of mouths to be fed by them, and five of the daughters left their parents to earn their own living as servants. Even with only two daughters to support, the poverty-stricken pair barely managed to struggle on. Last fall was a most critical time for them, as several debts had then to be paid or arranged for in some way, to say nothing of preparations to be made for the New Year. The youngest daughter had been most unfortunate from her birth. She came into the world with her brain affected and her head swollen out of all proportion. When she began to speak it was found that she stammered, apparently owing to the brain trouble. The parents were ashamed of their deformed child, and obliged her to live indoors most of the time. As poverty pressed harder and harder upon the family, Minoru began to look at the miserable girl with unfatherly eyes, and was more than once heard to mutter that had the family not been burdened with that child it might have been spared such bitter days of wretchedness as it then experienced. On these occasions his wife tried to dissuade him from such cruel and unparental utterances, and acted as a sort of shield for the child. On the 3rd instant, the wife and her elder daughter left their home at about noon to call on a relative living in Hongo. After a humble supper partaken of by the father and the youngest child, the latter went to bed and was soon fast asleep. Minoru sat by her side pondering over his past life and the dreary prospect before him. He must have remained in that gloomy state for over three hours. With the child lying before him and his mind harrassed with cares, the fatal idea of getting rid of one part of his burden rose to his mind and overwhelmed him. Winding a towel round the neck of his unconscious daughter he tightened it and strangled her. Then frantic with remorse at what he had done, rushed wildly to the police office in his street and confessed his crime. A policeman accompanied him back to his home where the little girl was found dead with the towel round her neck. The news was then conveyed to the Koishikawa Police Office, and the Peace Court of the same district, and a coroner's inquest duly held, at which the verdict given was identical with Minoru's confession. The man was taken to the Public Procurator's Office to be subjected to examination. Whether his crime will be regarded as real infanticide or commuted on the ground of mental aberration brought about by extreme poverty, is not yet known.

SILK DUTIES IN THE UNITED STATES.

In the case of A. A. Vantine & Co. and the American Trading Company against the Collectors at New York, the Board of General Appraisers recently decided as follows:—The merchandise consists of silk scarfs, table covers and other like completed articles manufactured from silk textile fabrics, all of which are embroidered with silk by hand or machinery. The goods were classified and assessed for duty at sixty per cent. ad valorem under paragraphs 413 and 373, Act of 1890, as silk "embroideries," but were claimed by appellants to be dutiable at fifty per cent., under paragraph 414, as manufactures of silk not specially provided for in same Act. The appeal was sustained, the Collector's decision being reversed.

A SCHEME TO ACHIEVE NATIONAL WEALTH.

"Shortly after the fall of Port Arthur," writes the correspondent of a Tokyo vernacular contemporary, "several of us war-correspondents were lodged in a half-ruined farm-house for a night. We were pretty hungry and very cold, so that sleep was out of the question. Naturally the conversation turned first on edibles of various description, and each described, with a fervour warranted by the occasion, the viand which he preferred to all others. After this Barmecide feast, we began talking of what should be done upon conclusion of the war, and then the question was broached as to the speediest method of making our country the wealthiest nation in the Orient, if not in all the world. Our ideas were slightly confused, and I remember that the talk was decidedly visionary, practically [illegible] their information ary but anyhow we unanimously decided upon the following plan:—Of course China will, as an Empire, soon be in the hands of Japan. Let us then, as the Empire is far too vast and unwieldy to govern with ease or even satisfactorily, sell the larger portion of the conquered territory to Europe, be the buyer Russia, England, or any other country. We ought to get at least 6,000,000,000 *yen* for our bargain. With this sum in hand we might get along for a while; and when that was finished start another war with the Chinese Government then in power, conquer another piece as large as the Liautung Peninsula, and sell this again to Europe. By doing this repeatedly, there seemed to us to be no reason why Japan should not, in another decade, rival the richest nation *on* earth."

A BASELESS SCARE.

Two or three Tokyo journals report a rather amusing incident in connection with the *dezome*, or first drill, of the metropolitan firemen, which took place early on Sunday morning, the 6th instant. In the Hongwan Temple at Asakusa there are at present some sixty or seventy Chinese prisoners, recently sent up to Tokyo from the Lioutung Peninsula. They are reported as being very quiet and well-behaved and generally in the best of spirits; yet it seems impossible to disabuse their minds of the idea that some dreadful fate is still in store for them, probably in revenge for the atrocities they and their countrymen committed on the hopeless Japanese soldiers who had the misfortune to be taken alive. At any rate, hearing the continual ringing of the fire-bells, the unusual commotion in the streets at an early hour on the morning in question, as well as the shouts and cries of the passing firemen, they deemed that their last moment had come and began weeping and wailing in the most pitiful manner. Some threw themselves at the feet of the soldiers on guard and in dumb show begged for mercy; others rocked silently to and fro, wringing their hands in an extremity of despair. It took, according to the vernacular press, nearly an hour to allay their baseless fears, and then their joy was as great as had been their grief.

COAL IN PLENTY.

The Port Arthur correspondent of the *Asahi Shimbun* states that enormous quantities of coal have been discovered in that place, quite enough to supply all the needs of the Japanese Army and Navy for at least six months to come. Upon examination it was found that most of this coal had been imported from Japan, the major part coming from the Miike and Hokkaido mines. The coal must have been transhipped at Shanghai prior to the outbreak of the war and sent on direct to Port Arthur, so that this, writes the correspondent, is an additional proof of the warlike preparations China was engaged in long before the actual declaration of hostilities. Besides Japanese coal, a comparatively large quantity of Australian coal was also discovered, the latter being mainly used in the machine-shops.

THE LATEST ROUND-THE-WORLD DEADBEAT.

The *Overland Mail* says:—We have received a call from an American, who is on tour round the world without money, and, so far, without work either. The American newspapers have been "booming" him for a good deal more than his case seems to us to be worth; and on the strength of mere mention in those columns, railway and steamship people have given him food and passage across America and the Pacific to Australia, and thence to Hongkong. He says he was chased by Indians, who were not able to catch him. He is not proposing to write any book, which is a novelty as far as it goes—a negative novelty. For this forbearance, perhaps, he deserves some gratitude; but it will never do to establish a predecent that every man who refrains from inflicting a book on us should be maintained in idleness and comparative luxury—for a first-class passage absolutely gratis is a distinct luxury. He says he is bound by the terms of his bet (as to which the news-

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

from him, vary in amount, though he now says it is 20,000 dols.), to go through India, Afghanistan, Beloochistan, Persia, Turkey, and Europe. His ideas of geography are delightfully original, but then he says he is an American journalist, which perhaps explains it: He proposes to go across China, sponging on the missionaries probably from Shanghai up westward; then he calmly contemplates crossing Thibet, climbing the Himalayas, into India. He airily mentions a week as the time this mountaineering feat will take; and he confidently asserts that he knows all about the difficulties he is contemplating. Meantime he is staying with some highly respected Americans, whom he expects to keep him for two or three weeks pending the arrival of some letters from Australia. He says he is willing to work for his keep, but what work he can do or has done does not appear. We sincerely trust that his success will be so modified as to effectively depopularise the "bumming" profession.

TOBACCO AT A PREMIUM.

ACCORDING to correspondence published in the vernacular press, dated December 22nd, there seems to be an actual "tobacco famine" not only in Port Arthur, but also in Talien and Antung. Ordinary Japanese leaf of the cheapest grade sells readily at two *yen* fifty *sen* for one hundred *momme*, or a little over one pound. Recently arrived coolies, who generally have a little stock of tobacco on hand, peddle their wares at two *sen* per pipe, or about three whiffs! The Manchurians, it is said, are not so fond of tobacco as are the Japanese, and those who do smoke use a coarse and unpalatable description of leaf that is repugnant to even the most inveterate Japanese smoker. At the same time it is said that some of the soldiers, in default of real tobacco, have been using dried willow leaves, very probably after the style of the North American Indian killikinnick. Gifts of tobacco sent from Japan are declared to be more acceptable than any others.

WOUNDED SOLDIERS IN TOKYO.

THERE are now several hundred wounded Japanese soldiers in the metropolis, mostly at the military hospitals at Kasumigaseki and Aoyama. Every one of these is reported as doing well, although since their arrival in the city a number have been subjected to surgical operations of the severest nature, such as resection of the hip-joint, fore-arm, foot, and hand. Whatever may have been their bravery and fortitude in the field, in Tokyo at all events the nurses report that they are impatient of pain and decidedly fractious. All operations are performed with the patients under the influence of anæsthetics; and thanks to the rigidly antiseptic precautions observed there has not yet been one unfavourable case, the wounds healing nicely and generally by first intention. There is one remarkable case at the Kasumigaseki Hospital. A bullet entered just below the orbital process of the left eye, went completely through the head and came out a little to the left of the third upper vertebra. Remarkable to say, the man is doing well and will shortly be completely restored to health; even the left eye has been preserved, the optic nerve fortunately escaping any serious injury.

CHINESE FUGITIVES ABOUT PORT ARTHUR.

A CORRESPONDENT of the *Yomiuri Shimbun* writes that there are still a large number of Chinese fugitive soldiers concealed in the hills and out-of-the-way places in the vicinity of Port Arthur. It is estimated that there are no less than two thousand of these men, all armed with swords and many having a rifle as well. A strict lookout is being kept for them, but as they do not appear in large bands but rather in twos or threes or even singly, it is difficult to trace their hiding-places. Placards have been posted to the effect that if they will yield peaceably no harm will be done them, while if they continue their marauding raids on the peasantry they will be shot down at sight. A few only have taken advantage of this, the majority preferring a semi-bandit existence that can only lead to one conclusion. Owing to the severe cold as well as to the difficulty in obtaining sufficient food, it is confidently expected that even the most desperate of these men will shortly be either taken prisoners or else compelled to betray their refuges.

FIRE IN SHANGHAI.

THE *North China Daily News* writes:—

A fire broke out on Thursday evening in the Rue due Consulat in the upper storey of a shop. It appears that an old man was getting into bed, and while so doing upset a lamp which set fire to the bed curtains. Twenty-four houses were destroyed before the firemen left the scene at midnight. A fire occurred on the same ground in January, 1893. The insurances on the contents amounted to Tls. 42,000, distributed among the following offices:—

London and Lancashire	Tls. 14,500
Union of London	6,000
Sun	6,000
North British and Mercantile	7,000
Hamburg of 1877	3,000
Imperial	2,000
Hongkong Fire	3,000

Some of the Insurance Companies had reinsured, among them being the London and Lancashire, whose actual liability is only some Tls. 3,500. There will be considerable salvage. The buildings were not insured.

MORITURI SALUTAMUS.

THE *Choho* publishes two or three odes, composed in the *Waka* metre, by a certain Captain Hayashi of the Artillery, who is said to be unusually skilful in poetic composition. Captain Hayashi is at present in Japan, but is shortly to leave for the front, and it was on receiving the announcement of his call that he penned the following, under the title of *Takara*, or "Treasures":—

Kimi no tame ni
Shinamu to omou
Masurao no
Kokoro so kuni no
Takara nari keru.

"The true treasures of our land are the hearts of warriors who are ready to die for thee (the Emperor)." The idea thus poetically expressed embodies a great truth. Not one of the soldiers hitherto called to fight for the Emperor and their country has gone unwillingly or without joy; while those that have fallen have not in a single instance shown any other regret besides that for being no longer serviceable to Japan. So at least say their countrymen.

THE HON. G. CURZON IN INDIA.

THE Hon. G. Curzon, whose visit to India during the Parliamentary recess has been noted by the home papers, seems to be having a very successful trip. Writing from Cabul, on November 20th, after his return from the Pamirs, to a friend in Tokyo, he says:—"I certainly never thought that I should ever write a letter to you or to anybody else from this place. * * * Here I am, the first Englishman that has ever been invited to Kabul as the private and unofficial guest of an Amir of Afghanistan. I rode in yesterday, and had a great reception, being escorted by a big cavalry following, and being lodged in the Palace, where I write this. I had my first audience with the Amir a few hours ago. * * * He is certainly a remarkable man."

YOKOHAMA LITERARY SOCIETY.

WHAT promises to be one of the most interesting evenings arranged by the Committee of the Yokohama Literary Society, comes off on Friday in the Van Schaick Hall. Mr. G. H. Scidmore, the lecturer on "Fiji and its people," will exhibit a collection of Fijian armour, ornaments, and curios which are well worth seeing. His address will be illustrated by lime-light views.

P. AND O. LOCAL CHANGES.

IT will be of interest to many, says the *Hyogo News*, to hear that the genial P. & O. Agent at Kobe, Mr. A. Woolley, has been appointed to take charge of the Agency in Hongkong, from early next month, during Mr. Joseph's absence on leave at home. All will wish him well in his administration of the important duties attaching to this post, and for our own sakes we must wish him also a safe return. We are informed that Mr. Abbott takes Mr. Woolley's place for the time being in Kobe; he is not quite a stranger, having come as one of the Shanghai cricket team in 1893. Mr. Hewett, who was here before, goes to take charge in Shanghai, as Mr. Ritchie is also going home.

THE BRITISH FLEET.

THE *Alacrity* left Shanghai on January 2nd in order to take Admiral Fremantle down to the flag-ship at Kintang, and it is probable that the British fleet will go northward for a cruise. The *Caroline* will return at once to Shanghai, but owing to neap tides will be detained at Woosung for some days. H.M.S. *Pigeon* left Woosung on January 5th for Chinkiang.

OFFICIAL REMOVALS.

MR. OTSUKI, Councillor of Kanagawa Prefecture, has been removed to Kyoto, and his late position given to Mr. Oki, Councillor of Toyama Prefecture, who has been succeeded by Mr. Rika, Councillor of Oita Prefecture. The latter's position has been taken by Mr. Yokoyama, a Probationer in the Home Department.

MR. INOUYE KI.

THE *Official Gazette* announces that Mr. Inouye Ki, who recently resigned the portfolio of Education on account of ill-health, is raised to the peerage with the title of Viscount. This announcement, coming immediately after intelligence that Mr. Inouye's illness had assumed a grave character, inspires much uneasiness.

SILK EXPORTS.

"JAPAN," says the *Textile Mercury* of Manchester, "formerly purchased from Europe good quantities of satin in wide widths. This trade has gradually fallen off and has now entirely ceased, while, on the other hand, Japan sends every year an increased quantity of silk fabrics to Europe, and, reversing the position, from a buyer has become a seller."

JAPANESE SILK HANDKERCHIEFS.

AMONG the auction sales of silk productions recently in New York was one of 30,000 dozens Japanese handkerchiefs, by order of the Japanese Fan Company, the prices realized for the more attractive goods being very fair, while others sold at way-down figures. It was the largest offering of this class of goods ever made.

"THE CITY OF RIO DE JANEIRO."

THIS steamer, reported by telegraph as being on shore near Van Diemen's Strait, left this port for Hongkong *vid* Nagasaki on the 4th inst. She had when leaving but few passengers—Mrs. White, Mr. C. F. Fearing, and Mrs. A. Sharp and son.

SILVER.

AN American paper asks:—"What are the silver men about that they don't send a deputation to Japan to ask the Mikado to demand his indemnity in silver coin? That is the way to do something for silver. It would start every silver mine in America."

THE "AMARANTH" TRIAL.

WE are requested to state that owing to the non-arrival of the steamer *Amaranth*, the trial of Peter Garry has been postponed from Saturday at 10 o'clock till Monday at 10.30 a.m.

ARMY PROMOTIONS.

MAJOR-GENERALS Yamagata Seigo and Okazawa Sei are raised to the rank of Lieut.-General, and Colonels Katsuda Yomazo and Yabuki Hideichi are promoted to be Major-Generals.

YAMAGATA EARTHQUAKE RELIEF FUND.

THE following is the state of this fund to date:—Brought forward, $308.20; A friend $10.00, total; $318.20.

THE PRINCE IMPERIAL.

HIS IMPERIAL HIGHNESS PRINCE YOSHIHITO is gazetted a Captain of Infantry. The Prince Imperial is now in his sixteenth year.

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

WAR NEWS.

Saturday, January 5th.

We remain still without any intelligence of importance from the seat of War. The *Jiji Shimpo* has some items relating to Weihaiwei. It says that forts in rear of that place have been constructed and armed, but that they are not nearly so strong as were the forts at Port Arthur on the land side. In the neighbourhood of Yingcheng, on the east of Weihaiwei, troops have been posted at various commanding positions in anticipation of a Japanese landing. The *Jiji* further alludes, with evident credence, to the news recently transmitted from Shanghai that a mutiny occurred among the soldiers at Weihaiwei in consequence of their not being paid, but that the receipt of the amounts due to them converted them at once into loyal troops.

A vernacular newspaper gives the following statement of the ships lost by China in the present War :—

Captured off the island of Phongdo, the *Tsao chiang*, wooden gun-boat of 95 tons.
Sunk in the battle of Haiyang, the *Chingyuen*, iron cruiser of 2,900 tons.
Sunk in the battle of Haiyang, the *Chiyuen*, iron cruiser of 2,300 tons.
Sunk in the battle of Haiyang, the *Chaoyang*, iron cruiser of 1,350 tons.
Burned in the battle of Haiyang, the *Tsi-yuen*, iron cruiser of 1,350 tons.
Taken in Port Arthur, the *Mintsie*, wooden war-ship of 750 tons.
Burned in Caroline Bay, the *Kwangyi*, iron cruiser of 1,000 tons.
Burned in Talien Bay, the *Kwangchia*, iron cruiser of 1,295 tons.
Taken at Port Arthur, the *Kaiching*, wooden war-ship of 1,450 tons.

These figures give a total tonnage of 13,346 tons, which, at an average of $800 per ton, represents a sum of over 10½ million *yen*. We do not vouch for the list. That China has lost 9 ships-of-war is more than we had supposed.

The *Nippon* says that, as China's peril has become more pressing, the Emperor has issued a decree establishing the general head-quarters at Fangliaokwan, and has appointed the following five officials to be chiefs of staff, Prince King, Wang Tangho, Li Hungtsao, Su Yangi, and Kang I.

According to the *Yomiuri*, there are now only 4,000 Chinese troops in Kaiping, and its capture may be expected soon. In the old, and new Newchwang, however, there still garrisons, contrary to recent reports.

We read in the *Nippon* that Mr. Tei, Secretary of the Japanese Legation in Sōul, has been sent to Japan by Count Inouye, to recommend that this empire lend Korea a sum of 4,000 *yen*, for the purpose of carrying out the proposed reforms.

Monday, January 7th.

Divested of names puzzling to non-geographical readers, the news from the Left Wing of the First Army is briefly this, that Generals Sung and Nieh are massing their troops a little to the north of Yingkow, with the rumoured intention of marching against Haicheng. After the battle of Kangwasai on the 19th of December, the greater part of Sung's troops, consisting originally of 10,000 men, retreated in the direction of Yingkow, some halting a few miles to the north of that city and some pushing farther west. Sung seems to have brought these troops together again at and in the neighbourhood of Kaokan, a town 13 miles to the north of Yingkow. We hear now of only 4,000 troops in Kaiping and its neighbourhood, from which it may be inferred that General Nieh has led the rest to join Sung's forces. Lieut.-General Nozu's report dated the 3rd inst. at Tuchengtsz, from which we take these details, adds that Nieh is enrolling all the male inhabitants of 20 years of age and upwards and organizing such of them as show any proficiency in marksmanship. The fact that General Nozu telegraphs from Tuchengtsz seems to indicate that he himself finds the operations of the Left Wing of his army sufficiently interesting and important to require his personal superintendence. Tuchengtsz is on the road from Takushan to Suiyen, whence Katsura's Division set out on its march against Haichien. Nozu has therefore left the general head-quarters at Antung and followed his Left Wing. Possibly he is at the head of reinforcements, but if that were the case we should probably have had some definite intelligence of the fact. We pointed out several days ago that the position of the Left Wing of the First Army is not strategically sound and could only be made so by a northward movement on the part of the Second Army from the Liaotung Peninsula. That such a movement has not hitherto been made, or rather, that it was abandoned at Fuchow, is plainly due to the exigencies of the other important operation now pending. The Army in the Liaotung Peninsula consists of one whole Division, the First, and one Brigade forming half of the Sixth Division. The Brigade has hitherto been occupied garrisoning Port Arthur, and the Division has been quartered at Chinchow and Talien, in readiness to embark at the latter place for the purpose of cōoperating with the Second (Sendai) Division in the expedition of which the objective is kept secret. Meanwhile, it is understood that the second Brigade of the Sixth Division has sailed for Talien, and on its arrival there is strong probability that it will not remain idle at Chinchow, but will push northward against Kaiping and Yingkow. That would make a complete plan of campaign in Shinking, but unless something of the sort is done it looks as though Katsura cannot hope to accomplish more than to hold his ground, which is not the rôle appropriate for an invading army. On the other hand, the *Tokyo Asahi* publishes a telegram from Shanghai, which it describes as trustworthy, to the effect that Katsura's troops have pushed on from Haicheng to old Newchwang, driving the Chinese before them, and that the latter have fled by the coast road toward Chinchow (not Chinchow in the Liaotung peninsula, but Chinchow on the main road to Shanhaikwan). We do not believe this intelligence. In the first place, General Nozu's report dated the 3rd instant says nothing about it. Of course Nozu telegraphing from Tuchengtsz could only have known what was happening at Haicheng up to about four days previously. But in the second place it is strategically most improbable that Katsura should have pushed westward to old Newchwang although aware that Sung and Nieh were gathering a large force to attack him from the south. We believe for our own part that Katsura has not moved out of Haichien. But just as we had written this comes the *Nippon* with a strange item of news, namely, that the First and Second Armies have joined forces at a point some seven miles from Newchwang, and are about to make a combined attack upon the enemy. And in the context of that remarkable piece of intelligence we find the still more startling item that a portion of the First Army has invested Mukden. The same paper says that 5,000 Chinese troops started from Chinchow, Talingho and other places in that district on the 29th of December for the purpose of reinforcing the troops in Newchwang, and further that great efforts are being made to strengthen the forces covering Mukden. The *Hochi Shimbun*, on the other hand, represents the situation of the First Army thus :—The General Head-quarters in Antung; detachments of the Fifth Division stationed between Saimatsi and Tsaokokow; the Third Division quartered in Haicheng with detachments between that place and Tomucheng. From these positions, the *Hochi* says, the Japanese troops are not likely to move for the present. Neither will they undertake any offensive operations. That seems to us a much more correct *résumé* of the situation than the *Nippon's* sensational news. The *Yomiuri Shimbun* appears to think that the next movement of Katsura's troops will be in the direction of Laoyang where the Chinese forces are massed in great strength, but this appears to be nothing more than an inference from the recently received intelligence that a reconnaissance had been effected in the neighbourhood of Laoyang. Finally, to conclude the statements of the vernacular press, we note in the *Kokumin* a telegram sent from Hiroshima at 11.25 a.m. on the 5th instant to the effect that the van of the Second Army starts from Fuchow on the 1st inst. to march northward, and that it will probably attack Kaiping in a few days. Evidently our vernacular contemporaries are perplexed to unravel the situation.

The *Hochi Shimbun* has a paragraph explaining that there are no Chinese troops in Yingkow, and that consequently no occasion exists for occupying the place. We do not understand this statement, seeing that Generals Sung and Nieh are reported to have massed their forces on the roads immediately to the north of Yingkow. The *Hochi* goes on to say that as Yingkow contains a foreign settlement its occupation would involve troublesome complications, and will therefore be avoided as long as possible. That seems a reasonable argument.

Naturally much attention is at present directed to Weihaiwei. We read in the vernacular press that the most recent reconnaissance made by the Japanese Navy showed 13 men-of-war and 15 torpedo-boats at anchor there. It is also stated that the troops collected there and in the immediate neighbourhood aggregate seventeen or eighteen thousand. With regard to the latter point, the *Jiji* is most explicit. It says that the Chinese have posted the forces available for the defence of the province of Shantung chiefly along its northern shore, Taugchow, Chefoo, and Weihaiwei being the principal points of concentration. On the southern and eastern coasts, however, with the exception of Chiao-chow Bay, there are no preparations for defence. The *Jiji* does not give any estimate of the numerical strength of the defenders. The *Nichi Nichi* has a note saying that the Chinese Government has employed an Englishman and a German—the names, as transliterated, seem to be Bushel and Friese—to superintend the defences of Weihaiwei and Chefoo, and that the two men are constantly engaged passing to and fro for purposes of inspection. The information is said to have been obtained from a foreigner lately come from China. He adds that the two experts are serving as Generals with executive command, but the *Nichi Nichi* doubts the latter allegation.

According to the *Nichi Nichi Shimbun*, the Chinese Government was induced to decide upon sending an embassy to sue for peace by the discovery that Foreign Powers were losing all confidence in China's ability to defend herself, and had become convinced that wherever her troops encountered the Japanese, victory would rest with the latter. This conviction has begun to make itself only too apparent in the attitude of European Powers towards the Middle Kingdom, and the authorities in Pekin thought it wise to agree with the enemy at once lest worse things befal.

Tuesday, January 8th.

The *Yomiuri Shimbun* says that according to the latest calculations made by the Head-quarters Staff, the number of Chinese troops in Kaiping is 4,000. Further, no doubt is entertained that General Sung has moved toward Laoyang. The total Chinese forces massed at and about Laoyang, Mukden, and Newchwang are estimated at 37,000, and if the troops guarding the road from Lieushankwan to Laoyang be included, the aggregate of the Chinese armies now confronting the Japanese in Shinking is about 50,000.

In default of any other news, the *Jiji Shimpo* gives a table showing the distances of various places in Manchuria :—

By the Chiulien-Laoyang Road.

	Miles (English.)
From Fenghwan to Suchlichan	17½
From Suchlichan to Tungyuenpu	25
From Tungyuenpu to Lieushankwan	20
From Lieushankwan to Tieushuichan	15
From Tieushuichan to Tanghoyen	22½
From Tanghoyen to Laoyang	20
From Laoyang to Changtaitsz	12½
From Changtaitsz to Shahopao	20
From Shahopao to Mukden	20
From Fenghwan to Mukden	170½

From Fuchow to Mukden	250

BY THE HIGH ROAD FROM MUKDEN.

	Miles.
From Mukden to Chulinho	25
From the latter to Pochipaochan	17½
From the latter to Ritaotsingchan	30
From the latter to Siaoheishanchan	20
From the latter to Hwangning	20
From the latter to Shisanshan	30
From the latter to Siaolingho	35
From the latter to Kaochiao	22½
From the latter to Mingyuen	25
From the latter to Tungkwan	25
From the latter to Liangshuiho	27½
From the alter to Shanhaikwan	32½
From Mukden to Shanhaikwan	310

To complete this table the distances by the coast road from Yinkow to Shanhaikwan should be added.

According to the *Yomiuri Shimbun*, there are now 14,000 Chinese troops collected behind Weihaiwei, under the command of General Ping Pitao. The same journal says that there are six Chinese Generals—Liu, Tsung, Ping, Sun, Chin, and Pizo—in and about Chefoo, the command-in-chief being vested in Ping Pitao and Liu Hanfang.

The *Shogyo Shimpo*, on what authority we do not know, undertakes to give a statement of the conditions of peace formulated by the Emperor of China for the guidance of the Envoy Chang. They are:—

1.—Recognition of the Independence of Korea.
2.—The payment of an indemnity of from 50 to 70 million taels.
3.—Exchange of prisoners.
4.—The opening of several ports specially for Japanese trade, the places to be selected by China.
5.—The payment of 20 million taels to the wives and families of Japanese killed in the war.

To the above five conditions China, says our contemporary, is ready to consent, but she will not give so much as a square inch of territory. As for the indemnity, however, she will pay it immediately on the conclusion of the treaty of peace.

WEDNESDAY, JANUARY 9TH.

If the *Yomiuri Shimbun* be correctly informed, a northward march up the Liautung peninsula was commenced by the First Brigade of the First Division, under Major-General Nogi, on the 2nd instant. In connection with this movement, Lieut.-Colonel Uchiyama, of the Divisional Staff, accompained by two interpreters, set out on the 31st ultimo, but whence and whither we are not told. In the same provokingly vague paragraph our contemporary adds that the Chinese forces, massed between Haicheng and Laoyang, to the number of 37,000, are moving southward against Katsura in Haicheng, and that there are 3,000 men garrisoning Yingkow. Apparently Katsura is to be attacked from the south also, for the *Shogyo Shimpo* tell us that General Sung, at the head of the forces collected after the battle of Kangwasai, and re-inforced by 3,000 men lately landed at Yingkow, is about to march against Haicheng. Shanghai, however, is responsible for the last item.

Nine steamers, says the *Yomiuri*, four foreign and five Chinese, are busily engaged transporting material of war to Chiaochow Bay, in Shantung.

The *Nichi Nichi Shimbun*, on the strength of news from Hongkong, says that two or three ships of the Chinese Southern fleet have lately been seen in the neighbourhood of Singapore.

The *Nichi Nichi's* war correspondent sends an account of General I's attempt to recover Fenghwan and the subsequent dispersion of the much-talked-of Amoor troops. Major-General Tatsumi's detachment started from Suehlitien in the direction of Lienshankwan on the 10th of December, in order to check the movements of the Chinese troops in the vicinity of the Motienling Pass, so that the Third Division under Lieut.-General Katsura might carry on its offensive operations against Haicheng unmolested. The enemy resolved at that time to make a decisive attempt to win Fenghwan back from the Japanese. They were labouring under the erroneous belief that the retreat of the Japanese detachment from Tsuichiafang and Tsaohokow was real, and not merely dictated by strategical considerations. General I divided his forces into two columns, one of which proceeded along the Mukden road and the other along the Saimatsui road. The former, from two to three thousand strong, followed Tatsumi's retreating column with a view to preventing it from joining the Fenghwan garrison, while the latter, estimated at about four thousand, was to march upon Fenghwan and take it while the garrison was comparatively weak. As soon as Colonel Tomoyasu, who was with the garrison at Fenghwan, received tidings of the enemy's approach, he promptly made all necessary arrangements for the defence of the place. It was, however, his intention not to encounter the enemy till they had crossed the river Ai, when he would deliver a furious charge and drive them back across the river. By dawn on the 13th of December General I's troops reached the elevation on the opposite side of the river. They had four guns, which were placed in the centre of the line. By 1 p.m. the left wing had commenced to move, apparently with the intention of attacking the right wing of the Japanese. When it reached the Kirin road, three signals for general advance were fired from the central part of the enemy's line, and presently trumpet calls were heard. The enemy moved about 300 metres, and then stopped—apparently on account of the ominous silence on the part of the Japanese. The distance between the two Armies at that moment was about 2,000 metres. The left wing of the enemy resumed its advance, however, and attempted to cross the river in the vicinity of Siaowai. There Major Tomita awaited in ambush the coming of the foe. They again showed signs of hesitation, and instead of proceeding to cross the river, retreated somewhat from the bank and were seen to enter some houses that stood not far off. In the meanwhile, a reinforcement of one battalion arrived at Fenghwan from Tangshancheng, and the Japanese therefore resolved to take the offensive the next morning. Before dawn of the following day, Major Tomita's battalion, constituting the right wing of the Japanese, crossed the Ai along the Kirin road, and stealthily approached the hamlet where the left wing of the enemy was quartered. The Chinese were off their guard, and asleep. They showed, therefore, the greatest signs of confusion when the Japanese coming close to the village, opened a fusillade from all four sides. The Amoor troops are, however, of better stuff than the Chinese have hitherto shown themselves to be. Surprised as they were, they resisted stubbornly for a few hours. The Japanese then set fire to the village, at the same time charging at close quarters. That was too much for the defenders. They fled, *pêle-mêle*, along the side of the mountain in the rear of the village. More than thirty were burnt to death. Major Yamaguchi's battalion attacked the enemy's centre, assisted by Major Tomita's men. They routed the Chinese completely, causing them to abandon their four guns. The right wing of the enemy proved more obstinate chiefly owing to its advantageous position. It occupied an elevation, and at first offered a stout resistance to the attack of Major Handa's battalion. The latter was then reinforced by the troops that had scattered the enemy's left wing and centre, and the combined columns delivered a furious charge from different sides. The Chinese could not hold out for more than a few hours, but that was long enough to enable their left wing and centre to make a comparatively easy retreat. The right wing at last fell back, and under a furious fire from the Japanese, fled in all directions. The enemy left 139 dead on the field, and the casualties on the Japanese side were about 70 all told. By about noon on the 14th of December the would-be invaders of Fenghwan were scattered.

We may here give an account of another fight that occurred at Fanchiatai, between Tatsumi's troops and a Chinese detachment that cooperated with the invaders of Fenghwan. In the vicinity of Fanchiatai there is a valley, through which a river runs occupying the greater part of the valley. A section of the Japanese van held an elevation on the right, leaving the other side for the main body led by the Major-General. The enemy was in a widening turn of the valley. At 12.30 p.m. the main body of the Japanese arrived upon the scene and took its position on the left elevation. Tatsumi at once ordered a battalion to attack the Chinese right wing. The first line of defence was carried, but the dislodged troops offered stout resistance after falling back on their reserves, and a hot fight ensued. Tatsumi then caused another battalion to charge the centre of the enemy with fixed bayonets. It was a bold attempt, but it succeeded, the line of the defenders being broken into two. This was at about half-past 2 o'clock. The remnant of the Chinese tried to effect an orderly retreat by slow stages along the hills on both sides of the valley, but were attacked by Lieut.-Colonel Tomita who led the van, and pursued as far as Tungyuenpao, where they were utterly routed. The battle concluded at half-past 5 o'clock. Out of from 2,000 to 3,000 of the Chinese 150 were killed, and at least 300 wounded. The Japanese had 10 killed and about 50 wounded. About 100 stand of small arms, many flags and other prizes of war were taken by the Japanese, besides eleven prisoners. When General Tatsumi heard of General I's proposed attack upon Fenghwan at the head of several thousand troops, he ordered Major Mihara to lie in ambush at Taung-ling and await the retreating Chinese. As anticipated, the fugitives approached that place on the day after the fight near Fenghwan. They were received with a volley from the Japanese soldiers, whereupon they fled in all directions without attempting the least resistance. The actual loss sustained by them was not large, but the demoralizing effect of the sudden attack made by the Japanese seems to have been remarkable.

THURSDAY, JANUARY 10TH.

It is plain that our vernacular contemporaries are much perplexed about the movements of the Second Army. The *Hochi Shimbun* is very positive that the troops necessary for garrisoning Port Arthur, Talien, and Chinchow having been detached, the remainder of the Second Army has moved north, so that the capture of Kaiping may be expected very shortly. Our contemporary adds, that since, according to Lieut.-General Nodzu's report, there are only 4,000 Chinese in Kaiping, and since they are virtually isolated, their defeat and dispersal should not present much difficulty. The same journal published a telegram despatched from Hiroshima at 1.55 p.m. on the 8th instant, to the effect that an engagement of a minor character was expected that morning in the neighbourhood of Kaiping.

We read in the *Nippon* that General Sung and his forces have retreated to Tienchwangtai. It will be remembered that according to Lieut.-General Nodzu's latest report, Sung and Nieh were assembling their troops and raising new levies a few miles westward of Yingkow (modern Newchwang), and that their apparent intention was to march against Haicheng. It may also be remembered that Tienchwangtai was the place to which Sung was supposed to have retreated after the battle of Kangwasai, on December 18th. Tienchwangtai is about 18 miles distant from Yingkow on the coast road leading westward to China proper. Yet another report recently received was to the effect that Sung had made his way toward Laoyang. What to believe we can not tell. The balance of testimony goes to show that the Chinese Commander-in-chief in Manchuria is somewhere in the neighbourhood of Yingkow.

The *Nichi Nichi* publishes the [illegible] of Lieut.-

Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

General Nodzu's reply to the Emperor's Message of commendation after the battle of Kangwasai. It is unnecessary to translate it. These documents are always framed according to a set formula. The Sovereign attribute the successes of his troops to valour and loyalty; the officer in command ascribes them entirely to the virtues of the Sovereign.

The *Hochi* has an interesting paragraph about the fate of the Peiyang Squadron. It says that the Squadron can not possibly remain much longer in Weihaiwei. Some definite course must be adopted by Admiral Ting. But what course? He has four to choose from. The first is to come out boldly and fight. The second is to run away. The third to burn his ships. The fourth is to surrender. As to the first, nothing seems less probable. With at least 6 powerful ships and a fleet of torpedo boats under his command, the Admiral has devoted himself to hiding in Weihaiwei. When a flotilla of Japanese transports landed troops for the attack of Port Arthur, he made no attempt to protect his country's shores. When Japanese men-of-war assisted at the assault upon that place, he remained inactive. Can it be expected that he will come out and fight now? As for escaping by flight, Weihaiwei is blockaded by the Japanese Squadron. Even if Ting managed to steal out, his speed is such that he would be soon overtaken. With regard to the third course—that of burning his vessels and escaping by shore—it is feasible so long as Weihaiwei is not invested, but should the Japanese troops surround the place, that means of safety would be impossible. To surrender at once would be his simplest and safest plan, but it is in the last degree improbable that he will adopt any such resolution. Such are the conclusions of the *Hochi's* informant. But, for our own part, we can not think that Ting is in such serious straits.

The *Jiji Shimpo*, always well informed about Korean affairs, says that the leader of the Tonghaks and his lieutenants have been killed by the local officials and the people, and that Japanese officers, landing from the *Tsukuba Kan*, identified the heads. Our contemporary adds that the rebels, deprived of a leader, have dispersed.

According to information obtained, says the *Kokkai*, from a Government transport recently returned from Talien, an attack in force was to be made by the Navy on the 5th or 6th instant against the Peiyang Squadron in Weihaiwei. If that be true, some news of the affair should have been received ere now.

A telegram sent from Hiroshima at 1 p.m. on the 8th instant, and published by the *Jiji*, says that about 1,000 men of the First Army are suffering from frost-bites. These casualties are mainly due to want of care, and it is expected that the caution given to the troops will prevent a recurrence of such mishaps.

Friday, January 11th.

Lieut.-General Nodzu telegraphs from Sniyen, under date of the 8th instant, that the Chinese troops on the westward of Haicheng have retired to Kaokan and its neighbourhood, and that the outposts of the Laoyang forces have been advanced to Kausienpao, a place not marked upon our maps, but presumably some miles northward of Haicheng on the Haicheng-Laoyang road. These troops are said to have two guns. Another body of Chinese has appeared at Hoshanken, some 8 or 9 miles to the north-east of Haicheng. In connection with these latter troops, the General speaks of some being within 2,000 metres of Haicheng, as we read the telegram, but it must be confessed that this part of the message is rather unintelligible. Another detachment of Chinese, infantry and cavalry, is at Chipao. Their number is said to be small.

Briefly speaking, the meaning of the above is that General Sung's troops have retired southward, to a point covering Yingkow (modern Newchwang), and that the Chinese forces on the Laoyang road show a disposition to push toward [illegible]eng.

Meanwhile, other vernacular journals publish various reports, none of which seem trustworthy. The *Hochi* adheres to its theory that a portion of the Second Army has moved north from Chinchow against Kaiping. Our contemporary now goes so far as to say that the assault of the town was to take place on the 10th instant, and that it was garrisoned by 3,000 Chinese. The *Nippon* partially confirms the *Hochi*, but does not mention the source of its information. It alleges that on the 26th of December, one brigade of infantry with some squadrons of cavalry and batteries of artillery, passed through Kaiping in the direction of Newchwang, the force being intended to cooperate with another force in attack on a certain town. The *Yomiuri Shimbun*, on the contrary, publishes a telegram from Hiroshima which describes as probably untrue the report that a portion of the Second Army had marched against Kaiping. Yet the same telegram adds that a reconnoitering party of the First Regiment—which forms part of the Second Army—pushed to the neighbourhood of Kaiping, and retired after ascertaining that there were no Chinese troops there. It seems to us pretty evident that the vernacular journals of the capital are for the moment quite at sea as to the movements of the Second Army, and that, in default of accurate information, they are publishing any and every rumour that reaches them. We do not ourselves believe that the Second Army has sent any force in the direction of Kaiping, but it is necessary to explain that our belief is not founded on any official information. The safest course is to attach faith solely to official intelligence, like that published above from Lieut.-General Nodzu.

The *Nippon* caps all previous estimates by saying that there are 200,000 Chinese troops, more or less—a very great deal less, we imagine—in Mukden, and that if the place is taken, 100,000 fugitive soldiers will head for Pekin or Newchwang. Such estimates seem extravagant.

The *Jiji Shimpo* says that, according to information received by a certain firm, the Chinese are making most extensive preparations for defence at Woosung and other places south of it. They are engaging every German merchant possessing any military knowledge, in order to have their troops drilled, and are manufacturing arms and ammunition night and day. If all that be true, it does not look like an expectation of peace.

The *Nichi Nichi* publishes some notes of a conversation held with Chinese prisoners. The latter say that what they fear most in fighting with Japanese is, first, the latter's marksmanship; secondly, their charging; and thirdly, their shells. As a rule the Chinese soldier has no idea of taking aim. All that he thinks of is to load and fire. For the most part, he fires from his hip, and the consequence is that his bullet commences its flight at a height of from 4 to 9 feet above a man's head and fails to do any execution. Still, among the officers trained at the military colleges there are some not to be despised. If a Chinese soldier knows that his enemy has no reserves, he will make a brave enough rush, but the Chinese themselves seldom have reserves. They like fighting behind parapets best of all fighting, but if they lose one fort out of a number, they have little heart to defend the others. Each Chinese regiment consists of 500 men, to whom are attached 80 coolies for carrying baggage and ammunition. There is no regular transport corps nor any commissariat. On the march, the immediate place of destination is indicated, and the first soldiers arriving there levy forced requisitions for everything needed by the troops—rice, fowl, vegetables, and so forth. No provision of money to pay for such things is made. The day's march is generally 12 or 13 miles. At the time of the Anglo-French invasion reinforcements came to Pekin from Hansuh, 800 miles distant. As for the conduct of the men, the want of courage they display is chiefly attributable to bad leadership. Under good officers the men would behave differently. If the soldiers are cowardly, they are also cruel. They yield quickly, but they do not forget easily.

Dovetailed among the above fragmentary items of information is a statement that the Japanese troops fired 70 rounds of ammunition each at the taking of Port Arthur.

The *Kokkai* publishes the following letter from an officer of the Second Army, stationed at Tungchiatien, in Shinking:—

The cold here is intense. At night the mercury falls eighteen or nineteen degrees below zero. Some of the soldiers have lost noses or ears from frost-bite. We had made up our minds that we should have to spend the rest of the year here, when we received orders to move forward to Kaiping. We shall set out in a few days, probably. It is with no little joy that we move, for the march will bring us so much nearer our great objective, Pekin. Such and such a place is 15 or 16 Japanese *ri* from here, and from thence to Newchwang is not more than 20 *ri*. It can not be long before our three armies unite and take Pekin. The inhabitants of this locality are most grateful for our clement treatment of them. They constantly come and thank us, and ask to be made Japanese subjects. It appears that their ancestors bore arms against the Chinese Government and were banished to islands in the vicinity of the Liaotung peninsula. Ever since then the people have been disaffected, and were looking for an opportunity to revolt when our troops arrived upon the scene.

Hence their readiness to welcome us. I append a list of the prices ruling at Chinchow:—

Japanese *Saké* ..... 28 *yen* per barrel.
Chinese Brown Sugar.....2 50 *yen* per catty.
Pigs, per head ..... 10 *yen*.
Millet *Saké*, per *to* .....1.50 *yen*.
Shochiu, per *to*.....2.50 *yen*.

Saurday, Januray 12th.

Telegraphic intelligence from the Chief of Staff at Chinchow to the Head-quarters at Hiroshima, says that on the 10th of January at daylight, a Brigade of the Second Army, under the command of Major-General Nogi, attacked Kaiping at daylight. The enemy had only five regiments, or about 2,500 men in garrison. They had with them 14 guns, of which 2 were quick-firing, but they made no very resolute resistance, for at 9.30 a.m. the town was in the possession of the assailants. The Chinese retreated toward Haishansai, a town distant a few miles on the coast road leading toward Yingkow. General Nogi detached a column in pursuit.

The distance from Chinchow to Kaiping (or Kaichow as it seems to be more commonly called in China) is 115 miles. Hence Nogi's Brigade must have marched from Chinchow during the last week of December at latest. The report designates his Brigade as "Mixed," from which we conclude that it was composed partly of troops from the First (Kawaji's) Division, and partly of troops from the Twelfth, or Kumamoto, Brigade, under the command of Major-General Hasegawa. It has hitherto been supposed that the whole of the First Division was held in the neighbourhood of Talien, for the purpose of joining the Sendai Division, now at Hiroshima, so soon as the latter should start on its over-sea expedition. But apparently the Third Army will be composed as the Second was, namely, of a Division and a Brigade.

The operation has been successfully surrounded with secrecy, to which fact may be partly attributed the easy capture of a position strategically so important as Kaiping. The *Nichi Nichi Shimbun* mentioned incidentally some days ago that troops had marched northward from Chinchow, but the announcement did not attract much attention. The palm for special information certainly belongs to the *Hochi*, which not only referred to the subject several times in explicit terms, but even informed its readers on the 9th instant that Kaiping would be attacked on the 10th, and that only some 3,000 Chinese were in garrison there.

The Third Army was to leave Hiroshima yesterday. We have not yet learned whether the transports actually sailed.

The Japanese ships are evidently keeping a sharp watch on the coasts of the Gulf of Pechili. The *Yomiuri* says that the *Naniwa Kan*, which arrived at Kure on the 7th instant, reports having been herself engaged four times on scouting duty, and that the *Akitsushima* and *Saikyo Maru* had been similarly employed.

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

A telegram from Hiroshima dated the 9th instant, and published by the *Nichi Nichi Shimbun*, says that Lieut.-General Nozu, on changing the head-quarters from Antung to Suiyen found all the people pursuing their avocations in peace and contentment. They came out to meet and welcome the General as he passed, and expressed a strong desire to remain under Japanese rule.

The *Shogyo Shimpo* says that General Sung has his outposts at Kaokan and Rhtaoho. If that be so, he is evidently endeavouring to cover Newchwang.

If a telegram published by the *Kokkai* may be trusted, Major-General Tatsumi has left the easterly road to Laoyang, for he is said to have Set out from Suiyen on the 5th instant at the head of a battalion of troops to attack a force of some 2,000 of the enemy intrenched at Tienshui, where 25 guns are reported to be in position. The same journal says that 15,000 Chinese troops are collected in the neighbourhood of Newchwang, and that a regiment of the Second Army left Chinchow on the 3rd instant to attack them.

In the *Nichi Nichi Shimbun* we find a telegram from Pekin to the effect that the head of the Mahommedans in China has arrived from the west to announce his sect's intention of avenging the death of General Tso Paokwei. The *Nichi Nichi* interprets to this mean that the Mahommedans are incensed against General Yeh, who, by deserting Tso at Phyông-yang, was the indirect cause of his death. Other papers, however, interpret the incident to mean that a religious war is to be waged against the Japanese.

A certain Mr. Munekata Kotaro, who is said to be very well versed in Chinese topography, is quoted by the *Yomiuri Shimbun* as giving some interesting information about important places. As to Mukden, he says that though as the capital of Shinking it is much valued by the Chinese, the walled part of the city is comparatively small, being not more than 2½ miles in circumference. Moreover, the vicinity offers no facilities for defence such as those that existed at Phyông-yang. Laoyang, on the contrary, is strongly protected by walls, but its topograhical features are favourable to attack. If the First Army captures Laoyang, the fate of Mukden will be sealed. Speaking of Chinchow, he says that its walls are very high and thick, and that it is only second to Mukden in importance among the towns of Manchuria. Moverover, the Chinese have taken no measures to defend it, their attention being chiefly concentrated on Laoyang. As for Weiheiwai, a powerful force is assembled there under Generals Ping, Tao, and Tzung. Its back-door, too, is very strongly fortified. Chefoo is not protected behind, but has a strong garrison, and steps were lately taken to protect Chiaochow Bay against the coming of an enemy.

IMPERIAL DIET.

TUESDAY, JANUARY 8TH.

HOUSE OF PEERS.

The House met at 10.35 a.m., the Order of the Day being :—

1. to 8.—Applications for leave of absence.
9.—First Reading of a Bill introduced by Mr. Ozaki Saburo, relating to the Pension Regulations and Grants to Families of Deceased officials.

The President announced that he had taken steps to convey to the Emperor at Hiroshima the House's Reply to His Majesty's Speech from the Throne, and that, on the 4th instant, the Emperor has graciously transmitted, through the Imperial Household Department, the following Message :—

We have received with approval the reverential Address of the House of Peers.

The Applications for leave having been passed,

Mr. Ozaki Saburo introduced the Bill relating to the Pension Regulations, and explained that it differed only in phraseology from a similar Bill introduced and discussed in the preceding session.

After a few questions, the Bill was entrusted to Special Committee nominated by the President.

The House rose at 11.25 a.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.15 p.m., the Order of the Day being :—

1.—Bill, introduced by Mr. Taguchi Ukichi, relating to the Control of Pawnbrokers.
2.—Representation relating to the Development of the Steam Ship Service.
3.—Bill, introduced by Mr. Den Teikichi, relating to the election of members of Local Assemblies.
4.—Bill, introduced by Mr. Nakajima Matagoro, relating to Ineffective Ballots.

The President announced the receipt of the Ordinary and Special Budgets for the 28th year of *Meiji*, and correlated Supplementary Budgets.

The President also announced that the necessary steps having been taken to convey to the Emperor the House's Reply to the Speech from the Throne, His Majesty had graciously forwarded the following message through the Imperial Household Department :—

We have received with approval the reverential Address of the House of Representatives.

The first Bill on the Order was entrusted to a Special Committee nominated by the President, no explanation being given by the introducer nor any questions asked.

Mr. Nishiyama Shicho, introducing the Representation relating to the Development of Steam Ship Service, explained that the House had already passed a similar Representation in a preceding session, but in view of the immense importance of increasing the maritime carrying facilities in a country situated as Japan was; in view also of the probable completion at an early date of the Siberian Railway and the Nicaragua Canal, and in view, finally, of the conditions likely to be created in the issue of the present war, it appeared advisable that the House should once more express its emphatic approval of the principles embodied in the Bill.

Mr. Nakano Buyei inquired whether the Representation was to be interpreted in the same sense as the former Representation with regard to abolishing the subsidy to the Nippon Yusen Kaisha.

Mr. Nishiyama said that the times had changed. It was a question of financial calculation.

Mr. Kawashima Jun said that he too had submitted a similar Representation. He proposed that both documents be submitted to a Special Committee nominated by the President.

The House voted in that sense.

The President announced that the third Bill on the Order had been withdrawn by its introducer.

Mr. Nakajima Matagoro having briefly introduced the Bill relating to Ineffective Ballots;

Mr. Suyematsu Kencho, Government Delegate, explained that while the Government approved of the general principle of the Bill, some of the details seemed to require alteration.

The Bill was entrusted to a Special Committee nominated by the President.

The Minister President of State then addressed the House as follows :—

Gentlemen,—You are doubtless sensible of the fact, as intimated in His Majesty's Speech at the opening of the Diet, that the country is now involved in a serious war. I am further persuaded that you are fully conversant with the progress made by the war since it broke out in July of last year, and that, consequently, there is no occasion for me to make any statement here. With regard to foreign affairs, also, their general aspect is sufficiently apparent, and as for their details I am forbidden by my duty to the State from disclosing them, though an opportunity for laying them before you with the fullest accuracy will occur when the war is brought to an end. At this unprecedented period many affairs await national inception, but it is imperative to calculate their relative degrees of urgency, undertaking only those of prime importance and relegating the rest to a future time. Hence, in submitting the Budget, we have confined ourselves to ordinary expenditures, subjoining such things only as are unavoidable. Hereafter, there will be many projects calling for gradual consideration and consummation, but while the war continues it is out of the question to undertake them. On its termination, we shall have to avail ourselves largely of your counsels. Bills relating to such projects will then be laid before you. That the struggle in which the country is engaged has reached the successful stage now presented to us is attributable in the first place to the virtue of the Sovereign, and in the next to the loyalty and bravery of the Army and Navy. But it is also due to the fact that you, gentlemen, the people's representatives, fully appreciating the great responsibility devolving upon you at this crisis, have given such assistance as to relieve the troops in the field of all anxiety, and to display the absolute unanimity of the national mind. It shall be my endeavour, within the limits of my humble capacity, so to discharge the trust reposed in me by my Sovereign as to satisfy His Majesty's gracious behests and to fulfill the wishes of you, gentlemen. I feel it to be a source of infinite honour that in the discharge of my high office as chief Minister of the Crown I should be called upon to carry out the will of a nation so united. In consideration of the views that I have now laid before you, the Government will avoid submitting to you any Bills, financial or otherwise, except those of urgent importance, deferring the rest to a future occasion. We trust, gentlemen, that you too, endorsing our views, will discharge your deliberative functions with all possible expedition.

No questions were asked, and the House rose at 2.20 p.m.

WEDNESDAY, JANUARY 9TH.

HOUSE OF PEERS.

The House did not meet, the Special and Standing Committees alone assembling to examine Bills and Petitions.

HOUSE OF REPRESENTATIVES.

The House met at 1.20 p.m., the Order of the Day being :—

1.—Bill for reforming the System of District Government.
2.—Bill for reforming the System of City and Prefecture Government.
3.—Bill for abolishing the Special System of Local Government in Tokyo, Kyoto, and Osaka.
4.—Supplementary Bill relating to City Government.
5.—Bill for reforming a part of the City Government Regulations.
6.—Bill for reforming the System of Division Government.

Mr. Toda Sakubei, introducing the first Bill, said that a similar measure had been before the House every session, but had failed to become law owing to delays in Committee, or the pressure of other business, or the dissolution of the House. He briefly recapitulated the reforms contemplated by the Bill, which was then entrusted, together with two other cognate projects, to a Special Committee nominated by the President.

A similar course was pursued with regard to the Second Bill.

Mr. Nakajima Matagoro introduced the Bill for abolishing the Special System of Local Government in the three cities of Tokyo, Kyoto, and Osaka. He refrained from entering into any explanation of the reasons of the proposed reform, as they had been frequently submitted to the House in previous sessions, and he was pursuaded that the people's anxiety for the measure was well appreciated by the members.

Mr. Matsuoka, Government Delegate, repeated, on behalf of the Government, the objection stated on each previous occasion in connection with this proposal. The Government held that in view of the special character of the population of the three cities, a special system of local administration was inevitable.

Mr. Kusakari Shimmei said that proposals for banding the Bill to a Special Committee were on the table, but he saw no occasion for such procedure. The objection advanced by the Government Delegate did not appear to possess any validity. There was no apparent reason why a city should be exceptionally administered simply because its size was exceptional. The citizens themselves were opposed to the present arrangement, and he invited the House to abolish it without further preliminaries.

On the motion of Mr. Tsunoda Shimpei, who had introduced a similar Bill, differing, however, as to the date of abolishing the Special System, the two Bills were entrusted to a Special Committee.

The remaining three Bills were entrusted to the same Special Committee without debate.

The House rose at 2.10 p.m.

THURSDAY, JANUARY 10TH.

HOUSE OF PEERS.

The House did not meet, the Special and Standing Committees alone assembling.

HOUSE OF REPRESENTATIVES.

The House met at 1.10 p.m., the Order of Day being :—

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

1.—Bill, introduced by Mr. Yamagata Chiyoo, for amending a portion of the Law of Election.
2.—Bill, introduced by Mr. Takahashi Yasuji, for amending Law No. 84 of the 23rd year of *Meiji*.
3.—Bill, introduced by Mr. Tokumasu Gentaro, for abolishing the Peace Preservation Regulations.
4.—Bill, introduced by Mr. Minoura Katsuto, embodying a project of Press Law.

Mr. Mochizuki Unai obtained permission to introduce, as a point of urgency, a Representation urging the Government to submit to the Diet in the present session estimates for the construction of the lines of railway included in the Railway Project passed in the 6th session. The Government, doubtless, had refrained from presenting these particular estimates in consideration of the fact that large war loans had to be floated, and that to issue railway bonds at such a time might produce financial embarrassment. But it must be remembered that the House had already voted the railway project, and that the Government was not entitled, on its own responsibility, to ignore that vote. If a choice of expediency and inexpediency had to be made between certain undertakings, the House could make such a choice as well as the Government. An exceedingly dangerous precedent would be established were the Executive allowed to determine whether action of the Legislature should be ignored or recognised. That would amount emphatically to an encroachment upon the privileges of the House. It was not within the competence of the House to frame an estimate. It could only vote upon estimates submitted to it. But when it had once passed a project requiring the compilation of an estimate, the Government was bound to prepare and submit that estimate, leaving the House to determine whether circumstances arising in the interval called for postponement of the project.

Mr. Tateishi Ki opposed the Representation. The Prime Minister had explained, in his speech on the 8th instant, that in view of the warlike crisis through which the country was now passing, it seemed advisable to eliminate from the field of immediate parliamentary debate all enterprises or undertakings not of an urgent character. The building of these railways could not possibly be regarded as an urgent work, and if the House agreed, as it certainly must, in the general policy enunciated by the Minister, there could be no question at all as to the uselessness of submitting a railway estimate.

Mr. Nakamura Kokusho asked for an explanation from the Government Delegate.

Mr. Suzuki, Government Delegate, said that the Government entirely shared the wish expressed in the Representation, and would have been glad to present the estimates in question without a day's delay. But they were aware that the country was passing through an unprecedented crisis, and that the time did not lend itself to railway construction. Under no other circumstances would the Government have refrained from compiling and presenting the estimates.

His Excellency Count Ito ascended the rostrum at this stage, and informed the House that he had been summoned to Hiroshima by the Emperor, and should be obliged to start the following day. He greatly regretted that he was unable to remain in Tokyo and hear the views of the House on various points, but the Sovereign's command must be obeyed. He had therefore instructed the various Ministers of State, and he trusted that, in his absence, the House would confer with them whenever necessary.

Mr. Inouye Kakugoro opposed the Representation. It amounted, in effect, to charging the Government with unconstitutional procedure, but the House would surely hesitate before endorsing such an accusation. Mr. Mochizuki seemed to have been unduly influenced by the wishes of the people through whose districts the proposed railways would pass. But they must wait. He did not mean to suggest that the country's finances were at all in embarrassed condition. There was a time for everything, however, and at present affairs of war must take precedence of everything else. Would Mr. Mochizuki advocate impairing the empire's belligerent capacity for the sake of building one of two railways? Their plain [illegible] to think that liable [illegible] of not more than 200 *yen*, or of the safety of the State, and afterwards of laying down iron roads to facilitate communication. The season for railway-building would come in good time.

Mr. Kagami Kahei supported the Representation. He way fully sensible of the weight of affairs pressing on the country in connection with the war, but it did not follow that everything not directly connected with the war must be neglected. Certainly it did not follow that the procedure prescribed by law was to be set aside, as would be the case if a resolution of the House were ignored by the Government on its own responsibility. With regard to the question of railways, he considered their construction of vital importance, whatever might be the circumstances of the time, and he thought that not a moment should be lost in completing the essential preliminaries. The same argument applied to water-works, concerning which he made some remarks.

Mr. Takahashi Yasuji moved that, in view of the importance of the question, the Representation be entrusted to a Special Committee, but the House rejected the motion.

Mr. Minami-no-Michichika supported the Representation, but the House showed some impatience and the closure was moved and carried.

The House rejected the Representation and passed to the Order of the Day.

Mr. Yamashita Chioo, introducing the Bill for amending the Law of Election, explained that the object of the Bill was simply to extend the franchise. The House had agreed to such a measure in previous session, and he thought it might now be taken for granted that all objections existing outside the House had disappeared. His reason for saying so was the spirit displayed by the people in connection with the present war. The humblest inhabitant of the remotest village had shown himself ready to serve his country with his body or his money, thus proving his competence to take an intelligent interest in public affairs. Even foreigners had expressed admiration of the people's conduct, and he thought it would scarcely be claiming too much to say that such people might safely be trusted with universal franchise. But the Bill now before them asked for no such sweeping change. It aimed at nothing more than reducing the franchise qualifications from a payment of taxes aggregating 15 *yen* annually to 5 *yen*, and from a minimum age of 25 years to 20. He called upon the House to pass the Bill unanimously nd without delay.

Mr. Suyematsu Kencho, Government Delegate, said that on behalf of the Government, he was compelled to oppose the Bill. The inference drawn by the introducer from the warlike spirit shown by the people seemed altogether unwarrantable. Patriotism and politics were too very different things. It did not at all follow that because a man was ready to fight, he was competent to have a voice in the management of public affairs. Further, the change proposed was fundamental. It affected the very basis of the constitutional system. The Government did not consider that the experience thus far gained of representative institutions justified such a radical alteration as the Bill embodied.

Mr. Yamada Taizo asked why the Government Delegate objected to lowering the tax-paying qualification to 5 *yen*.

Mr. Suyematsu replied that just as the proposer of the Bill, while inclined to advocate universal franchise, had declared it prudential to preserve a five-*yen* limit, so the Government considered it prudent to preserve the fifteen-*yen*. (This reply elicited much laughter and applause.)

On the motion of Mr. Otsu Junichiro, the Bill, together with two similar measures, was entrusted to a Special Committee.

Mr. Takahashi Yasuji, introducing the second Bill on the Order, explained that its object was to reduce the power conferred on the Executive by Law 84. That Law provided that any person violating a Government Notification should be liable to a fine of not more than 200 *yen*, or minor confinement for not more than one year. To confer such power of punishment on executive officials was distinctly a relic of autocratic times. The Bill proposed to reduce the maximum penalty to a fine of 50 *yen*, and to substitute detention for confinement.

Mr. Suyematsu Kencho, Government Delegate, regretted to be again obliged to assume an attitude of opposition. But it was necessary to remind the House of the great variety of matters included in the scope of Government Notifications. Such Notifications might have for the prime object the protection of the people themselves, whose liberties the House was invited to consider as threatened. He would ask them to consider two examples. One was the enactment of regulations relating to labour emigration; another the prevention of illicit exportation of females. Did they think it possible to control such practices by means of penalties so light as the Bill proposed? The House had better not allow itself to be carried away by romantic ideas. They were practical legislators.

Mr. Kusakari Shimmei supported the Bill but advanced no new argument.

The First Reading was passed without dissent, and the Second Reading was voted.

Mr. Tokumatsu Yentaro introduced the Bill for abolishing the Peace Preservation Regulations. He called the Regulations a disgrace to a constitutional country, and reminded the House that five years had passed since representative institutions were introduced in Japan, yet they were required to live under a law that belonged essentially to the days of autocratic government.

Mr. Noguchi Kei said that this Bill had been repeatedly submitted and repeatedly passed, but on every occasion the Government had formulated some objection. He thought it very little to the Government's credit that they should maintain such an attitude. The question had now become one of the burning topics of the day. Public opinion unequivocally called for the abolition of the Peace Preservation Regulations. (At this stage several members called out that it had been agreed not to attack the Government this session. Mr. Noguchi replied that he was merely exercising his tongue by opposing Mr. Suyematsu, an answer that elicited much laughter.) He trusted that the Government for its own sake would endorse the Bill.

Mr. Suyematsu Kencho said that some of the expressions applied by Mr. Noguchi to the Government were decidedly regrettable in the interests of the House's reputation. He asked the House to consider soberly whether the Government was less solicitous than themselves on behalf of the public good, or whether the Government was more disposed than they to preserve laws opposed to the spirit of liberty. The Regulations that they proposed to abolish were intended to be applied in times of emergency. They were never enforced unless occasion offered. It was within the recollection of the House that they had been enforced for the protection of the members themselves. The Government would rejoice to be able to revoke them, could it conscientiously regard such a step as safe in the interests of public peace and good order. (Cries of "the Government applies the Regulations recklessly," and counter-cries of "No, no.") The mere fact that secret societies existed threatening the peace of the people was enough to justify this special legislation. They had to remember, too, that in the sequel of the remarkable war now being waged, popular excitement might involve developments calling for just such measures as these Regulations provided. (Cries of "Enforce them in China.")

The closure was moved and carried, and the House passed the Bill, dispensing with the Second and Third Readings.

Mr. Minoura Katsuto, introducing the new Press Law, said that as it had already been six times before the House, no explanation of its provisions was needed. The one point of dispute about the project was the question of suspending [illegible] newspapers. It was true that the power of suspension still existed in the hands of the Executive in some European countries,

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

but no such power was needed in the case of an orderly, quiet people like the Japanese.

Mr. Suyematsu Kencho, Government Delegate, said that the Government regretted much to be obliged to assume an attitude of opposition session after session. Last session the Government and the House had come to an understanding on this subject after much consultation, but the House had suddenly changed front, and the Bill had consequently failed to become law. He knew very well that the Japanese were an orderly, law abiding people, but unfortunately that excellent characteristic was not always apparent in the conduct of newspapers, which, for the sake of their circulation, or else in order to agitate some political question, too often displayed a marked disregard for public tranquillity. The Government shared the House's desire to hasten the era of complete freedom of the press, but could not yet agree to the total abrogation of the existing power of suspension. It would be glad, however, to meet the House's views as far as possible, after consultation.

Mr. Tsunoda Shimpei asked whether by suspending a newspaper for the publication of reprehensible matter, the effect of the publication could be obviated.

Mr. Suyematsu said that the question tended to involve a discussion. Certainly, what had once been written could not be effaced, but the tendency betrayed by a journal might be corrected.

Mr. Tanaka Shozo inquired whether Mr. Suyematsu, as Government Delegate, intended them to believe that he was speaking in sober earnest.

Mr. Suyematsu recommended Mr. Tanaka to address such questions to some one else.

Mr. Tanaka Shozo wanted to know whether the Government, while pretending to desire concord with the House, declined to recognise the progress made by the country since the fourth session. If the Government really desired to meet the House's views, why did it not introduce a Bill of its own? He then indulged in some personal abuse of Mr. Suyematsu Kencho.

The Bill was entrusted to a Special Committee, with instructions to report within 3 days.

The House rose at 3.30 p.m.

FRIDAY, JANUARY 11TH.

HOUSE OF PEERS.

The House did not meet, the Special and Standing Committees alone assembling.

HOUSE OF REPRESENTATIVES.

The House met at 1.30 p.m., the Order of the Day being :—

1.—Bill for amending the Law of the Houses.
2.—Representation relating to the restoration of civil rights to political offenders.
3.—Bill for supplementing the Stamp Regulations.
4.—Bill for amending Proclamation No. 16, of the 13th year of Meiji, with reference to Local Taxation.

The President announced that the fourth Bill on the Order had been withdrawn by the presenter.

Mr. Takata Sanaye, introducing the first Bill, said that as it had frequently been before the House already, he should dispense with explanations until the Bill had been examined and reported upon by a Special Committee. But he desired to make one comment at this stage. The Government had always opposed the projected changes on the ground that they affected the Constitution, and that no alteration of the Constitution should be made without the utmost deliberation. It was not the Constitution, however, that the Bill aimed at modifying, but the Law of the Houses. The Constitution embodied general principles; the appended laws, namely, the Law of Election and the Law of the Houses, dealt with details, and according to his view, these details were put into the form of annexed laws precisely because experience might at any time dictate the advisability of modifying them without touching the Constitution itself. It could not be contended that experience was lacking. The House was now sitting in its eighth session. It had had ample opportunity to test the quality of the laws under which it sat. Further, some might argue that at a time of war these questions should not be raised. He deprecated such a view. There was no reason why the House should fold its hands and abandon its legislative functions because the country happened to be at war.

In answer to a question from Mr. Suyehiro Shigeyasu, Mr. Takata explained that though he too warmly approved the idea of abolishing the payment of members, he deemed it advisable to postpone that reform.

Several questions having been asked and answered, Mr. Kubo Kuhei asked for a brief statement from the Government Delegate, at the same time observing that the language used by the Delegate the preceding day had not been calculated to promote harmony between the House and the Government, and he trusted that more circumspection would be observed.

Mr. Suyematsu, Government Delegate, said that the possibility of promoting harmony depended upon circumstances. Some of the members themselves were fond of using tolerably punctuated language, and they could scarcely expect to find an invariably docile attitude on the part of the Delegates under such conditions. As to the Bill, the Government saw no reason for the changes it contemplated. Doubtless many of the proposed alterations would be satisfactory to the House, as tending to augment its competence. But it was not apparent that the present system worked badly. Quite the contrary, indeed. The Government thought it well that a need for change should be demonstrated before proceeding to alter a law.

Mr. Kommuro Shigehiro remarked that the Government Delegate was always in an attitude of opposition to the House. Further, Mr. Suyematsu showed great disrespect for the House when he accused some of its members of being fond of punctuated language. He thought that a different form of address should be employed.

Mr. Suyehiro Shigeyasu inferred from the Government Delegate's speech that the necessity spoken of was a necessity on the Government's side only, and that no idea existed of considering any necessity or desire on the part of the House. They did not want a brief explanation. They wanted a full statement of the Government's views on each point, instead of being put off with disingenuous generalities.

Mr. Suyematsu replied that Mr. Kubo had asked for a brief explanation, and now Mr. Suyehiro found fault with brevity. It was difficult to give universal satisfaction. In effect, the Government saw no occasion for the proposed changes, and he consequently failed to appreciate the need of discussing each item in detail.

The Bill was entrusted to a Special Committee nominated by the President.

Mr. Takahashi Yasuji, introducing the Representation coming second on the Order, observed that the House had already had an opportunity of considering it in previous sessions. Briefly speaking, its object was to restore their civil rights to political offenders who had already fully expiated their offences, and received pardon or completed their sentences, but were still under a painful stigma. He made an eloquent appeal to the House on behalf of these persons.

The House adopted the Representation.

Mr. Takahashi Kojuro introduced the Bill for amending the Stamp Regulations. According to the present system the value of the stamp affixed to a promissory note varied in proportion to the sum of money involved, and sometimes the amount spent on stamps almost equalled that appearing on the face of the document. The Bill proposed a uniform one-*sen* stamp in every case. Such a reform must greatly facilitate business transactions.

Several questions having been asked, Mr. Meguro Sadaji opposed the Bill as being based on a false principle. Taxes in the nature of stamps should be levied in proportion to the amounts involved in the transactions. The method contemplated by the Bill was nothing more than an evasion of just taxes.

The House refused to carry the Bill to a Second Reading, and rose at 2.35 p.m.

COUNT INOUYE AND THE KOREAN COURT.

The *Nichi Nichi's* Sôul correspondent gives a long and minute account of the strong remonstance lately made by Count Inouye to the King of Korea that brought about a favourable turn in the progress of Korean reform. The account given by the *Nichi Nichi's* correspondent is so precise in all its particulars that a Tokyo paper suspects it to have emanated from the Count himself. Be that as it may, the correspondent vouches for the authenticity of his information. It seems that the direct cause of the Count's anger with the King and his Ministers was a totally unnecessary change that had been made in several Vice-Ministers on the 28th of November. The new men chosen being all friends of the Ming faction, it was apparent that the Queen must have been at the bottom of the affair. The Count was highly displeased at this disregard of his advice, to the effect that changes in the appointment of high functionaries should not be made without due deliberation and, also at finding that what had happened was due to the Queen's contrivance. He at once wrote a letter to the Korean Premier rebuking him for flagrant breach of promise. The next day the Premier and Ministers of Foreign Affairs and the Treasury were invited to the Legation, and the Count expressed his opinion that the affairs of Korea were utterly hopeless, and that the reform programme submitted by him to the King should be returned. Both on that occasion and on the following day the Ministers tried to excuse the King's conduct and to appease the Count's anger. The latter would not listen to their apologetic explanations, but said that as he was going to visit the King he should speak directly with him on the subject. Upon being admitted to the King's presence, the Count assumed a most solemn mien, and told the King that the arbitrary change of Vice-Ministers thoroughly convinced him that he no longer enjoyed the King's confidence and that he therefore wished to withdraw the reform programme. He also said that though the King seemed, as far as outward appearances went, to desire to carry out the schemes of reform, he, the Count, was of opinion that his Majesty's determination would be frustrated by the many obstacles in the back-ground. The King made some excuses about the change of Vice-Ministers, and said that he would stop it, if desired, but added that, since he had already decided to carry out the reforms as set forth in the programme, the latter should not be withdrawn. Count Inouye replied that all decisions of the King could be of no avail so long as a strong power was by his side to move him, and that it was on that account, not merely because of a change of Vice-Ministers, that he considered Korean affairs in a hopeless state. The King perceived the meaning of the Count's insinuation and declared that in future the Queen should be prevented from interfering in State affairs, and that he and his Ministers would be careful to avail themselves of the Count's advice. Upon this the latter impressed upon the Sovereign the distinction between promise and performance, and pointed out how the promises made to Japan in 1882, then in 1884, and again on July 23rd, 1894, had never been fulfilled. He also showed that Japan was not the only country that had experienced great difficulties in connection with Korea. Even the Chinese ex-Resident, Yuen, powerful as he had been, was baulked in a similar way, and not only did the Court fail to adopt his frequent representations of an intimidating nature, but it had also secretly endeavoured to bring about Yuen's recall by bribing a certain powerful prince in Pekin. The Count repeated that he was convinced that all the promises and declarations of the King would fall through, and again asked to have the written programme of reform handed back to him so that he might show that he was no longer connected with the doings of the Korean Government. He further stated, after having again replied in the negative to the King's request that he should consent to interest himself

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

Korean affairs, that the King had better conduct the administration of the country according to the advice of the Queen or the Tai Wŏn-kun with the help of the Mings or Tonghaks, in short, of any persons he chose. Of course in that case the Count would order the withdrawal of the Japanese troops sent by request of the Korean Government to suppress the Tonghaks. All friendly feeling toward Korea would be at an end, and should any Japanese subject be killed by the Tonghaks, or Japan's interests be in any way injured, he, the Count, would demand satisfaction even though he had to resort to extreme measures to obtain it. The King pleaded against the Count's utterances, saying that as Korea had only Japan to depend upon he hoped the Count would think again over his previous remarks. Count Inouye replied that Korea's decline had been brought about by herself, being the result of her disregard of Japan's advice.

The Count is eager to help Korea, but he is secretly hated in that country and is regarded with suspicion. Facts are therefore carefully hidden from him. But he can use his own eyes and is perfectly aware of the evils and abuses existing. Such avowals as he makes may strengthen the hatred felt for him and designs may be made upon his life. He is not afraid of any such thing, but declares that the day on which his life is put in danger will be the day of Korea's destruction. He had more conversation with the King and his Ministers, all of whom earnestly endeavoured to dissuade him from breaking off his connection with the reform of Korean affairs, but he was firm, and on leaving the presence said that, even if the written programme were not returned to him, he hoped it would not be used as a basis for the reform of the country. Subsequently the Premier and several Ministers of State called upon the Count repeatedly at the Legation and begged him to alter his determination. They even drew up an oath attesting the sincerity of their promises. At last the Count relaxed, and it was arranged that he should have private audience of the King on the 8th of December. On the Count's presenting himself at the Court, the King seemed exceedingly pleased and a most confidential conversation ensued. The King ordered all the Ministers with him to withdraw, though the Queen was allowed to remain in the room just behind her consort's throne. Count Inouye then said that as he was confident that the conversation would be kept secret, he should disclose his ideas with the greatest sincerity, and entreated Their Majesties to listen to his remarks. He then observed that in his opinion the anxieties besetting Their Majesties caused them to look with suspicion on everything. (Both the King and the Queen replied in the affirmative.) The grandson of the Tai Wŏn-kun, continued the Count, subsequent to the skirmish in Sŏul on the 23rd of July between the Japanese and Korean soldiers, repeatedly impressed upon ex-Minister Otori and Secretary Sugimura the advisability of discrowning the Queen. When dissent was expressed to this proposal, Li suddenly turned against the Japanese and caused his grandfather to send secret letters to the Chinese, besides instigating the Tonghaks to expel the Japanese and to further his own interests and those of his confederates. Li's design was not confined to the degradation of the Queen but also had as its object the removal of the Crown Prince. Such plots as well as the absurd rumour circulated on the occasion of Boku Yeiko's return to Korea must have filled the Royal Pair with great anxiety. (The Royal Pair answered "yes"). That no doubt led the King and Queen to seek the support of the Ming family. Though natural, observed the Count, that was not a wise plan, as the Mings are hated by the people on account of the oppression exercised by them when they held the reins of Government, and the Court could not hope to gain the respect of the country if combined with such a party. The Count advised, therefore, that the King and Queen should altogether discard any idea of strengthening their position by the help of [illegible], and pledged his honour that the position of Their Majesties and the Crown Prince should be secured beyond all danger. The King replied that he could not but regard Li's actions with great suspicion. After the skirmish of the 23rd of July he had been repeatedly told by Li that the Japanese intended to discrown the Queen and to absorb the country of Korea, and that the King should therefore be strictly on his guard against Japan. He also asked the King to send a letter secretly to the Chinese in Phyŏng-yang to ensure their favour. His Majesty and the Japanese Minister then consulted as to how Li should be disposed of, and it was decided to send him to Japan in the capacity of Korean Representative. The Queen then addressed the Count, saying that she and her family had been desirous from the first to bring Japan and Korea into intimate relations with each other and expressed her intention of refraining in future from intermeddling with State affairs. About two decades ago her father and other members of the family were blown up by the anti-Japanese party, but they had not met their death in vain, for the next year a treaty was concluded between the two countries and the object held in view by the Queen's family was at last realized. Her Majesty further remarked that the assurance of the Count to exert himself on Korea's behalf gave her the utmost satisfaction, and that, following his advice, she should refrain from interference with State matters and content herself with praying for the effective reform of the internal administratinn and the prosperity of the country. It was owing to her womanly weakness and apprehension for her own safety that she had considered that the protection of the allied families would be useful, but now that the security of the Court had been promised by Japan's Representative, such a course would be needless. Then followed some conversation about the agents of the Tonghaks at the Court, about Boku Yeiko, and other matters, after which the Count retired, both parties being satisfied with the meeting. Since then the King and Queen have become entirely different beings and such implicit trust is placed in Count Inouye both by them and their Ministers, that the Japanese Representative is now, observes the correspondent, a great man at the Court.

MR. KANEKO ON THE 4TH DOMESTIC EXHIBITION.

An opinion has been formulated by certain vernacular journals, and also by a section of the members of Parliament, that the opening of the 4th Domestic Exhibition should be postponed till the termination of the war, so that it may be conducted on a more extensive scale befitting the occasion. This view is combatted by Mr. Kaneko, Vice-Minister of Agriculture and Commerce, who, according to the *Yomiuri*, opposes the proposal on the following grounds. In the first place, postponement would create considerable excitement among intending exhibitors, to say nothing of the additional expense to which they would be subjected. Some of them would even be obliged to abandon the project altogether. It would further affect the credit of the Government in the eyes not only of the people but also of foreigners. The preparations of the Government are already duly made and great confusion would be brought about were the undertaking postponed. Further, in the matter of the buildings for the Exhibition, the contractors are held responsible for the period of one year, and that agreement would become invalid should the opening be put off. According to information obtained by Mr. Kurino, Japanese Representative in Washington, the Exhibition is much talked of in America, in consequence of the remarkable exploits of the Japanese in the present war with China, and every American newspaper of note is eager to obtain from the Japanese Legation facts relating to the Emperor Kwammu, about the anniversary of the removal of the capital to Kyoto, and about the Exhibition; in fact, quite a number of Americans are resolved to visit Japan when the Exhibition is opened, to observe at the same time the industry, manufactures, and also the military equipment of the new Power in the East. Nor is this curiosity confined to the people of the trans-Pacific Republic. Europeans also will be equally eager to avail themselves of the opportunity to come over to Japan. The zeal of these intending tourists would be considerably abated should the enterprise be postponed. To hold an exhibition at home while the army is marching upon the Chinese capital and winning victory after victory will serve to prove the inexhaustible resources of the country, and to ennoble it in the eyes of foreigners. In short, the Vice-Minister of Agriculture and Commerce declared to the representative of the *Yomiuri* that the Government is resolved to carry out the Exhibition scheme as first announced, and that intending exhibitors should be prepared to take part in it without paying any head to groundless rumours of postponement.

THE SODO SECT TROUBLE COMPROMISED.

We learn from the vernacular press that a compromise has been effected in connection with the trouble in the Sodo Sect, which had become notorious, not having been confined merely to the Sect itself, but even made a subject of deliberation in the Diet. The present Home Minister, Viscount Nomura, has concerned himself greatly about it since he assumed the portfolio of Home Affairs, and in order to have it settled in some satisfactory way, conducted a minute enquiry into the affair. After having thought over a definite plan he invited the ex-Chief Abbot of the Sect from the Noto centre and the Chief Abbot of the Echizen centre to the Home Office, and in the presence of the Vice-Minister of the Department and some others, exhorted the two dignitaries to settle the trouble. The priests expressed sincere regret for what had occurred, which they attributed to their own want of virtue and ability, and asked to be relieved of their offices. The Viscount praised greatly their disinterested resolve, but pressed them to continue to fill their present positions. He then advised them to dismiss several of their chief subordinate priests who were regarded as the principal originators of the trouble. Three supplementary articles relating to the internal organization of the Sect were next approved. The two Abbots then consulted as to special pardon to be extended to those who had been guilty of more or less disorderly conduct in connection with the difficulty. It was decided that about 30 head priests of local temples who had been dismissed on account of insubordination to the order of the Central Sectarian Office in Tokyo, be rehabilitated. Another knotty point to be settled was the provision that the Chief Abbots of the two Sodo centres should alternately become Head of the Sect. The mediation of a certain influential personage, presumably Viscount Miura, was invoked, and by his advice it was decided that as the Chief Abbot of the Noto centre had held the position for two years, namely, 1890 and 1891, the Chief Abbot of the Echizen Centre should be installed in the office for one whole year. It is thus evident that for about four years the Sect has been without a legitimate Head and a state of anarchy has therefore prevailed. The arrangement made by the Home Minister is simply a temporary measure, the Office being desirous to leave the management of religious matters as much as possible to those directly interested in them. Grave responsibility now rests with the Chief Abbot of the Echizen Centre who has been appointed Head of the Sect, for if he should fail in the difficult task of restoring order and quiet, who knows what confusion will ensue? The Home Office is therefore bound to pay attention to the future course of events and to tender all possible help.

THE KOREAN GOVERNMENT'S FOREIGN LOAN.

As a result of the earnest endeavours of the Japanese Ambassador in Sōul, considerable reforms have been accomplished in the Court and also in the mechanism of the government. A grave difficulty has, however, to be surmounted before legislative reforms can be put into practice, namely, the replenishment of the Central Treasury, which is now absolutely empty. The salaries of the officials are all in arrears, while the Government Offices cannot proceed with their business for want of the necessary equipment. Yet it is out of the question to levy taxes, considering the state of anarchy to which the country has been reduced by the Tong-hak insurrections. Some other expedient must therefore be resorted to. Through the medium of the Japanese Representative, the Government has secured a promise from the First National Bank to advance a sum of 100,000 *yen*, but that is only sufficient to meet urgent needs, a far larger sum being requisite in order to put the reform schemes into operation. At the lowest estimate, a sum of 5 millions is necessary for the purpose, and the Korean Government, having no other alternative, has decided to float a Japanese loan, and an overture to that effect has been conveyed to the Japanese Government, the security being land taxes and the interest being about 10 per cent. The Treasury placed the matter before the three capitalists, Mitsui, Iwasaki, and Shibusawa, and asked their opinion upon it. They all declined to enter into the negotiation on the grounds that they had no spare funds, having invested a large sum in the War Loan, and that even if they had, they did not consider it prudent to lend money to Korea as she is still in a most unsettled state. Although the Treasury promised to stand security for the fulfilment of the obligation by the Korean Government, the negotiation was declined not only by the three capitalists above mentioned, but also by others who were consulted about the matter. Rumour says that Mr. Yamamoto, of the Nippon Ginko, started a few days ago for Kyoto for the purpose, it is believed, of meeting Mr. Kawata, the President of the Bank, who is now staying in the southern capital for the benefit of his health. It is therefore conjectured that the necessary money will be supplied either by the Bank or by the Treasury out of the War Fund.

Since writing the above we learn from the *Asahi* that the President has expressed his unwillingness to accomodate the Korean Government with the desired loan. The Treasury is thus placed in an awkward position, for to refuse the money to Korea would be to undo Japan's work in the Peninsular Kingdom. It is said that the Diet's opinion will be asked as to whether the amount may be spared out of the War Fund.

THE BUDGET FOR THE 28TH FISCAL YEAR OF MEIJI.

The Budget for the 28th fiscal year has been submitted to the House of Representatives. It does not differ much, writes a Tokyo paper, from the Budgets of the last few years. The total revenue is estimated at 90,300,700.453 *yen* and the expenditure at 89,757,415.73 *yen*, leaving a surplus of about half a million *yen*. Increase is more or less noticeable in almost every important item of revenue compared with last year, while though the total outlay shows a large increase, the contrary is the case in the estimated current expenditures of the Departments of State. It will be remembered that the estimated revenue of 1894 was about 88,040,000 *yen*, while the outlay was 80,140,000 odd *yen*. Thus in the revenue the increase is about two and a quarter million *yen* and in the expenditures, no less than 9,610,000 *yen*, approximately. In the item of taxes, the estimated increase is over 4,200,000 *yen*, and in receipts accruing from works conducted by the Government, above one million *yen*. Last year, the sum accruing from the accounts of the previous year amounted to over 3,800,000 *yen*, but that item is wanting in this year's Budget, so that the actual increase in revenue is 2½ millions. The increment in taxes is mainly due to the enforcement of Law No. XVII. (1893) relating to the imposition of a tax on the sale of alcohol. As stated above, the current expenditures of each Department proper have been more or less reduced. The increase in the outlay of over 9,600,000 *yen* has been brought about in connection with certain items coming under the category of other ordinary and extraordinary expenditures. Thus the items of national loan, pensions, &c., have risen from 22,358,617 *yen* to 26,282,476 *yen*, making an increase of 4 millions or so. Then there is an additional sum of 550,000 *yen* for several items of the War Department, and a similar amount in the Department of Communications, while in extraordinary items of the Navy we have an additional sum of more than 3 millions. The revenue for the Central Treasury is also increased by 1½ million *yen*. A sum of 20 millions has hitherto been set apart every year for the redemption of the principal and interest of the national loan. This item is put at 23,120,000 *yen*, in round numbers, in this year's Budget. Should the total War Loan of 130 millions be raised, and interest paid at the rate of 5 per cent. per annum, the interest alone would amount to 6,500,000 *yen*. As the whole loan has not yet been floated the sum set apart under this heading does not exceed half that amount. The *Kokumin* considers this sum far too small unless the Government deem it unnecessary to raise the whole Loan. The increase of about half a million *yen* in the expenditures for the War Department is on account of the rise in the price of provisions and fodder, the cost of remounts for the cavalry, and the despatch of gendarmes to Kure and Sasebo, while the additional 8 million *yen* or so for the Department of Communications is chiefly due to contemplated extensions of the telephone business and other means of communication. The increase of 3 millions in the extraordinary expenditures of the Navy is for the purpose of hastening the period of construction of the iron-clads by two years and for the carrying out of minor projects. The Foreign Department intends to establish Consulates at Tacoma and at Townsville in Australia.

JAPAN'S FOREIGN COMMERCE IN 1894.

The total foreign commerce of Japan, writes the *Shogyo*, rose to 230 million *yen* last year, exceeding the average by about 30 per cent. In no other year thus far had the total amount reached 200 million *yen*. The following is a comparative table of Japan's commerce for the last two years:—

	Imports. Yen.	Exports. Yen.	Total. Yen.
1894	113,246,084	117,482,951	230,728,035
1893	89,712,861	88,257,170	177,970,031

It will thus be seen that a considerable increase over the previous year took place both in exports and imports, 23 million *yen* in round numbers in the former and about 29 millions in the latter. This must be considered a very welcome state of affairs, when we remember that the country is engaged in a tremendous international struggle involving a cost of 150 million *yen*. As shown in the above table, the excess of imports above exports last year was about 4 million *yen*. The depreciation of silver has for some years facilitated exports though standing in the way of imports. The excess of the latter over the former last year is therefore a clear evidence of the development of the people's purchasing power. This excess must necessarily be followed by an exodus of specie, a result already brought about by the war. In looking over the Customs Returns, we find that, in 1894, the outflow of specie exceeded the inflow by 7,600,000 *yen* approximately. The specie reserves of the Nippon Ginko consequently diminished last year by about 3 million *yen* as compared with 1893.

THE "CITY OF RIO DE JANEIRO."

The agent of the Pacific Mail S.S. Co. has received the following telegram from Capt. J. T. Smith, of the steamer *City of Rio de Janeiro*:—"Ship struck unknown rock on Sunday, Jan. 6th, at 1.35 p.m., making hole in starboard bilge. Beached ship at 2.30 p m., patched hole, got off at 8 p.m. evening Jan. 8th; proceeding slowly for Nagasaki. Found patch weakening, put into Iwafune to strengthen it; expect to reach Nagasaki to-morrow (10th). Passengers and specie arrived at Nagasaki per *Yugao* last evening at 10 p.m."

It will be seen by the telegram we publish to-day, that the *Rio* has had a very narrow escape from total destruction, having run—most probably at full speed—upon a submerged and unknown rock which lies apparently in the track of vessels making Nagasaki via Van Diemen's Strait. It is doubtless due to the skill and prompt action of the *Rio's* commander that the vessel has been placed in a position of safety where she can be repaired sufficiently to enable her to reach Nagasaki, and it is satisfactory to learn that the passengers, mails, and specie have been taken to that port in safety. The Nippon Yusen Kaisha steamer *Harima Maru* happened to be in a port not far from the scene of the accident at the time of its occurrence, and if the *Rio* requires any assistance the captain of the *Harima* has been ordered to render it. We trust that Captain Smith was enabled to take bearings of his position at the time the *Rio* struck this unknown danger, for the sake of the lives and property that have to be carried over the same course.

The P.M. steamer *City of Rio de Janeiro*, will not leave Iwafune until Sunday. She will then go on to Nagasaki and dock for repairs.

The Nagasaki paper says that the telegraphic news which reached the local agent of the Nippon Yusen Kaisha as to the stranding of the P.M. steamer *City of Rio de Janeiro*, stated that the accident occurred off the coast of Nishi-Kaseda, about 13 *ri* west of Kagoshima, and south of Koshiki-jima. The Mitsu Bishi Co.'s tow-boat *Yugao* left late on Monday night, taking Mr. Mansbridge, the Co.'s diver, Mr. D. F. Robertson, Lloyds' Surveyor, and an official of the N. Y. K. Captain Wilson Walker also took passage.

AN OPEN LETTER FROM CHIEF-SURGEON ISHIGURO.

Nothing could be more considerate than the way in which the Medical Department treats those in the Army. The *Yomiuri* publishes an open letter over the signature of Chief-Surgeon Ishiguro addressed to families, members of which are now in the Army. The Japanese troops, we are told in this letter, now occupy half of the Shinking province, and the districts held by them extend to a length of about 225 miles, commencing with the vicinity of Lanyang in the north and terminating with Port Arthur in the south, and they are still marching upon the enemy. The cold becomes, of course, intenser the further north they go, but in general it does not differ greatly from the temperature of Sapporo in Hokkaido. At this juncture the parents and other near relations of those in the field are no doubt exceedingly desirous to know how the men are sheltered, fed, and tended when wounded or afflicted by disease. It is for the purpose of giving information on those points that this letter has been indited. As battles are still being fought, the shelter given to the troops depends, of course, upon circumstances, for while a portion may at times be obliged to camp in the open air, or protected from the snow and wind only by tents, others, as for instance those in Fenghwan and Takushan, are quartered in brick houses, or in barracks deserted by the enemy, as in Port Arthur. The soldiers' clothes consist of under-garments of cotton flannel, stockings, a great-coat of woollen cloth, a neckcloth, and a blanket—the ordinary uniform including gloves for the cavalry artillery corps—besides which they

Digitized by Google UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN Original from

special articles of apparel for protection against the cold, namely a head-covering made of thick fur, a great-coat with a fur collar, a flannel shirt, knitted woollen drawers, lined woollen stockings, an under-garment made of paper and floss-silk, thick leather gloves, and an additional blanket. A large piece of fur also has now been given to each soldier. Even to the coolies who receive ten times the wages of the soldiers, and who therefore provide themselves with clothing, the following suit is given to each man: a quilted garment made of *kokura* cloth, a lined head-covering of a special thick kind of cotton cloth, a great-coat and trousers of the same material, a shirt and drawers of cotton flannel, socks of a particular make, and one blanket. Socks lined with flannel, straw foot-gear and heavy boots have also recently been sent for both soldiers and coolies. The daily ration of food is 6 *go* of cleaned rice and 40 *monme* of meat, besides a quantity of vegetables. This fare cannot, however, be always given, as for instance on a march, and at such times simple boiled rice and a few pieces of pickled plum (*ume-boshi*) or only a gruel made of rice and Indian corn are partaken of by the men. As a set-off to this, when booty is abundant, fowls, pork, or beef are plentifully dealt out. The clothing, food, and shelter of the troops differ thus necessarily according to circumstances. When the enemy is to be charged at close quarters, the soldiers strip themselves of all extra clothing so as to ensure freedom of motion and are then obliged to stand in the snow in their ordinary winter suits. On the other hand, soldiers who were the first to arrive at the enemy's quarters in Fenghwan, Chiulien, Port Arthur, and so forth, found fur garments and boots of great value which they now wear. We now come to the treatment of the wounded and diseased. It is highly satisfactory to find from the returns that lately reached Head-quarters how comparatively small is the number of wounded and killed on our side since the beginning of the campaign. It is also reassuring to learn than the ratio of mortality among the wounded who were brought under the care of surgeons was only 4 per cent. The number of deaths from sickness is rather large, but it is not to be wondered at when we remember how prevalent epidemics such as dysentery, typhus, and so forth were in Korea, and what hardships the Japanese suffered owing to change of climate and of diet. It is fortunate that owing to the resemblance more or less of food and customs among the allied races of Japan, China and Korea, our soldiers are less liable to suffer than Europeans or Americans would be under existing circumstances. The mortality among the sick was also small, only about 2.9 per cent. The total aggregate of military medical attendants in the Army is 1,350, of whom 380 are surgeons and chemists, and the rest male nurses. The Red Cross Society has 138 practitioners and nurses in the Army, besides a far greater number who attend the wounded and the sick at the various barrack hospitals in Japan. The medical attention in the field is thus as perfect as it can well be, but as the treatment given at home is necessarily better, I have enjoined the Medical Corps in the Army to send the wounded and sick back to Japan with all possible speed. When a patient has been sufficiently restored to health in Hiroshima to be moved, he is at once conveyed to a military hospital near his home, as he will there enjoy greater facilities for seeing his family and friends. The progress that has been made in medicine in general and military surgery in particular, in Japan is remarkable. In the Satsuma Civil War the mortality among the wounded was 170.5 per 1,000, whereas in the present campaign it has only been 27.2 per 1,000. A short account of the Hiroshima Barrack Hospital may be interesting. The Hospital is directly controlled by Dr. Sato Susumu, and under him there are 56 surgeons and dispensers and 501 nurses. Besides these there are 20 practitioners and dispensers and 152 lady nurses from the Red Cross Society. Among the latter we find Viscountesses Kabayama and other distinguished ladies indefatigably engaged in tending the wounded and sick, together with other nurses of humbler origin. No outsider can have an idea of the care that is taken of a patient seriously ill or wounded, be he an officer or a coolie. He is generally tended by two nurses, and the treatment he receives even surpasses that given to a patient of high rank at home. The public is gratefully cognisant of the assiduity of the Court in relieving the pain of the sick and wounded and providing comforts for them. The Emperor frequently sends messengers to the Hospital, with grants of money to the patients, and causes the military bands to visit them and play for their pleasure. The Empress-Dowager, the Empress, and the Crown Prince are equally solicitous, and the former have made bandages with their own hands to be given to the patients who, however, regard them as too precious for use and hang them on their bedsteads as mementoes of the Imperial benevolence. Almost daily the Hospital is visited by Princes of the Blood and their wives and other distinguished personages. The Chief Abbot of the Higashi Hongwan Temple, and other high priests, both Buddhist and Shinto, read prayers with any patient whose case is dangerous. The contributions sent to the Hospital from almost every part of the Empire are almost innumerable. Bandages are of course the article most needed, yet such is the supply incessantly sent by well-wishers that the Hospital has not had to buy a single one. Light literature contributed by patriotic people for the use of the patients already fills one ware-house. It will thus be seen that the lot of those who receive wounds or fall ill in the discharge of their duties is not hard.

The letter closes with kind injunctions to the families of those away at the seat of war to await the return of their heroes with their stories of glorious deeds achieved by themselves and their comrades.

LETTER FROM HIROSHIMA.

(From our own Correspondent.)

Hiroshima, January 4th.

The New Year's Holidays have passed away quietly and uneventfully. It would be more correct to say that the people of Hiroshima did not observe the holidays at all. Few house-fronts were decorated in the usual manner with *kadomatsu*, and no one was observed to go about making visits of congratulation. The fact is that the citizens agreed to dispense with all customary ceremonies and formalities of the New Year out of deference to the example of the Court, where all such observances were totally suppressed this year.

The Second Division (Sendai) is still staying here. During the day-time the streets are full of troops. Their conduct excites the admiration of the citizens. Throughout the forenoon the soldiers are regularly drilled in a spacious parade-ground, called the "eastern," in distinction from the one outside the castle. The afternoon hours are left at the disposal of the men, and they spend them lounging about the streets and making visits to each other. From six in the evening, no private is allowed to leave the house in which he is quartered. Such is the strictness of the discipline maintained among the troops that no complaint has ever been brought against them in their two months' stay here. Not only the troops but even the coolies, are kept under rigid control. The latter, like the former, are daily exercised to perform their work methodically and without confusion. Though much is attributable to the naturally docile and quiet disposition of the people from the north-eastern provinces, due credit must be given to the officers also of the Division.

How long it takes in Japan to convey a certain body of troops, say a Division, by rail, from one part of the empire to another, is a question of great importance and interest, but at the present stage of the war it is impossible to collect conclusive details for publication in newspaper columns. It may, however, be stated that, roughly speaking, a week suffices to transport a Division (a little more than 20,000 men) by rail over a distance of say 800 miles. This includes not only the men but the horses, the artillery, and all other warlike accessories. This rate of conveyance does not refer to cases in which the troops are to be sent with the greatest possible rapidity. Thus far all military operations on the Japanese side having been carried out according to a well concerted plan, there has been no necessity to employ special haste for the mobilization of troops by rail.

The port of Ujina now presents a lively appearance, there being at anchor over thirty large transports. The last time I went there, I saw several additional military store-houses in the course of construction. Among the articles exposed for sale in one of these stores, I noticed a number of bath tubs and an immense quantity of straw ropes and sandals (*waraji*). Several new shops have been opened, with large supplies of warm wearing apparel, mostly of foreign fashion. These stores are crowded from morning till evening by coolies, crews of the the transports, and camp followers of various classes.

A private letter from a well known military officer in the vicinity of Fenghwang states that the cold is exceedingly severe up there, nearly thirty to forty per cent. of the sickness being attributable to climatic influences. However, the general health of the troops is said to be extremely good, the coolies being the chief sufferers from severity of climate.

CIVIL REGULATIONS FOR PORT ARTHUR AND CHINCHOW.

The Commander-in-Chief of the Second Army has issued some civil regulations for the administration of Port Arthur, subordinate rules as to public grants of rice to the Chinese inhabitants, and also rules relating to commerce at Chinchow. The Administrative Regulations consist of 17 Articles, and are characterised by such liberality and firmness as the occasion requires. The civil affairs of every village coming under the jurisdiction of the Administrative Office of Port Arthur, are to be managed by salaried headman elected from the inhabitants of the hamlet. Soldiers and non-combatant Japanese are forbidden to use or enter the houses of the natives without the sanction of the Authorities. Chinese are also forbidden from entering or using houses not belonging to them without first obtaining permission. Sick or wounded persons are to be properly cared for, and information as to their complaints and place of abode is to be submitted to the Authorities. Any native or alien who commits an offence within the districts under the jurisdiction of the Port Arthur Administrative Office, shall be tried in accordance with the provisions of international law applicable to occupied regions in an enemy's territory. The Chinese are enjoined to give information to competent authorities of all those who secretly possess arms or harbour Chinese soldiers. They are at the same time to bring all complaints to the Administrative Offices when they suffer damage either at the hands of Japanese or from their own countrymen. Charitable grants of rice to indigent persons were to be made for a period of 30 days commencing the 26th ultimo. The daily allowance per adult is 4 *go*, which was to be doled out every day between 9 a.m. to mid-day to all who had previously obtained tickets entitling them to relief. These tickets could be obtained at the local office.

The Chinchow Commercial Regulations consist of 10 Articles, and are framed for the mutual benefit of Japanese and Chinese traders while the Japanese troops are occupying Chinchow. For a while, permission to trade will be granted to only a limited number of Japanese merchants, and transactions will be confined to Japanese and Chinese merchants who have secured these licenses. At first the market will be established only in Linshu, and not in Chinchow, in order to impress the Chinese with the inconvenience of carrying heavy silver coin; and, in that way, it is hoped that the natives will be gradually

Digitized by Google UNIVERSITY OF ILLINOIS URBANA-CHAMPAIGN

induced to use Japanese notes, which at present are not accepted as currency in Chinchow. For the purpose of conveying merchandise to Chinchow, two steamers in the Government service will undertake a regular service between Ujina and Talien. The standard of prices will be left to the merchants engaged in the trade, but, when it is deemed advisable, the Governor of the Chinchow Administration Office may restrict the prices put upon certain goods. The administration office will also act as arbitrator in any cases where disputes arise between Japanese and Chinese merchants. An authorized merchant will have to pay a tax of one per cent. on the whole amount of his transactions, toward the cost of local civil expenses. Licenses will be given only to members of the *Nis-sei Boyeki Shokai* (Japan-China Commercial Association) to sell miscellaneous articles in the markets opened in Chinchow.

THE METROPOLITAN THEATRES.

As a rule, the first month of the year is the busiest in the Japanese theatrical world. Lessees and managers can count upon larger audiences and greater receipts, an important fact, for, somehow or other, theatres in Japan are nearly always a losing venture, especially if they are of the first order and accustomed to house only star actors. Danjuro and his immediate little group of pupils charge no less than thirty thousand *yen* for their services in any one play, which generally runs for about a calendar month. It is for that reason that, great actor as he is, Danjuro is now seldom seen on the stage, very few managers being willing to run the risk of losing thousands of *yen*. And besides this, the management of most play-houses, especially those of the metropolis, is so complicated in its details that it is beyond the mental grasp of any but a theatrical habitué. There is the owner of the ground; then the owner of the building—neither of whom have any control in reality over what is or is not to be produced. Then comes the lessee of the good-will, or the man who really lets the theatre. After him comes the lessee of the theatre for one season or one month, and so forth until the number of people either directly or indirectly connected with the place, its lease, the possible profit or loss, etc., is legion. It really pays better to run a second or even third rate establishment, with a troupe composed of histrions of a lower order, than to take the finest play-house with a star company; and this despite the fact that, in the latter case, there will be full houses up to the very last day. We append a list of the better known theatres now open, or about to open, with a brief synopsis of the plays announced:—

1.—Meiji-za, one of the finest and most modern appointed theatres in Tokyo. Opened on the 3rd instant. The programme includes (1) a new version of the story of the Soga Brothers' Vendetta; (2) a new play by Kikugoro, one of the best known actors; (3) *Jigoku no kama-aki*, literally "Opening of the cauldrons of Inferno:" a melodrama of very forcible description, as might be expected from the title. The principal actors are Sadanji; Gonjuro, the hero of a very sad drama in actual life and one of the handsomest men on the Japanese stage; Shucho, who is unequalled in female parts; Kodanji, a notable "villain;" Shodaku; Yonezo; and one or two others.

2.—Haruki-za, also a theatre of modern type, with many improvements, especially in the mechanical parts of the stage. The bill comprises (1) the tragedy of Sano Genzaemon, a loyal knight of the days of Hojo Tokiyori. The hero is most excellently impersonated by Yaozo, one of Danjuro's best pupils. (2) *Inaka Genji*, a drama taken from the modified version of the well-known Genji Monogatari. (3) *Sano Jirozaemon*, a tragedy of the most sanguinary type. The hero was a man of rank but disfigured with small-pox. After having been deceived repeatedly by the frail denizens of the Yoshiwara he grew insane with rage, and finished by killing no less than one hundred persons before being overpowered. The story is historic. The chief actors here are Shikan, now well-advanced in years, but excellent as a woman; Fukusuke, recently married to a *geisha*, and not only very handsome but an adept actor, the son of Shikan; Yaozo, Komanosuke, and Matsunosuke. The theatre opened on the 2nd instant.

3.—Shintomi-za, formerly the largest and best theatre in Tokyo, but now antiquated. Will open on the 14th instant. Two plays only are billed, the first, *Awada-guchi*, being founded on the adventures of a famous sword bearing this name; while the second is a most pathetic tragedy of the old style: *Miura Wakare*. The plot is taken from a series of occurrences in the Kamakura war, when that city was the capital of the Empire. The leading character is a knight that has married the daughter of one of the enemy's chieftains, and the interest turns upon the conflict in the bosom of this wife between her love for her husband and her loyalty to the cause of her father's party. It is a great play for delineators of female character. The principal actors are Shikan, Fukusuke, and Eizaburo, who makes a charming young woman and excels as a *ballerina*; Ennosuke, another favourite in female parts; Kikugoro and his son Kikunosuke; Ichizo, Danjuro's pupil; and Kakitsu, an old favourite in pathetic male rôles.

(4).—Asakusa-za, a theatre of the second rate but none the less popular. First-class actors never make their appearance on this stage. Opened on the 2nd instant. The programme has (1) *Matsudaira-geki*, a revised version of one of the great tales of loyalty in which Japanese audiences so much delight; (2) *Miyagino Shinobu*, the story of two sisters who avenged the death of their father. The elder, Miyagino, became a prostitute to encompass the downfall of their enemy, while the younger, through countless adventures, carried the sword which was to drink their enemy's life blood; finally (3) *Nozaraki Yosuke*, a tale of the Otoko-date, something like Mitford's story of "Chobei of the Banzui-in."

(5).—Ichimura-za, a favourite gathering place for *soshi*-actors. Here Kawakami's troupe, now playing at the Minato-za, in Tokyo, will, from the 15th instant, present a new play written by Kawakami himself. It is to depict scenes from the war and glimpses of Japan nearly a score of years later on, the style being "The Forty-second year of *Meiji*," or "1909." Ichikawa Kumehachi, by far the greatest actress Japan has ever produced and exceedingly popular, although now more than sixty years of age, has joined hands with Kawakami, much to the disgust of old stage-goers. Kawakami Otojiro, they declare, is a young man of undeniable talent; but Kumehachi moves in an altogether higher sphere and is immeasurably his superior. She should not, the old-timers hold, have consented to join the troupe of a theatrical *parvenu*. Kumehachi is equally excellent in male and female rôles, and plays with a vigour and fidelity to nature unexcelled by any male actor, except perhaps Danjuro himself.

(6).—Masago-za, a third-rate place, but often well worth a visit. We note particularly the melodrama known as *Yagyu Sodo*, which deals with the adventures of a celebrated fencer and the vendetta which he carried out. This is a very instructive play, as it gives an excellent insight into a number of now long obsolete Japanese customs. Further, the romantic drama entitled *Shirokiya Okoma*, wherein the heroine, Okoma, in her search for certain heirlooms, marries the very man whom she ought to consider her bitterest foe. There is the usual number of murders and suicides, with all their realistic accessories.

7.—Ryuse-za, in Honjo District. This place is also of a low order, but deserves notice on account of a very novel play, being no less than a *mise-en-scène* of the recent Celebration of Victories at Uyeno Park. A love story is mixed up with the fête.

Several books of the second and third centuries have leaden leaves. One such, in the British Museum, has six leaden leaves, with hinges and

ENGLISH NEWS.

The Times, writing of Rubinstein, says:—

His eminence as a *virtuoso* was beyond all question, and as an interpreter of the highest music he was easily in the front rank of the greatest artists of the world. He has been called "Liszt's only rival," and not without justice; though a certain wildness of nature would at times appear to possess him to such an extent that some one piece or movement in his programme was entirely sacrificed, the enormous range of his tone gradation and the passion and poetry of his reading of works of widely different schools were quite unique. Often his rendering of the graver compositions was marked by force rather than earnestness; but his performance of old music such as Handel's suites was marvellous in its self-restraint and simplicity. Yet in the development of pianoforte technique his place is second to Liszt, although his own technical attainment was most wonderful.

Like many another *virtuoso*, he would fain have exchanged his renown as a performer for an equal amount of fame as a composer. He called Liszt "a performer-virtuoso, no doubt, but no composer," and the severe criticism is scarcely less applicable to himself, although his works embrace every form of music, from operas and oratorios to simple songs and piano pieces. He was greatly influenced by Mendelssohn in early life, and his music retained a strong Semitic flavour in its best and most individual parts. He was a thoroughly conservative musician, but his treatment of the classical forms rarely convinces us that these forms were of living force for him. Nor are his various attempts to modify or extend them very successful. His "Ocean" symphony, the best known of his orchestral works, gained little from two successive additions to its number of movements, and his concerted music, though containing some of the work that is most popular, is to a certain extent superficial and written with a view to effect. Some of his pianoforte pieces, whether in the form of studies or of "genre" pictures, have undeniable charm and spontaneity, and in many of his songs and duets a sincerity of expression is revealed for which we look in vain elsewhere. In particular the Persian series Op. 34, with its happy treatment of Oriental characteristics, deserves to rank with the very best of his compositions.

The gold medal of the Royal Statistical Society has been presented to Mr. R. Giffen, the celebrated statistician.

Lord Farrer, President of the Royal Statistical Society, in his inaugural address delivered on Nov. 20th in the Theatre of the Museum of Practical Geology, Jermyn-street, said:—

Take again, Malthus's celebrated theory of population. That theory was founded on statistical evidence which, we are informed, was as good and as accurate a representation of the then known existing facts as it was at the time possible to procure. The theory has still an element of truth in it, as we may see in the condition of some of our crowded cities, in Ireland, and, as some competent judges tell us, in India; and if other things had remained as they were when Malthus wrote, it is probable that his views would still have had a general or universal application. Even now we cannot say that it may not prove true in the future. But, so far as the greater part of the civilized world is concerned, not only has population not increased faster than food, but the reverse is the case, and the complaint now is that the supply of food, at any rate of wheat, is in excess of the demand. The mistake here lies not in founding a theory on a supposed tendency of human nature, but in an insufficient induction—in supposing that a generalization founded on the facts of one period would be good for all periods. The lesson to be learnt from it, so far as statistics are concerned, is that it is not safe to base a permanent conclusion on the facts of any one place or time collected once for all; but that observation of facts, to be permanently useful, must be continuous, and that the conclusions to be drawn from such observations must be open to question and revision as the facts alter. There is no finality in statistics any more than in any other branch of knowledge. The quantitative theory of money and prices furnishes another illustration. There is a notion still, I am sorry to say, prevalent in many quarters, that since coined money is the nominal medium of exchange, and is actually in some cases given in exchange, therefore prices of all articles depend on the quantity of coined money available for the purpose. This theory may have had some foundation in fact at a time, if ever there was such a time, when coined money was actually used and given in exchange

on every sale and purchase. It has long ceased to be generally true, and has become absolutely false and mischievous at the present time, when the great bulk of sales and purchases are carried on without any coin at all, and when the trade of a country may be doubled without the need for an additional sovereign. The real weapon with which to defeat this fallacy is to be found in the statistics of banking, of credit operations, of gold reserves, and of the rate of discount.

A deputation representing the whole of the Trade Unions of Great Britain has waited upon Lord Rosebery, to urge the importance of paying members of Parliament, and defraying the fees of returning officers, out of the public treasury. The deputation explained that they did not advocate any allowance of such magnitude as a constitute an inducement. They seemed to be divided in opinion as to whether the annual sum should be fixed at £250 or £300. Lord Rosebery offered no objection whatever to the principle involved. Indeed, he admitted that he approved the idea in theory, and he added that all his colleagues in the House of Commons had already voted for the principle. His only queries had reference to time and money. It would be necessary to proceed by Bill, and he doubted whether a Bill relating to such a matter would ever reach its final stage in view of the immense amount of other business to be done. As for the financial point, a sum of £1,675,000 would be required annually to give each member £250. Lord Rosebery might well query the readiness of Parliament to find such a sum for such a purpose.

The match between Mr. Stoddart's eleven and the Victoria (Melbourne) team, played on November 19th, 20th, and 21st, produced great scoring. The visitors made a total of 774 in their two innings, and the home team compiled 559. For Stoddart's eleven, MacLaren compiled the colossal score of 228 in the first innings.

On November 19th the first-class battle-ship *Magnificent* was floated out at Chatham Dockyard.

Mr. H. H. Asquith, M.P., speaking at Birmingham, said this of the House of Lords:—

Are the Tories satisfied, the intelligent Tories, with this grotesque parody of a second Chamber? Is there one among them who does not regret, and bitterly regret, that the time between 1886 and 1892, when they had a docile majority in both Houses, was not taken advantage of to set the Upper House a little in order. Lord Salisbury reproaches us with tinkering at the Constitution, and says that it is a sterile question of political machinery. Will Lord Salisbury, will the Tory party, go to the country at the next general election in favour of the maintenance of the House of Lords as it is?—(Cries of "No.") No, not they.—(Laughter.) You can already see that. I am not sure that the first indications of it were not given not far from the place where I am standing to-night. You can already see that a new second Chamber is on the stocks.—(Laughter and cheers.) By an adroit manipulation of the processes of election and selection, by a judicious mixture of new blood with blue blood—(laughter)—they hope to produce something which will be a little more presentable to the electorate of Great Britain.—(A voice.—"Have Joey in there.") All this ancient structure, in support of which so much rhetorical ink is being spilt—this ancient structure, with its Norman porch and Plantagenet and Tudor buttresses, is going to pass into the hands of the speculative builder.—(Laughter and cheers.) It is to be patched and mended; new wings are to be thrown out, and new side doors put in.—(Laughter.) And then, when it has been provided—if I may use the technical language—with all the modern conveniences suited to the use of a democratic people, it is to be handed over to the English nation as a brand-new Senate, worthy to take place side by side with the 20—or was it 40?—second Chambers which Lord Rosebery enumerated in his speech at Glasgow the other day.—(Cheers.) Yes, and these are the people who accuse us of tinkering with the Constitution. Why, never since the art of tinkering was first practised has a more gigantic job of the kind been taken in hand.—(Laughter and cheers.) I will say nothing but this about these proposed changes in the composition of the House of Lords. If the House [illegible]rds is to maintain its present function[illegible] changes to which you and I can[illegible]—(Cheers.) We are not going to [illegible] see [illegible]h a fresh mandate of popular authority and more formidable and irresponsible power in this country.—(Cheers). Let me say one word as to the action of the House of Lords. How does it, in fact, act? Lord Salisbury says—I must again quote him—"that it is for the purpose of referring to the average and continuous judgment of the nation the excesses to which its representatives in particular circumstances may be inclined that a second Chamber exists;" and he goes on to say—"The terrible prerogative of destruction, which is irrevocable, is not to be exercised except with the full consciousness and consent of those who are the only authorities entitled to pronounce in the case—namely, the nation by which these islands are inhabited."—(Cheers.)

"It but rarely happens," says *The Times*, "that the greatness of the void left by the death of a man of ability is so promptly and clearly demonstrated as in the case of M. Magnard, the late editor of the *Figaro*. The grave had scarcely closed over his remains when the journal which he had laboured for years to redeem from its old traditions of irresponsible frivolity indulged in a freak that can hardly be paralleled even in its own checkered annals. It gravely assured its readers, on the alleged authority of the French Foreign Office, that several English sportsmen had started some days ago for Madagascar, in order to enjoy the sport of shooting Frenchmen, by way of relief from the monotony of tiger-hunts. Our Paris Correspondent observes that the contradiction issued from the Quai d'Orsay was perhaps, not superfluous, seeing that at least one other newspaper has been found to describe the outrageous invention as "not at all improbable."

Medical men in England are beginning to agitate in favour of the Government's undertaking to distribute anti-toxin, the new French remedy for and preventive of diphtheria. The ground taken is that the anti-toxin serum being a prophylactic, its distribution by the Authorities might stand upon the same ground as the distribution of vaccine lymph.

In "More Memories" of Dean Hole, just published, the following anecdote appears:—

A gentleman travelling on the underground rail in London was addressed by a very large lady, who sat near him as follows:—"The next station at which we arrive, Sir, will be Sloane-square, and I shall feel greatly obliged if you will kindly assist me to leave the carriage on our arrival. I have already been twice round London, having made unsuccessful efforts to leave the train. Being unfortunately very heavy and clumsy in my movements, I find it easier to descend from the doorway backwards, and I have twice been occupied in my awkward endeavour, when a porter, under the misapprehension that I was entering the compartment, has not only addressed me, "Now Miss, be quick, train's going," but has propelled me onwards.

Mr. Chaplin, M.P., speaking at the Alford Agricultural Labourers' Society on November 16th, said this about bimetallism:—

In regard to bimetallism, he had been very much surprised and pleased to find how widely the opinion was spreading among farmers and agriculturists that it was the question of currency which lay at the very root of all their troubles at the present time. It was foreign competition with which they must reckon. To what branch or of agriculture ought they to direct their efforts in the future? It was a matter of life and death to them to know what they had got to reckon with, and in what direction, if they were to survive at all, their efforts ought to turn. Yet the very fringe of this question had, in his opinion, not been touched by the Agricultural Commission. They had yet to hear what the Board of Agriculture was able to tell them bearing upon the question, for example, of foreign bounties on agricultural produce, and the land in this country that had gone and was going out of cultivation. To have attempted to close the inquiry before Christmas would have been to reduce that inquiry to nothing but a farce, and if he had been a party to it he would have justly deserved their condemnation.—(Cheers.) He thought he might say that the information of every witness before the Agricultural Commission, he believed absolutely without exception, had borne on the heavy and progressive fall of prices which had occurred in the price of agricultural produce now for many years, and to which at present there appeared absolutely no limit in sight. He was profoundly convinced that the cause which was mainly responsible for the unprecedented fall in the prices of their produce, especially in wheat, must be traced to the great monetary changes which occurred in America and upon the Continent of Europe some 20 years ago. The general result of those changes he believed to have been this—that they had brought about an enormous change in values, and chiefly in the value of money itself. He thought so for this reason. Before these changes, from time immemorial, the two metals, gold and silver jointly, had done the work of the standard money of the world; since those changes gold only had been called upon to do the work which formerly was done jointly by both. The demand and strain on gold in consequence had been enormously increased. This demand, without any corresponding increase in silver, had necessarily made the gold, as it would make everything else, dearer than it was before; but the fact of gold being dearer than it was before simply meant that *all* other things were cheaper, for everything they sold was priced by gold.

We take the following extract from a letter dated at Biltis, Armenia, Oct. 9th, 1894, and enclosed to the Earl of Kimberley by the Chairman of the Armenian Patriotic Association:—

No compassion was shown to age or sex, even by the regular soldiery, not even when their victims fell suppliant at their feet. Six to ten thousand met such a fate as even the darkest ages of darkened Africa have hardly witnessed, for there women and tender babes might have at least the chance of a life of slavery, while here womanhood and innocency were but a cruel mockery before the cruel lust had ended its debauch by stabbing to death with the bayonet, while tender babes were impaled with the same weapon on their dead mother's breasts, or perhaps seized by the hair to have the head lopped off by the sword. In one place three or four hundred women, after being forced to serve the vile purposes of a merciless soldiery, were hacked to pieces by sword and bayonet in a valley below. In another place some 200 weeping and wailing, begged for compassion, falling at the commander's feet, but the bloodthirsty wretch, after ordering their violation, directed the soldiers to despatch them in a similar way. In another place some 60 young brides and more attractive girls were crowded into a church and after violation were slaughtered, and human gore was seen flowing from the church door. In another place a large company under the lead of their priests, fell down before them begging compassion, averring that they had nothing to do with the culprits, but all to no purpose—all were killed. In another place proposition was made to several of the more attractive women to change their faith, in which case their lives might be spared. "Why should we deny Christ?" they say; "we are no more than these," pointing to the mangled forms of their husbands and brothers before them, "kill us too"—and they did. Great effort was made to save one, the beauty, but three or four quarrelled over her and she sank down like her sisters. But why prolong the sickening tale? There must be a God in Heaven who will do right in all these matters, or some of us would lose faith.

Here is the *Spectator's* idea, on November 24th—*i.e.* three days after the fall of Port Arthur—about the state of affairs in the Liautung peninsula:—

The Japanese are hammering away at Port Arthur, but they have not carried the place yet. According to the latest accounts, they are on the Kinchow side within two miles of the arsenal, and their fleet has been pounding away at the Chinese ironclads in the harbour; but they are not so near on the other side, and no defeat of the Chinese vessels is reported. The Chinese are evidently fighting as they have not yet fought, and it is not likely that the Mandarins can have stolen or sold all the munitions collected in the great storehouse. Negotiations will, of course, depend upon the fate of Port Arthur; but the Chinese have at last consulted Sir Robert Hart; he has advised a direct appeal to Tokyo, and his second in command of the Customs, Herr Detring, has gone there with full powers. The offer to be made is said to be the independence of Korea, £20,000,000, and the actual expenses incurred by Japan; but the Mikado's advisers will want more than that. They will seek some guarantee against a *revanche*.

The number of millionaires in England is not so great as one might believe. According to the report of the income-tax officials there are in England 71 persons without annual income of $250,000, two 1,000 draw $25,000 annually, and only about 10,000 have an income of $10,000.

FOREIGN ADVISER TO THE CHINESE MISSION.

THE Honorable Mr. J. FOSTER, Secretary of State in the last United States Cabinet, has accepted the position of adviser to the Chinese Envoys appointed to proceed to Japan for the purpose of suing for peace. When the principal Envoy, Mr. CHANG, represented China in Washington, Mr. FOSTER, then a practising barrister, acted in a legal capacity for the Chinese Legation, and won the friendship and full confidence of its inmates. To that fact must doubtless be attributed his present appointment. It is natural that Mr. CHANG, retaining a lively recollection of the quality of Mr. FOSTER'S aid, should be anxious to have him at his side in a negotiation offering very great difficulties. We believe that Mr. FOSTER is already *en route* for the East, and that his arrival in Shanghai may be expected about the 28th of this month. It will be remembered that the Governor of Formosa, who companies Mr. CHANG in the capacity of Second Envoy, was in Shanghai at the end of December, and that Mr. CHANG was expected to leave Pekin in the beginning of January, travelling overland to Shanghai and there taking steamer for Kobe. It is to be presumed that the Envoys will proceed direct to Hiroshima, and from the above facts their arrival there may be expected about the 7th of February. Mr. FOSTER'S association with the embassy imparts to it an element of earnestness that it has hitherto lacked in public estimation. We need scarcely say that the assistance of a statesman and diplomatist so distinguished will be of immense value. That feature of the affair needs no elaboration. Indeed, there is just a possibility that a smaller man would have suited the occasion better. The personality of an ex-Secretary of State can not be concealed under a legal brief, and many Japanese will undoubtedly be disposed to view Mr. FOSTER'S connection with the mission as a fresh exercise of foreign interference. That view would be a regrettable mistake, we think. Whatever may have been Mr. FOSTER'S official position in the past, he is now simply a practising barrister, open to become the advocate of any client fortunate enough to secure his services. He is certainly shrewd enough to know, the Envoys themselves are certainly shrewd enough to know, that apart from Japan's desire to eliminate every foreign element from her negotiations with a neighbouring Oriental empire, the deprecatory attitude she has hitherto maintained toward offers of mediation worthy of the highest consideration, precludes her consent to the intrusion of any such element into a negotiation like that now pending. It will depend upon Mr. FOSTER and the Envoys to contrive that his association with the mission is deprived of all colour not purely advisory and subordinate. That precaution taken, nothing could be more hopeful than his assistance. But of course a dozen Mr. FOSTERS can accomplish nothing unless the Pekin Government be really in earnest, and with regard to that most essential point there are still many doubts. It may be taken for granted that Japan will not formulate her terms before being thoroughly satisfied that she is submitting them to men invested with full authority to accept or reject them. If Mr. CHANG is coming here merely to sound Japan's intentions, he will accomplish nothing. One thing to be noted is the leisurely character of his movements. If there is a genuine anxiety on China's part to terminate the war, she ought surely to employ the utmost expedition in despatching her embassy. Every day's delay may mean the loss of additional lives. Two weeks, possibly three, might be saved by making Chefoo the port of embarkation. But apparently Mr. CHANG is to travel all the way to Shanghai overland. It is not easily to reconcile such deliberation with any theory of great earnestness. However, until failure is assured, it is permissible to hope for success.

THE REVISED TREATY WITH THE UNITED STATES.

THE Revised Treaty between Japan and the United States, though framed upon the same general lines as the Treaty recently concluded with Great Britain, presents three essential points of difference. The first relates to the time of going into operation. We do not refer, of course, to the typographical error of the American journals in which the text of the Treaty has been published—the error of writing "1895" instead of "1899." The latter, not the former, is the date really fixed, as every intelligent reader must have perceived. What we refer to is the fact that whereas the date indicated by the British Treaty is conditional, that indicated by the American Treaty is definitive. To understand this difference it is necessary to recall the facts, first, that the operation of the British Treaty must be preceded by a year's notice of the Japanese Government's wish to have it put into force; and secondly, that the Japanese Government, in a Diplomatic Note accompanying the Treaty undertakes not to give that notice until the portions of the Empire's Codes now in abeyance shall have become operative. Hence the period indicated in the British Treaty is, in truth, nothing more than an inferior limit: at least five years must elapse before the Treaty goes into force, but if the Codes have not become fully operative within five years, then the operation of the Treaty must be deferred accordingly. The American negotiators, on the other hand, have dispensed altogether with the Diplomatic Note, and have unconditionally fixed, July 16th, 1899, as the date of the Treaty's operation. It is an evidence of confidence in Japan's purpose. Speaking practically, very little is involved. The steady and unfaltering progress made by this country since the Restoration affords the best possible guarantee that there will be no frivolous delay about a question of such vital importance as the final revision of the remaining portions of the Civil and Commercial Codes, and moreover, the conditional clause in the British Treaty must act as an additional spur. Thus the risk incurred by the United States in fixing a definite date is virtually *nil*, whereas the credit attaching to such a display of trustfulness will be considerable.

The second difference between the Treaties is in the matter of Tariff. The British Treaty provides that import duties shall be regulated by a Conventional Tariff to remain in force for at least 12 years after the date of the Treaty's taking effect. In other words, import duties are to be levied in accordance with a schedule mutually agreed upon by the High Contracting Parties. The American Treaty contains no such stipulation. It leaves the Japanese free to fix import duties by a General Statutory Tariff. Stated differently, the United States recognises Japan's Tariff Autonomy a month after the ratification of the Treaty; Great Britain recognises it not sooner than July 16th, 1911. Here again we have a difference important in appearance but of no serious consequence. In point of fact, the most-favour-ed-nation clause protects articles of American production or manufacture against the imposition of any duties higher than these fixed by the Conventional Tariff between Japan and Great Britain. America consequently incurs no risk by this act of generosity. We do not desire to depreciate in any degree the good will shown by her negotiators, but it is only fair to point out that citizens of the United States derive precisely the same benefits as British subjects from the conditions that the latter's Government deemed it advisable to insert.

The third difference between the Treaties is found in the last clause of the Second Article of the American document, where it is provided that "the stipulations contained in this and the preceding article do not in any way affect the laws, ordinances, and regulations with regard to trade, immigration of labourers, police and public security which are in force, or which may hereafter be enacted, in either of the two countries." The object of this proviso is plain. The United States reserve the sight of forbidding the immigration of Japanese labourers, just as she forbids the immigration of Chinese, Japan, of course, possessing a corresponding right with respect to American labourers. It was never supposed that the United States would give a conventional pledge to permit the unrestricted

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

ingress of Japanese labourers. That is not her policy. She is open to much theoretical reproach on account of her general attitude toward Oriental labour, but it must be presumed that she knows what she wants and what she does not want a good deal better than other folks know it.

As for the drafting of the American Treaty, it seems to us better than that of the British. Perhaps some improvement in that respect might have been reasonably expected.

JAPAN IN KOREA.

HAD Korea been in a less corrupt and miserable condition, Japan's interference might not have been necessary and Japan's programme of reform would have been achievable without provoking the complications now apparent. But in truth, Korea was a species of Augean stable and the process of clearing it out involved at once herculean toil and wide-spread commotion. The MING family stood in the fore-front of the obstacles to be swept away. The QUEEN is the head of that family. She is plainly a lady of great talent and still greater ambition, and the influence exercised by her over her pliant Consort gradually brought about the occupation of all high offices of State by her own relatives and their friends. The members of the MING family may have excellent administrative ability and their monopoly of official posts might be the happiest thing possible for Korea under different circumstances. But there are two fatal objections to their tenure of power: one is that they are pledged to the restoration of Chinese supremacy; the other, that their faith in Chinese systems is founded on purely selfish motives. In those systems they find the widest scope for corruption and peculation, and to be corrupt and to peculate represent their interpretation of official opportunities. It was necessary to commence the scheme of reform by ousting the MINGS. With that object their immemorial enemy, the TAI WÖN-KUN, was raised to the chief place of power. But though the TAI WÖN-KUN was very willing to welcome reform as a stepping-stone to his own recovery of executive control, he did not care a pin's point about reform for reform's sake. What is more, he was just as deeply imbued as the MING family with Chinese proclivities, and being a man of heroic methods, he at once opened secret correspondence with the Chinese Generals in Phyöngyang, proposing to them a project of simultaneous attack by themselves and the Tonghaks upon the Japanese troops in Söul. The crafty old Prince failed to cover his tracks completely in this matter. Proofs of his treachery came into the hands of the Japanese Representative, who quietly pointed out to him that while free to attach himself as a private gentleman to whatever friends he pleased, he could not be permitted to hold the Regency in a Government pledged to reform when in reality he was working in the interests of conservatism. After that, voluntary retirement became a golden bridge for the old man, and his fall from power was softened by an intermediary stage in which we find him acting as Court Superintendent. The motive of his appointment to that position was evidently to impose a check upon the QUEEN'S ambitious schemes by bringing her under the direct surveillance of her habitual enemy. But even as Court Superintendent the TAI WÖN-KUN did not prove a success, and he is now enjoying the dignified ease of private life. After that followed a thorough change of Cabinet, the nine portfolios being given to three neutral conservatives, three moderate progressionists, and three declared progressionists. At the same time, each Department of State received the assistance of a Japanese Adviser. Having thus provided a sympathetic body of Administrators, Count INOUYE proceeded to formulate his programme of reform in explicit terms. On the 20th and 21st of December he submitted it to the KING, and obtained the Royal assent. A translation of the document having already appeared in these columns it need not be reproduced here. Briefly speaking, it consists of projects belonging to the general sphere of administrative, legal, and financial reform, and of particular changes dictated by the special conditions existing in Korea. The latter are the more interesting. A good idea of them may be gathered from the terms of the oath that the KING of Korea has just taken before the tombs of his ancestors. A telegram from Söul, dated 7.30 p.m. on the 7th instant recapitulates the 14 clauses of the oath as follows:—

1.—To abandon all national reliance upon China, and in all things to proceed upon the assumption of Korea's absolute independence.

2.—To enact a Law of the Royal House clearly establishing the order of succession and distinguishing between the direct line and its branches.

3.—Personal superintendence of national affairs by the Sovereign acting with the advice of the Cabinet Ministers; and further rigorous exclusion of the Queen, any of her relatives, or any Court lady from intermeddling in State affairs.

4.—Court affairs and State affairs to be clearly distinguished beyond all danger of confusion.

5.—The competence of the Cabinet and of the State Departments to be distinctly defined.

6.—Taxes to be levied in strict conformity with law and with the rates legally prescribed, no other impost of any kind being levied under any pretence whatever.

7.—The functions of collecting taxes and applying their proceeds to be discharged entirely by the Finance Department.

8.—Retrenchment of public expenditures to commence with the Court by way of furnishing a precedent and example to other Departments and offices.

9.—The outlays of the Court and of the Administration to be regularly estimated and the national finances duly systematized.

10.—The system of Local Government to be reorganized and the competence of Governors defined.

11.—Young men of ability to be sent abroad for study.

12.—Military conscription to be introduced and measures inaugurated for the proper training of officers.

13.—Civil and penal codes to be enacted for the security of life and property and to guarantee the people against arbitrary confinement or punishment.

14.—Class distinctions to be abolished, and ability only considered in the appointment or promotion of officials.

Several of the above conditions are aimed at special abuses, and the whole constitute a scheme of reform, the successful carrying out of which would mean the dawn of happiness and prosperity for the people of the Peninsula. But unfortunately the people of the Peninsula appear resolved that the new era shall be born in blood. The latest intelligence speaks of virtually the whole province of Chhollado as being in a state of revolt, the Tonghaks having persuaded or coerced no less than a million of the provincials to join their insurrection. If these Tonghaks were fighting for national freedom, they would deserve sympathy. But having submitted tamely for year after year to the yoke of China their sudden opposition to a power undertaking to relieve them of that yoke cannot be reconciled with any real love of liberty. They are in truth mere political tools. Last Spring, they raised the standard of revolt against the extortion and oppression of the MING family, who then monopolized the public offices. This winter, they are fighting in the interests of the self-same MINGS, and therefore against Japan's programme of reform, which aims at putting an end to all corruption and oppression. It would be extravagant to expect that Japan should achieve without friction or disturbance the immense task undertaken by her in Korea. But as she is working, not more in the cause of the peace of the East than in the interests of a nation's regeneration, it is to be hoped that no obstacles will deter or discourage her.

THE IRISH PROBLEM.

THAT crux of six centuries, the Irish problem, seems as far as ever from a solution, to judge from two articles on the subject that appear in the November number of the *Nineteenth Century*, one by Mr. REDMOND, entitled "What has become of Home Rule?" the other by Mr. EDWARD DICEY, "Justice to Ireland, a Rallying Cry."

Mr. REDMOND'S note is one of war. He is thoroughly dissatisfied with the attitude of the Liberal Party, recognizes the apathy of the English electorate, thinks absurd the talk of a campaign on the Home Rule issue against the House of Lords, and advocates dissolution of the alliance between the Nationalists and the Gladstonian party. The Liberals, he says, have failed to fulfill their pledges to the Irish people, and it is time to return to the obstructive policy by which Mr. PARNELL for years harassed the two great English parties. When the English electorate has learned its lesson,

Digitized by Google Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

when it has fully recognized the fact that the Irish Nationalist party can and will block the way to English reform until England has granted justice to Ireland, both parties alike will be glad, says Mr. REDMOND, to solve the Irish problem by granting all that Irishmen can desire.

Mr. DICEY'S article opens by asking what it is that Irishmen mean by the demand for justice to Ireland. As a member of the Liberal Party he himself assented, he tells us, to one measure after another which, however much he disapproved of them on abstract grounds, he, in common with the majority of thoughtful Englishmen, was willing to accede to on the ground of justice to Ireland—more especially because each measure was to be the last, the one thing needed to make Ireland prosperous and contented. He now utterly declines to make any further concession on the strength of assurances that if he only yields to this last demand he will reap the reward of his previous sacrifices of principles and policy. The time has come to turn our attention to justice to England. The way in which he proposes to secure this is ingenious. The great evil of English politics at present is the existence in the House of an Irish faction sufficiently powerful to make one or other party truckle to secure its support. In the days of unreformed parliaments this evil was not felt—and here, in justice to Mr. DICEY and ourselves, we will quote his own words:—"The bulk of the Irish constituencies were under the direct control of the Protestants and English garrison in Ireland, and, whatever the defects of the Irish landlords may have been, they were, as a rule, loyal to the interests of the United Kingdom. *At the same time the representatives of the few independent Irish constituencies were in most instances amenable to private considerations, by which their support could be secured to the cause of law and order.* The evil I refer to only began to display its true existence when, having reformed our own Parliamentary representation, we consented, in deference to the justice to Ireland plea, to grant the same suffrage to the Irish as we possessed ourselves. Ever since the great Reform Bill we have had in Parliament a succession of Irish parties who, however much they may have differed in other respects, have been at one in constituting a disturbing and discordant element in British politics."

It would not have damaged Mr. DICEY'S case if, instead of employing the euphemism "amenable to private considerations" in the sentence that we have taken the liberty of italicising, he had said frankly that until comparatively recent years it was possible by the free use of direct or indirect bribery, to prevent the free ventilation of Irish grievances in the English House of Commons. But let us go on to consider the remedy he proposes.

The present Government, he says, feeling that it is losing its hold on the country, is about to jerrymander the electorate. It propose next session to introduce a bill to abolish plural voting, and to reduce the residential qualification for lodger voters to a period of three months. The Government believe, that "one man one vote," and a large increase in what may be called the migratory electorate, would improve the prospects of the Liberals in a considerable number of doubtful constituencies. Such a bill, if passed by the Commons, would place the Lords in a position of considerable embarrassment. On the one hand, to pass it might result in the return of a new Home Rule majority from the jerrymandered electorate; on the other, to reject it would give the Liberals a plausible cry against the Lords with which to appeal to the country—for "one man one vote," and, practically, manhood suffrage, are accepted principles of modern democracy. Now Mr. DICEY suggests that the proper course is for the Unionists, with a rallying cry of "Justice to England," to insist on an immediate further application of the principles of democracy, and to demand equal electorated districts. "If," says Mr. DICEY, "we are to govern by counting heads, irrespective of brains, let the heads, in the name of common sense, be counted in accordance with the rules of arithmetic." The results of such a reform would be striking. To mention a conspicuous anomaly of our representative system, London, with a considerably larger population than the whole sister kingdom; has 63 representatives, while Ireland has 103. The net result of the proposed change is thus summed up by Mr. DICEY: "Leaving odd fractions out of account, a simple sum of division will show that if the United Kingdom were divided into 670 equal electoral districts, each comprising as near as possible a population of a little over 57,000 souls, the Parliamentary representation of the different kingdoms would stand about as follows:—

England	486
Ireland	87
Scotland	71
Wales	26
	670

Thus Ireland would lose sixteen votes, and Scotland one, all of which under equal electoral districts would go to England, thus increasing the English representation by twenty-three. It may be said that this gain is not very large one, but from a Unionist point of view the gain would far exceed these not inconsiderable proportions. If seats were redistributed according to population, the great towns in England would gain very largely, at the expense of the small boroughs and of the agricultural counties; while in Ireland the manufacturing and progressive North would have a great augmentation, if not an actual preponderance, of representation in comparison with the agricultural and unprogressive South. In other words, as things are, give the complete command of electoral power to those parts of the United Kingdom which form the strongholds of the Unionist and Conservative party."

It would obviously be impossible for the Liberal party to refuse to sanction its own principles; and were such a measure carried, the vote would be comparatively insignificant, the "predominant partner" would once more have her own way, and Ireland would no longer block the path of English reform.

No doubt, if it all turned out as Mr. DICEY supposes, the *Irish Parliamentary difficulty* would be solved: but it would be quite another matter with regard to the *general Irish problem*—that would be further than ever from solution. Mr. DICEY vouchsafes us no hint of how the new Unionist Government would then proceed to deal with the problem of Irish disaffection. The kernel of the Irish difficulty is this, that the Irish Nationalists regard the English rule in Ireland, to quote Mr. REDMOND'S words, as "a monstrous foreign tyranny;" and those who are familiar with Irish history can feel no surprise that they do so regard it. And no measure of self-government that the English Government is ever likely to grant would satisfy the Irish canons of "justice to Ireland." Americans, whose sympathy with the Irish demands is well-known, often say: "But Ireland asks for nothing more than is conceded to every one of our States. Putting on one side the question whether the cases are at all parallel, and also the question whether England could ever be brought to assent to so large a measure of Home Rule as that possessed by the various States of the American Union, there can be little doubt that, even were this granted, there would still be a large section of Irishmen who would regard as a "monstrous foreign tyranny" the refusal by the Imperial Parliament of the right of imposing other customs duties than those that obtain in Great Britain, and the maintenance by the Imperial Army of an English, not Irish, standard of law and order. At any rate, it was the conviction, right or wrong, on the part of Mr. DICEY and others holding the same views, that Ireland would never be satisfied with any concessions short of entire separation, and it was this belief, that any lesser measure of Home Rule than this would merely accentuate Irish difficulty and disorder, that led to the Liberal Unionist secession. The ultimate resort of complete separation is one to which the "predominant partner" is never likely to consent; though complete separation might well be better than the policy of the past, alternate coercion and concession, which will probably also be the policy of the future. The Government of Ireland is an unhappy legacy left to us by the sins of our fathers, and we seem destined to hand it down with undiminished powers of vexation to our children's children.

THE TREATMENT OF HIRED HORSES.

To the Editor of the "Japan Mail."

Sir,—May I trespass on your space to say a word in favour of the wretched ponies who at this bitter season of the year may be seen daily standing from 9 o'clock in the morning until late in the afternoon, without blanket or other covering, outside houses in the Settlement and on the Bluff. It is, I believe, a common practice for persons, who have hired a "basha" to instruct the job-master to send it every morning to their residence at or, even, before 9 o'clock. There it waits standing in the road until wanted. Perchance, the first service it renders is to take the "danna-san" to the office. Then it returns and takes the "okusama" out shopping. Then, having taken her home, it again returns to the Settlement to fetch the master of the house for tiffin. During 1 and 2 it enjoys a rest, and I hope, the contents of its nose-bag; but is again requisitioned to take Madame out for her afternoon calls, and lucky it is, if it finishes its work at 5 or 6 p.m., and does not have to take the whole family out to dinner or dance in the evening, and wait to bring them home until 11 or 12 at night. This, Sir, I *know* is no exaggerated picture of the ordinary day's work of the hired carriage pony, and I challenge denial. I even predict that it will be maintained that, after all, the labour is not very severe. Let each *man's* opinion be as it may, I appeal to the most ordinary feelings of humanity and ask that at least each wretched animal may be furnished with a blanket during the next few months and *that each master and mistress should see that it be used* while the pony waits in the road.

Surely, sir, this is not a great thing—blankets are not dear, and if people will take a very small modicum of trouble the condition of the poor animals will be very much improved.

I am, dear Sir, yours truly,

"HOUVHNHNM."

Yokohama, January 7th, 1895.

P.S.—It should be noted the above complaint is directed wholly against those who *hire* ponies. *Owners* are much too alive to the value of the animals to treat them as described. H.

PRESBYTERIANISM IN JAPAN.

To the Editor of the "Japan Mail."

Sir,—A letter signed "Satori Kato" having appeared in your issue of yesterday, we request the privilege of inserting an answer to the same from the pen of Dr. Wm. Imbrie, which also appeared in the New York *Tribune*, and a further answer which was recently sent to the *Tribune* from here over our signatures. We regret the necessity of thus troubling you, but the publication of Mr. Kato's letter allows us no alternative, as it has allowed none in America.

Yours truly,

(Signed) T. T. ALEXANDER,
H. M. LANDIS,
D. B. McCARTEE,
T. M. MacNAIR.
(per T. M. MacNair.)
Members of the Presbyterian Mission in Tokyo.

Tokyo, January 4th, 1895.

Being absent from Tokyo when the communication referred to above was sent, my name was therefore not included among the signatures; I heartily concur in requesting the publication as above. Sincerely yours,

JAMES M. McCAULEY.

I desire that my name be appended as approving the publication of the matter requested by the above.

GEO. P. PIERSON.

A REPLY TO THE STATEMENTS MADE BY SATORI KATO.

To the Editor of the *Tribune*.

Sir,—My attention has been called to a letter in the *Tribune* of November 6, signed Satori Kato, and entitled "Presbyterianism in Japan." Had the letter appeared in Japan, where the facts and the persons are known, no reply would have been needed; but appearing in this country, the case is diffe[rent]. If Mr. Kato's statements are allowed [to pass] without contradiction, injustice may be [done] to the Presbyterian and Reformed churches, and also to the Church of Christ in Japan. I therefore speak a word in behalf the absent.

Many of Mr. Kato's statements are so extravagant as almost to carry with them their own refutation. He says:—

"The majority of the Church not only sympathize with the higher criticism, but openly insist upon the fallibility of the Holy Bible. It even proposes to revise the hymn-book so as to have its hymnology conform to its theology. The committee appointed in the last Synod is composed of its liberal men." "The deposition from the ministry of the Revs. Naomi Tamura and H. Ishawara, the latter without a trial, is nothing more than a scheme to drive out the orthodox brethren." "The Confession of Faith has opened the door to socinianism." "The understanding of the Synod when the Confession was accepted was that various grades of anti-Trinitarians may be received into the Church." "Undoubtedly the proposition to adopt the Apostles' Creed was a pious scheme under cover of a different theology than what appears on the face." "The Church, except a small portion of the Church government, has entirely worn out the Presbyterian garment." "The Meiji Gakuin, an institute supported by the Dutch Reformed and the American Presbyterian missions, is a champion of the most radical theology in Japan." "There are a number of ministers who are eager to seek the restoration of sound doctrine. Yet unfortunately they are unpopular with the missionaries with a few exceptions."

All of these statements pass the bounds of truth; some of them are simply imaginary. Take as examples those regarding the hymn-book, and the deposition from the ministry of Messrs. Tamura and Ishiwara. I have inquired of a Japanese friend, quite as well informed regarding the movements in the Church as Mr. Kato, and the only purpose in the revision of the hymn-book that he knows of is the addition of new hymns and the literary improvement of old ones. The committee appointed to the work are Dr. Verbeck, Mr. MacNair, Mr. Togawa, and an elder whose name I do not recall. The reasons for the selection of this committee are clear. Dr. Verbeck and Mr. Togawa are chosen because of their literary skill; Mr. MacNair, for his knowledge of music. It is of interest to add that Dr. Verbeck is one of the missionaries whom Mr. Kato expressly excludes from the number of those who are prejudiced against ministers holding evangelical views. The deposition of Mr. Tamura from the ministry may fairly be regarded as too severe a penalty for the offence charged. This was the view expressed by them to the Synod; but Mr. Tamura's orthodoxy had nothing whatever to do with the matter. No action was taken by the missionaries in the case of Mr. Ishiwara. Not because the circumstances were not known, for some of the missionaries (such men as Drs. Verbeck and Thompson) were members of the presbytery that deposed him; but for other reasons Mr. Ishiwara was deposed, not because he was evangelical in his theology, but because he was guilty of adultery.

There are two statements in Mr. Kato's letter, of which he makes much, and which are extremely misleading.

It is true that in 1890 the church newspaper advocated a revision of the Confession of Faith. I presume Mr. Kato's quotation is correct: "We profoundly regret the effort to import foreign ideas, and any willingness to swallow them. The standards framed at Augsburg, Dort, and Westminster are not needed in Japan." But when Mr. Kato suggests that the position of the paper was that of rationalism, he suggests what is not true. What the paper stood for was a short, simple creed, to be accepted by ministers and people alike.

It is also true that in 1888-91 a wave of rationalism swept over Japan. Nor will it be denied that it occasioned great anxiety and wrought much harm. But it is not true that the Presbyterian Church was submerged. The only minister in the entire body who departed from the faith was Mr. Kato himself. He united with the Unitarians.

Mr. Kato comes before the Church as one of a little band who are seeking for "a restoration of the truth in Japan." These "faithful orthodox brethren are making a move to organize a pure Presbyterian Church." The first step in this advance is a criticism of the present Confession of Faith. This Confession Mr. Kato describes as "thoroughly antagonistic to the standards of the Presbyterian Church." Perhaps it would be sufficient to say in reply that this is the creed upon which two years ago the Church was cordially welcomed to membership in the Alliance of Reformed Churches holding the Presbyterian system. But Mr. Kato's criticism of the Creed is valuable as casting light upon his accuracy and trustworthiness in other matters. He says:—

"The Creed speaks of 'the Lord Jesus Christ, whom we exalt as God'; therefore there is no affirmative statement on the divinity of our Lord Jesus." What Mr. Kato quotes is only the beginning of a sentence. The entire sentence is as follows: "The Lord Jesus Christ, whom we worship as God, the only begotten Son of God, for us men and for our salvation was made man and suffered."

2. "There is nothing found respecting the divine personality of the Holy Ghost." The words of the Creed, which Mr. Kato himself quotes in part, are: "The Holy Ghost, Who with the Father and the Son is worshipped and glorified, 'reveals Jesus Christ to the soul," etc. Is there any clearer way in which to express the truth?

3. "The statement 'a perfect sacrifice for sin' does not represent that a vicarious atonement was made through the Lord's crucifixion." It is true that the words "vicarious atonement" do not appear; but it is likewise true that the Creed sets forth in simple language the evangelical truth of a propitiatory sacrifice as the ground of justification. The sentence reads: "He offered up a perfect sacrifice for sin; and all who are one with Him by faith are pardoned and accounted righteous."

4. "No definite reference is made to the corruption of human nature." The Creed says:—"The Holy Ghost, who with the Father and the Son is worshipped and glorified, reveals Jesus Christ to the soul; and without His grace, man being dead in sin, cannot enter the kingdom of God."

(4.) "The Confession does not recognize the divine authority of the Bible." On this point the statement of the Creed is:—"By Him (the Holy Ghost) the prophets and apostles and holy men of old were inspired, and He, speaking in the Scriptures of the Old and New Testaments, is the supreme and infallible Judge in all things pertaining unto faith and living."

But to the intelligent reading of Mr. Kato's letter it is necessary that one be acquainted with a bit of history. As already stated, when the wave of rationalism swept over Japan, Mr. Kato became a Unitarian and entered the employment of the Unitarian Mission. In order to take this step he requested that his name be dropped from the roll of the presbytery of Tokyo. That request was granted with all courtesy. When, however, he decided to apply for readmission to the Church, he did not present his application to the presbytery of Tokyo, to which he had formerly belonged and within whose bounds he resided, but to another one situated at a distance. His admission by that presbytery was regarded by the presbytery of Tokyo not only as an act lacking in courtesy, but also as one imperilling the order and faith of the Church. It was thought that a minister abandoning the Church to embrace Unitarianism should appear before his old presbytery and satisfy it that he was at last really established in the faith. The presbytery of Tokyo therefore declined to recognize Mr. Kato as a minister until conference could be had with the presbytery which received him, or at least until the reception of official notice of his admission. This excited Mr. Kato's anger, and led to a virulent attack by him in the newspapers upon the president of the Meiji Gakuin. A second fact needs to be known by one reading Mr. Kato's letter. Last year it transpired that he was planning to come to this country with the intention of appealing for funds to carry on an independent work. The Presbyterian Mission thereupon drew up a paper setting forth its views regarding Mr. Kato and his purpose, and seeking to dissuade friends from furnishing him financial aid. This letter has since been published by the Board.

But in conclusion the question naturally arises, What is the theological position of the Presbyterian Church in Japan?

Early in the present year there were several matters which seemed to a number of the ministers and elders of the Church worthy of attention. One of these was the agitation of the question of a revision of the Confession of Faith to which Mr. Kato refers. Coupled with this was the repeated assertion on the part of Mr. Kato and one or two others that the ministry in general did not accept the Confession in sincerity. A meeting was therefore held which was attended by some fifty of the ministers and elders, among them most if not all of those to whom Mr. Kato refers in his letter. A resolution was adopted unanimously, affirming on the part of all their sincere acceptance of and loyalty to the Confession, as containing the essential truths of evangelical Christianity. That is the answer of the men themselves to Mr. Kato's assertion and insinuations.

To this it may be worth while to add the following:—It is what I wrote a year ago in a letter to a friend, and without any thought of Mr. Kato in mind. What I said then I repeat now:—"I do not know of any more accurate way to describe the theological position of the Church in Japan

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

than to say that it resembles that of the Church in this country. There are in our General Assembly those who are classed as liberals; these are those also who are classed as conservatives; and between the two there is a third class who stand rather for toleration. That condition is found in Japan also. The chief difference between the two Churches is, I should say, that in Japan the number of those standing for toleration is relatively larger." WILLIAM IMBRIE.

Lawrenceville, N. J., Nov. 17, 1894.

TO THE EDITOR OF THE "TRIBUNE."

SIR,—The admirable reply of Dr. Wm. Imbrie published in your issue of Nov. 22nd to a letter headed "Presbyterianism in Japan," and signed Satori Kato, which latter appeared on Nov. 6th, forstalls a similar communication which we had prepared and would otherwise have forwarded to you. Under ordinary circumstances further reference to the subject would be unnecessary. Dr. Imbrie has, however, been absent from Japan since early in 1893, of which fact Mr. Kato may make use, and therefore a word of confirmation directly from here may not be amiss.

As members of the Eastern Japan Mission of the Presbyterian Church (North) we heartily endorse what Dr. Imbrie has written, and would add that the brief, simple, comprehensive, and irenic creed adopted by the Church of Christ in Japan (with which body the various Presbyterian and Reformed missions are in co-operation) was substituted for the Westminister Confession, the Heidelberg Catechism, and the Canons of the Synod of Dort, not because these venerable standards were "too orthodox," but rather because they were to the young and growing church like the armour of Saul to the youthful David. No one claims that this creed is complete and final. It will no doubt be added to as occasion demands; but as it stands it is thoroughly evangelical and is no way "antagonistic" to these standards, and as the creed of the Japanese church it is peculiarly acceptable to Japanese Presbyterians. That the society of "faithful orthodox brethren" that had been formed, as Mr. Kato says, to enquire into the vexed question, failed in effecting any result, was due, 1st, to the fact that work and not discussion was believed to be the need of the hour—the latter would only have precipitated the church into conditions for which as a whole it is unprepared; 2nd, the society was a very small body, and 3rd, there were those who thrust themselves into the fore front of the movement who have not been distinguished hitherto in church affairs either for wisdom, orthodoxy, or especial piety. Under these circumstances, profitable discussion was not to be hoped for.

The *Weekly Evangelist* (Fukuin Shuho), denounced by Mr. Kato as being the chief agent in securing the present creed, has had no connection with the missions since last July. In many respects the paper had been an agent for good, and Mr. Kato would find it difficult to prove his assertion that it "repeatedly declared in favour of the fallibility of the Holy Scriptures and against soundcreeds" (as creeds) "of Christianity."

As to Theological "unsoundness" amongst the directors of the Meiji Gakuin, it is sufficient only to cite the promptness and unanimity with which the services of an otherwise valuable lecturer were dispensed with in the current year, because he was discovered to have Unitarian affiliations. The charge that its Theological Department is "fully steeped with semi-rationalism" has as little foundation. Not one of its professors holds or teaches semi-rationalistic views. The examinations for the fall term have just closed. In point of orthodoxy they would compare favourably with the examinations of any seminary of the Presbyterian Church in America. The tone of the school is seriously and earnestly evangelical.

Mr. Kato's statement that "Briggsism is spread broadcast in the pale of the church and has run wild," received a practical refutation recently, yet long enough ago for him to have been aware of the fact. A similar charge having been made from another and outside quarter, to test its truthfulness some of the Japanese brethern sent letters of inquiry to all the Ministers of the Church of Christ in Japan, with the result that while some denied holding such views the majority replied:—"We do not even know what the peculiar views of Dr. Briggs are."

Japan has had, however, its full share of rationalistic teachings and literature. All the so-called "liberal" schools have also their organs. These have been widely circulated, and the demand for freedom of religious thought has been vigorously made. It would be too much to affirm that never a doubt or question has arisen in the minds of any of our Japanese brethren; but it is to their credit that with but few exceptions they have held fast to all the essential features of our faith. From personal acquaintance with them we say unhesitatingly that their doctrinal views are evangelical and substantially orthodox, and that they are far more interested in questions of practical importance than in theological speculation. Mr. Kato's assertions that "the deposition from the ministry of Mr. Tamura and Mr. Ishiwara, the latter without a trial, is nothing more than a scheme to drive out the orthodox brethren, has no foundation in fact. Mr. Tamura was deposed for what his Japanese brethren believed to be unministerial conduct in writing for gain a book, flippant in style, partial in its statements, and thus calculated to bring immerited shame upon the whole Japanese nation. He had opportunity given him to correct certain sweeping statements in this book, "The Japanese Bride," but he refused to accept it. Mr. Ishiwara was deposed on charges of gross immorality. The presbytery sought in every way to clear him and shield him from unnecessary exposure, but the evidence obtained by an investigating committee was strongly against him, and as he repeatedly refused to appear before his co-presbyters to make explanation or for any other purpose, there was no recourse but to deal with the case in the light of evidence.

A word in regard to the theological position of the Presbyterian and Reformed Missions in Japan may be necessary. We desire it to be understood that with scarcely an exception they are pronouncedly conservative, and therefore any favouring of heterodoxy or of a "liberal party" as such is out of the question.

To those who are familiar with Mr. Kato's ecclesiastical history, his arraignment of the Presbyterianism of Japan in both doctrine and polity have singular, and despite its serious nature, a ludicrous setting. He not only enjoys the distinction of being the first and almost only Presbyterian minister who has yielded to "liberal" or heterodox influences, but while the Church was framing an evangelical creed he was advocating a creedless Unitarianism. He was the author of a book called "Christ," otherwise popularly known as the "Unitarian Bible," from which the supernatural was eliminated. Before he left the Church of Christ in Japan to became a propagandist of Unitarian tenets, while he was yet a trusted minister of an orthodox congregation, he used his opportunities to undermine the faith of many less capable than himself of judging of the relative merits of orthodoxy and heterodoxy. Matters of faith were then of so little importance to him that after a few months he sought to re-enter the Presbyterian ministry without any confession of renewed faith in its doctrines. Failing this in his former presbytery in Tokyo, he succeeded through a misunderstanding in obtaining entrance to a Presbytery in the south of Japan. He was thus the direct cause of about the only unpresbyterial act with which the church can be charged, and this irregularity led to an immediate change in the constitution to prevent its recurrence. In defiance of Presbyterian practice, he chose not to take up work within the bounds of his new Presbytery, but returned to Tokyo where, in the intervals of superintending himself alone, as "Superintendent of the Tokyo Mission" (otherwise one small street-side preaching place) he has given himself to disturbing the peace both ecclesiastical and civil. The injury that Mr. Kato has done to evangelical Christianity during the past few years demands an atonement of a lifetime of *humble* service. This he declines to give. He prefers instead to travel about the world (he has already made a circuit of the globe and is now on his second visit to the United States) soliciting support for his work of "reforming" those who remained steadfast while he wandered, and who are to-day sincerely and faithfully endeavouring to preach, and prepare others to preach, Christ to the thousands of their countrymen who are as yet ignorant of Him and His redeeming grace.

BIMETALLISM AND H.B.M.'s CONSUL AT SHANGHAI.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—As Mr. George Jamieson was so well known to many of your readers in Yokohama and Tokyo during his temporary residence in Japan as H.B.M.'s Acting Judge, I believe the following letter, which I take from *The Times* of the 20th November, will be read by them with much interest. To those who like myself, confidently look forward to the rehabilitation of silver at no very distant date, I would recommend a careful perusal of the most excellent paper Mr. Jamieson has recently published under the auspices of the Eastern Bimetallic League, entitled "Appreciation of Gold the cause of Industrial Depression in England." He demonstrates with undeniable force that "in the competitive manufacturing industries of the world the divergence of value between gold and silver will inevitably lead to a gradual transfer of the seat of all the great manufactures from gold-using to silver-using countries." There are some Japanese who advocate a gold standard for Japan. The adoption of such a course would be suicidal. Her prosperity depends in very great measure on the fact of her being silver using with a large field and capacity for the extension of manufacturing industries of varied description.

I am, Sir, your obedient Servant,
STABLE RATIO.

Tokyo, January 7th, 1895.

SIR H. MEYSEY-THOMPSON'S BIMETALLIC PRIZE.

TO THE EDITOR OF "THE TIMES."

SIR,—Last summer I offered a bimetallic prize of a silver cup and £25 in sovereigns for the essay which pointed out most clearly and plainly the great injury which has been caused to producers in this country by our present monometallic system, and that the divergence in value between gold and silver must inevitably lead to the transference of the seat of all the great manufacturing industries of the world from England to the silver-using countries of the East

I am happy to inform you I have received many excellent essays, not only from England but also from the Straits Settlements, Japan, China, and South Australia.

The prize has been adjudged to Mr. George Jamieson, Her Britannic Majesty's Consul, Shanghai, China

I remain, your obedient Servant,
H. M. MEYSEY-THOMPSON.

Kirkby Hall, York, Nov. 18.

THE JAPANESE NEW TESTAMENT TRANSLATION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—"Epsilon," in replying to Mr. McCaleb's question regarding the propriety of the use of *tadashiki*, seems to me scarcely to have given the right answer. There is propriety for the use of *tadashiki*, or there is not, according to the meaning of the Greek *κρίσις*. We cannot translate merely words. Their respective meanings in different languages seldom are exactly the same. To translate *κρίσις* simply with *sabaki* in this passage leaving the rest unchanged, would certainly be a serious blunder. "*Sabaki*" means "judgment," "sentence;" *κρίσις* can mean this, also "right," "justice," "a just cause," ideas certainly never expressed by *sabaki*. In translating this, translators had to ask themselves: what is the meaning here of *κρίσις*? how can we best render it into Japanese? And they had good authority (*e.g.* Hachett, Gloag, Schaff) for taking the meaning to be not "judicial sentence" but "judgment due to him," "the rights of justice and humanity." I myself think that another interpretation is more correct, viz., "the punishment appointed him was taken away, i.e., was ended" (cpr. Thayer *in loco*), but then we will have to do away not only with *tadashiki* but also with *ubawaretari*, for *αἴρω* means here then "to cause to cease," a meaning certainly not expressed by *ubau*. We must translate not words, but ideas, and this is what the translators of the Japanese New Testament have done.

As to the word *Fo-hitsuji*, in 1 Tim. 3:11, the criticism of "Epsilon," that it is an unnecessary and misleading interpretation, is just, but here also the mere verbal translation of the R. V., "women," fails to give what is the meaning of the Greek. It was the best that could be done without adopting definitely one or the other of disputed interpretations, but as long as the ambiguity of the Greek word could not be maintained some translation more restricted to the sense of the whole passage, rather than one still wider and more indefinite than the Greek, would have been desirable. The translation of the R.V. can make the exhortations of v. 11 applicable to women in general; the meaning of the Greek text evidently does not favour this general application. Weitsaecher's translation—so admirable in many ways—maintains the proper balance: "Die Frauen ebenso." I doubt that the Japanese language can in this follow the German and the Greek. In view of the translation of *γυνή* as [redacted] in v. 12, perhaps the same translation in v. 11 would be the best that could be done, for the reference in v. 11 is most probably to wives of deacons. In any case a mere translation of the word, except where significations are identical, is

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

not good translation, and the translators of the Japanese Testament, of whom I am not one, were within their proper rights in rendering the Greek by such Japanese words as they considered to convey most truly the meaning of the original.

Respectfully,
A.

January 8th, 1895.

BRITISH INCOME TAX.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—As a large proportion of your readers are doubtless interested in this subject, we trust you will consider the paragraph printed on the fly sheet of sufficient importance to publish in your columns.

Your obedient servants,

THE INCOME-TAX ADJUSTMENT AGENCY.

The Income-Tax Adjustment Agency,
52, Queen Victoria Street,
London, E.C., Nov. 9th, 1894.

BRITISH INCOME TAX.

Many persons permanently residing out of the United Kingdom being unaware of the fact that such residence entitles them to a remission of British Income Tax under certain circumstances, may we be allowed to state briefly what these circumstances are. Persons who have been resident out of the United Kingdom for a period of not less than twelve months, or one complete financial year (which commences April 6th), and whose total net incomes for either or each of the past three years ending April 5th, 1894, derived from property, investments, or other sources in the United Kingdom, did not amount to £130 per annum, were entitled to total exemption, consequently they can obtain repayment of the amount of tax paid in error or improperly deducted during that period, while those whose incomes amounted to £130, but were less than £400, are entitled to be repaid the tax on £120.

Under the Finance Act now in force, incomes not exceeding £160 are exempt, incomes not exceeding £400 are entitled to an abatement as to £160, and incomes not exceeding £500 as to £100. It is not necessary to declare income derived from any source outside, notwithstanding it is paid within the United Kingdom, except it be desired to claim repayment of any tax that may have been deducted therefrom. Of course, if the tax has been deducted, and the inclusion of such income would not disentitle the claimant to exemption, it is advisable to include it. It is not going too far to say that there are thousands of persons with incomes derived from investments paid "free of income tax," or where the tax has been deducted from the dividends, rents, or interest before being paid over to them, who are ignorant of or have lost sight of the fact that the amount of such tax deducted is recoverable in all cases where their incomes have been under the limit entitling them to exemption or abatement. It should not be forgotten that it is not too late to claim the return of the tax overpaid or improperly deducted in respect of the three years ended April 5th, 1894. Persons residing out of the United Kingdom must appoint an agent in the United Kingdom to make their claims and receive payment of the tax refunded on their behalf.

MESSRS. DEAKIN BROS., LIMITED.

An extraordinary meeting of shareholders of Messrs. Deakin Bros., Limited, was held in the Company's office on Wednesday afternoon to confirm a resolution passed at a recent meeting, viz:—"That the Company be wound up voluntarily under the provisions of the Companies Ordinance of Hongkong, and that a Liquidator be appointed." There were present, Messrs. J. Rickett (Chairman of the Board), A. J. Wilkie, E. Andreis, T. H. Box, J. McLean, Dr. Hall, Messrs. J. Eyton, C. K. M. Martin, W. J. S. Shand, and Dr. Gravatt.

Dr. GRAVATT, upon a quorum being present, asked leave to address a few remarks to the meeting upon some misapprehensions which had arisen as to the floating of the Company by the original board of directors. He was justified, he felt, in speaking upon these matters at what was doubtless the "death-scene" of the Company, and as he had been one of the original shareholders, they would pardon the seeming egotism which might attach to remarks upon his own action in the matter. He would speak about himself first. He had been told that he had been one of the principal promoters of the undertaking. That was an error: he was not a promoter, although he was one of the original board of directors. The promoters came to him and asked if he would consent to be become a provisional director, help draft a prospectus, and assist in some detail of work at the start of the company. They offered him altogether 50 shares. After a careful and thorough examination of the accounts of the old business, which had been prepared by a properly accredited accountant, who had investigated the books of the firm at the request of the promoters, he acce[illegible] the offer, and as great was his faith in [illegible] the enterprise that he [illegible] valuation of stock—that the stock was put down at very much more than it should have been valued at. Then as to the $80,000 for the goodwill, I don't think any charge can be made against the original board of directors in regard to that. They were not practical men, and had therefore to be guided by the advice tendered them by practical experts. I don't think that any one has ever accused any of the gentlemen the speaker has mentioned. If anything has been said, then it has come from an outsider, and not from any one in authority.

Dr. GRAVATT was very pleased to hear this, and obliged to the Chairman for the disclaimer. He did not connect the directors of the present board nor any one at the meeting with the putting forth of the accusations. Still they were "in the air" as it were, and he had heard them since his visit. He thought that that meeting would be a good opportunity to protest against them, and indeed he felt that it was only proper that a denial should be made. If there had been an error in judgment then he was willing to take his proper share in the blame of it. But he thought that there had been an error in judgment. A great deal of their misfortune could be ascribed to that wave of business depression which had passed over the world; while a good deal also might be put down to the incompatibility of carrying on such a business as theirs under the rules governing a limited liability company. A good deal, too, could be ascribed to bad management and mismanagement. It was unnecessary to go far in seeking about for a cause for their misfortune, but in all fairness an "error in judgment" could not be used as a reason for the venting of their disappointment at non-success upon the original promoters of the company.

The CHAIRMAN said he was very glad Dr. Gravatt had made the remarks he did. It appeared to him that there were two causes for their failure. One was the misfortune of having originally invested in stock intended to be sold but which was not sold according to expectation—the sales falling through under circumstances over which the company had no control. Also, their failure could, in the second place, be attributed to the defalcations of their secretary. He thought every one would agree that the Company had not come to its present straits through any mal-practices of the original or the present board of directors; whatever malpractices existed that were the work of the late secretary, who had absconded and left the company in its present dilemma. The meeting was called that afternoon to confirm the resolution carried at the last meeting, a resolution proposing the voluntary winding-up of the company and the appointment of a liquidator. This resolution needed confirmation that day. As he had said at the last meeting, he was not in favour of a dissolution of the company. They were now in a better position than they had ever been before. They were practically out of debt, and if it had not been for the defalcation of their late secretary there would have been a credit balance at the Bank. The books would not have shown a profit: they would have shown a loss, but it did not follow that there would have been a loss at the end of the year. He regretted that the company was going into liquidation. They had a much brighter prospect of retrieving their losses than had several which had safely pulled other concerns through worse positions and were now flourishing concerns, not only here, but elsewhere in the world.

Dr. GRAVATT said that he was ignorant as to what transpired at the last meeting. If there was any real hope that a brilliant outlook was before the company, then it might be well for them to endeavour to tide over the bad time, but he could not see it. Did the proposition before the meeting place any restrictions of time or means of disposing of the business upon the liquidator?

The CHAIRMAN—There is none at all. I propose that we now take the minutes of the last meeting. Shall I read them?

Dr. GRAVATT said that it was hardly necessary to read the minutes: he would propose that they be taken as read.

Mr. J. MCLEAN seconded—Carried.

Mr. SHAND then proposed the confirmation of the resolution winding-up the company voluntarily and appointing a liquidator.

Dr. GRAVATT—That leads up to my question—is the liquidator restricted in his action? Is he bound to accede to the wishes of the shareholders in the matter of the liquidation? Can we remove from these premises, for which we are paying, I believe, $175—(The Chairman: $200)—a month; and can we dispose of the stock by public auction, and is it in our province to say how the goods shall be sold and the business cleared up?

The CHAIRMAN—It was proposed at the last meeting that a liquidator be appointed with two shareholders to assist him with advice. With regard to moving from these premises, that must

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

be done. We can not go on paying $200 a month for these premises. We must go to a cheaper place. We have heard of a place where our stock could be on view and properly seen, for $50 a month rent. The method of disposing of the business is not decided. It is very difficult how best to decide in the matter. Some of the shareholders favour the idea of selling the business at auction as a going concern. Others are in favour of it being sold by piecemeal, the stock by itself, the furniture by itself, and the lease separately. We have no lease, but we can arrange in the event of any one buying the business as a going concern, for him to continue on here. We gave up the annexe at the Grand Hotel, as you all remember, and to do so had to pay something over $4,000. Now the question before us is the appointment of a liquidator and two shareholders to assist him with advice.

Dr. GRAVATT—Is this in accordance with the provisions of the Hongkong Ordinance?

The CHAIRMAN—I believe it is. Our legal adviser was of that opinion.

Mr. WILKIN—I second Mr. Shand's resolution.

Dr. HALL—What force have the shareholders in the advice they tender the liquidator? Is he to be guided by them, or is he independent?

The CHAIRMAN—To a certain extent he will be independent, but he will act in accordance with their advice. I think we might leave that to him and them.

Mr. WILKIN—If they are dissatisfied can they annul his appointment?

The CHAIRMAN—No.

Dr. GRAVATT said that the appointment of their liquidator would have to be approved by the Court, so that they could not afterwards annul his appointment. He hoped that the liquidation would not drag its weary length along for a year or more.

The CHAIRMAN—It will be the liquidator's duty to wind-up as speedily as possible. I think we can trust him to do that. It might be possible to wind-up the Company in three or four months. At least that was the opinion of their present secretary—a very good opinion too—and he advised them that it might be better to put their goods it godown and wait till the spring before they sold, than to sell off at once, when nobody was here to buy. The board had canvassed among the curio merchants here for the disposal of their stock, but none seemed willing to embark in the venture. The stock was old.

Mr. BOX—We shall be put to the expense of having our liquidator's appointment legally confirmed, I suppose?

The CHAIRMAN thought that the fees would be very small.

Mr. BOX wished to know whether it might not be cheaper for the present board to realize their assets themselves than to appoint a liquidator to do it at a commission. If the goods were sold at auction there would then be two commissions to pay—the auctioneer's and the liquidator's. It seemed unnecessary to appoint a liquidator if they could realise their assets cheaper and more expeditiously.

Mr. EYTON believed that when the Turkish Bath Company went into liquidation the appointment of a liquidator did not necessitate any fees.

Mr. MARTIN—Was that a registered company?

Mr. EYTON—Yes.

Dr. GRAVATT said he had looked up the Ordinance and found that under a voluntary liquidation no confirmation from the Court was necessary.

The CHAIRMAN—The liquidator takes the place of the present board from the day of his appointment.

Mr. ANDRIES agreed with Mr. Box that it would be better to sell the goods by auction or otherwise, and appoint a liquidator afterwards, if it would be cheaper to do so.

The CHAIRMAN pointed out that it could not be cheaper, for if no liquidator was appointed, the Company must continue in its present premises and keep up its staff, etc. The present board had, he might remind them, received no remuneration whatever for their services.

Mr. BOX was aware of that fact, and felt very sorry that it was so. But he was one who had been hit very hard through the company's failure, and now thought they should go to work as economically as possible in winding-up.

The CHAIRMAN—Well, it will be cheaper to appoint a liquidator and two shareholders as his advisers, and get into cheaper quarters. It will be the best thing for us.

Dr. HALL understood that no amendments could be made to the proposition.

The CHAIRMAN then put the proposition to the meeting and it was carried.

The CHAIRMAN announced that there were two applications for the position of liquidator, one was from Mr. Ure, the other from their secretary, Mr. Fearon. Both offered the same terms, 5 per cent. on the gross receipts.

Mr. SHAND proposed that Mr. Fearon be appointed.

Mr. MCLEAN seconded.

Mr. WILKIN thought the language regarding the advisory committee of two was very vague.

The CHAIRMAN—The liquidator has one casting vote.

Mr. WILKIN—Yes, but does it imply that he will feel bound by the advice of the majority in any matters requiring a vote?

The CHAIRMAN—Yes, I presume so.

Mr. FEARON said he should feel so bound if appointed.

Dr. HALL—That answers my question. Mr. Fearon will act on the advice of the majority even though it be against him.

The CHAIRMAN—I think this would be a very good opportunity to-day, and quite within the province of the meeting, for any shareholder to offer his opinion as to the manner in which he thinks it best to accomplish the winding-up of the company. It would be a guide to the liquidator and his advisers if any shareholder would offer any suggestion.

Dr. GRAVATT—A couplet comes to my mind in this connection:—"If it were done, 'twere well it were well done quickly."

Mr. WILKIN—Very good.

Mr. BOX thought 5 per cent. on gross profits was too high a commission. Considering the circumstances of the company, it would be ample if 2½ per cent. were given. If the business and stock fetched $10,000, the commission would, at 5 per cent., amount to $500. This was a lot for very little work.

The CHAIRMAN said that the liquidation might run into several months, and then the remuneration would not be too much.

Mr. BOX was sorry to have to urge such a thing, but he really must do it out of consideration of the company's circumstances. He would formally propose that the commission be 2½ per cent.

No person rising to second, the amendment fell through, and the original proposition was carried.

Mr. BOX asked if it would be in order to bring up a discussion as to the disposal of the goodwill. It was not worth a red cent. in the open market, but it might fetch a considerable amount if offered to a certain person who might like to retain the trade name.

The CHAIRMAN said that the liquidator would certainly endeavour to sell the goodwill to the best advantage.

Mr. BOX—My advice is to hang on to it as long as possible, even after the other assets are sold.

The CHAIRMAN—You understand that the power of the board expires from now.

Mr. FEARON, in returning thanks for being appointed liquidator assured shareholders that he would endeavour to do his best for them. He hoped to carry out the liquidation with credit. The disposal of the goodwill had better be left to him and his advisory associates. He might be able to advise several ways of disposing of the stock and goodwill. He thought that they would sell better in the spring.

Mr. ANDRIES proposed that Mr. Rickett and Mr. Wilkin be appointed to advise the liquidator.

Both gentlemen declined. Other names were suggested, but eventually

Dr. HALL proposed that the selection of the two advisors be left to the Secretary, who would duly appoint them.

Mr. EYTON seconded.—Carried.

Dr. HALL then proposed a vote of thanks to the late board of directors.

Mr. BOX seconded.—Carried.

Mr. RICKETT having returned thanks, the meeting dispersed.

"DESCENDED FROM THE GODS."

"Descended from the Gods." . . . . .
. . . . . Aye, and these same gods
The scorching Sun, the blasting death-fraught Hurricane,
The *Strife* of warring Earth, and Sea, and Air!
"Descended from the Gods," . . . . . .
True; these pygmy of human mould do hide and hold
Somewhat of all the ungoverned madness of the Universe!
The mobile-features pass from change to change.
When leash is slipped that holds the beasts within,
What marvel! . . . Now upon this face is writ
The white, dread flash of Anger's murder;
Swift, blasting Hate's most cruel craft;
Envy's slow death-purpose; . . . . . .
And,—viler, lower still,—(the blood-beasts loosed),
Change the dull tissues till they show what mocks Despair,
And sinks man lower than the Grave!
Yet marvel we! The subtle lines of baseness melt and fade,
As if at touch of unseen, soothing hands.
See, now, the face of him "Descended from the Gods,"
Upon the brow the conscious Pride that knows itself of noble birth;
A lofty Peace; and Love, as of the Heavens brooding over weary Earth;
The Glory of a Light, like that which heralds birth
Of all the glad profusion of the soil;
A calmness, as of Stars that lure the soul to vaster heights;
Such Pity as gives Rain to still the thirsty flocks!
All this is writ upon the brow of him
Who is "Descended from the Gods."
And they who love Him, His touch may thereon see
. . . . . The God of gods, and men and mystery.

K. E.

HONGKONG NEWS.

It is reported, says the *Singapore Free Press*, that there are great troubles in Manila. Serious defalcations have been discovered in the Treasury, the sum of money missing being stated to be no less than $800,000. The president, the secretary, and the cashier to the Treasury have been placed under arrest. It is also reported that the Spanish officers of the *Mindanao*, having a considerable amount of money in hand deposited it with a foreign trader: he and the $90,000 are now missing.

The *Chinese Mail* (*Wah Tze Yat Po*) relates a very improbable story. It says that the Chinese arrested in Chinese Kowloon for secretly enlisting soldiers for the Japanese under the cloak of getting up emigrants, and another Chinaman arrested in the Heung Shan district for the same crime, were decapitated several days ago. A proclamation has been issued by the Yun Yu magistrate warning the people not to follow the example of these two criminals, else they will share the same fate.

H.M.S. *Gibraltar*, Capt. MacLeod, arrived in Hongkong on Sunday morning, Dec. 30th, from Portsmouth. She left Portsmouth on the 17th ult. and made the usual run, calling at Gibraltar, Malta, Port Said, Suez, and Aden. She left Colombo on the 25th inst., and with the exception of a little rough weather at the outset and again in the China Sea, the voyage has been what one of the officers termed placid and uneventful. The following is a list of the ship's officers:—Captain Angus McLeod, Commander Oliver A. Stokes, Lieut. William B. Fawckner, Lieut. Archibald P. Stoddart, Staff Paymr. Alfd. W. Askham, Staff Engineer William H. Matthews, Engineer Herbert B. T. Cox, Captain Fitzroy T. H. Scott, R.M.L.I., Chaplain Rev. Richd. S. Hartley, Gunner William Martin, Boatswain William Platt, Carpenter Benjamin J. Richards. There are 606 people all told on board, of whom 24 officers and 332 men are for the ships on the China station, the list of officers being:—Lieutenants—Henry J. W. Neville, Robert Sterling, Arthur R. Waistell, Saml. M. Agnew, H. A. Gillett; Sub-Lieuts.—Jno. Harvey, M. C. Allenby, Ed. H. Rymer; Staff Engineer Wm. H. Mitchell; Engineer Robt. B. Garde; Assistant Engineers—F. J. Roskruge, J. D. Wilson, Fredr. C. Haste, George H. Duiston; Staff Surgeon Wm. G. K. Barnes; Surgeons—Hubert Holyoake, Ed. T. Meagher, Arthur E. Kelsey, Reg. J. Fyffe; Assistant Paymasters H. O. Jones, Ed. H. Innes; Gunners—Hy. B. Howell, William Fiddick, and Boatswain John Cock. The *Gibraltar* is a first-class, twin-screw, steel cruiser, of 7,700 tons displacement. She was built in Glasgow in 1892 at a cost of £347,634. Her dimensions are, length 360 feet, breadth 60 feet, and draught 23.9 feet. Her engines, by Napier, are of 12,000 indicated horse-power, her speed being 19.7 knots. She has accommodation for 850 tons of coal, and with this she can steam a distance of 10,000 knots at 10 knots. Her armament consists of two 22-ton, ten 6-in Q. F., twelve 6-pdr. Q. F., five 3-pdr. Q. F., 7 machine guns, and four torpedo tubes.

The annual mobilization of the Hongkong Garrison is fixed to take place from the 15th to the 19th January. Major-General Barker has asked both branches of the Volunteer Corps to take part in the manœuvres, as they have done for the last two years. The Field Battery will man the 64-pounder guns in the South Shore Battery of Stonecutters' Island on the night of the 7th January and will have 7-pounder practice on the afternoon of Saturday, 9th January. The destination of the Maxim Gun Company has not been determined, but they are expected to turn out on the afternoon of the 17th and 19th prox. The Annual Challenge Cup competition with 64-prs. will take place at Stonecutter's on the 26th January (Chinese New Year).

The steamer *Monmouthshire* brought out to Hongkong several gun mountings (heavy and small), and the cruiser *Gibraltar* brought out from home a spare 6-in. quick firing gun for the Naval Ordnance Department. The *Gibraltar* was timed to leave early on Monday, Jan. 7th, for Chefoo, following the example of the *Crescent*, *Edgar*, and other recently-arrived cruisers by carrying naval stores from Hongkong to Chefoo for the use of Admiral Sir E. Fremantle's squadron. H.M.S. *Mercury* is expected to arrive at Hongkong from the north to make good defects preparatory to going to Singapore as senior officer's ship. The steamer *Moldavia*, which came out from home with a cargo of coal for the use of the fleet, sustained some damage whilst discharging alongside the various war-ships in the north. She will take down to Hongkong a large quantity of condemned stories, and will be repaired by the staff of the Naval Yard in Hongkong.

PRESBYTERIANISM IN JAPAN.

We have been asked to reproduce the following letter from the *New York Tribune*:—

The men of the Christian churches in our country separate the colours of the banner (doctrine) as they please in their interests. They confuse one another and hold their own angle of position according to the separated opinions. Some, flying the sign of humanitarianism, refuse the Divine authority of our Lord Jesus Christ. And some insisting on the new theology, assault the Atonement. This is the statement by a most trustworthy native minister, the Rev. Shuho, Wada, in a native Christian weekly, dated July 5, 1894.

Disastrous digression from the orthodox faith is found in the Japanese churches, especially in the Presbyterian and Congregational. A native Congregational press had an article concerning the recent Synod of the Japanese Presbyterian Church as follows:—"The American Presbyterian Church with which the Japanese Presbyterian has a close relation has had for years continual controversy in theology. The struggle between conservatism and liberalism has reached its extremity, and there has been a crisis. In the United States conservatism still flourishes, and the majority in the General Assembly support this view. On the contrary, the influence of conservative theology in the Japanese Presbyterian Church is remarkably weak. It is not likely to regain its power."

The majority of the Church not only sympathize with the higher criticism, but openly insist upon the fallibility of the Holy Bible. It even proposes to revise the hymn-book, so as to have its hymnology conform to its theology. The committee appointed at the last Synod is composed of its liberal men. The deposition from the ministry of the Revs. Naomi Tamura and H. Ishihara, the latter without a trial, is nothing more than a scheme to drive out the orthodox brethren.

At all events, Briggsism is spread broadcast in the pale of the Church, and has run wild. Its confession of faith has decidedly opened the door to Anninianm, Socinianism, and other ideas which admit hurtful errors into Christian doctrine. The understanding of the Synod held in December, 1890, when the new confession was accepted, was that various grades of anti-Trinitarians and those who insist on the fallibility of the Holy Bible may be received into the Church. The reports of many missionaries are to be interpreted with a certain degree of caution. No doubt some of them endeavoured to advocate the revision of the confession in such a way as to put them in good standing with their mother churches at home. According to their own expression, it seems as if their sole duty is to avoid "all that might be calculated to give umbrage to our Japanese brethren here, or give rise to misgivings among our churches at home." Therefore, they seek to make everything quiet and calm. They were thus (unwittingly, we hope) seeking a union—a broad union—between heterodoxy and orthodoxy.

The scheme of the union of the Presbyterian and Congregational churches, about which there was much noise for some time, failed in 1889. The Japanese Presbyterian Church since then took up the subject of the revision of its confession in such a way as to become more liberal. The confession adopted in 1890 is the Apostles' Creed, with a brief preface, which runs only about 110 words in an English translation. Undoubtedly the proposition to adopt the Apostles' Creed was a pious scheme under cover of a different theology than what appears on its face. The Japanese Presbyterian Church hesitated to establish connection with the Alliance of the Reformed Churches because there was fear of an approval of the reformed creed, which was too orthodox to suit their tastes. Indeed, "in this change the Church has utterly revolutionized its original nature, and, except a small portion of the Church government, she has entirely worn out the Presbyterian garment. As far as the confession is concerned she apparently jumped out from Presbyterianism."

The state of affairs as mentioned above was brought into the Church in the following manner:

First—During 1888-91 iconoclastic waves inundated the whole primitive community of Protestants in Japan. Many native ministers travelled in the United States and Europe and brought back to Japan radical views in theology. One of them, a Congregationalist, stated:—"It must be asserted that the saying that the remission of sins and eternal salvation will be given through an obscure matter of so-called 'faith in Christ' has been expelled in the advanced religious thought of to-day. The creed has been made the sword to divide the Church of Christ, and the Bible a store of arms for theological disputants. The creed and the Bible have oppressed the European Protestant churches like a papal authority, who are eager to seek the restoration of sound doctrine. Yet they are unfortunately unpopular with the missionaries, with a few exceptions, like the Rev. G. F. Verbeck, D.D., the Rev. G. P. Pierson, and the Rev. Hugh Waddell. Most others practically throw their influence on the side of the so-called "leaders," who are heterodox. The missionaries undoubtedly do this through weakness, because they imagine that any accusation of heterodoxy is prejudicial to the cause of Christ. The determination by orthodox ministers to make a pure Presbyterian Church is not for the purpose of making a schism, but in the interests of truth and righteousness. We dare not remain passive while the standards of the Church and the Word of God are being broken down in a ruthless manner.

The Japanese people outside of the Church are not altogether willing to trust to their "own merits" for salvation, and they are always willing to be rational. The Protestant doctrine of justification by faith, salvation through grace, that is, in Jesus Christ, is always acceptable to them. The Gospel fits all creatures. They found their salvation in Jesus—the God man. As Dr. Ellinwood, a leading man in the missionary enterprise, says, "mere ethical knowledge cannot comfort the human soul." But the assertions of a creed like the one at present in the Japanese Presbyterian Church provoke scepticism most naturally. The worst of our obstacles are the western materialistic and secularistic views which are rapidly growing in these days in Japan.

Herewith I give a summary of the present condition of the Japanese Presbyterian Church: (1) The Church is not Presbyterian in its confession, and in the practice of its polity: (2) Heterodoxy is tolerated, but not orthodoxy: (3) The theological seminary, the Meiji Gakuin, is fully steeped with semi-rationalism: (4) the missionaries, with some exceptions, I am thankful to say, favour the liberal party. At any rate, they are inactive as far as the restoration of sound theology is concerned; (5) as a result, the Church is not growing.

I believe that the present confession is thoroughly antagonistic to the standards of the Presbyterian Church. I believe the present condition of the Church, if continued, will result in a fearful disaster to the Christian movement in Japan, and these terrible results would be a judgment upon the Church and upon these ministers who may think rightly but are afraid to act rightly. It reminds me of the Presbyterian Church of England, which once went into Unitarianism through the teachings of the clergy and the practical independence of the laity.

We depend upon God for a restoration of truth in Japan. But to whom shall we look as leaders in this sore time of need but to those who have the courage to stand up and face the fight and suffer the consequences? Our preservation as a Church depends upon our fidelity and loyalty to the commission which we have received to hold forth the light of Christ's truth. We must not allow ourselves to be cheated out of that truth. "The greatest glory of Christians is to transmit their faith to their children."

Problem No. 160.

By Maximilian Frigl.

BLACK.

WHITE.

White to play and mate in three moves.

The last American mail brings us the following news from New York:—"The score of the Albin-Showalter match now stands 8 to 4 in favour of Showalter, four games having been drawn. In the sixteenth game the Austrian once more adopted the French defense, while Showalter again tried his favourite way of attack, Queen to Knight's fourth. The game was beautifully played on both sides, and although Showalter forced the pace repeatedly, Albin always found a way out of the difficulty. After sixty-one moves a draw was agreed upon. Owing to Mrs. Showalter having been advised by her doctor not to engage in any chess play for the present the chess match with Mrs. Worrell stands adjourned.

Leipsic Tournament.

The game played between Suechting and Lipke, in which the former managed to obtain a draw by perpetual check and deprived Lipke of the first prize, is an interesting one and well worthy of careful study:—

WHITE.

BLACK.

Black to play and win.

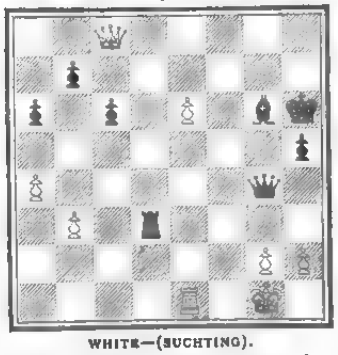
BLACK.	WHITE.
(a) 1—Q to K B 7 ch.	1—Q to K Kt 2
2—B to K Kt 6 ch.	2—K to ■ sq.
3—Q to K 8 ch.	3—Q to Kt sq.
4—R takes R ch.	4—K to Kt 2
5—R to R 7 ch.	5—Q takes R
6—Q to K B 7 ch. and wins.	
(b) 1.....	1—K to R sq.
2—B to Kt 6, &c.	

Chess in Sydney.

A Smart Skirmish.

Game No. 205.

VIENNA GAME.



WHITE. Mr. X.	BLACK. Mr. Y.
1—P to K 4	1—P to K 4
2—Kt to Q B 3	2—Kt to Q B 3
3—P to B 4	3—P takes P
4—Kt to K B 3 (a)	4—P to K Kt 4
5—B to B 4 (b)	5—B to Kt 2
6—P to Q 4	6—P to Q 3
7—P to K R 3	7—P to K R 3
8—Castles	8—Kt to B 3
9—Q to K 2	9—Castles
10—P to K 5	10—Kt to K R 4
11—P to K 6	11—P takes P
12—B takes P ch.	12—K to R sq. (best)
13—Kt to R 4 (c)	13—P takes Kt
14—Q takes Kt	14—B takes B
15—P to Q 5	15—R to B 4
16—Q to Kt 6 (d)	16—Kt to K 4 (e)

And White resigned.

(a) Or 4—P to Q 4—Steinitz Gambit.
(b) 5—P to K R 4 results in the Hampe—Allgaier.
(c) An ingenious but unsound sacrifice, as Black's next four moves demonstrate.
(d) Inferior to 16—Q to Q sq.
(e) Winning the Q rather prettily. White has nothing better than 17—Q takes B, to which Black replies with 17—R to ■ 3.

End-Game No. 19.

BLACK—(JANOWSKI).

WHITE—(SUCHTING).

Close to the adjournment Janowski, a piece to the good, thought to hurry on, and with this result:—

WHITE.	BLACK.
1.....	1—R to Q 7
2—Q to R 8 ch.	2—K to Kt 4
3—R to K 5 ch.	3—B to B 4
4—Q to Kt 7 ch.	4—K to R 5
5—Q to B 6 ch.	5—Q to Kt 4
6—Q takes Q ch.	6—R takes Q
7—P to K 7 and wins.	

Black overlooked that his Bishop would be pinned in this final position, and the oversight cost him the game. Interposing at R 2 would at least have drawn.

A Brilliant Skittle.

The following off-hand skirmish was played on May 22nd last between Messrs. Hall and Crane. Mr. Hall was in a sacrificial humour, and made the game entertaining and instructive.

STEINITZ GAMBIT.

WHITE. W. Crane.	BLACK. G. B. Hall.
1—P to K 4	1—P to K 4
2—Kt to Q B 3	2—Kt to Q B 3
3—P to B 4	3—P takes P
4—P to Q 4	4—Q to R 5 ch.
5—K to K 2	5—P to Q 4
6—P takes P	6—B to Kt 5 ch.
7—Kt to B 3	7—Castles
8—P takes Kt	8—B to Q B 4
9—Kt to Q Kt 5 (a)	9—P takes P
10—P to B 3 (b)	10—P takes Kt
11—B takes P	11—Kt to B 3
12—B to Kt 3	12—Q to R 4 (c)
13—K to B 2	13—Kt to K 5 ch.
14—K to Kt sq.	14—R takes P! (d)
15—P takes R	15—R to Q sq.!
16—B to K 2	16—R takes P!! (e)
17—Q takes R (f)	17—B takes Kt (g)
18—P takes B	18—B takes Q ch.
19—K to Kt 2	19—Kt to Kt 4!
20—P to K R 4 (h)	20—Kt to K 3
21—K R to K sq.	21—Q to Kt 3
22—B takes Kt P (i)	22—Kt to B 5 ch.
23—K to R 2	23—Q to B 7 ch.
24—B to K 2	24—Kt takes B
25—K to R 3	25—Kt takes B
26—K takes Kt	26—B to B 7 ch.

White resigned.

(a) All book so far, White should now have played B takes P ch.
(b) Kt takes P ch. was the move.
(c) Mr. Hall thought Q to R 5 stronger; but we prefer R 4.
(d) A fine sacrifice.
(e) A succession of fireworks.
(f) If 17—Kt takes R—B takes B wins.
(g) Beautifully continued.
(h) To stop the mate and gain time.
(i) An error; 22—K to R 2 equalised the game.

LATEST TELEGRAMS.

[Reuter "Special" to "Japan Mail."]

London, January 6.

Captain Dreyfus has had his epaulettes stripped from his shoulders and his sword broken in the presence of 5,000 troops of the Paris Garrison.

Prince Hohenlohe has paid a visit to Prince Bismarck in compliance with the request of Emperor William, who follows shortly on a similar errand.

London, January 10.

M. Rousseaux goes to Tonquin [as Resident-General].

The Red Cross Society of Great Britain has voted the sum of £500 to the Red Cross Society of Japan.

London, January 10.

Dissensions among the Democrats will probably prevent the passing of the Currency Bill during the present session, and President Cleveland in that case threatens an extra session.

M. Lacour has been reëlected President of the Senate.

["Special" Telegram to "Japan Mail."]

Nagasaki, January 7, 7.20 p.m.

The Pacific Mail steamship *City of Rio de Janeiro* has run ashore on the coast of Satsuma. The accident happened shortly after passing Van Diemen's Straits, and it is reported here that her bottom is badly damaged, but no further particulars are to hand. The Mitsu Bishi Company's tug-boat *Yugao Maru* has left this to render assistance to the stranded vessel and obtain information as to her exact position.

Nagasaki, January 10, 11.40 a.m.

Information has reached this port that the *City of Rio de Janeiro* struck upon an unknown sunken rock on Sunday afternoon, and that Captain Smith beached his ship for the purpose of effecting a temporary stoppage of the leak. The damage was found to be forward of the foremast, where there was a hole 15 feet by 4 feet on the starboard side. Having patched up the hole, the *Rio* proceeded under easy steam, but it being subsequently discovered that water was again coming in, Captain Smith selected a safe and suitable spot and again beached the vessel for more effective repairs. A quantity of cargo in the fore-hold had to be jettisoned, but that in the other holds is intact, and other parts of the ship are tight and undamaged. The passengers, mails, and specie were transferred to the *Yugao Maru*, sent hence to the *Rio's* assistance, and have all been landed safely at this port. The *Rio* will be effectually repaired where she lies so as to be able to make this port in safety, and may be expected to arrive here in a few days.

Nagasaki, January 11, 4.20 p.m.

The weather is favourable, and the *City of Rio de Janeiro* is expected to arrive at this port on Sunday.

(From the "Siam Observer.")

London, December 20.

The barbette battleship *Magnificent* was launched to-day.

London, December 21.

The Times, in a leading article on British East Africa, urges the Government to build forthwith a railway connecting the coast with Uganda.

St. Petersburg, December 20.

The Russian Government has sanctioned an increase in the duty on cotton.

Sydney, December 21.

The first cricket match between Stoddart's Team and All Australia concluded yesterday.

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

It resulted in a victory for Stoddart's team by ten runs. The match lasted six days.

(From Tonkin Papers.)

Paris, December 23.

The Press and public opinion unanimously approve the decision in the Dreyfus case, and regret is expressed that under the law of 1848 the prisoner could not be condemned to death.

December 24.

The Cabinet has introduced a Bill rendering any military man guilty of treason in time of peace liable to death.

December 25.

In the Chamber of Deputies, on the introduction of the law relating to treason, M. Jaurès abused the Ministers, and the Chamber expelled him.

A duel with pistols between M. Jaurès and M. Barthouin had no result.

December 27.

Parliament will probably adjourn this evening.

The situation in Italy shows no improvement. The opposition is agitating.

(From Japanese Papers.)

San Francisco, January 9.

The new Treaty between Japan and the United States has met with no opposition in the Senate, and will now be endorsed by the President at no distant date.

The public opinion of citizens of the United States is that the time has not yet arrived for the restoration of peace between Japan and China.

The U.S. Government has no connection with Mr. Foster's engagement as adviser to the Chinese Envoys.

Hiroshima, January 10.

A party of Japanese soldiers dispatched to attack Kaiping was expected to reach there yesterday; the assault was to have taken place to-day.

Nagasaki, January 9.

The *Chiyoda Kan* left here to-day for an unknown destination.

Hiroshima, January 9.

The Bureau of Command of the First Army was lately removed to Suiyen. Residents along the Antung-Suiyen road have returned to their houses, and are resuming their business operations. They have heartily welcomed the Japanese troops, and seem determined to have nothing more to do with the Chinese Government.

Shanghai, January 9.

A Pekin telegram, dated the 9th inst., states that a famous military leader of the Mahommedan auxiliaries in the western provinces has arrived there (Pekin), and has informed the Government that all the Mahommedans of those provinces have promised to aid in fighting against Japan.

Nagasaki, January 10.

The U.S. *Charleston* arrived here to-day from Chefoo.

Aomori, January 11.

The principal residents of this port propose to send a deputy to the capital to petition the Diet to open this port for trade between Russia and Japan.

For CANADA, United States, and Europe, viâ Vancouver, B.C., February 1st, the "EMPRESS OF CHINA."—Frazar & Co.

LATEST COMMERCIAL.

IMPORTS.

Business generally has not been resumed after the New Year holidays, and the general tone is very dull and disappointing. In Grey Yarns and Grey Shirtings nothing has been done beyond a few small purchases as a kind of "first-foot" in the New Year. Fancies and Woollens have not even participated in this small trade, and the present outlook is gloomy.

COTTON PIECE GOODS.

Chester	$1.75	to 1.77½
Comet	1.72½	to 1.75
Devoe	—	
Russian Anchor	1.72½	to 1.75
Russian Moon	1.70	to 1.72½

SUGAR.

Brown—Arrivals exceed sales, but prices are unchanged; except for Manila sorts, which are slightly lower. Nothing done in Formosa kinds, either "spot" or "to arrive." White—Quiet and unchanged.

	PER PICUL.	
Brown Takao	$4.20	to 4.30
Brown Manila	4.80	to 4.90
Brown Daitong (New)	3.45	to 3.50
Brown Canton	3.70	to 4.25
White Java and Penang	6.60	to 6.70
White Refined	6.50	to 9.00

EXPORTS.

RAW SILK.

The large settlements noted in our last have been delivered and inspected. Prices are strong, especially for fine sizes, and the general stock is down to about 11,000 piculs, with no prospect of large arrivals, as many Filatures and Re-reeling factories are now closed for the winter. Available supplies to date are fully 49,000 piculs against 43,000 piculs at same date last season.

THE GREATEST WONDERS OF MODERN TIME.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In I short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas and the demand became so great that I was obliged to keep the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1894.

THAMES ELECTRIC & STEAM LAUNCH Cº

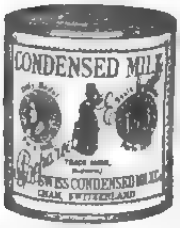
ELECTRIC LAUNCH "GLOW-WORM," 52ft. by 7ft. 8in.

Are prepared to Estimate and Furnish Drawings and Specifications for Launches in Wood, Steel, Delta Metal, or Composite, either with Steam or Electric Power—Speed from 6 to 20 miles per hour; —also Tugs, and Stern Wheelers, which, if required, will be prepared and constructed in Sections.

Launches of specially Light Draught constructed for Shallow Waters.

Electric and Steam Pinnaces for Harbour or Ferry purposes.

Builders of Electric Charging Stations, Floating or Stationary; and makers of all required fittings and equipments.



A selection of Electric Launches always ready for prompt delivery, of which particulars will be forwarded on application to

W. S. SARGEANT, M.I.M.E., *Manager.*

TWICKENHAM, ENGLAND.

SUMMARY OF NEWS.

THE estuary of the Taidong has been frozen since the 13th inst.

TOKYO is now within a day's telegraphic communication of Kaiping.

OVER 1,000 Hokkaido ponies have been requisitioned for service in China.

FIRE destroyed a large house in the Maganecho quarter of Yokohama on Sunday night.

H.I.M. THE EMPRESS paid a New Year's visit to H.I.M. the Empress Dowager on the 11th inst.

PUBLIC subscriptions received by the Naval Department reached *yen* 481,149 on the 14th inst.

IN December last the Osaka Mint struck coins to the following amount:—5-*yen* gold pices, *yen* 280,000; 1-*yen* silver pieces, *yen* 2,210,000; 20-*sen* silver pieces *yen* 416,301, and 10-*sen* silver pieces *yen* 224,276.

COUNT MATSUKATA, it is said, has consented to become President of a big petroleum company in Japan.

DURING the night of the 7th inst. the sum of *yen* 3,700 was stolen from the Miyagi Court of Appeal.

IT is stated that the Japanese War Loan Bonds are finding foreign buyers at the Yokohama Exchange.

THE First National Bank declares a dividend for the past half-year at the rate of 12 per cent. per annum.

JINRIKISHA communication has been opened between Söul and Ninsen. The fare is exceedingly high, ranging from *yen* 5 to *yen*.

THE Interport Football match between Kobe and Yokohama will be played on the Cricket Ground of the latter port on February 11.

THE 74th National Bank and the Savings Bank, Yokohama, have declared a dividend of 12 per cent. per annum for the past half-year.

A MAN OF-WAR, named the *Idsumi Kan*, has been added to the Japanese Navy. Her crew consists of two hundred and ninety-eight men.

THE section between Teramaye and Hase, a distance of about three miles, on the Hantan Railroad, was opened for traffic on the 15th inst.

A NEWSPAPER in the Korean and Japanese languages has been projected in Söul. Mr. Kuroda Takuma is taking a leading part in its promotion.

THE Okura-gumi proposes to construct a big dock at Moji at an estimated cost of *yen* 500,000. Surveyors have already been sent to lay out the proposed site.

THE hard frosts at the early part of the week rendered skating possible on the Skating Club's pond at Yokohama, but Friday's rain again dissolved the ice.

A MAN was detected in the act of setting fire to a house in Sumiyoshi-cho, Yokohama, on Monday evening. Being swift of foot he managed to get clear away.

WITH the exception of the debates on the Yokohama Harbour Works' appropriation, little or no friction has developed between the Diet and the Government.

THE N.Y.K. steamer *Higo Maru*, the pioneer vessel to open communication between ports in the conquered territory in China, was dispatched from Kobe on the 13th inst.

VISCOUNT INOUYE, ex-Minister of Education, though out of immediate danger, is not expected to be able to withstand the ravages of consumption for more than a twelvemonth.

THE total amount of matches exported from Kobe and Osaka during last year was 236,426 gross, and that of the previous year 235,866 gross, an increase of 560 gross this year.

COUNT ITO and the principal Ministers of State are in Hiroshima, leaving Marquis Saionji and Viscount Nomura, Count Kuroda, Mr. Watanabe, and Mr. Yoshikawa alone in Tokyo.

A FIREMAN who refused to obey the Captain of the *Amaranth's* lawful commands, and declined to do any more work on the steamer, has been punished with eight weeks' hard labour.

THE net profits of the 119th National Bank in Tez. half of last year. *Yen* 100,000.00 was added to the reserve, and *yen* 30,000.00 declared as a dividend, *yen* 93,470.51 being carried forward to the new account.

PETER GARRY, a fireman on board the steamer *Amaranth*, who scalded the ship's cook during a quarrel last December, has pleaded guilty and been sentenced to one year's hard labour by H.B.M.'s Judge.

THE Nanzen Temple, one of the largest and most beautiful in Kyoto, was destroyed by fire during the night of the 12th inst., through the carelessness of a watchman, named Kondo Ikujiro, who was burnt to death during the conflagration.

DON GEORGE CANO, Secretary of the Spanish Legation, Tokyo, has been appointed *Chargé d'Affaires* pending the arrival of the successor of H.E. Don Luis del Castillo y Trigueros, Spanish Minister to Japan, who was lately transferred to Peru.

RUMOURS from Shanghai in reference to the proposed Embassy of Peace are very plentiful. It is said that Chang does not desire to come to Japan; that the Cantonese have petitioned against the Embassy being sent; and that the *literati* consider the Embassy will never leave Shanghai.

REUTER telegraphs that the French Cabinet has resigned, owing to the defeat of the Government in a debate initiated by the Socialists in connection with the question of State guarantees for railways. M. Casimir-Perier conferred all day with the leaders, but a semi-official note appeared in the evening announcing that he had resigned, the Republican parties having failed to protect him in their attacks upon the present régime. Sig. Ressman, Italian Ambassador at Paris, had been suddenly recalled from his post. The cause of this movement is unstated. The town of Kassala has been freshly supplied with cannon, ammunition, and provisions. It is stated that Japan refuses to hear of any armistice. Col. Denby, U.S. Minister in Peking, has stated his belief that all attempts at parleying will be fruitless until Pekin has been occupied by the Japanese. Sir Henry F. Ponsonby, Private Secretary to H.M. the Queen, has had a paralytic stroke, and is in a critical condition. The Russian Budget for 1895 shows a deficit of seventy millions of roubles.

IN the Import trade a somewhat better feeling prevails. Yarns continue dull, but Shirtings have improved, both in "spot" and "forward" sales. There is some improvement in Fancy Cottons, and Turkey Reds are taken freely at an advance. The Woollen trade, however, is stagnant, with the exception of a few sales of Italians. The Metal business is generally quiet, the principal demand being for Iron Bars. Tin Plates have declined. There has been a moderate amount of Kerosene moved off, but the stock increases notwithstanding, and prices are rather in favour of sellers of American, holders of Russian being also hard to deal with. Arrivals have been *Murex* from Batoum and *Waverley* from New York. There have been fair sales of Sugar and the stock is reduced, but prices are unchanged and supplies are floating. The Silk trade has been extensive, and the stock has been reduced to 9,000 piculs. The business of the week has been done at full rates, and all kinds are now held for an advance. There has only been a small trade in Waste Silk. Nothing to report without quotable alteration. Exchange remains low, and rates are

UNIVERSITY OF ILLINOIS
URBANA-CHAMPAIGN

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The vernacular press has much to say about the National Bank problem. The *Nichi Nichi*, writes strongly in favour of the Banks being continued as private institutions after the expiration of their term, and condemns the Bill introduced by Mr. Nakano Buyei and eleven others of the Diet. The object of the Bill is to extend the National Banks' Charters for twelve years, with a proviso that such Banks as desire to become private firms at any time during that extended term, may do so by taking proper steps. The *Nichi Nichi* writes in the following strain:—In the first place, the introducers of the Bill state with reason that violentchanges are to be greatly deprecated in economical circles. Fresh issues of bank notes are by no means allowable. The Bill itself does not advocate anything of the kind. For if, while the notes already issued have been in steady process of redemption since 1883, new issues were now thrown on the market, dangerous financial phenomena must inevitably ensue. But what would remain of a national bank to distinguish it from a private one, were it divested of its power of issuing notes? Mr. Nakano and his supporters may consider that the National Bank system lends stability to the credit of the Banks under it, supervised as they are by the Government. But facts prove in the plainest possible manner that the system has no such merit. Are there not many National Banks whose credit is anything but good as compared with not a few private banks? Thus there can be no doubt that to continue the National Banks as private concerns after the expiration of the term of their charters will entail no violent economical changes. In the second place, it is asserted that at the expiration of the National Banks' term, a considerable amount of bank notes will remain unredeemed. But apart from extending the charters, there are other ways of contriving the redemption of the notes. At the end of their term, the National Banks will find that the redemption of their notes has been accomplished through the exertions of the Central Bank and other agencies, without the slightest injury to their interests. Thirdly, it is declared that to abolish the National Banks at one *coup* and simultaneously to invest the Central Bank with special note-issuing power, is a policy too hasty and drastic to command approval. Such an objection would have force were there question of amending laws relating to the Bank of Japan or convertible notes. But on the present occasion it has no value. Fourthly and lastly, it is asserted to be an infringement of the freedom of mercantile transactions to adopt a sudden administrative measure with regard to financial affairs. But the measure against which this objection is raised was decided upon and publicly notified twelve years ago. Can that be called sudden? Thus surveyed, the Bill, concludes our contemporary, cannot be regarded as anything but the result of selfish complaints uttered by certain bankers and listened to by the framers and supporters of the Bill. The *Jiji Shimpo*, after writing much about the necessity of strengthening the spirit of independence among the Japanese mercantile classes, refers to the National Bank question and ridicules as servile and timid those that advocate extension of the charters within or without the House. The *Nippon* writes in the same train of thought as the *Jiji*, but uses more impassioned terms.

* * *

The *Yomiuri* dwells in strong terms on the importance of Japanese merchants' starting business, at the earliest possible date, in the occupied districts in China. It urges the Government to permit not only the ships of the Nippon Yusen Kaisha but also those of other firms and persons, to sail to and from Manchurian ports, conveying merchants and merchandise. It explicity states that the losses entailed by the present war cannot be made good by any amount of pecuniary indemnity and territorial cession unless there is a contemporaneous development of commerce on a large scale. Not a few other Metropolitan journals express absolutely the same views as the *Yomiuri*. The *Kokumin* is especially outspoken. It says that to buy things from the Chinese is like casting money into a well. What, it asks, could be more regrettable than that the money earned with the blood of Japanese officers, soldiers, and coolies should go to swell the pockets of the Chinese? The Authorities ought therefore to permit Japanese merchants to hasten to the seat of war. For their part, they are more than ready to go.

* * *

In the absence of any remarkable event during the week past, nothing of an elaborate nature appears in the vernacular journals, but short paragraphs not without vigour and eloquence are to be found. We proceed to refer to them briefly. The *Kokkai* laughs at the alleged alliance between Great Britain and Russia as nothing of deeper significance than England's menacing advice to Japan to keep her ambition within reasonable limits. As to the degree of closeness of the alliance, the Independent paper remarks that the publicity of the affair tells its own story. A really close union would never have been exposed to the light of the world. The *Choya*, the *Kokumin*, the *Niroku*, and several other Tokyo journals attach much importance to the capture of Kaiping, in that it has established communication between the First and the Second Armies. They are glad that henceforth the First Army will be able to have its central commissariat station in a much more convenient place than formerly. Comments upon the Chinese mission for peace are continued by several Metropolitan Journals, but we find nothing new or worth reproduction. Upon the whole the vernacular papers attach little importance to the mission, and, foreseeing for it no better success than attended Mr. Detring's coming, urge the forces abroad to hasten toward their final goal. The *Mainichi* writes of the promising greatness of Japan in language almost mysterious. Such writing may flatter the vanity of our contemporary's readers, but in Western eyes it is little short of ridiculous. "Our forces abroad," says the *Kokumin*, "are now fighting with General January, and have to face ere long a greater foe, General February, adversaries far more formidable than General Sung and Admiral Ting. These natural Generals have often defeated European armies. Therefore if, in the present war, the Japanese Army and Navy prove greater than their Occidental representatives, they will show themselves the greatest in the world, in one sense at least." Several papers clamorously assert the advisability of capturing Formosa. The *Kokumin* and some others hold the taking of that island to be even more important than the seizure of Pekin itself. The *Nichi Nichi* refers to the troubles now raging in the Tokyo Rice Exchange, and advises the Government and the Diet to take measures to put an end to the practice of purchasing and selling rice by sample, which, we are told, is the root of all the evils prevailing in rice exchanges. The *Jiyu* regards the present as a suitable occasion for denouncing the right of any foreign States to interfere with the restoration of peace between Japan and China. The *Niroku* writes of Mr. Foster to the effect that his coming with the Chinese mission is, on the one hand, beneficial to Japan, since his advice will help to bring the negotiations to a speedier conclusion than if they were left solely to the Chinese Envoys, who will most probably be ignorant of civilized etiquette and usages; while, on the other hand, it is disadvantageous to this country in that the Japanese High Commissioners may feel constrained, in the course of the negotiations, to listen to Mr. Foster's conciliatory language, so high is his personal standing as a statesman and jurisconsult, and so friendly are the relations between his country and this empire. The *Kokumin* pays a tribute of national gratitude to M. Boissonade. The Memorial he presented to the Government when the Treaty Revision question was at a critical stage years ago, is mentioned as alone sufficient to entitle him to the hearty thanks of the whole nation. This and other achievements in his capacity of adviser to the Cabinet and Professor of Law in several scholastic institutions, public as well as private, induce our contemporary to confer upon him the title of Japan's Benefactor.

EDITORIAL NOTES.

FISHERY IN KOREA.

MR. KABURAKI, an expert of the Department of Agriculture and Commerce, whose specialty is marine industry, paid a visit last fall to the eastern coast of Korea in response to an invitation from the Japanese merchants in Wonsan, and inspected the fishery along that coast. His observations confirmed the opinion prevalent among the Japanese that Korea is rich in fish. The littoral of the eastern coast swarms with fishes of various kinds. The natives do not, however, seem to know their value, and only catch what they need for their own kitchens. Sardines they take in large quantities, using them for fertalizing purposes. The tunny-fish (*maguro*), shark, and many other varieties are to be found in abundance along the coast visited by Mr. Kaburaki. The only difficulty is how to dispose of them. Mr. Kaburaki advised the Japanese merchants in Wonsan to organize a marine products company, as has been done by their colleagues in Fusan, and to export marine products in a cured state. Enterprising Japanese fishermen have already made use of the sea near that portion of Korea contiguous to Japan. The *awabi* along the coasts of Port Hamilton have already been exhausted by them. They even went as far as Vladivostock, but they are now practically excluded from that place owing to the increased cost of licenses. The fishermen have therefore been driven further and further to the remote portions of the Korean coast, and at present quite a number are engaged in their industry in the vicinity of Wonsan. The object of their fishing is, however, very limited: they only seek for sea-cucumbers, which are found abundantly in that part. They boil them on the shore and then sell them to the Marine Products Company in Fusan or direct to the Chinese in Vladivostock, for the latter specially relish this peculiar sea delicacy. It is said that the profit derived from the industry is consider able. A certain kind of shell-fish in demand by the Chinese is also caught and sold to them by the Japanese fishermen.

CORRESPONDENCE FROM VLADIVOSTOCK.

CORRESPONDENCE is published in the *Miyako Shimbun* purporting to come from a gentleman until lately in the easternmost Russian trading port. Under the startling caption of "Murdered Japanese," he makes the following remarkable statements:—"In October or thereabouts of last year, Uemura, a Yokohama photographer, Ogawa, his student apprentice, and a third Japanese named Kawai Matsunosuke, a native of Saitama Prefecture, travelled inland for about a league from Vladivostok, to a place called Ivanchik (?) All three were engaged in taking photographs of the various scenes of interest in the neighbourhood. Most unfortunately some Russian soldiers thereabouts took these inoffensive people for spies from Japan. Without putting any formal question or waiting for a reply they at once made a murderous attack upon them, killing Ogawa, and a Korean porter in their employ, on the spot. Kawai was also severely wounded and fell to the ground where he lay feigning death. Believing him to be really dead, the Russians withdrew. With great difficulty the wounded man thereafter made his way to the sea-coast and finally reached Nagasaki, where he is now in hospital. The facts as above set forth certainly demand strict inquiry and due punishment of the offenders. Seeing that nothing has so far been done in the matter, there is good reason to believe that the Japanese Consul at Vladivostock has not yet informed the Government of the sad occurrence."

* * *

The writer also gives a good comparison of the salient characteristics of the Japanese, Koreans, and Chinese residents of Vladivostok

Digitized by Google Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

in particular and South-eastern Siberia in general. Those Japanese who are in receipt of comparatively large incomes, he remarks, spend their money freely in the land and are open handed. The Koreans and Chinese, for their part, are given to parsimony and hoarding. As a rule, the latter two nationals return to their native countries between the months of April and November of each year, carrying away with them the amount of their earnings. But nine out of every ten Japanese leave the country poorer than when they arrived. "I do not say," continues the correspondent, "that such conduct is worthy of admiration; yet it certainly has won for the Japanese the respect of the Russians, who are themselves proverbially spendthrifts. Moreover, our victories since the opening of the war with China have compelled the esteem of the Russian residents, so that our fame stands high. On the other hand, the Koreans and Chinese have sunk a grade lower, if that is possible. The Russians treat them like they would oxen or hoses, yet they—the Koreans and Chinese—are very thick-skinned and not susceptible to the shame of such treatment. Both are exceptionally cunning in all their dealings, and keep their habitations in such a state of disorder and filthiness as to arouse the detestation of civilized people."

A STRANGE RUMOUR ABOUT MR. HOSHI.

THE Domestic and Foreign News Agency is responsible for a curious rumour in the vernacular papers about Mr. Hoshi Toru. It is to this effect. The departure of Mr. Hoshi to Korea last fall as soon as Parliament was opened was not considered strange, as it was believed that his object was to inspect the state of affairs in the Peninsula. Deeper meaning is now attached to it. It is said that the absence of Count Inouye is very inconvenient to the Premier in many ways. As, however, it is necessary to have at Sōul a statesman of Count Inouye's calibre, much trouble has been experienced to solve the difficulty. At last it was decided that some suitable person should be appointed as Count Inouye's successor, so as to relieve him of his present duty. The choice fell on Mr. Hoshi Toru, ex-President of the House of Representatives, who was secretly informed of the matter. He replied that he could not give any definite answer until he had personally observed Korean affairs. Hence his hasty departure. He has now returned to Tokyo, and a certain personage with access to official information is of opinion that Mr. Hoshi will be gazetted one of these days. We give this news for what it is worth.

MEDICAL SCIENCE IN JAPAN.

THE Japanese, says the *Ohio Monthly Sanitary Record*, have recently illustrated how a disease, commonly thought to be infectious, may be eliminated through scientific investigation and the application of a proper remedy. Prior to to 1884, *beri-beri* was the scourge of the Japanese navy. During a period of six years, prior to 1884, there were 9,516 cases reported while for a second period of six years, from 1884 to 1889, inclusive, there were but 765 cases, of which 718 occurred in 1884, which was the year in which the remedy relating to a change in the character of the food furnished was applied. In 1887 there was not a single case reported in the entire navy of 9,000 men; and the *New York Medical Record*, aptly remarks that, "This is one of the greatest victories of science, and lends ground to the hope that *beri-beri* may before long become a rare, or even unknown disease in the Mikado's dominions."

THE SENDAI CONTINGENT IN HIROSHIMA.

AMONG the numerous troops now, or until a few days ago, temporarily in garrison at Hiroshima, there is a large contingent of First Class Reserves from Sendai, and concerning these soldiers that the correspondent of a Tokyo contemporary writes in terms of unstinted praise. They are said to be very steady in their behaviour, excellent at drill, and shirking no work, however wearisome. Most of them go for a swim every morning to the Motoyasu River, a little stream that flows about the city. The water is described as being of Arctic temperature, yet these men remain daily for five or ten minutes in the waves. It is an ancient Japanese custom, now happily almost obsolete, to expose the body to the extremes of cold in winter and heat in summer in order to excite the compassion of the gods and move them to hear the prayers of the devotee. Thinking this might be the explanation of the conduct of the Sendai troopers, the correspondent questioned them. Yes, they replied, it was partly for such reasons that they braved the bitter cold daily; they had, in fact, three reasons: first, they prayed to the gods to send them speedily to the seat of war; secondly, they prayed for victory over the enemies of Japan; and finally they wished to accustom their bodies to the frigid temperature in order that they might not succumb to the wintry frost and snow of Manchuria. Their greatest wish was to get off and come into hand-to-hand conflict with the enemy as speedily as possible.

VISCOUNT MUTSU ON THE CHINESE EMBASSY.

ACCORDING to the *Kokkai*, Viscount Mutsu is said to have expressed his opinion to a certain distinguished personage that the coming of the Chinese Embassy to sue for peace accompanied by Mr. Foster, ex-Secretary of State America, means business. The Japanese Government has already received news of it from a reliable quarter. His Excellency also remarked that the fact that Mr. Foster is to accompany the Embassy ought to be regarded with the greatest satisfaction, for, not only is he a great friend of Viscount Mutsu, but the presence of such a man will much facilitate the work of negotiation. If would be in tolerably vexatious to negotiate with irregular and sluggish Chinese, and yet to send back an embassy of the kind without hearing its terms of peace would not be in strict conformity with the usage of civilized nations. Hence the advantage of the presence of the ex-Secretary of the United States Cabinet. Of course it is out of the question that terms should be settled by the coming Embassy. It will only be a preliminary step to lay before Japan China's desires and to ascertain the conditions of peace. All things considered, the presence of Mr. Foster as China's adviser will be advantageous to Japan in many respects.

THE HEAD-WATER OF THE TAMAGAWA.

NOT only to the citizens of Tokyo, but also to the Imperial Court, the waters of the Tamagawa are, says the *Mainichi*, of the most vital importance, and any defect in the mode of preservation would cause inestimable mischief. It is therefore most unaccountable that the forests at the source of the river are owned entirely by private individuals, no step being taken to convert them into city property. That was not the case in pre-Restoration days. The most rigid control was exercised by the Government over the preservation of the head-waters, and the forests were then the property of the Kwan-yei Temple and under the strict *surveillance* of the Shogunate. That salutary system has, however, undergone a great change. Now that the Tama district has been incorporated into the Municipality, the effective control of the head-waters is much easier than it used to be, but strange to say, the importance of the matter seems to be entirely overlooked. A rumour was recently circulated to the effect that a certain member of the City Assembly, with a view to making a large profit out of the transaction, proposed to buy the forests from their present owners for the sum, of 100,000 *yen*. The latter, however, would not consent to sell unless for double the price offered. The forests are therefore still owned by the same men. Unless the city takes prompt measures to have the forests transferred to its possession it will be obliged to pay a large sum for them, as it must get them sooner or later.

THE SIBERIAN RAILWAY.

HERE is an item that will be read with special interest by the Japanese:—

Mr. Charles Jonas, Consul for the United States, the indomitable energy and nervous force

at St. Petersburg, sends to his government under date June 19th, the following notice which is published in the U.S. Consular Reports for August:—

"At the last meeting of the Siberian Railway committee the economic section of the Imperial Council, which took place on May 15th, the Minister of Finance submitted an important memorial in reference to the Great Siberian Railway.

"According to the imperial decree of December 22nd, 1892, the west and central Siberian sections of the line, as far as the city of Irkutsk, as well as the Ussuri section from Vladivostock to Grafskaya and the connecting line between the Ural and Siberian railways, were to be connected in the year 1900. Last fall, it became evident that the road can be built as far as Irkutsk by the year 1898—that is, two years before the time originally indicated—and that the Ussuri line can be finished in 1896. The construction of the line from Grafskaya to Khabarovka has already been approved.

"In view of these facts, it was resolved to accelerate the construction of the remaining portion of the Great Siberian Railway in the following manner:—First, the building of the Transbaikal line is to be pushed, so that it may be opened for traffic in the year 1898, at the time of the completion of the central Siberian section to Irkutsk and of the connecting link from Irkutsk to Listvenichnaya, on Lake Baikal; second, the whole line along the Amour River is to be finished before the end of the year 1901. The Minister of Communications has been granted the necessary credit, amounting to 1,215,000 roubles, to carry out the preliminary work of tracing the line Irkutsk around Lake Baikal, as well as in the Transbaikal region, and along the Amour River, and has also been authorized to forward, without delay, part of the material ordered for the other sections of the line.

"The above resolutions received the sanction of the Emperor on May 25th and the preliminary work in the Transbaikal region has already begun."

KOBE EPISCOPAL CHURCH.

THE Committee of the Kobe Episcopal Church, at the annual meeting held on Thursday said it was a source of satisfaction for them to report that "there is a balance in hand of $523.78 against a debit balance of $15.38 last year: this result is owing to an increase in the subscriptions to the Chaplain's Fund and to the proceeds of two entertainments given."

VISCOUNT INOUYE.

THE latest reports concerning the illness of Viscount Inouye, ex-Minister of Education, are anything but reassuring. It is true that he seems to be slowly rallying from an attack which, it was feared, would prove immediately fatal. But his disease—consumption—has reached an advanced stage where complete restoration to health can no longer be hoped for. The consulting physicians now announce that, with care, their distinguished patient may live six months longer, possibly even for a year. Viscount Inouye, at once one of the ablest and most hard-working of the younger generation of statesmen, has only one young daughter, so that the title will lapse upon his decease. It seems a sad but certain rule that many of Japan's most brilliant men and profoundest thinkers succumb sooner or later to that dread disease, phthisis. Whether it be owing to any constitutional predilection in this direction or not, at all events it is true that the malady early develops itself and rapidly runs its course, particularly in the case of men who have been ardent students and achieved fame while still young. We had recently to record the deaths of the Manager of the Specie Bank and the President of the Telephone Exchange, both men of exceptional ability, both scarcely having reached an age when most men attain the prime of their vigour and manhood, and both falling victims to the same malady, consumption. Some of the most distinguished parliamentarians at the moment are victims of the same complaint. Viscount Mutsu has long been a sufferer from this cause, and, three years ago, was practically given over by his physicians. Mr. Sakuma Teiichi, one of the most eminently practical philanthropists and advanced thinkers in the country, has lived for years with one lung only; his continued capability for work being solely attributable to

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

necrology for the last decade shows that nearly all of Japan's great men who have passed away were consumptive. But the subject is a painful one. Only one could wish that Koch's lymph, as improved upon and administered by Dr. Kitasato, might prove effective in the advanced as well as in the earlier stages of what appears to be a national disease in Japan.

THE USES OF DYNAMITE.

"ENGRAVING by dynamite is the rather striking reference which has been made by one of the foreign journals to the imprinting of the lines of delicate leaves and grasses on metal surfaces by the explosive force of this material. A short time ago, so the story goes, a charge of dynamite was exploded by a board of army officers who had been delegated to test a new kind of fuse. In some way a small dried leaf had slipped in between the dynamite cartridge and the iron block on which the charge was fired, with the starting result of a perfect imprint of the leaf in the metal. The most delicate lines had been reproduced with surprising distinctness, and further trials gave equally striking results. Leaves and flowers were placed between two plates of boiler iron and a moderate charge of dynamite was then fired on the upper plate. The exact outlines, with even the veins in the petals of the flowers, it is stated, were reproduced in the metal. While the truth of the account cannot be vouched for here, the results are quite within the range of possibility, and it is not unlikely that more may be heard of them. The thing, of course, depends, in a great measure, upon the reaction effect of the explosion, and accordingly calls to mind one other service of unusual character to which dynamite has been put in the past, namely, the driving of piles. Several years ago, in the execution of municipal works at the city of Buda-Pesth, a number of piles, already driven, were required to support a greater load than had been originally contemplated, and it was consequently necessary to test them and drive those that yielded still deeper. To bring a pile-driving machine successively over each pile for so small an amount of work would necessarily have entailed considerable expense, and it was consequently determined to try the effect of dynamite. For this purpose the piles were cut square, and a wrought iron plate, about fifteen inches in diameter and four and one-half inches thick, was placed on the top of each. In the centre of this plate, and immediately over that of the pile, was placed a charge of the explosive in the form of a cake, six inches in diameter, about three-quarters of an inch thick and weighing a little over a pound. The dynamite was wrapped in parchment paper, covered with clay, and ignited, and the effect produced was found to be equal to that of about five blows from a 1,500-pound monkey falling from a height of about ten feet. The iron plates, it was said, resisted from twenty to twenty-four explosions."—*Cassell's Magazine.*

SECOND ARMY COOLIES IN HIROSHIMA.

SEVERAL of the vernacular papers report that the coolies now in Hiroshima and destined to be sent on service with Count Oyama's Army, are an altogether exceptionally good and well-behaved lot. There are at present somewhat over eight thousand of these men in the city, but there has not yet been even one complaint made of any ill conduct on their part. The reason of this exceptional report is that the coolies have voluntarily subjected themselves to military routine. They choose sentinels of their own, who keep watch at the door of their barracks, and no one is permitted to be out of bounds after six p.m. The whole eight thousand odd form a close corporation, none of them having been chosen through the agency of any middleman or employment bureau, but all having voluntarily applied to the Kencho authorities and thus undergone a strict examination before being chosen. Their wages average fifty *sen* a day, or fifteen *yen* a month. Since their engagement these men have lived so frugally that they have already been able to [illegible] several thousand *yen* to their relatives at home. They discountenance gambling and loose living of any kind. The sentries are armed with stones, somewhat after the fashion of the Japanese police of olden times, and they do not hesitate to use these weapons over the head of any riotous member. Far different is the report of the men who were sent to join the First Army. According to the *Choho*, though drawing comparatively large salaries, and having really no need to spend their money, not one of the coolies has sent even a *sen* back to Japan. They carouse and gamble when off duty; they may be brave, but they are as thoughtless as they are courageous, to say the least, and require a strong hand to keep them from indulging in excesses of all kinds.

A NEW SYSTEM OF TRANSLATION.

WE note in the *Eigaku*, a monthly magazine published by the Meiho-do firm in Tokyo and devoted solely to the study of the English tongue, which the editors have set out to teach from the alphabet upwards, the adoption of a new and interesting method of so-called "literal translation" (*Choku-yaku*). It consists of printing each word of the text with a Japanese translation attached, but the English words are printed in the syntactical order of the Japanese language. By comparing this with the real text, the student soon becomes familiar with the, to him, strange forms of speech, so that the method is infinitely preferable to that of numbering the text-words or placing the Japanese translations just below but adhering to the syntax of the text. We quote one paragraph as a specimen. The text, taken from Longmans' Second Reader, runs thus:—"In this way they go from one side to the other of a wood, without once coming to the ground. How do you think they cross a river? Some of them go to the top of a very high tree on one side of the river." It is, of course, from a chapter on monkeys and their migratory habits. Then follows the same text, with Japanese translation beside each word, but transposed so as to keep to the order of the Japanese tongue. To those of our readers unfamiliar with Japanese, the paragraph will give an idea of the quaint structure of the language:—"This way in, they once the ground to coming without, a wood of one side from the other to, go. How they a river cross, you think do? Them some of, the river of one side on, a very high tree of the top to, go." None but a maniac of the most dangerous type could or would write English after this fashion; yet it is in good Japanese order of the words for all that.

NOT HALF ENOUGH.

AN excellent story, albeit somewhat apocryphal, is narrated in the columns of a Tokyo contemporary concerning the fate of a would-be briber and his *posse comitatus*. The other day, Mr. Okubo, Chief of the Commissariat Bureau in the General Staff Head-quarters at Hiroshima, was approached by a well-known and wealthy merchant. The latter stated, with some show of diffidence, that he had hitherto held aloof from the crowd of those who besieged the Bureau for orders for their wares; he had now come forward not so much in his own interests as of those of a dozen friends or so, who would be greatly honoured if they might receive Government contracts; his friends, he continued, would procure everything of the best, at the lowest possible figure. Mr. Okubo listened patiently to this preamble, as it is nothing new to him to be approached in this insinuating manner; he noticed, however, as soon as his visitor had bowed himself out with every mark of devoted respect, that a little bundle of bank-notes, subsequently found to be worth three hundred *yen*, had been placed at his elbow. This attempt at corruption Mr. Okubo speedily made known to his subordinates, among whom there was a general feeling of indignation and a hearty laugh; whereupon a scheme was concocted to fairly vanquish the briber with his own weapons. Shortly afterwards a little crowd of some seventeen or eighteen merchants sent in their cards; they had come on the recommendation of Mr. So-and-so, and hoped the Chief would look at their samples and give them orders. Mr. Okubo received the speculative squad at the same time, and after a few words began: "Your introducer is too miserly. Here is the three hundred *yen* which was to be my share in this transaction. This is ridiculously small. I want two thousand *yen*, cash down, or you get no contracts. With this pitiful sum watch what I do," and away the seductive packet flew through the open window. Crestfallen and abashed the company of bribers arose and departed, followed by the derisive laughter of the clerks who had been looking on at the scene in huge enjoyment.

SOLDIERS IN HOSPITAL IN TOKYO.

WE are indebted to a correspondent for the following statistics, which give full particulars concerning the number of soldiers in the three metropolitan military hospitals, viz., those at Kasumigaseki, Aoyama, and Kojimachi. The table was compiled on the 10th instant:—

	Sent back from Korea and/or China.	Taken sick before leaving Japan.	Total.
Traumatic Wounds ...	130	—	130
External Diseases	32	323	355
Internal Disorders	115	308	423
Epidemic Diseases	53	43	95
Diseases of eye and ear	9	47	56
Syphilitic patients	41	161	202
Total	380	888	1,261

Under the heading of "external diseases" are included frost-bite; wounds received otherwise than in battle; sprains; dislocations, etc. "Internal diseases" comprise principally disorders of the lungs, stomach, bowels, and liver. As "epidemic diseases" are classed cholera, typhus, typhoid, dysentery, diphtheria, and one or two others. It is certainly a surprise to note that the patients brought back from the seat of war are less than half the number of those taken sick in this country. It speaks highly for the sanitary precautions observed in the army.

A GENEROUS DONATION.

EVEN papers holding views opposed to the *Kaishin-to* speak in glowing terms of the magnificent funeral Count Okuma gave to his venerable mother on the 6th instant. As we have already reported, more than eight thousand persons attended the ceremonies, people coming expressly for the purpose from the most distant parts of the Empire. The floral tributes are spoken of as having been in unparalleled profusion, more than four hundred stands of odorous flowers being presented. But more particularly do the vernacular journals praise Count Okuma's generosity in having distributed no less than twenty-four *koku* of rice among the poor of Waseda and Ushigome District on the day of the funeral; that being a fitting tribute to the gentle, tender memory of his mother.

CHINA AND JAPAN POSTAGE.

THE Director of Imperial Posts at this port has been informed by the Postmaster-General of Hongkong, that on and after the 1st January, 1895, the postage from British Post Offices in China to Japan are altered as below:—

Letters per ½ oz.	Single postal cards each.	Reply postal cards each.	Books, patterns, prices current per 2 oz.	Newspapers per 2 oz.	Registration.	Return receipt for Registered article.
Cents. 10	Cents. 4	Cents. 8	Cents. 2	Cents. 2	Cents. 10	Cents. 5

MORE PURCHASES OF STEAMERS.

PURCHASES of steamers by Japanese, says the *Chronicle*, still go on. The German steamer *Glücksburg* has been sold to the Chiuyetsu Kisen Kabushiki Kaisha through a foreign firm at Kobe and changed her flag on Friday, being known now as the *Hino Maru*. We understand that the *Metapedia* has also been sold in Yokohama to Mr. Hiromi.

THE HON. G. CURZON.

ACCORDING to recent Indian papers the Hon. George Curzon has left Cabul for India *viâ* the Kandahar frontier. Rumour adds that he carries in his pocket the Ameer's acceptance of the Queen-Empress's invitation to visit England.

IMPERIAL DIET.

SATURDAY, JANUARY 12TH.

HOUSE OF PEERS.

The House met at 10.45 a.m., the Order of the Day being :—

1.—Bill relating to Vaccination.
2.—Representation relating to Reform of the Prefectural Administration in Okinawa Prefecture.

The President announced that the Minister President had attended at the House two days previously, and had desired to have his regrets conveyed to the members for his inability to remain in Tokyo and be present during their session. Owing to the pressure of warlike affairs, he had been summoned by the Emperor to proceed without delay to Head-quarters at Hiroshima. He had, however, left full instructions with the other Ministers of State, and he trusted that the House would freely confer with them whenever such a course was dictated in the discharge of its legislative duties.

Surgeon-General Takagi, introducing the Vaccination Bill, explained that the Vaccination Regulations now in force had been enacted nine years previously and were in many respects imperfect. It was scarcely possible to exaggerate the importance of a proper system of vaccination, and the need of good organization became at once apparent when they knew that over 9 million persons had to be vaccinated yearly. Presumably his hearers were all agreed as to the utility of vaccination, but they were not aware, perhaps, that the number of small-pox patients annually, taking the average from 1887 to 1893, was over 1,120,000. At the lowest estimate each of these persons was laid up for 30 days, and even if they put the expense of treatment at only 10 *sen* daily, a sum of nearly 3½ million *yen* per year was involved. Further, it had to be remembered that when a member of a family fell ill of small-pox, segregation was essential, and the business of the household was consequently dislocated. Taking that into account, as well as the loss of productive labour, it did not seem too much to put the annual amount lost to the country at over 7 million *yen*. Moreover, the death rate was 22.5 per cent., which meant that tens of thousands of valuable lives were sacrificed yearly. Hence the vast importance of the subject was plain. The Bill proposed that vaccination should be compulsory at four periods, namely, at the ages of one, seven, thirteen, and twenty. Those periods had been chosen, because the first coincided with the time when a birth was registered, the two next with school ages, and the last with the conscription age. Great convenience would thus be insured in carrying out the system, whereas at present great inconvenience and confusion prevailed. Finally, it was proposed that all vaccine lymph, should be given out officially, after most careful inspection, a matter of infinite moment.

Marquis Daigo thought that the punishment proposed for failure to procure vaccination was excessive, though he entirely approved of the distribution of lymph and the inspection of vaccinating stations at the public expense.

In answer to questions, Dr. Takagi said that, according to statistics, vaccination guaranteed a person against small-pox for a period of six years. Persons taking the disease within two or three years after vaccination, were generally adults over twenty years of age, and even in their case it was found that in the majority of instances the vaccination had not taken. The cost of distributing lymph gratis was estimated at 65,076 *yen* annually.

Mr. Shibawara Wa opposed the Bill on the ground that the Law in lieu of which it was proposed excelled it. The project of fixing periods for vaccination in accordance with school and conscription ages took no account of difference of avocation, and, moreover, the Prefects and Local Officials, who were to be deprived of competence for the purposes of vesting it in the Home Minister, had better opportunities and facilities for enforcing the regulations than the central Government could have.

The House took a recess at noon, and reassembled at 1.10 p.m.

Mr. Matsuoka, Government Delegate, opposed the Bill as unnecessary. He said that Dr. Takagi had given statistical and financial reasons for his proposal, but statistics were things that might become very misleading according to the manner of their interpretation. During the period of 10 years ending in 1893, the average number of persons vaccinated annually was something over 3 millions. In that interval, the year most prolific of small-pox had been 1883, when there were 73,000 cases, and 18,600 deaths, and the year least prolific had been 1890, when there were only 296 cases. Such figures suggested nothing very terrible. Many other diseases showed more serious records. Moreover, the present system, as improved in 1886, worked very well. It had not yet gone into operation in every hole and corner of the empire, but it was pretty generally in force, and the results produced were most satisfactory. From 1886 to 1891, the percentage of unvaccinated children had been 24, whereas in 1892 and 1893 it had been only 6. Evidently the system was accomplishing its purpose rapidly. With regard to official examinations, it should be noted that whereas only one examination yearly was made in England and two in Germany, there were three in Japan; the police regularly make house-to-house visits of inquiry under the authority of the Local Government. The expense, too, of carrying out the projected changes would be great—here the speaker gave figures—and the Government did not deem them either expedient or essential.

Viscount Tani opposed the Bill, chiefly on the ground of the fines contemplated. Compulsory vaccination enforced by the aid of fines was a remnant of unenlightened times, when men did not yet know the value of the precaution and all kinds of ignorant objections were raised against it. Those days were past. The Japanese people fully appreciated the benefits of vaccination, and Japanese parents loved their children too much to neglect such a means of preserving their health. Further, the figures given by the Government Delegate showed that vaccination was widely used, and that the number of those neglecting it was not only insignificant, but rapidly diminishing. Under such circumstances, he saw no occasion to enact a new law and incur large outlay.

Dr. Choyo Junsai supported the Bill. Vaccine lymph was obtained in the first place from the calf, and subsequently from a person vaccinated direct from the calf. But some years ago it had been found that the lymph taken from one person for use in another was capable of transmitting serious maladies, and, in consequence, the demand for calf lymph had increased so much that numerous private establishments for furnishing it sprang up here and there, with the result that competition gradually affected the quality of the lymph, and much that was very bad now found a market. It might be urged that a proper system of inspection would rectify that abuse. But really efficient inspection was exceedingly difficult in such a matter, the use of the microscope and other delicate processes being necessary. Hence, as the public health was deeply concerned, it seemed plainly better that all lymph should be officially prepared and supplied. The question of expense should not weigh with them for a moment in the face of these considerations.

Viscount Tani inquired whether a physician could not distinguish an unhealthy child sufficiently clearly to avoid taking lymph from it for use elsewhere.

Dr. Choyo replied that congenital disease was often very difficult to detect. He explained how it was possible to take precautions against employing diseased calves.

After some further questions, the Bill was entrusted to a Special Committee nominated by the President.

Viscount Soga, introducing the Representation relating to Okinawa Prefecture (the Loochoo Islands), said that these islands were a most important possession. Numbering more than 50, they had a population of over 46,000, and they produced not only rice, millet, and sweet potatoes, but also coal. Excellent harbours existed there, and many facilities offered for establishing military stations. The islands were nearer to China than to Japan, the most northerly being 275 miles from Kiushu, and the most southerly, only 60 miles from Formosa. Often it appeared that folks were doubtful about their ownership, and he had recently read in a foreign newspaper a recommendation that their good anchorages and coal supply, as well as the uncertainty as to their ownership, should be taken advantage of to annex them and establish a naval depot. The House knew what rivalry existed between certain great western Powers about the fate of Samoa, an island than which several of the Okinawa group were more important in every respect. Could there be any question as to the necessity of incorporating such a part of the empire so thoroughly as to remove all doubts about its title? Yet, in point of fact, the systems of old time still existed there. Taxes were paid in kind, and the people were put to forced labour. In order to defray the taxes, the women had to weave cloth with materials obtained from abroad, and the men had to till the ground, all working so assiduously that they commonly declared the year too short for the mere labour of satisfying the tax-collector. He had these facts from persons that had visited the islands recently, and come home vowing to devote their lives, if necessary, to procuring relief for the poor people. The Government showed itself very solicitous about the Ogasawara Islands (the Bonins), but neglected the Okinawa group altogether, behaving, for all the world, like a man who devoted all his attention to a scratch on one finger and took no measure to heal gangrene of his foot. The Orient was now plunged in war. Peace would doubtless dawn once more, but who could tell when the night of battle might not close over them again, or what form its shadows might take. He had heard it said that a Minister of Foreign Affairs should look at the map of the World every morning before going to his office, but he thought it behoved a Minister of Home Affairs to examine the map of his own country even more carefully. Not a day ought to be lost in attending to the condition of the people of Okinawa, and putting them into the path of prosperity and strength.

Viscount Nomura, Minister of State for Home Affairs, explained that the Government had by no means been unmindful of the necessity of introducing reforms in Okinawa Prefecture. Officials had been despatched thither last year, and thorough investigations had been made, in the sequel of which the Government intended to prepare a Bill for submission to the Diet. Owing, however, to the difficult nature of the question and the pressure of other business, the Bill was not yet ready. But he wished the House to understand that there was no idea of neglecting the question on the part of the Administration, and that the utmost despatch would be employed.

Viscount Soga expressed himself thoroughly satisfied with this explanation.

After some questions, the House passed the Representation, and rose at 3.15 p.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.15 p.m., the Order of the Day being :—

1.—Supplementary Budget for the 27th year of *Meiji*.
2.—Second Reading of the Bill for amending Law No. 8, of the 23rd year of *Meiji*.
3.—Bill for abolishing Notification No. 10 of the 15th year of *Meiji*.
4.—Bill for rescinding a portion of Law No. 28 of the 22nd year of *Meiji*.

Mr. Taketomi Tokitoshi, Chairman of the Budget Committee, reported in favour of the Supplementary Budget for the last fiscal year, as submitted by the Government.

Mr. Kawashima Jun, Chairman of the Section of the Budget Committee entrusted with the duty of reporting upon the part of the Supplementary Budget relating to the Finance Department, said that, although reporting in favour of the Budget as presented, he thought it necessary to draw the attention of the House to one item, namely, the sum of 200,000 *yen* entered as a reserve fund. This fund was devoted

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

partly to defraying expenditures in connection with Chinese and Korean warlike affairs, and partly to the construction of Yokohama harbour. So far as concerned the war expenditures, nothing need be said; but the defraying of harbour construction outlay from such a source seemed plainly unconstitutional, and if the committee passed the item, it was solely in deference to the general desire of avoiding any collision with the Government at the present crisis.

Mr. Yumoto Yoshinori, on behalf of the Home Department Section of the Committee, also referred to the Yokohama Harbour Works, and said that the Committee had sought to obtain some definite information fixing the responsibility of the accident that had impeded the completion of the undertaking. But the Government Delegate had explained that as the failure of the cement blocks involved a scientific question exceedingly difficult to determine, a precise reason could not be assigned; and that, with regard to the financial aspect of the affair, a rigorous inquiry had failed to detect anything irregular. Finally, the Committee, appreciating the importance of completing the work, had passed the item.

Mr. Suyehiro Shigeyasu asked whether, in view of the alleged impossibility of determining the exact cause of the failure of the cement blocks, it was conceivable that the engineers could give the undertaking attributed to them, namely, that no such mishap should occur again. He also wished to know whether, although some persons connected with the affair had died, others similarly responsible did not remain.

Mr. Yumoto replied that the engineers, while declining to be perfectly explicit about the past, nevertheless gave their assurances about the future. As for the second point, the chief responsibility rested with the foreign engineer, whose supervision appeared to have been insufficient. But he was dead, and no one remained chargeable with the responsibility.

Mr. Suyehiro pressed his question. He did not understand the idea of putting the whole responsibility on a dead man. Surely, there must have been some others associated with him in the work of superintendence. Were not they alive?

Mr. Yumoto answered that the defects had been confined to a few blocks. Hence the difficulty of arriving at any general conclusion. With regard to the responsibility, it rested with the engineer-in-chief, and he was dead.

Mr. Suyehiro said that the engineer who had died was a foreigner. There must have been some Japanese associated with him in the work. Did the committee imagine it possible that he alone was really responsible?

Mr. Yumoto had given all the information in his possession. He referred Mr. Suyehiro to the Government Delegate.

Mr. Nakamura Kokusho said that this question of the failure of the concrete blocks had given rise to much discussion and caused wide comment on the part of the public. In consequence of the Government's failure to offer an explanation such as might serve as guarantee against repetitions of the disaster, the House, in a previous session, had refused to pass an appropriation for completing the Harbour Works. Now, however, they were asked to sanction the outlay as a continuing expenditure. Under the circumstances, he did not see how they could consent to take such a step without fuller elucidation.

Mr. Kudo Kokan presented a report on behalf of the minority in the Committee. He traversed, in the first place, the practice of presenting Supplementary Estimates for accounts of such magnitude as that now before the House. The principles of Budget compilation was that a tolerably close estimate should be formed of the revenue and expenditure for the incoming year so that the Diet might be in a position to exercise its due control over the items. If, however, supplementary Budgets of expenditures already incurred, aggregating 2 or 3 million *yen*, were to be presented session after session, not only was the Government's financial ability plainly defective, but also the House's right of supervision was seriously impaired. No reason was discernible why expenditures such as those included in the Supplementary Budget now before them, should not have been foreseen and duly provided for; or, if not foreseen, why the outlays should not have been deferred until the Diet's consent could be obtained. As to the Yokohama Harbour Works, they were a large undertaking. The nucleus of the sum required for their construction had been taken from the money magnanimously returned to this country by the United States, and already more than a million of dollars had been expended. Such an enterprise naturally attracted public attention and deserved careful supervision. A serious defect had occurred in the substructure of the breakwaters, and the Government failed to fix the responsibility. They were told that the engineer-in-chief, upon whom devolved the duty of superintendance, was dead, and that the responsibility had been buried with him. That was incredible. It was known as a matter of fact that highly paid Japanese engineers had been associated with the engineer-in-chief from first to last. Those assistant engineers could not possibly be acquitted of all responsibility, except on the assumption that they acted without any intelligent judgment, automatically obeying the orders of their foreign chief. Moreover, there were ugly questions with reference to the purchase of a dredger and of cement. A full statement had been made by Mr. Saito in a previous session, but no official notice had been taken of it. Had no irregularities really occurred? The Government had recently placed the Secretary of the Kanagawa Kencho on the Retired List. They were given to understand that his retirement had no connection with the alleged irregularities, but it was not easy to accept that denial literally. Again, even granting that the whole responsibility of inefficient superintendence rested on the deceased engineer-in-chief, what about the responsibility of those that employed him? The country was now on the eve of an era when many important public enterprises would doubtless be inaugurated. Could they trust the conduct and control of great works to a Government so unskilful in the choice of experts and so irresponsible as the present Cabinet?

Mr. Kusakari Shimmei asked whether the minority of the Committee proposed to leave the Yokohama Harbour Works unfinished for any number of years, until the Government was able to fix the responsibility of the blocks' failure.

Mr. Kudo replied that while insisting on a full and explicit explanation, the minority did not suggest that proper steps ought not to be taken for completing so important a work.

Mr. Tsuzuki, Government Delegate, said that this affair had provoked much controversy and they were now even confronted with a question as to the constitutionality of the Government's financial methods. He had to remind them, however, that when a Budget failed to come into existence, as had been the case last year, and when the Government was consequently obliged to carry out the Budget of the preceding year, it was inevitable either that important undertakings, even though partially completed, should be abandoned, or that the House should subsequently be invited to sanction, by means of supplementary budgets, the expenditures involved in their prosecution. So far as the Government could perceive, no other resource offered under the Constitution. Turning to the particular question of the Yokohama Harbour Works, they should remember, in the first place, that the failure under consideration was of comparatively trifling dimension. Not all the cement blocks had proved defective, nor even a large portion, but only a petty fraction, some 3 or 4 per cent. Nevertheless, the Government, fully appreciating the importance of fixing the responsibility and ascertaining the cause, the former in the interest of administrative efficiency, and the latter on account of the future of the great work, had appointed a committee of experts to investigate the matter. After long and patient inquiry and experiment, the Committee had arrived at the conclusion that either bad materials, or insufficient mixing, or a faulty method of carriage, or incomplete drying, or unskilful laying, had been responsible for the cracks. Doubtless the disaster was attributable to one or all of these causes, but which particular cause had been chiefly operative, it had been found impossible to determine. Under the circumstances it did not seem just to allege that the responsibility remained unfixed. It was fixed, in the opinion of the Government, and it rested with the superintending engineer. As to alleged irregularities connected with the purchase of a dredger and cement, all the allegations made were of the vaguest character. The Government, however, had entrusted the investigation of this question to the most painstaking and accurate auditors available, and these had failed to detect any evidence whatever of irregularity. It was impossible to go farther. The Administration could not prefer vague rumours to the exhaustive analysis of qualified financial experts. Finally, it was asked why they could not defer the prosecution of the Works for a few months so as to obtain the preliminary assent of the Diet. The answer was that a day's delay in continuing such works meant a day's deterioration. To be left uncompleted was fatal in the case of structures chiefly under water and exposed to influences which, though comparatively undestructive after the competion of the works, were most destructive during the uncompleted stage. The Government could not reconcile itself to such a waste of public funds.

In answer to further questions, the Delegate said that although the precise cause of the cracks in the blocks could not be ascertained, it was certain that some or all of the five causes he had mentioned, must be responsible, and by guarding against all five, any recurrence of the trouble could be confidently prevented.

Mr. Tanaka Shozo said that an excuse was made on the ground of the comparative smallness of the number of defective blocks. But a small percentage amounted to a great many when large numbers were concerned. Letting that pass, however, he desired to be informed whether there was any other instance of a great public work being entrusted solely to foreign expert inspection.

Mr. Tsuzuki said that he was not in a position to reply without consulting the records.

Mr. Tanaka Shozo called attention to the 19th article of the Constitution:—"Japanese subjects may, according to qualifications determined in laws or ordinances, be appointed to civil or military offices equally, and may fill any other public offices."—(Great laughter.) Mr. Tanaka angrily inquired what they were laughing at. The Constitution showed that although foreigners might be employed, they must not be entrusted with executive functions. Did the Government imagine that its responsibilities could be evaded by reposing such trust in a foreigner and then laying the blame on him after his death? What did the Government Delegate find to laugh at? There must have been some responsible Japanese official. Who was it? Why didn't they seize the thief, whoever it might be. A thief could be recognised by his cast of countenance.

Mr. Tsuzuki denied having laughed. As for entrusting the Harbour Works to a foreign expert, the Government considered that perfectly proper. If nothing was to be entrusted to foreigners, the empire could not order its men-of-war abroad. He should not notice the last speaker's violent language further than to express a hope that greater circumspection would be observed in future.

Mr. Tanaka Shozo at this stage became violently excited, and thumping his desk cried out: "Why don't you catch the thief?"

Mr. Shigeno Kenjiro asked for explicit information as to the possibility of preventing such mishaps in future.

Mr. Furuichi, Government Delegate, said that as a technical expert he was, perhaps, qualified to reply. The question centered upon two points, first, the quality of the materials employed, and secondly the method of mixing [illegible] As to the former point the House would

Digitized by Google Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

understand that to determine the quality of the materials employed in blocks that had been made many months previously and had been lying under water, was a matter of no little difficulty. At any rate, so far as concerned the future stability of blocks, it was enough to know that sound materials used for such a purpose would certainly fulfil the object contemplated. As to the second point, the exact proportions in which the materials were originally mixed by the workmen was also difficult to determine now. The Committee had conducted experiments on a careful and extended scale, and had arrived at the definite conclusion that by using a slightly larger proportion of cement than that fixed by the formula hitherto followed, blocks of permanent durability could be obtained.

Mr. Moriya Konosuke asked whether Mr. Furuichi also entertained the opinion that the responsibility rested with the deceased foreign engineer.

Mr. Furuichi replied in the affirmative. There had been, it is true, several Japanese engineers associated with the work, but each had had his own special functions assigned, and had not gone beyond those functions. The general responsibility of direction rested with the engineer-in-chief, and this was a point of direction.

After some further questions, Mr. Suyehiro Shigeyasu said that this affair must be considered under two aspects. There was, first, the point that unless the Harbour Works were completed, a heavy loss of public funds would be incurred. Impelled by that argument the Committee, he understood, had passed the item, and he endorsed their action. But there was secondly the question of responsibility. The House could not be satisfied with the Government's explanations. It seemed to him that the action of the Government might be compared to that of a party of gamblers among whom a quarrel arises ending in the killing of one of their number, whereupon the rest declare that the dead man was the first to strike a blow. Doubtless the Government had not undertaken the Harbour Works with any expectation of making a failure, but the failure having been made, it would not do to lay the whole responsibility upon a deceased *employé*. He moved that a special committee be appointed to give the matter fuller consideration, and that in the meanwhile, the business of debating this Budget be suspended.

This proposal having found no seconder,

Mr. Kommuro Shigehiro, while admitting the advisability of clearing up the question of administrative and technical control, reminded the House that the work itself was of too much importance to be suspended for such a reason.

Mr. Horiuchi Kuro protested against such a view, and said that if the House admitted Mr. Kommuro's principle, the Legislature's supervision would become a farce.

The closure having been moved and carried, the House passed the sections of the Budget relating to the War Department and the Department of Finance.

The section relating to the Yokohama Harbour Works was put to an open ballot, when 123 voted in favour of the item and 118 against.

The rest of the Supplementary Budget was passed as submitted by the Government.

The Second Reading of the Bill for amending Law No. 84 was then taken (*i.e.* the Law relating to punishments for violations of Administrative Ordinances).

Mr. Konishi Jinnosuke proposed some trifling amendments at great length, but the House rejected them, and passed the original Bill. The Third Reading was also passed at once.

The Bill for abolishing Notification No. 70 of the 15th year of Meiji was then introduced by Mr. Nishimura Shintaro. The Notification in question interdicted the members of a Prefectural Assembly from holding meetings or communications with the members of another Prefectural Assembly with reference to any question coming before either body. It was contended that such a restriction was inconsistent with the theory of Constitutional Government, and that, moreover, it was often very inconvenient in practice, since matters arose connected with public works and so forth, that absolutely demanded consultation between the members of neighbouring Prefectural Assemblies.

Mr. Konishi Jinnosuke opposed the Bill, not on principle, but because subsequent Ordinances with respect to Public Meetings and Political Associations had practically rescinded the objectionable article of the Notification in question.

The Bill was passed through all its readings at once.

Mr. Kagami Kahei, introducing the last Bill on the Order, explained that the portion of Law No. 28 for the abolition of which the Bill was designed, enacted that, in the event of any person's uttering contemptuous or abusive language toward the Diet, no prosecution at law could be instituted until the Diet itself had taken previous action. Such a law had the effect of assigning to the Imperial Diet the legal status of a private individual, and it was therefore proposed that, in case an offence of the above character were committed, the public procurator or the police should immediately take steps to prosecute.

Mr. Kusakari Shimmei strongly opposed the Bill. The principle involved was of the utmost importance. What was proposed was to transfer the guardianship of the Diet's good name to officers of the law, instead of leaving it to the legislators themselves, who were presumably the best judges of what constituted an offence against their dignity.

Mr. Tsunoda Shimpei proposed that the Bill be entrusted to a Special Committee, but the House rejected the proposal and refused to carry the Bill to a second reading.

The House rose at 4.25 p.m.

MONDAY, JANUARY 14TH.

HOUSE OF PEERS.

The House met at 10.30 a.m., the Order of the Day being :—

1.—Application for leave.
2.—Bill for rescinding the Peace Preservation Regulations, sent up from the House of Representatives.
3.—Bill embodying a new Game Law.

The President announced that the Government desired urgency for the Supplementary Budget for the 27th year of *Meiji*, sent up from the Lower House, and the House agreed to change the Order of the Day accordingly.

Mr. Tajiri, Government Delegate, explained the principal items of the Supplemeutary Budget, and pointed out the necessity of passing it expeditiously.

Viscount Soga proposed that the Budget Committee be instructed to present its report the following day, and the House assented.

The Budget Committee asked leave to retire for the purpose of examining the Budget and preparing its report, but an objection was raised that the House ought to be as largely attended as possible in view of the important Bill standing second on the Order.

The President said that, according to rule, members ought not to be allowed to absent themselves while the House was in session, but the House could give permission if it pleased. He must remind them, however, that if they refused the Committee's application, it could not be expected that the Committee should prepare and present its report by the following day.

The House agreed to the withdrawal of the Committee.

The first item on the Order having been disposed of,

Mr. Ando Sokumei inquired whether they were to understand distinctly from the statements made by the Government Delegate in the Lower House that the Government did not consider itself able to preserve public peace and good order without the Peace Preservation Regulations.

Mr. Suyematsu Kencho, Government Delegate, replied in the affirmative. The existence of secret societies and the disorderly conduct of a section of the people seemed, in the Government's opinion, to call for some legislation over and above the ordinary Criminal Code.

Mr. Ando inquired the total number of policemen in the empire and the expense of maintaining them.

Mr. Suyematsu replied that he had not come supplied with statistics on that point, but if Mr. Ando desired, he should send for them to the Home Office.

Mr. Ando did not consider that necessary at once. He believed that there were from 30,000 to 40,000 policemen in the country, and he thought that if they did their duty zealously they ought to be able to control all secret societies and law-breakers. He wished to know whether the Government considered the Peace Preservation Regulations a piece of uncivilized legislation, as had been asserted in the Lower House.

Mr. Suyematsu replied that different men entertained different opinions. The Government, however, most certainly did not think that Japan should be considered uncivilized because the Peace Preservation Regulations were in force.

Mr. Ando, with considerable excitement, declared that he could not obtain answers to the real purport of his questions.

The Bill was entrusted to a Special Committee nominated by the President.

Mr. Murata Tamotsu, introducing the project of Game Law, reminded the House that it had already fully discussed and passed this measure in a previous session. He trusted, therefore, that no delay would occur in debating it now.

The House agreed to carry the Bill to its Second Reading at once, and passed it through its Second and Third Readings without debate.

The House rose at noon.

HOUSE OF REPRESENTATIVES.

The House met at 1.10 p.m., the Order of the Day being :—

1.—Second Reading of Bill for abolishing the Special System of City Government in the case of Tokyo, Osaka, and Kyoto.
2.—Second Reading of Bill for supplementing the City Government system.
3.—Bill for amending the Regulations for the Control of Dealers in Second-hand Goods.
4.—Bill for amending the 60th Article of the Land Tax Regulations.
5.—Bill relating to the Control of State Property.
6.—Bill relating to the establishment of a Silk Conditioning House.
7.—Representation relating to Losses caused by Inundations.

Mr. Tsunoda Shimpei, on behalf of the Special Committee, reported in favour of the first and second Bills on the Order, and the House passed the Second Reading, dispensing with the Third.

Mr. Tsunoda Shimpei, introducing the Bill for amending the Regulations for the Control of Dealers in Second-hand Goods, reminded the House that the passage of the Bill in the sixth session had been prevented only by the dissolution of the House. The present regulations were undoubtedly obsolete, and the Government itself admitted the fact. He proposed that the Bill be entrusted to the Special Committee already charged with the duty of reporting upon the Bill for amending the Pawn Brokers Regulations.

The House agreed.

Mr. Kimura Seitaro, introducing the Bill standing fourth on the Order, explained that the present Land Tax Regulations granted 15 years' exemption from taxation in the case of land inundated by the sea only. The Bill proposed to add land inundated by river water, or rendered barren by drought, or devastated by earthquake.

The Bill was entrusted to a Special Committee.

Mr. Inouye Hikozayemon explained that the object of the Bill relating to the control of State Properties was to bring within the provisions of law, and therefore within the purview of the Diet, all purchases or sales of public property, instead of leaving them to be managed by Government Ordinance as was now the case.

The Bill was entrusted to a Special Committee.

Mr. Takahashi Yasuji, who had attempted to speak with reference to the Bill for amending the Land Tax Regulations, but had been prevented by the President on the ground that a motion for entrusting the Bill to a Special Committee was already before the House, asked that the Order of the Day be changed to enable him to introduce an urgency motion taking the sense of the House as to whether the President had competence to deprive a member of the right of speech.

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

The House refused permission.

Mr. Hamana Shimpei introduced the Bill for establishing a Silk-conditioning Warehouse :—

Art. I.—A Silk-conditioning Warehouse shall be established in Yokohama.

Art. II.—All silk produced in Japan and treated as an article of commerce, whether foreign or Japanese merchants be concerned, may be conditioned at the above Warehouse: provided that no charge shall be levied for conditioning.

Art. III.—The Silk-conditioning Warehouse shall be under the control of the Minister of State for Agriculture and Commerce, by whom regulations for its management shall be enacted.

This Law shall become operative from the 1st day of the tenth month of the 28th year of *Meiji* (October 1st, 1895).

Silk constituted one-fifth of the total exports of Japan. Its proper management was of essential importance. At present the determination of the price and quality of Japanese silk rested entirely with foreign merchants, the native dealers being concerned solely with satisfying their foreign customers' wishes. No confidence whatever was placed in Japanese merchants, nor could any silk put up and inspected by them find a purchaser unless it had first been taken into a foreign godown and inspected there. Japan was behind all civilized countries in this matter. A silk-conditioning warehouse had existed in Lyons since 1779; there were 14 of such institutions in France, 15 in Italy, and several in England, Germany, and other countries. If the silk business of Japan was ever to be placed on a satisfactory basis, a conditioning warehouse must be established in Yokohama, and in order to acquire public confidence, it must be under Government control. He need scarcely remind the House that satisfactory as were the victories won by Japanese arms in the field, the country could never hold a high place among states unless it developed its resources and acquired the real sinews of war, wealth. The outlay involved in establishing the proposed warehouse would be only 15,000 *yen*. Even in China a conditioning warehouse had been established in Canton, and was found of great benefit.

In answer to questions, Mr. Hamana explained that he did not suppose that one conditioning house would be sufficient, but a beginning must be made, and Yokohama was plainly the centre of the silk export trade at present. Kobe's case might require consideration in the second place.

Mr. Taguchi Ukichi opposed the Bill on the ground that Yokohama was not the proper place to establish such a house. In other countries the manufacturing centres were always chosen. He understood that the project embodied in the Bill found much favour at the Department of Agriculture and Commerce, but for his own part he could not see that competent persons to carry on the work were procurable in Yokohama.

Mr. Obata Iwajiro supported the Bill. Forty million *yen* of foreign capital flowed into Japan every year by the sale of silk, and undoubtedly the country suffered great loss in the weighing of the staple and in the expenses of inspecting, under the present system. A conditioning house was absolutely required, and Yokohama, being the centre of the export trade, was plainly the place to establish it.

Mr. Shigeno Kenjiro pointed out that a motion to apply the closure had been made before Mr. Taguchi ascended the rostrum, and the permission accorded to him to address the House had consequently been out of order.

The President explained that the closure had been moved before the Bill was under discussion, and before the process of questioning its introducer had been concluded.

The Bill was entrusted to a Special Committee nominated by the President.

Mr. Shuto Rikuzo, introducing the Representation with reference to Inundations, explained that the Prefectures of Akita, Yamagata, and Shimane had suffered even more than other Prefectures to which large state aid had been granted in former years, yet no steps had been taken to relieve them. The Representation urged the Government to prepare and submit a Budget at once.

Mr. Furuichi, Government Delegate, stated that before granting aid in such cases, where public works were principally concerned, the Government deemed it essential to make full preliminary investigations. On previous occasions a term of six months had been required for that purpose, and six months had not yet expired in the present instances. The investigations were nearly concluded, and the necessary estimates would soon be compiled.

Mr. Haseba Junko pressed for a distinct statement in the name of the Cabinet as to whether grants in aid would be made, but Mr. Furuichi declined to speak for the Cabinet, or to pledge even the Home Department to anything definite pending the conclusion of the investigations.

Mr. Haseba said that he did not wish to discuss with Mr. Furuichi. The Minister of Home Affairs was present, and he trusted that his Excellency would give some definite reply.

Viscount Nomura, Minister of State for Home Affairs, said that no definite declaration had been made by the Government of a resolve not to make grants in aid of the distressed districts because of the war. Unquestionably, in view of the heavy expenses devolving upon the State in connection with belligerent operations, and in view, also, of the fact that the issue of the war could not be foreseen, the policy of the Cabinet was to avoid all large issues from the Treasury on other accounts. But the Government could not see the people suffer unaided. It would certainly make every possible effort to do what was required by the circumstances. On the other hand, the circumstances must be duly investigated. Whatever the Diet might say, they might as well understand distinctly that the Cabinet would pledge itself to nothing in such a matter until full inquiry had established the facts of the case. Such inquiry was now in progress, and on its conlusion the necessary measures would be adopted. The Government was not indifferent to the people's cry of distress. Further, even though no appeal were made to it, it knew its duty and would do it. But no appeal, whether from the House or from the people, would be held sufficient to warrant final action until proper investigations had been made.

Mr. Koizuka Ryo complained that whereas, according to the statement of the Government Delegate, the investigations were already concluded in the case of Shimane Prefecture, no appropriation had been asked for. Apparently the Prefectures of Yamagata and Akita were to be the means of keeping Shimane in a state of unaided distress.

Mr. Fuji Kinsaku considered that the matter should be left entirely in the hands of the Government. He reminded the House that whereas, in a former year, certain Prefectures had asked for 15 million *yen*, they had been content with 8 millions in the sequel of official investigations.

The closure having been put and carried, the House voted the Representation and rose at 5 p.m.

TUESDAY, JANUARY 15TH.

HOUSE OF PEERS.

The House met at 1.30 p.m., the Order of the Day being :—

1.—Supplementary Budget and correlated Appropriations for the 27th year of *Meiji*.

Viscount Soga, on behalf of the Budget Committee, reported in favour of the Supplementary Budget, but stated with regard to the appropriation for the Yokohama Harbour Works, that although a loss of some 300,000 or 400,000 *yen* had been caused by a failure in the concrete blocks, the Committee had failed to obtain any satisfactory explanation from the Government Delegate. The time at their disposal had not been sufficient to enable them to push their inquiries thoroughly. It did not seem to the Committee that the passing of this Budget was a matter of so much urgency as the Government's request implied, and they desired to examine it more at leisure. The Delegate had recognised the advisability of establishing an

said that no one was responsible, and that accidents of a similar nature could be avoided in the future by careful organization.

Baron Date asked the Government Delegate to explain.

Mr. Furuichi briefly explained that it had been impossible to determine whether the defects in the blocks were due to bad materials or faulty mixing. But the responsibility rested with the inspecting engineer, Major-General Palmer, and as he was dead, nothing could be done.

Viscount Tani wanted to know who could be responsible in future. The past was now irrevocable, but in the case of such an important work they should know clearly on whom the responsibility would rest hereafter.

Mr. Furuichi replied that each engineer would be responsible for his own section, but although much pressed by Viscount Tani, he declined to say who would be responsible in chief.

Baron Date complained of the Delegate's vagueness, and asked the Minister of State for Home Affairs to give an explanation.

Viscount Nomura, Minister for Home Affairs, replied that the causes of the failure of the concrete blocks were of a purely technical character, and that it had not been found possible to discover them. The extra expense incurred was most regrettable, but nothing further could be added by way of explanation.

Baron Date was not at all content that the whole blame should be laid on a deceased foreign engineer. He wished to know whether the final function of inspection had not been performed by the Government, and if so, whether the ultimate responsibility did not rest with the Government.

The Minister of State replied that undoubtedly the Government had been ultimately responsible in the matter of inspection, but the Government of to-day was not the Government of that time. The thing was passed and they could only regret it.

In reply to Viscount Tani, Mr. Matsuoka, Vice-Minister of Home Affairs, said that the work had been entrusted to Major-General Palmer and the Government had not exercised any direct control.

Mr. Furuichi, replying to Mr. Miyamoto Koichi, said that it was impossible to examine every bag in thousands of bags of cement. A few were examined in each lot. Inspection of the cement remaining at the works had not shown any bad material.

Baron Date failed to understand how any guarantee could be given as to the stability of the blocks in future if the causes of their defects in the past was unknown.

Mr. Furuichi said that they had now found by experiment a lasting form of block.

After further discussion of a desultory character, the Supplementary Budget and correlated Appropriations were passed, the Government having explained that the allowance of 1,000 *yen* on account of travelling expenses abroad, made to Professor Tanaka, the inventor of a new kind of piano, would have been the usual amount (2,500 *yen*) had not the circumstances of the time dictated economy.

The House rose at 3.45 p.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.10 p.m. the Order of the Day being :—

1.—Bill for extending the charters of the National Banks.
2.—Bill relating to the Note Issues of the National Banks.
3.—Bill for supplementing Law No. 25 of the 23rd year of *Meiji*.
4.—Representation relating to Damage by Earthquake in Yamagata Prefecture.
5.—Bill relating to the Shares of Private Railways.
6.—Bill relating to Temple Lands.
7.—Bill relating to Temple Forests.
8.—Representation for increasing the Commercial Navigation School.

Mr. Taguchi, Government Delegate, reminded the House that the first Bill on the Order had been passed by a large majority in the preceding session. It would not be necessary, therefore, to offer any explanations until the Special Committee's report was presented. In answer to questions, he said that the Bank of Japan was satisfactorily discharging the business of a central bank, and that the Government

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

industrial bank and had actually prepared a Bill in that sense, but owing to pressure of extraordinary affairs the project had been laid aside for the moment.

Mr. Kawashima Jun inquired whether the Government, having so emphatically committed itself to a declaration of the importance of this Bill, was prepared to dissolve the House in the event of the Bill's not passing.

Mr. Taguchi replied that it was not his place to answer such a question.

Mr. Shigeoka Kungoro, in view of the great importance of the Bill, and of the fact that the Banks were reported to have adopted most active measures involving large outlays to secure a majority of supporters in the Diet through the influence of the press, proposed that a Committee of 18 be nominated by the President, 9 from the party in favour of continuing the Banks as private institutions, and 9 from the advocates of extending their charters, and that explicit instructions be given to the Committee.

Mr. Mayekawa Makizo saw no occasion for such an exceptional course. Let the Committee of 18 be nominated by the President, and proceed to prepare its report in the usual manner.

Mr. Komuro Shigehiro failed to understand the idea of the Houses being divided into a party for continuing the Banks and a party for extending their charters. He did not believe that a single member of the House could be moved by the writings of such petty things as newspapers.

The House agreed, without division, to entrust the Bill to a Special Committee of 18 nominated by the President, and to entrust to the same Committee a Bill introduced by Mr. Komuro for extending the period of the Banks' charters.

The Bill relating to the Note Issues of the National Banks was entrusted to the same Committee without question or debate.

The Bill for Supplementing Law No. 25 was handed to the same Committee.

Mr. Suto Rikuzo, introducing the Representation relating to Earthquake Damage in Yamagata Prefecture, said that the measure was based on the same grounds as the Representation already passed with reference to grants in aid of inundated districts. He spoke at great length about the particulars of the sufferings inflicted by the earthquake, and declared that if the country could afford to treat its prisoners of war as luxuriously as the Chinese were treated, it could certainly afford to succour its own people.

Several members complained that no Government Delegates were present, although questions relating to this Representation called for reply. The President promised to make strong recommendations to the Government, and the House adopted the Representation without discussion.

Mr. Misaki Kamenosuke introduced the Bill relating to the shares of Private Railways. According to the present law, a private company could not commence work until at least one-fourth of its capital had been paid up. Doubtless such a precaution was useful to secure the public against bogus undertakings, but it had the effect of needlessly hampering enterprise. The amendment proposed was to reduce the compulsory amount to one-tenth of the capital.

Mr. Suzuki, Government Delegate, said that the Government offered no objection at the present stage; and the Bill was entrusted to a Special Committee nominated by the President.

Mr. Imai Isoichiro, introducing the Bill relating to Lands of Temples and Shrines, said that the object of the Bill was to restore to Temples and Shrines the lands of which they had been deprived at the time of the Restoration. The cultivation and planting of those lands through long centuries had been the work of pious parishioners, aided by grants from munificent patrons of religion. Such lands differed essentially in their character from the fiefs of the feudal nobles, and their confiscation by the Government, in lieu of a paltry allowance to the Temples and Shrines, was an act of flagrant injustice, quite inconsistent with the dictates of constitutional institutions. Its result had been to reduce the Temples and Shrines to a condition of indigence. They were unable to keep their buildings in repair, or to support establishments worthy of the place they held in the national sentiment, despite the subscriptions of charitable persons and occasional grants in aid from the Treasury. Yet these temples and shrines were among the most beautiful and interesting objects in Japan: they occupied a prominent place in her art treasures and had an intimate connection with her national history. There might be some apprehension lest, if the lands were restored to the Temples and Shrines, excessive felling of timber would take place. To guard against anything of that kind, a forestry law was appended to the Bill. In answer to questions, he explained that none of the lands in question had yet become private property; that their total extent was about 100,000 *cho* (250,000 acres); and that if private *rights*, acquired since the Restoration, were injured by the measure, the interests of the few must yield to those of the many.

Mr. Nakamura Yaroku opposed the Bill. Were it passed, equal justice would require the restoration of the Tokugawa and Tsugaru lands. A capital sum of about 30,000,000 was involved, and the country could not at present afford that. Already they were confronted by the pressing necessity of replanting lands that had been recklessly denuded of trees by the people, yet they were now invited to expose immense tracts of forest to a similar fate.

Mr. Hayakawa Ryosuke observed that Mr. Nakamura had supported the same Bill in a previous session. Be that as it might, however, they were invited to perform an act of justice, and the mere question of cost should not be considered deterrent.

The Bill was entrusted to a Special Committee nominated by the President, as was also the next Bill on the Order.

The Representation for increasing the Commercial Navigation School was then introduced by Mr. Komuro Shigehiro, who explained that the future of Japan must depend greatly on the development of her mercantile marine, and that her Commercial Navigation Schools in Tokyo, Osaka, and Hakodate were altogether inadequate to the needs of the time. The Representation therefore called upon the Government to present a Budget providing proper appropriations for the increase of those schools. The commercial marine had actual need of over 700 men to officer it, but only 139 graduates of the Schools were available, and if such were the state of affairs at present, how much more accentuated would it be when the conclusion of the war opened a new era of enterprise. He need only remind them that the Nippon Yusen Kaisha had over 200 foreigners in its employ. That fact alone should show the pressing necessity of the measure he proposed. A trifle of 40,000 or 50,000 *yen* would suffice.

After a few questions, the Representation was entrusted to the Special Committee already charged with the duty of reporting upon the Representation relating to the development of Navigation.

The House rose at 4.10 p.m.

WEDNESDAY, JANUARY 16TH.

HOUSE OF PEERS.

The House met at 10.50 a.m., the Order of the Day being:—

1.—Bill, sent up from the Lower House, for amending Law No. 84 of the 23rd year of *Meiji*.
2.—Bill, sent up from the Lower House, for rescinding Notification No. 20 of the 15th year of *Meiji*.

Mr. Watari Masamoto complained that the first Bill on the Order had come up unaccompanied by any statement of reasons.

The President said there was no help. He could not apply to the Lower House for the statement of reasons usually accompanying a Bill. Mr. Watari could consult the stenographic records of the Lower House.

Baron Date supported Mr. Watari, and urged the President to apply to the Lower House.

Mr. Murata Tamotsu asked whether the Government approved of the Bill.

The Government Delegate, Mr. Suyematsu Kuzuo, replied in the negative. The Government considered that Administrative Ordinances could not be efficiently enforced without penalties of the nature provided in Law No. 84, and that the mitigated penalties proposed by the Bill would be quite insufficient.

The Bill was entrusted to a special Committee nominated by the President.

The Second Bill on the Order, abolishing the veto upon communication between concerted members of different Prefectural Assemblies being introduced,

Mr. Suyematsu, Government Delegate, said that the Government did not approve of the Bill, but gave no reasons.

Mr. Mitsukuri Rinsho observed that since the rescinding of Article 13 of the Public Meeting Regulations, the Law in question had ceased to have any effect.

After some desultory discussion, the Bill was entrusted to a Special Committee nominated by the President.

The House rose at 11.45 a.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.10 p.m., the Order of the Day being:—

1.—Petition relating to Financial and Administrative Reforms in the island of Miyako, Okinawa Prefecture.
2.—Petition relating to Reduction of Fares on Government Railways.
3.—Bill embodying a Project of Law for the Registration of Buildings and Ships.
4.—Representation for the Abolition of the Law of Premonition.
5.—Bill for amending the Banking Regulations, contained in Law No. 72 of the 23rd year of *Meiji*.
6.—Bill for amending the Savings' Bank Regulations, contained in Law No. 73 of the 23rd year of *Meiji*.

Mr. Fuji Kinsaku presented a Question relating to the continuation of the Sanyo Railway from Hiroshima to Shimonoseki. Permission for the construction of the line had been given in a previous session, and its vital importance, both commercially and strategically, was now universally recognised. He wished to know why no steps had been taken toward its construction.

Mr. Ota Shinichi presented a Question with regard to the enforcement of the District Local Government System. The system had been promulgated in the 5th month of the 25th year, and put into operation from the 4th month of the following year in Aichi and eleven other Prefectures, but there the process had stopped. His Question was presented for the purpose of learning the reasons of the interruption.

Mr. Hamano Shimpei, on behalf of the Petitions Committee, explained that the Petition standing first on the Order was recommended by the Committee for adoption by the House, because the state of affairs in Okinawa Prefecture stood in urgent need of reform. The administration of the islands lagged far behind the general progress of the empire. In the island of Miyako there were 35,000 inhabitants of a very humble order, cultivating 11,632 *cho* (29,080 acres), and paying taxes that aggregated over 74,000 *yen*, an altogether excessive amount. Moreover, the number of officials employed in the island was 344.

The Government Delegate explained that a Bill on the subject was in process of preparation.

The House adopted the Petition unanimously.

Mr. Hamano, explaining the Second Petition, said that the sending of goods by Government Railways was hampered by many restrictions fatal to commercial convenience, and moreover, the rates of freight were higher than those on private lines.

Mr. Tanaka Torio opposed the Petition. The principal restriction complained of was that goods of different kinds were not allowed to be packed in the same waggon, an obviously necessary regulation. As to the comparison made between freights on State Railways and freights on private lines, it appeared that wherever the latter were cheaper, competition with maritime transport was the cause.

The House rejected the Petition.

Mr. Nishimura Shintaro, introducing the Bill for amending the Registration Law, said that the registration districts designated by the present law were too extensive; that the law was defective, and that it was not properly enforced.

The Bill, which was of great length, was entrusted to a Special Committee, after the Government Delegate had pointed out that it

Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

amend the Registration Law at present was virtually a superfluous task, since it must be again altered when the new Civil Code went into operation.

Mr. Hirata Shin briefly introduced the Representation for abolishing the Law of Premonition. He said that the House, having voted for abolishing the Peace Preservation Regulations, was logically compelled to adopt the same course in the case of this objectionable and unconstitutional law.

Mr. Tsuzaki, Government Delegate, declared that, in the present state of society in Japan, the Government regarded the law in question as essential to the preservation of good order.

The House passed the Representation.

Mr. Kozaka Zennosuke explained that the proposed amendment of the Banking Regulations had already received the House's approval in a previous session, but had failed to become law owing to its not coming up for discussion in the House of Peers. The contemplated amendment was to abolish the clause forbidding a bank to lend more than one-tenth of its paid-up capital to a firm or an individual. Such a restriction was opposed to the interests of trade. The Bill further proposed to change the banking hours fixed by the Regulations, in the sense that the banks should be open from 9 a.m. to 3 p.m., instead of from 10 a.m. to 4 p.m.

The Bill was voted at once, the Second and Third Readings being dispensed with.

Mr. Kozaka Zennosuke, introducing the Bill for amending the Savings' Bank Regulations, said that the present law required a Savings' Bank to keep, as security for the payment of its deposits, a sum equal to one-half of its paid-up capital, in the form of interest-bearing public bonds. No bank could carry on business under such a regulation. Its consequence had been to reduce the number of Savings' Banks in the empire from 300 to 20. The amendment proposed was that a bank must keep in reserve a sum equal to at least one-fourth of its deposits, in the form of interest-bearing public bonds, whether of the Central or a Local Government; and that when such sum amounted to one-half of the bank's capital, it might take the form of commercial notes or trustworthy company's shares. Other facilities, also, were proposed.

Mr. Tajiri, Government Delegate, said that the Government was not altogether opposed to the projected changes.

The Bill was entrusted to a Special Committee nominated by the President.

The House rose at 3.35 p.m.

THURSDAY, JANUARY 17TH.

HOUSE OF PEERS.

The House met at 10.45 a.m., the Order of the Day being :—

1.—Bill sent up from the Lower House for abolishing the Special System of City Government in Tokyo, Osaka, and Kyoto.
2.—Bill sent up from the Lower House, for supplementing the City Government System.

Visconnt Soga asked the Government's opinion with regard to the first Bill, and Mr. Matsuoka, Government Delegate, replied that the Government emphatically opposed it. As promised in a previous session, the Government contemplated introducing a project of law to amend the present system of city government, but the necessary investigations were not completed, and the occasion was not opportune, as explained by the Minister-President in his speech at the opening of the Diet. The Bill would be introduced next session.

The two Bills were entrusted to a Special Committee of 9 nominated by the Vice-President, the President being absent.

The House rose at 11.30 a.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.10 p.m., the Order of the Day being :—

1.—Bill sent down from the Upper House, embodying project of Game Law.
2.—Second Reading of the Press Regulations Bill.
3.—Bill for rescinding Law No. 7 of the 23rd year of *Meiji*.
4.—Bill for rescinding Notification No. 2 of the 18th year of *Meiji*.
5.—Bill for amending a portion of the Codes of Civil Procedure.
6.—Representation relating to the Restoration of Pensions and amendment of their amounts.
7.—Bill for amending the Regulations relating to Sureties.

Mr. Tsunematsu Yukei presented a Question [illegible] relating to the Administration of Forest Lands.

The first Bill, together with a Bill on the same subject introduced by Mr. Tsunoda Shimpei, were handed to a Special Committee appointed by the President.

Mr. Koizuka Ryo, on behalf of the Special Committee, reported that the Committee approved of amending the Press Regulations in the sense of abolishing the power of suspensions by administrative order, as well as the provision requiring the proprietor of a journal to deposit security with the Government.

Mr. Komuro Shigehiro complained that while the Government talked of harmonious cöoperation with the Diet, their acts, especially in opposing this Bill, belied their words. He noted, also, that the Government Delegate, in speaking of newspaper proprietors, described them as "Shimbun-ya," thus placing them on the same level with fishmongers and confectioners. The House of Peers, too, in opposing this Bill, showed that it took no heed of the nation's wishes.

The House voted for the Second Reading and proceeded with it at once, passing all the clauses as amended by the Committee.

Mr. Kusakari Shimmei, introducing the next Bill, said that, under the existing law, a defendant desiring to appeal from the judgment of an inferior tribunal in a case of crime, had to lodge a sum of 20 *yen* with the Court. Thus poor people were practically excluded from the privilege of appeal, and condemned to be content with the verdict of a lower Court, however unjust. The Bill proposed to abolish that provision.

Mr. Kanaoka Matazayemon pointed out that there was a special regulation empowering the Public Prosecutor to exact or dispense with the security in question according to his own judgment. Hence the abolition of Law 7 would practically leave the matter as it was, unless they rescinded the special regulation also.

Mr. Kusakari recognised the difficulty, but explained that the special regulation referred to was virtually inoperative.

Mr. Yoshimura Yukichi moved that as the next two Bills were correlated measures, all three should be entrusted to the same Committee, and the House agreed, after some remarks from the Government Delegate, explaining that the change proposed by the fifth bill would involve considerable confusion.

Mr. Komuro Shigehiro explained that the Representation standing 6th on the Order had several times been before the House already. Briefly speaking, its object was to correct many injustices committed when commuting and otherwise dealing with hereditary incomes in the early days of the *Meiji* era, and after the Satsuma Insurrection.

The Representation was entrusted to a Special Committee, as was also the 7th Bill, after some discussion.

The House rose at 3.50 p.m.

WAR NEWS.

MONDAY, JANUARY 14TH.

The capture of Kaiping by Major-General Nogi's Mixed Brigade is the journalistic topic of the moment. The leading newspapers of Tokyo evidently recognise the importance of the event from a strategical point of view. The *Nichi Nichi Shimbun* is notably explicit. It points out that with the Second Army, or rather a Brigade of it, at Kaiping, and the left wing of the First Army at Haicheng, General Sung is effectually separated from the rest of the Chinese forces in Manchuria, and must now retreat toward Chinchow and Shanhaikwan. We do not, for our own part, accept that view as conclusive, Sung may still make his way *vid* Newchwang (the old town) past Haicheng, striking the Laoyang road a few miles north of the latter town. At present, however, he does not seem to contemplate any such movement. On the contrary, his apparent purpose is to cover Yingkow, for he has established outposts at Kaokan, on the road leading north from Yingkow to Haicheng, and at Pulantien, on the road leading east to Kaiping. In short, he is facing both Katsura and Nogi, seemingly resolved to defy the advance of either against Yingkow, and to guard the coastwise road to China proper. From Yingkow to the important town of Chinchow is only a little more than 100 miles. Once Sung's forces are swept out of the path, there will be nothing, except commissariat difficulties to prevent the Japanese troops from pushing on to Chinchow, provided that they can hold Haiching and Newchwang (the old city), so as to guard their coastwise communications against attack from the troops massed in the neighbourhood of Mukden. It seems uncertain whether the Japanese will advance immediately against Yingkow. The foreign settlement there presents a complication that they are apparently unwilling to unravel. We interpret their present intention to be manœuvring of such a character as shall compel the Chinese forces to evacuate Yingkow and withdraw from its neighbourhood. The *Nichi Nichi Shimbun* notes the criticism pronounced by some onlookers, ourselves among the rest, that the northward movement of the Second Army from the Liaotung peninsula was delayed longer that seems consistent with a well matured scheme of strategy. Our contemporary reminds its readers that Nogi's Brigade had to set out in mid-winter, and that the preparations for such an advance must have been very extensive. That is quite true. These winter campaigns are terrible things. Seldom, very seldom, are they attempted. Critics sitting comfortably at home with the map spread out before them, may wonder at this or condemn that, but in the end all must concur in admiring the organization and courage that the Japanese troops are displaying.

Since writing the above, further intelligence of Sung's movements has been telegraphed from Chinchow, under date 7.50 a.m. on the 12th instant. It embodies a report from the Staff to the effect that the enemy moved from Yingkow in the direction of Kaiping on the 8th instant, presumably under command of Sung, and, on the night of the 10th, halted at Lanchichang, a town about midway between Yingkow and Kaiping. It was supposed that these forces would continue their advance on the 11th, but they showed no sign of doing so. Reconnaisances were being conducted to ascertain their movements.

With regard to the details of Major-General Nogi's march against Kaiping, we find some official and some unofficial accounts. His movements up to the time of the attack are reported by the *Jiji Shimpo* and the *Yomiuri Shimbun*. According to the former, he marched out of Chinchow on the 1st instant; according to the latter, on the 31st ultimo. Collecting the troops stationed at Pitszwo and Pulantien (Port Adams), he pushed on rapidly, reaching Hiungyochang (90 miles from Chinchow) on the 8th instant, and halting there for the night. On the 9th, he covered a distance of 15 miles, and bivouaced within 8 miles of Kaiping. These 8 miles he travelled the following morning, and got within striking distance of Kaiping. He found the enemy established on the opposite bank of the Kaiping river, which runs on the south of the town, their line of defence extending some 1,300 metres. The Chinese forces consisted of 11 regiments (nominally 5,500 men) and 200 artillery with 4 guns. The attack commenced at dawn, and by 9.30 a.m. the Chinese were in full retreat, pursued by the Japanese cavalry. The enemy were under the command of Generals Nieh and Chang, and the Japanese got within 50 metres of the cart in which the former was riding at the time of the retreat, killing his horse and wounding him in the body, but failing to take him prisoner. The pursuing cavalry reported that a large force of the enemy, apparently about 10,000 strong, were posted on the high road to Yingkow, and that the fugitives from Kaiping joined them. It is conjectured that these troops were under the command of Su Pang-tao, who was known to be in the neighbourhood, at the head of 18 regiments. They appear to have retreated with the fugitives from Kaiping. Major-General Nogi posted his advance guard

Digitized by Google UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

in Haishanssi, a town 5 miles beyond Kaiping in the direction of Yingkow. He reports that about 200 of the enemy were killed and 150 taken prisoners, but the number of their wounded is not ascertained. At noon on the 10th a force of the First Army under Major Aoki entered Kaiping, thus effecting a junction with the Second Army. Nogi's troops fired 575 rounds of grape and shrapnel, and rifle ammunition enough to fill a small Japanese *kori* (we quote the official report) in the attack on Kaiping, from which details it may be inferred that the battle was in part an artillery duel, and that, while the fighting lasted, it must have been pretty severe. Five hundred and seventy rounds of shrapnel is a very large expenditure, but it has been proved that nothing does so much execution among the Chinese as the Japanese shrapnel. The *Kokkai* estimates that a small *kori* full of rifle ammunition represents 120 rounds per man, but that, of course, depends on the number of the troops engaged. The Japanese loss was about 50 killed and wounded. General Nieh, who is said to have commanded the Chinese, is doubtless Nieh Ch'chang, of Phyongyang notoriety, and General Chang, his associated commander, is Chang Kwangtsien, who suffered defeat at Port Arthur. We note that there seem to be doubts as to the presence of either of these Generals, as well as of Sung himself, in the part of Shinking now forming the battle-field. Thus, a telegram despatched from Hiroshima on the 12th instant and published by the *Kokkai*, alleges that Nieh is still at Motienling and that Sung has made his way to Laoyang. It is plain, however, that Nieh, at all events, was at Kaiping on the 10th instant.

The *Hochi* says that a powerful army of Chinese troops is assembled at Chefoo and Weihaiwei under several Generals. Twenty thousand are said to be at Chefoo, commanded by Sun and Li, and eleven thousand at Weihaiwei under Wu Ta-chang, to whom must be added the original garrison of 6,500, making nearly 40,000 in all. Sun has posted a force of 3,500 cavalry on the north and south of Chefoo, armed with Winchesters, and has distributed bodies of from 250 to 500 strong at intervals of two or three miles along the coast. These men are supposed to be continually on the watch to give notice of the coming of the Japanese.

According to the *Choya*, Liu Kwan-yi has at length accepted the post of commander-in-chief at Shanhaikwan, for which place he set out from Tientsin, with about 200 officers and 15,000 soldiers on the 3rd instant. Shanhaikwan having been hitherto under the control of the Viceroy Li, it is presumed that the latter's forces will be withdrawn when Liu arrives.

In the *Nichi Nichi Shimbun* we read that although a very large force is assembled at Shanhaikwan, desertions are continually taking place. The majority of the troops are raw levies. Twenty or thirty desert daily from each regiment, their object being to escape to another district, and enlist again, for the sake of the bounty.

The *Yoshino*, reconnoitering Weihaiwei on the 1st instant, says the *Nichi Nichi*, observed two torpedo-boats steam out to the entrance of the harbour, but they did not attempt any attack. The Chinese ships are still there, but they have moved farther into the harbour, and are painted an ash colour.

The *Hochi* says that the Chinese garrisoning forts along the sea-shore are observed to fire vigorously upon an enemy at a long distance, but their cannonade grows less as the enemy approaches. That is due partly to their want of steadiness, but chiefly to the fact that they can not depress their guns sufficiently to bring an object within effective range at close quarters. A fast ship can consequently steam into the zone of safety very soon. Our contemporary adds that the defect is not confined to Chinese forts.

It would appear that the Head-quarters at Hiroshima are now in direct telegraphic communication with the First and Second Armies. The *Yomiuri* says that the through line was opened on the 30th of December at 2.37 p.m. Apparently the *Yomiuri* is correct as to the fact of such communication's existence, for the War Office in Tokyo received on the 13th instant, a telegram despatched from Hiroshima at 12.40 p.m. the same day, giving the substance of a message sent from the Staff at Chinchow at 7.50 a.m. on the 12th instant. Moreover, the Chinchow telegram contained news from Kaiping up to the 11th. Thus Tokyo seems to be brought within 48 hours of the scene of military operations in the south of Shinking. The *Yomiuri* adds that by the 31st ultimo a postal system between the two Armies had been fully organized. That is a most satisfactory state of affairs.

Commander Kurooka, of the *Tsukuba Kan*, telegraphs from Fusan that the Tong-hak insurrection in the Junten district has been suppressed. Insurgents have proved the genuineness of their surrender by decapitating their chief Kim Jinhai, as well as his lieutenant, Liu Katok, and by shooting another leader, Bok Kosai, with about 40 of his followers. Yet another leader, Kim Ka, and four subordinates are under arrest. Commander Kurooka, together with the Korean authorities, inspected the heads or corpses of all the persons killed and saw the prisoners. He reports that a division seems to have happened among the Tong-haks. A rumour got abroad that some of them, combining with Japanese marines at Sasuiei, were about to attack Junten, and this terrified the rest into submission. The rebels who had surrendered came out, with a Korean band of music, to welcome Commander Kurooka and his men, and to invite them into the castle. In view of the changed aspect of affairs in the Junten district, the *Tsukuba Kan* has returned to Fusan.

Tuesday, January 15th.

Major-General Nogi telegraphs from Kaiping on the 12th instant, to say that his scouts report the presence of the enemy, to the number of about 10,000 in Rhtasho, that, according to intelligence received from the Third Division in Haicheng, the Chinese troops are massed in considerable numbers at Laoyomiao. To make the position plain, we may add that Rhtasho and Laoyomiao are towns on the East of Yingkow (modern Newchwang), the former at a distance of 8 miles, the latter at a distance of 10. They are on different roads, but the lateral interval between them being only 6 miles, troops stationed at the places are virtually in communication. Evidently Sung contemplates a strong resistance on the east of Yingkow, his object being to defend the mouth of the Liao river, which constitutes the waterway to Mukden, as well as the chief waterway of the province of Shinking. It is probable that the Japanese are not very anxious to capture Yingkow itself, as the presence of a foreign settlement there would introduce a troublesome complication into the programme of occupation. But since Sung has chosen the environs of the town as a battle-field, Katsura and Nogi have no alternative. They will doubtless make a concerted attack against Sung's position. Haicheng is about 33 miles from Yingkow; Kaiping is 24. The two Japanese Generals are in telegraphic communication *via* Takushan and Chinchow, a military line of wires has been carried from Takushan to Haicheng *via* Suiyen, and the original Chinese line, from Port Arthur *vid* Chinchow and Fuchow along the west coast of the Liaotung peninsula, is in use. According to intelligence published by the *Yomiuri Shimbun*, General Sung seems disposed to make another attempt to recapture Haicheng, but it is difficult to see how he can do so with Major-General Nogi's Brigade threatening his base at Yingkow.

The prisoners taken at Kaiping state that in addition to the troops already reported as present in Kaiping at the time of its attack, there were three of the Chunchien and Hingtsz regiments. That would bring the enemy's nominal strength to 7,000.

The *Yomiuri* says that the remnants of I's forces, which were threatening the right flank of the First Army's Right Wing have been compelled to retire owing to the cold, and are now out of the field altogether.

Unquestionably General I is the best of the Chinese captains hitherto opposed to the Japanese. The latter speak of him in high terms and say that his manner of handling his troops and planning his attacks bespeaks much military skill. His cavalry, too, are said to be particularly good. The *Nippon* writes that I was educated in Germany.

News has been received from Shanghai that a battle was fought near Newchwang (Yingkow) on the 13th instant. That a battle of considerable magnitude and importance is to be expected there there can be no doubt, but inasmuch as Tokyo is now within a day's telegraphic communication with Kaiping, it is most improbable that had a battle taken place on the 13th, intelligence would not yet have reached us.

Wednesday, January 16th

There is an absolute dearth of intelligence from the front this morning. The *Nichi Nichi* published a telegram from Shanghai, dated the 14th at 2 p.m., to the effect that H.E. Chang has arrived there with a retinue of 50 persons, and that much opposition to his mission is being fomented in Canton. The southern Chinese are said to be opposed to the notion of such a humiliating procedure as submitting to the haughty and aggressive Japanese.

The Peiyang Squadron, always an object of the keenest interest to the Japanese, is said to be unquestionably in Weihaiwei, which port is protected at the entrance by torpedoes and booms. It is alleged, however, that the ships constantly have their fires lit, and that they are observed exchanging frequent signals with the forts, as though some project were on foot. This intelligence is conveyed in a telegram from Moji. The message adds that no possibility of escape now exists for the ships.

The *Nippon*, speaking of the latest addition to the Japanese Navy, namely, the *Izumi Kan*, notes that her complement consists of a Captain, a Commander, and 298 officers and men. The *Chiyoda* has 306 men, and the *Kongo* and *Hiyei* 285 each, so that the class of the *Izumi* may easily be inferred.

The *Kokkai* undertakes to analyse the cause of the Chinese troops' inability to cope with the Japanese, but our contemporary's reasons resolve themselves simply into bad organization and worse tactics.

The designation of the King of Korea has been settled, says a Sōul telegram, dated the 14th and published by the *Jiji*. He is to be called *Taikun Yu Heika*.

Thursday, January 17th.

The *Shogyo Shimpo* publishes an important item of news, namely, that the Japanese troops are attacking Yingkow, and that its Chinese defenders have begun to retreat in the direction of Chinchow. The intelligence comes from Shanghai, and is dated 15th instant at 10 a.m. Consequently, the attack referred to must have taken place on the 14th, and had such been the case, the fact should have been already known in Japan by a direct telegram from Kaiping. We are disposed, therefore, to doubt the news.

With the exception of the above item, there is nothing of importance relating to the war. Various statements are published as to the defences of Weihaiwei. The *Nichi Nichi Shimbun* says that 3,000 troops from Hunan have been added to the defenders, and the *Kokumin* puts the number of troops assembled to protect the place on the land side at 14,000, under the command of Tantai King and General Sun.

The *Kokumin* publishes a telegram from Hiroshima, saying that seven Chinese transports and five men-of-war have been lying for a long time in Shanghai.

According to a telegram from Shimonoseki published by the *Kokkai*, five Chinese transports, carrying troops and munitions of war, were ascending the Hwanho on the 29th of last month, when they encountered a violent gale. One of the transports was sunk, two were driven on the rocks, and the other two escaped with injuries more or less serious. Three hundred soldiers were drowned, and a quantity of stores were lost.

The *Yomiuri Shimbun* says that the Chinese

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

Envoys are expected to arrive at Shimonoseki on the 24th instant. If that be so, they will just be in time to meet Mr. Foster on his coming from America.

FRIDAY, JANUARY 18TH.

Lieut.-General Nodzu, telegraphing from Suiyen under date of the 15th instant at 11 p.m., says that, according to intelligence received from Major Aoki, of the staff in Kaiping, there appear to be undoubtedly 44 regiments of Chinese troops assembled in the neighbourhood of Yingkow; namely, 18 regiments under Su Pangtao, 5 under one of the Changs, 18 under the other Chang, and 3 under Ku. That means a total of about 20,000 men.

"On the 12th of December," writes the *Nichi Nichi Shimbun's* war correspondent, "intelligence having been received that the enemy at Yingshukow had retired upon Tomucheng, the plan of the Division's advance was altered, and at dawn it marched direct by the high road against Tomucheng. The advance guard moved by the high road, the main body following, and the 19th Regiment, under Colonel Awa, was directed to shape its march so as to threaten the enemy's line of retreat. This last body encountered, *en route*, a force of the enemy on the east of Potsaoaokow, and defeated them, capturing two guns. At the same time, the Division itself advancing direct, entered Tomucheng, and the Chinese retreated before it. Meanwhile, Major-General Oseko, in command of the right wing, had come in contact, on the previous day, with the portion of the enemy's troops under General Ma, at Hwalunglao, and having defeated them, had marched on towards Tomucheng, reaching it almost simultaneously with the centre advancing by the high road. Thus Tomucheng was assaulted from three directions, by Oseko on the east, by the centre of the Division on the south, and by Colonel Awa on the south-west. At 10 a.m. the place was entirely in Japanese possession, the enemy having burned his head-quarters and fled. The Chinese forces aggregated from 9,000 to 10,000; namely, about 2,000 at Yingshukow, 3,000 in Oseko's front, and from 4,000 to 5,000 on the high road. A small force having been left to hold Tomucheng, the three portions of the Division were united, and a column having been despatched in pursuit of the enemy, the general forward movement was resumed toward Haicheng. In the afternoon, the advance guard came up with the enemy's rear, and after some fighting, captured Yingchangtsz. The Division halted for the night in Yangchiatien, the Commander-in-chief preferring to let the enemy re-assemble in the neighbourhood of Haicheng, so as to strike another crushing blow. The marching during that day had been terribly hampered by snow, frost, and mud, especially in the case of Colonel Awa's regiment whose route lay through the mountains. But the troops made nothing of these obstacles. The advance guard was on the march almost continually for 10 hours from daylight, yet the men showed no signs of fatigue."

The *Hochi Shimbun* has an interesting note about the number of ships acquired by Japan since the war broke out. Our contemporary puts them at 32, with a total tonnage of 81,554 tons, being an average of 2,548 tons. The names and tonnage (burden) are as follow:—

Name.	Tonnage.	Name.	Tonnage.
Otaru Maru	2,374	*Toyo Maru*	2,089
Kokure Maru	2,389	*Taiyo Maru*	1,267
Fusan Maru	2,362	*Yamaguchi Maru*	3,033
Sakun Maru	2,818	*Yamato Maru*	3,067
Himeji Maru	3,008	*Oyo Maru*	1,892
Ujina Maru	2,375	*Tatayama Maru*	2,162
Shibata Maru	2,690	*Kagoshima Maru*	4,139
Fukuoka Maru	2,538	*Konoura Maru*	2,265
Matsuyama Maru	2,958	*Koko Maru*	542
Toyohashi Maru	2,878	*Kiushiu Maru*	3,555
Izumi Maru	3,224	*Ryojyun Maru*	4,670
Soya Maru	1,725	*Tosa Maru*	5,402
Iburi Maru	2,520	*Moji Maru*	2,040
Shinshu Maru	2,838	*Ninsen Maru*	2,189
Sanyu Maru	588	*Gensan Maru*	2,198
Edo Maru	1,670	*Tamashima Maru*	2,035

The *Kokkai* says that the Chinese Government is in treaty for the purchase of the *Nictheroy* and *Odoria* (?) from the Brazilian Government. These ships were built, we read, at New York for the purposes of the insurrection in Brazil, and being no longer required, were offered for sale by the President. The officers of the *Nictheroy* were asked what they would take for three months service against the Japanese at Weihaiwei, and they replied, $3,000 for the voyage out and $5,000 for the fighting. It is said that the decision of the Chinese Government to buy or not, depends upon whether the officers and crews can be induced to go out with the ships. The *Nictheroy* is a wooden corvette of 1,800 tons, built in 1862, and having a speed of 8 knots. Her armament is twelve 70-pdr Whitworths. What such a ship could accomplish if she did come out, we do not perceive. The other vessel we can not identify.

A telegram from Fusan says that the work of quelling the Tonghaks proceeds apace. Captain Miyake's troops, guarding Ukuton and Taifun sent detachments which joined forces with the surveying engineers, and the whole, marching against the Tonghaks at Chyunchyon, Chhonsan and Poun, broke them completely, killing over 300.

The *Mainichi* publishes a telegram from Hiroshima saying that H.E. Chang, during his stay in Shanghai, inspected the Woosung forts and witnessed target practice there. The shooting was miserable, not a single hit being made.

SATURDAY, JANUARY 19TH.

The *Nichi Nichi Shimbun's* war correspondent continues his detailed narrative of the operations ending in the capture of Haicheng on the 23th of December. He gives nothing beyond a mere outline of movements of troops, interspersed with names of places. Our readers would find no interest whatever in the account, and we therefore refrain from translating it.

The latest intelligence from Kaiping is conveyed in two telegrams addressed to the War Office from Colonel Inouye, Head of the Staff with the Second Army. Our readers doubtless remember that after the capture of Kaiping by Nogi's Brigade, the Chinese General Sung posted his forces on the two roads leading toward Kaiping from Yingkow, the position (Rhtaohotsz) occupied on the coast road being some 8 miles from Yingkow, and that (Laoyomiao) occupied on the more northerly road being 10 miles from the same place. The first of the two telegrams referred to above was despatched from Kaiping at 7.45 p.m. on the 16th inst. It says that the Chinese troops at Laoyomiao had retreated to Tangchiapaotsz, and those in Kaokan (a place on the north of Yingkow at the junction of three roads) had also retired westward, but that the force ■ Rhtaoho remained as before. The telegram adds that, according to intelligence obtained from people of the locality, the Chinese troops massed in the immediate neighbourhood of Yingkow numbered about 7,000, a still larger force being posted to the westward of Yingkow, between that place and Tienchwangtai. The second telegram, also despatched from Kaiping and dated the 17th instant ■ 4.40 p.m., says that, on the morning of the 16th, the forces at Rhtaohotsz also retired, and adds that, according to information obtained in the vicinity, they numbered only a thousand infantry and a hundred troopers with three guns—evidently a mere outpost. The direction taken by these troops in falling back was Yingkow. The Tangchiapaotsz force also retired, on the 15th, to Kanchiahiofang, a hamlet 5½ miles east of Yingkow. Thus the two positions, Rhtaohotsz and Tangchiapaotsz were completely abandoned. Translated into simple language, the meaning of all these movements is that Sung is drawing in his outposts and concentrating his troops so that the van holds Yingkow and its immediate neighbourhood, and the main body is posted on the coast road beyond that city in the direction of Tienchwangtai. The last named town, being on the western bank of the Liao river, probably offers excellent facilities for defence. It looks as though the Japanese were manœuvering so as to force Sung to evacuate Yingkow without fighting and make his final stand westward of that city. We trust they may succeed, so that Yingkow (Newchwang) will be saved from the perils attendant upon the retreat of a Chinese army after a battle.

The *Nippon* gives the most accurate estimate yet published of the Chinese troops assembled at Shanhaikwan. It puts their total number at about 30,000, under the command-in-chief of Wu Ta-cheng and Siang Ng. The composition is as follows:—

	Regiments.
Tsin troops under Lin Shuynen	7
Wuwei troops under Wei Kwangtao	10
Kangwu artillery under Tsang Kwangchun	1
Kangwu infantry under Tsang Kwangchun	2
Chantsz infantry under Yu Huan	3
Hutsz infantry under Meu Tsiang	7
Tietsz infantry under Tiung Tieshang	10
Chungsin infantry under Tan Wanhwan	5
Kaitsz artillery under Wu Yuenkai	4
Liu Kwangtsai's infantry	3
Wang Liusan's infantry	1
Total	53

The *Nippon* says the Commander-in-chief at Weihaiwei is Tai Tsung-chien, and that the original garrison consisted of 8 regiments of Suikung troops, now constantly receiving large reinforcements. Four regiments of Sungwei troops are at Chefoo.

LETTER FROM CHINCHOW.

(FROM OUR CORRESPONDENT).

Chinchow, December, 1894.

I inhabit at Chinchow the Hotel of the Invalids, for that is the name with which my comrades have christened my dwelling and the name that it will carry down to posterity. In this hut, the four walls of which can hardly stand upright, when the wind whistles in and the rain makes its reservoirs, I have narrowly escaped death. Even while writing these lines I have not yet recovered from the dreadful shock that has inspired terror into my soul and inflicted suffering on my poor body. You may believe me when I say that for the future I shall have nothing more to do with Chinese *kangs!*

You can have no idea of the installation. We are living in the houses of the fugitive Chinese. It has been found necessary to shelter an army in a place that is a mere burrow, and to lodge two thousand men in veritable dens. The Head-quarters Staff have set their wits to work to find as good accommodation for everybody as possible, and, frankly speaking, they have made wonderful use of a most unpromising place. I have as companions two excellent confrères and a distinguished Japanese, Mr. Sameshima, brother of the old Japanese Minister in Paris, whom the Government has had the delicate kindness to attach to us. We were allotted the house of a carpenter, who was certainly wrong in not carrying away the dust of his dwelling on the soles of his shoes. The house consists of two little rooms, which I could cover easily in three strides. Two of us live in each of these cells. A table and two stools constitute all the furniture. On a sort of platform raised about four feet from the ground our mats are spread and our coverings piled. I call your attention specially to this square of bricks to which I have given the inappropriate name of platform. It is in itself the chief thing in the room, being at the same the bed and fire-place underneath. The interior closely resembles a baker's oven: through an opening firebrands and great pieces of wood are thrust into the kiln. Quietly settled on the top you feel a gentle heat penetrating all your body. To roast you and serve you up hot all that has to be done is to make up the fire a little. In a short time you would be done to a turn. The evening of our arrival, tired out by a long march and frozen by the cold, we experienced inexpressible pleasure in stretching out our icy bodies upon the warm bricks. A catastrophe was imminent. Ignorant of the local customs, our Japanese servants, instead of feeding the fire with wood, simply stuffed the *kang* with pit-coal. It meant quick asphyxiation. Originated in the middle of the night I and my

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

companions fell like heaps from our platform and lay inanimate on the floor of our room. One of us fortunately had strength enough to drag himself out-of-doors and call for help. Some people immediately appeared upon the scene just in time to bring our four corpses back to life. It is an ill wind that blows nobody any good. Since our accident the troops have been forbidden to make use of these "*fours à corps*." China will do more harm with her coal than with her cannon.

A crenelated wall surrounds Chinchow on all sides, and at the four corners of the town heavy fortress gates defend the entrance. The Japanese sentinels in their straw sentry-boxes keep good guard. In order to enter one must show *patte blanche*. All the thresholds crossed, you find yourself in the middle of the conquered population. Very ugly, very dirty, very repugnant is this crowd of Chinese covered with sordid rags. By their side the coolies draped in their blankets have the look of great gentlemen, and the soldiers that pass wrapped in their long grey overcoats seem like rich proprietors. On the arrival of the troops the town was, so to say, deserted. The inhabitants had fled. Then, little by little, finding that those who had stayed behind had not been molested, the Chinese responded to the request of the authorities and again took possession of their homes. They are returning; there are already more than 1,500 of them spread over the town and supplying the army with fowls and vegetables. The street presents a curious spectacle in the morning. On the right and left, drawn up in front of the houses, the inhabitants stand with ducks or fowls between their legs waiting quietly and resignedly for their clients. By their side urchins, hardly bigger than the high shoes they wear, sell cakes and other sweetmeats in boxes that they carry hung to their necks. All these dirty people do a very good business, for the supply is not greater than the demand. Soldiers in their idle moments have insatiable appetites. Every corporal with any self-respect expects to have in China a fowl in his pot, and even a coolie, unless he wishes himself to be considered a blackguard, must pay regular attention to his provisions. It is a a perfect menagerie. What is really comic is to observe what efforts all these people have to resort to in order to make themselves understood. The least purchase necessitates about an hour's parley. It is not uncommon to see the impatient client simply place the object of contest under his arm and decamp. That is what the cooks call here in their euphemistic language "marchander."

It must not be concluded, however, that the conduct of the Japanese soldier on a campaign is unrestrained. I have just spoken of the coolies, and the coolies are by no means soldiers. The soldiers themselves, according to those who have followed and watched them from the commencement of hostilities, are admirably disciplined. In these silent streets, deserted after 6 o'clock in the evening, it is difficult to figure to ourselves that we are in a conquered country in the middle of a victorious army. Not a sound escapes from these little hovels hermetically closed where the Japanese soldiers live in groups of five, ten, or fifteen. No sounds of mirth are heard in the daytime, no songs at night. These men are decidedly silent in their victory. They amuse themselves and triumph in their own way, without noise, without *éclat*, without many words, like good children of a united family who, even in their games, know that fixed upon them is the inflexible eye of the father, their master.

Marshal Oyama does not lose sight of his army for an instant. The first to share its fatigues and privations, he always takes his place at its rejoicings. These are at the present time of great number and variety. The day after a forced march, an assault, or a battle, lengthened repose succeeding continual alarms does no good to an army on a campaign. The ardour which on the one day sustained the body and forced "the old carcass" to march though worn out, will be extinguished if inaction and idleness are allowed to follow it, and the sacrifices will become harder, the privations more painful. The soldier must therefore be occupied and his morals kept up. The officers, with this end in view, have spared no trouble in providing distractions for the men, and, as I have personally taken a large part in their amusements, I embrace this opportunity of adding to my felicitations as a writer, my thanks as a spectator. The military *fêtes* have a very picturesque character. Comedy, pantomime, and wrestling are the fundamentary ideas. You can hardly believe what hidden talents slumber in the cartridge-boxes of these warriors. They will act before you in the open air without preparation, without rehearsal, without manager, and without prompter, farces and vaudevilles with an art, and at some moments even with an emotion, which is not often surpassed by footlight professionals.

It goes without saying that the Chinaman is always the *tête de turc* of the soldier actors. He is an ingredient in all their sauces, and his unhappy tail is an indispensable accessory to these nomadic troupes. The Chinaman in a Japanese scene takes the place of our Guignol, the fabulous commissary. He is beaten unmercifully from the beginning to the end, and the onlookers are never weary of laughing and applauding. I admired greatly in these representations the marvellous imitative capacity with which the Japanese are gifted. The actors entrusted with the parts of the Celestials seem to change themselves entirely into the personages they represent, and the illusion is thoroughly complete. At their inimitable play of features everybody is compelled to laugh, beginning with the real Chinese gentlemen of the locality who, perched on neighbouring walls, seem to follow the different acts with the liveliest interest.

But the programme of our amusements is very varied. After the comedy we have a circus, and after the circus a bout of wrestling. In the middle of the large piece of ground where we are assembled a ring is formed the inside of which is covered with fine sand. The spectators seated or standing round excite the amateurs called out to try their strength. I must own that the sight of these contests seemed to me like a dream. In a temperature of 15° (Cent.) below zero, in the open air unprotected from gusts of north wind that cut one's face like blows from a sabre, I saw these men quietly take off all their clothes and set themselves to their favourite exercise perfectly naked, while we, wrapped in our furs and seated round braziers placed at distances of ten metres apart, find difficulty in keeping from freezing. Our wrestlers, however, perspire and do not seem at all knocked up. As soon as one man has fallen, vanquished, to the icy ground, another combatant bounds from the crowd of spectators with lightning rapidity, stamps his foot on the ground several times, rubs his muscles, and then provokes his adversary to the onset with gesture, look, and voice. A few minutes afterwards you see them rolling about like two masses till the conqueror is ready to claim another victim, while his unfortunate adversary goes back piteously to his place amid the jests of the crowd.

Great feasts usually end these rejoicings. The banquet to which we were invited the other day by Marshal Oyama deserves special mention in the annals of gastronomy. On immense tables arranged in a row were placed, in artistically varied positions, quarters of beef and whole pigs and sheep, reminding one of the feasts supposed to have been partaken of by ogres. The wine consisted of champagne and warm *saké*. The toasts were model sentiments in all languages. Then, at a sign from one of the officers, a military band struck up one after another the national airs of the Europeans present at the feast. I, for my part, greatly appreciated this gracious act of our hosts.

Night arrives and we must think of retiring. I return arm-in arm with a general officer who was for a long time in Europe. We cross the great street of Chinchow. The Chinese on their doorsteps, their hands hidden in the long sleeves of their blouses, watch us pass. They give no words to their astonishment; they look. Speechless as

and that is all. Children play, run about, and quarrel at their side, careless of their new masters. These brats swarm. Many of the urchins that surround us seem bright and intelligent. If it were not for the villainous rags they wear they would not be at all bad looking. At the sight of this ragged childhood a thought that has struck me a hundred times before again crosses my mind—where are the mothers of all this little world? Since my arrival at Chinchow—ten days ago—I have not seen a single woman, not one. My officer explains to me what I have already heard others say. The women took to flight on the approach of the conquerors. "Don't ask me in what direction," adds my companion. "As soon as we were signalled the mothers took little ones in their arms and fled straight ahead without stopping. They are most likely hidden in the few villages scattered about at the foot of those mountains away in the distance. . . . Those were the prudent women. The others, surprised by our arrival, killed themselves and made their children share their fate. I myself saw four of those unfortunates throw their little ones into the well that you see in front of you and follow afterwards themselves. I saw it in this very place on the day of our entry into the town." . . .

"Four women in a well! What must Truth have said to herself, General?"

"Truth, my dear Sir, must certainly have thought that times had changed greatly if women decided to come to her."

FERNAND GANESCO,
Special Correspondent of the *Figaro*.

PRINCE ARISUGAWA'S ILLNESS.

We learn with much regret that the malady (typhoid fever) from which His Imperial Highness Prince Arisugawa has been suffering for some time, now presents a dangerous aspect, and grave fears are entertained.

ARREST OF FRAME.

On Thursday afternoon, shortly before 2 o'clock, James Frame, the saloon-keeper, was arrested at his own house by the Japanese Police on a warrant issued by a Judge of the Yokohama Local Court. He offered no resistance and went quietly to the Settlement police-station. After the charge of assault and wounding had been read to him, Frame was removed to Tobe. He will undergo preliminary examination to-day, the enquiry being *in camera*.

THE CHINESE ENVOY.

The Chinese Envoy reached Shanghai on the 13th instant. It was supposed that he would have to travel overland from Tientsin to Shanghai, but he managed to take steamer at Shanhaikwan, and the journey was thus materially shortened. It is not yet known, so far as we can gather, whether his Excellency will come at once to Japan, or whether he will await in Shanghai the arrival of Mr. Foster. The latter is understood to have left Vancouver on the 7th instant, in which case he should reach Yokohama on the 21st. If Mr. Chang awaits Mr. Foster's arrival in Shanghai, the embassy can not reach Hiroshima before about 10th of February. But the probability is that Chang will come on at once and meet Mr. Foster in Japan. Mr. Inouye Katsunosuke has been appointed to meet the Envoy's ship at Shimunoseki, whence she will proceed direct to Ujina.

When Mr. Toole was in Australia he was preceded in his tour by Sir Charles Hallé. At one town in Victoria the Mayor proposed the health of the great musician at a banquet, and pronounced his name as Hall. This he continued to do until he was corrected. A few weeks afterwards Toole came along that way, and the Mayor was resolved on not again laying himself open to correction. So Mr. Toole found himself pleasantly referred to throughout the mayoral speeches as "Mr. Tooley."

Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

MR. OKOSHI ON THE PROSPECTS OF JAPAN'S EASTERN COMMERCE AFTER THE WAR.

The following is the gist of a speech delivered by Mr. Okoshi, the late Japanese Consul-General at Shanghai and now Superintendent of the Yokohama Customs House, at the winter general meeting of the Japanese Economic Society held in Tokyo. Mr. Okoshi first dwelt on the commerce between Japan and Korea. He remarked that there are at present three open ports in Korea, Fusan, Chemulpo, and Wonsan, at all of which places foreign commerce is far from active. Chemulpo is at the head of the three, its total commerce amounting to about 5 million *yen* a year. The opening of Treaty Ports in Korea being chiefly due to the instrumentality of Japan, our merchants ought to enjoy the greatest influence in the Korean market; but that was only the case for about a decade, after which time the shrewder Chinese gradually got the upper hand and in the end the relative positions of the two were completely reversed. Till 1887 the Japanese sold goods to Korea to the amount of about 1,300,000 *yen* a year against 700,000 *yen* sold by the Chinese. In 1894, however, the Chinese managed to sell more than 1,580,000 *yen* worth while the Japanese only sold to the value of 800,000 *yen*. Mr. Okoshi attributes this commercial defeat sustained by the Japanese to two causes, namely, want of combination on the part of Japanese merchants, and the roundabout way in which goods are shipped to Korea. The cooperative power of the Chinese is very marked. They render mutual help by accomodating each other with cheap money, a thing that the Japanese merchants have never attempted in Korea. Then, while the Chinese ship their goods, mostly shirtings, direct from Shanghai to Korea, the Japanese go to the trouble and expense of having cotton cloths brought first to Nagasaki and re-shipped thence to Korea. At present the Korean market is virtually monopolized by the Japanese, their commercial antagonists having returned to China. It must not, however, be supposed that we shall be allowed to enjoy this position for long unopposed by the Chinese. The latter are sure to return sooner or later to their field of commerce where they will strive to regain their influence. It is therefore of urgent necessity that measures be devised to ensure the further enjoyment of the advantages now held by Japan in Korea. The lecturer made seven suggestions as follow :—

1st, Inaugurating the system of advances on goods and an endeavour to make cheap money accessible.

2nd, The firm establishment of cordial relations between Japanese merchants.

3rd, The improvement of roads in Korea, especially of the one leading from Sōul to Chemulpo.

4th, Discrimination between direct import and retail transactions. Of about 600 Chinese merchants engaged in Korean commerce only 10 are direct importers, the rest being retail dealers, whereas every Japanese merchant, however small his transactions, imports directly from home. This state of affairs must be changed.

5th, The extension of commerce into the interior of Korea.

6th, The direct importation of goods from Shanghai.

7th, The increase of facilities for shipment and cheapening of freight.

Mr. Okoshi considers that by attending to the above points great improvement may be effected in Japan's Korean trade, though he does not think that the total amount of commerce between the two countries could be made to exceed 7 or 8 million *yen* a year, because of the comparative poverty of the Koreans. The Japanese should strive to have Korea's resources opened up and utilized. Speaking of the future of Japan's trade with China, Mr. Okoshi had three propositions to make, namely, 1st, that the relations of Japanese merchants engaged in Chinese commerce be made more cordial, so as to provide against competition between them; 2nd, to make more extensive use of the coast of Yangtszkiang for purposes of commerce; and 3rd, to own factories and immovable property in China.

DISHONESTY IN ARMY CONTRACTS.

The *Mainichi's* Hiroshima correspondent writes in strong terms about dishonesty in Army contracts. He alleges that it is now an open secret that Army accountants and contractors are leagued together and that they are guilty of the most flagrant breaches of discipline and probity. The way in which the accountants defend the contractors when any strange action of the latter is brought to light, is most peculiar. Rumours were rife some time ago to the effect that casks of soy were found half empty when opened in the Japanese camps in China, that bales of rice were in a similar condition, and that canned meat received by a certain part of the Army was for the greater part rotten. When the accountants were asked about the matter, they said that neither they nor the contractors who supplied the articles were responsible for what had happened, but that its was most likely attributable to faulty transportion and packing. They tried to explain that a fluid like soy or a substance like rice it very apt to leak or drop out if the vessel that holds it is at all out of order, while the knocking of one can of meat against another might produce interstices that admit the air. The *Mainichi's* correspondent wants to know how Japanese soldiers fighting abroad can get their provisions from home if contractors and accountants do not hold themselves responsible for the safe transportation of those provisions. A war offers dishonest merchants and officers good opportunities for practising their knavery as, owing to the limited space of time in which things have to be procured, the Government cannot call for tenders according to the general usage, and is consequently practically at the mercy of a small number of contractors. These latter monopolize all orders and exact fabulous prices. Some time ago, says the correspondent, the Okura Gumi and Muraoka, one of the contractors, having failed to send in certain goods to the Hiroshima Barrack Hospital by the appointed period, and having, moreover, attempted to palm off goods of inferior quality, an honest accountant was greatly incensed and told them that they would hereafter be excluded from supplying articles for the Hospital. The next day a letter was received by the Chief of the Hospital over the signature of Kuramura—a name formed by joining one character each of the names Okura and Muraoka—charging the said accountant with partiality and advising the Chief to dismiss him. The letter concluded with a statement to the effect that as the undersigned had for a long time rendered great services to the War Department, he deemed it reasonable to enjoy a little profit on the present occasion by way of compensation. The correspondent gives us an illustration of the manner in which dishonest accountants bar their doors against upright merchants and how they endeavour to protect those with whom they are leagued. When a certain building was to be constructed in Hiroshima, a number of dishonest contractors sent in tenders, but their terms were so exhorbitant as to astonish outsiders. One gentleman in particular was much surprised, and suggested to an Okayama architect to try competition On estimating the cost of the affair, this architect found that he could undertake the work at less than half of the price offered by the lowest tender. On applying to the Superintending Office for leave to bid, he was given leave to do so provided that he procured a certificate from the Governor of Okayama. The latter arrived in the due time in the form of a telegraphic message. The architect then presented himself at the Office with the telegram and tender, when he was unceremoniously told that the certificate was simply a private telegram and therefore inefficacious. In the meanwhile, the prescribed period for bidding expired and the contract was given to one of the "gangs." The vernacular press informs us that certain members of the House of Representatives have made careful enquiries into the matter of army contracts, and that they intend laying the result before the House in the present session.

KOREAN NEWS.

We take the following items from the latest letters of the *Nichi Nichi's* Sōul correspondent. Li Shunyo, the new Korean Minister to Japan, grandson of the Tai Wōn-kun, is only 24 or 25 years of age. He has the repute of being one of the most talented young men of his country. Both his father—the Minister of the Royal Household—and his grandfather are averse to his being sent away from Sōul, and have tried in various ways to have his new appointment annulled, but to no purpose. The Japanese Minister and, persuaded by him, the King and Queen, are bent on sending him to Japan for the young man's sake as well as for Korea's. As he intends to marry before leaving, the date of his departure is not yet settled.

Of all the members of the Korean Ministry Gio Inchu, the Minister of Finance, is said to be the most energetic and resolute. The other Ministers generally comply obediently with Count Inouye's proposals, but that is not the case with Gio. He frequently enunciates his own views and defends them in a most obstinate way. The monthly salary of the Premier is 300 *yen*, while his colleagues receive only 200 *yen*. Of this sum they are obliged to give half to the Government Police fund, so that what remains is not sufficient to cover even their smaller expenses. A Minister like Boku Yeiko, who has no private means to depend upon, is therefore in a very bad condition. The King has been pleased to bestow upon him the residence of one of the Ming faction. There are at present a few foreign employés, such as Mr. Greathouse and General Legendre, whose monthly salary is from seven to eight hundred *yen*. Although they are not required at present, the Korean Government would be much embarrassed if they were dismissed, as the arrears of their salary, extending over half a year, would have then to be paid at once.

The statement reproduced from the vernacular press a short time ago to the effect that the reform introduced in the Royal Household of Korea was so drastic as to leave no attendant near the person of the Queen, is corroborated by the *Nichi Nichi's* correspondent. Some days ago, when the Japanese Ambassador presented himself at the Court, the conversation turned on the subject of reform in the Royal Household. The King said that, resolved that the Court should set the example in the reform of the country, he had caused all the eunuchs employed in the inner chambers of the Court to be dismissed. He had since then, however, experienced great inconvenience, having no one left to perform even humble services for him. He was even obliged to light his own fire and to send for medicine himself when he wanted to take it. It was comical, observed the King good-humouredly, to combine in one person the duties of sovereign and menial. While he, the ruler of Korea, was subjected to such inconvenience, the Tai Wōn-kun was attended by numerous servants. This, he thought, was not quite fair. The Ambassador was surprised to hear the King speak in that way. He explained that when he had mentioned the matter of eunuchs to the Ministers of State he had not intended that they should be dismissed in that number, but that they should be forbidden to intermeddle in State affairs as they had previously done. He advised the King, therefore, to recall as many eunuchs as were necessary to perform his behests, taking care to select only those who were likely to keep Court matters secret. To those dismissed, a certain allowance should be given according to their merits. The King expressed great satisfaction at these remarks, saying that as he had been told by his Ministers that Count Inouye insisted on having all the eunuchs turned away, he had done so. He would now recall 10 eunuchs for service in the inner chambers, and another 10 for the outer chambers. He was greatly relieved at being able to have them back, as he had been much troubled by the thought that before the coming ceremony of his State visit to the tombs of his ancestors he should be

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

obliged to dress and perform other functions himself. Henceforward, he observed laughing, he should be relieved from his duties as servant and be once more restored to his special post of King. With regard to the ceremony of taking oath before the tombs of his ancestors, the King asked the Count whether he ought not to be accompanied by the Queen. The Japanese Minister highly approved of that plan. In the course of further conversation the King observed that he hoped that the Count would give his advice freely on all matters with which he was not satisfied, and further that he thought it would be well to have the Count's seal affixed to all drafts of importance submitted to him by the Ministers, so as to show that he had been consulted. The Count was sincerely gratified by the first remark, and said that he should speak with the Ministers about the second suggestion. Count Inouye told the Royal Pair that as he was extremely solicitous for the Heir-Apparent, who is constitutionally weak, he would like to take the earliest opportunity of sending for celebrated medical authorities such as Drs. Hashimoto and Baelz to examine him, for as the Prince is to become the Commander of the Body Guard he should be robust in health. The King and Queen were much gratified at the Count's kind attention, and hoped he would do as he proposed. The relations between the Count and the King and Queen are at present most friendly.

SAD ACCIDENT ON THE YALU RIVER.

The vernacular papers give a minute account of the sad fate of a soldier of the Engineering Corps on the Yalu River. On the 29th of November the temporary bridge built by the Japanese Army over the Yalu was considerably damaged by floating masses of ice striking against it. Two companies of the Engineering Corps undertook the work of repair, which was completed in a few days. So abundant was the ice floating down the river, however, that the bridge was again injured and made useless. In the short space of about 10 days the bridge was repaired three times. The passage of steamers to the mouth of the Yalu being interrupted owing to the ice, the bridge was the only means of communication between Korea and Manchuria. On the 10th of December the repairs were completed for the third time, but as the bridge could not be expected to hold out long against the collision of the ice-blocks, the soldiers guarding it awaited eagerly the freezing of the river when the bridge could be dispensed with. Just then a report reached them to the effect that the river was frozen over at a point about 3,000 metres higher up. On the 11th of December Ensign Makino was despatched with 13 soldiers of the company to ascertain the truth. They found that the river was indeed covered with ice, but could not tell whether the latter was thick enough to bear the weight of a heavy body. As stones that were thrown bounded away without breaking the ice, one of the soldiers volunteered to attempt a trial passage. By way of precaution against accident he drew with him a small canoe. He proceeded without difficulty till about 3,000 metres from his starting-point when the ice gave way under him and he fell into the water together with his canoe. He tried to enter the boat but could not succeed, owing to its being very narrow and rounded at the bottom. Nor could he raise himself out of the water, as the ice around him was thin and gave way when pressure was brought to bear on it. The Ensign called to him to keep his body out of the water as much as possible, and to await rescue. Poles and ropes were thrown but to no purpose, and the ensign then told his men to bring a boat that lay a little lower down the river and to run for the surgeon, and repeatedly shouted encouragement to the unfortunate soldier. The latter, however, could not hold out. The intense coldness of the water in which his body was immersed was too much for him; his hands growing powerless, lost their hold and before the boat could be brought he sank under the ice. When the boat arrived the comrades of the soldier, getting into it, broke the ice near the spot where he had disappeared and at last succeeded in finding his body, apparently already lifeless. Though every means possible were tried by them and a surgeon, who arrived about a quarter of an hour later, to resuscitate the body, it was all to no purpose. Life was found to be extinct.

THE QUESTION OF THE NATIONAL BANKS.

The Bill relating to the charters of the National Banks, now under the consideration of a Committee of the Lower House of the Diet, has given rise to a singular crop of rumours. The *Nippon*, the *Nichi Nichi* and other vernacular contemporaries openly declare that stories are rife as to the wholesale corruption of members of the Diet by the Peers' Bank. The Peers' Bank is the leading spirit in the movement for obtaining a renewal of the National Banks' charters, and its vice-manager, Mr. Miwa, is accused of being the agent for the placing of the bribes. He is credited with hinting that many inconvenient secrets of the Peers would be revealed should the affairs of the Bank have to be wound-up, in the event of the Government's refusing to renew its charter. His fears are shared by other members of the banking circle interested in the continuance of the National Banks, and steps were at once taken to win over the members of both Houses of the Diet to their scheme. For this purpose, money was expended lavishly. After the present session opened, an entertainment was organized at the Maple Club to which prominent peers and M.P.'s were invited by the scheming bankers. Over the wine cups the guests were told of the many advantages that would accrue were the National Banks allowed to continue work under the conditions of their present charters, while the evils that would befal the country were the Banks to be reorganized, were painted in vivid colours. But it was not only in this indirect manner that pressure was brought to bear upon the country's legislators. Cheques were sent in a crafty fashion to many men in influential positions in the two Houses; and it is said that this form of corruption cost its supporters upwards of 100,000 *yen*. It is therefore hardly surprising, remarks the native press, that the Diet, hitherto neglectful of banking and its attendant financial machinery, should suddenly evince great interest in all that pertains to institutions of that nature. And the members' interest has borne practical fruit in the introduction of Bill for the renewal of the charters of the National Banks. The bill is in charge of Mr. Nakano Buyei and others. This action on their part has taken the Government by surprise, for the authorities had no intention of submitting a Bill dealing with the Banks' charters during this session. The Progressionists will, it is said, support the Renewal Bill to a man, while the Radicals, who last year gave their votes unanimously in favour of the Government Bill, will vote this time just as seemeth best to each individual. The National Unionists and Constitutional Reformists have also wavered, so that the Renewal Bill will, in all probability, find 150 supporters in the Lower House. In less than a year, then, the attitude of the majority of the House of Representatives has undergone a complete change. To outsiders such conduct is inexplicable, and even the business world finds the situation interesting. Bankers of the *Kwan-to* Union, who have not come to a definite conclusion upon the matter, says the *Nichi Nichi*, will hold a conference shortly in order to free themselves from the scandal that has been circulated against certain of their number: and the Tokyo Chamber of Commerce, in conjunction with the Commercial and Industrial Association of the capital, may take a similiar step. The Bank of Japan, by the way, against which the Board of the Peers' Bank are really agitating, does not appear at all concerned at the sudden change in the aspect of affairs. Its Board of Directors are credited with holding the opinion that as the Treasury is committed to the Re-organization Scheme, there is no need for anxiety that the National Banks' charters will be renewed, even though both Houses of the Diet passed the Renewal Bill, it would never become law. Count Itagaki, although he has left his followers free to vote how they wish upon the matter, is favourably inclined towards the renewal scheme, holding that to confine note-issuing powers to the Central Bank is not consistent with the principles of broad minded and liberal finance. The *Nichi Nichi* twits Count Itagaki upon this point, and satirically asks why he does not go a step further and advocate the bestowal of note-issuing powers on private banks.

The *Nippon*, writing editorially upon the subject, says that some private members of the Lower House are so indignant at the scandal, that although in favour of continuing the charters of the National Banks, they have resolved to withdraw their support from the Bill. One of these members has also declared his intention of laying the whole matter before the public, should the Renewal Bill be debated, as he has obtained incontestible proofs of the corruption used to secure the votes of members.

NOISY MEETING OF TOKYO RICE BROKERS.

Fuller particulars of the general meeting of the Tokyo Rice Exchange, which broke up in such disorder, have been published. The cause of the trouble was a conflict of opinion between a section of the brokers calling themselves the Reform Party and another section supposed to be dominated by the officers of the Exchange. The Reform Party wished to introduce some changes in the system of working the Exchange, which the officers very strongly opposed. Debate upon these matters was mutually deferred until the general meeting, when 80 shareholders representing 1,497 shares, were present. The Reformers had strengthened their party by nominally transferring to several *soshi* certain of their shares in the Exchange, as only shareholders were allowed to enter the general meeting. In the absence of the President, Mr. Yonekura, the Chair was taken by one of the managers. Having called the meeting to order, he asked the clerk to read the report and accounts for the preceding year. Immediately upon this, some members of the Reform Party began to shout at the Chairman, but the latter paid no attention, and the clerk proceeded with his reading of the report. Then some of the *soshi* present got up from their seats, and advancing, towards the Chair, demanded to be heard. At the same time, and probably by a previously concerted plan, one of the malcontents sprang at the clerk and tore the report from his hands. The clerk seized his assailant and a struggle ensued, in the course of which the report and other papers were passed from hand to hand by the *soshi* until lost sight of. The Chairman then ordered a recess, and after an hour's adjournment the meeting was resumed. The clerk began again to read the report, from a duplicate copy, and another attempt was made to snatch it from him: this time unsuccessfully. Uproar and confusion prevailed generally and the police were called in to restore order. The *soshi* still refused to allow the meeting to proceed, and it was suggested that both parties should elect a committee to arrange preliminary business. This was agreed to, and three deputies were chosen from each party. A conference then took place, but as the day was declining and the discussion grew more and more argumentative, the Chairman suggested an adjournment till the morning of the 20th instant. The *Shogyo Shimpo* fears that no compromise will be arrived at by the conferring committees, and that another scene of riot and confusion will take place.

The Reform Party, it is said, have resolved to resign from the Exchange, should their plans miscarry, and then petition for the establishment of a new organization on their own lines.

EARTHQUAKE.

Tokyo was visited, at a few minutes to 11 p.m. on the 18th inst., by an earthquake of great severity. Records from seismological observatories have not reached us at this moment of writing, but we are disposed to think that the shock was even more severe than that of June last.

The earthquake last night was attended in Yokohama with fatal results to one man. While a Japanese pawn-broker (58) and his son (32) were escaping from their shop at No. 97, in Honmura Road, they were caught by some falling bricks and tiles. The old man received some severe injuries to his head from which he succumbed during the night. The son, had his left arm broken and is now in hospital. At No. 119 the whole side of a godown gave out, but fortunately without injuring any one. At No. 128 a stone wall collapsed, while at No. 163 the gable end of a large godown fell into the street. The office of M. Eymard, on the same lot, is so badly shaken that the house is almost uninhabitable. No. 146, in China-town, has its brick walls so twisted that it will have to be pulled down. The Chinese Consulate also suffered severely, while a portion of the stone wall of Messrs. Vivanti Bros.' premises collapsed. In Ishikawa, Honmura, and other portions of the native town, more or less damage was sustained, tiles and plaster, etc., being detached, but nothing of a serious character has been reported.

On the Bluff the mischief done was comparatively slight, but the top of a brick chimney at the Italian Consulate fell and the *débris* was scattered in the road. One of the walls at the General Hospital at No. 82 was cracked.

In the Native Town the damage was much smaller. An old dwelling house at Ota-machi was destroyed, and some damage was caused in an earthen-ware shop at Yoshida-machi. No further reports had been received at any of the Police Offices when we went to press.

MR. MAYEDA MASANA ON THE AGRICULTURE, INDUSTRY, AND TRADE OF JAPAN.

We give an epitome of Mr. Mayeda's lecture on the above topic delivered at the last meeting of the Economic Society of Japan. Mr. Mayeda spoke first of agriculture, and observed that even in rice, the chief staple of Japan, the country has sustained defeat. In 1890 the nation paid out as much as 10 million *yen* for foreign rice. Formerly Japan sold her cotton abroad, but now her people purchase foreign cotton to the amount of half a *yen* per head. They also pay out about a quarter of a *yen* a head for sugar every year. The people of this country are increasing at the rate of half a million per year, and it is therefore evident that Japan will be over-populated a century hence. In China rice can be grown all the year round, but here only in a small portion of Tosa can two crops be produced per annum. In the West a farmer receives an average income of over 420 *yen* a year, but in Japan we find that the average in Nagasaki is only 11 *yen*, in Kagoshima 6.70 *yen*, and about 7 *yen* in Hiuga. The condition of stock-breeding in Japan is deplorable. In the early part of the *Meiji* era there were about 270,000 head of cattle and horses in the country, but the number has now dwindled down to about 120,000 head. The quality of rice has deteriorated since the Reformation, that is, since the payment of land taxes in rice has been superseded by payment in cash. Farmers are also very careless in the cultivation of this staple, about half a million *koku* being annually destroyed by worms. Industry fares no better, perhaps even worse than agriculture. Take the lacquer industry, for instance, which used to be unrivalled throughout the world. Now owing to carelessness on the part of the Japanese in preparing lacquer, this national industry, formerly unique, has been gradually taken up by the shrewd Germans who have transplanted lacquer trees and now produce lacquer wares. It is the same story in the case of porcelain—retrogression and gradual decline. In a certain district of Mino 3,000 potters used formerly to realize one million *yen* a year, but now the income has fallen to less than one-third of that amount, though the number of manufacturers has been doubled. The Hizen procelains used to bring in about 700,000 *yen* a year, which has now dwindled to only 130,000 *yen*. About 40 years ago a hundred catties of tea fetched $20; 10 years later the price rose to $42, then it fell to $30, next to $20, and in 1894 rose again to $22. The development of the tea industry in China, India, and Ceylon has been remarkable. Thirty years ago the total amount produced in those three countries was very small, but about fifteen years ago it rose to about 400,000 *yen* worth, while in 1893 the total aggregate was over 13,500,000 *yen*. Mr. Mayeda's view of Japan's commerce is equally gloomy. Despite the fact that communication with other countries is now easier than that between different provinces of Japan in pre-Restoration days, only a very small number of merchants go abroad for the purpose of undertaking commercial transactions. Yokohama and Kobe are their only foreign markets, and even there they do not sell their goods direct to foreigners but negotiate by means of a go-between. There is, too, an entire want of union among the Japanese merchants trading in the Treaty ports. They are, on the contrary, constantly on the watch to cut each other out. The amount they spend in bribing employés of foreign merchants must amount to over 3 million *yen*, and what do they get in *return*—nothing but contempt and ridicule. It is indeed a piteous state of affairs.

CHINESE NEWS.

The Emperor of China's normal occupation at present seems to be the issuing of invitations to his unsuccessful Generals to come to Pekin and receive the rewards due to them. We have not yet heard that so much as a single General has obeyed the Sovereign's gracious but ominous summons. The most comprehensive of these invitations hitherto sent out from the Throne appears to be the following Decree, dated December 18th, 1894, and translated by the *Pekin and Tientsin Times*:—

According to the report of Sung Ching, who has been ordered to state the different cases of the several generals, &c., who had been disapproved of, The degraded Brigade-General of Ning-hsia-chên in the province of Kansu, Wei Ju-wei, usually treated his soldiers without mercy. This time when they went to Korea to fight the enemy, he could not direct them properly. His soldiers troubled the inhabitants as they passed, so that the inhabitants hated and mistrusted us, which is indeed an offence in every respect and so the undertaking was destroyed. He has already been decreed to be deprived of his titles and sent to Peking. We have commanded Li Hung-chang and Yu Lu twice to find out where the said degraded officer has arrived at and to send him immediately to the Board of Punishments to be dealt with and not to delay.

The degraded Provincial Commander-in chief of Chihli Yeh Chin-tsan retreated from Kingchou to Ping-yang but did not fight with the enemy. All the reports of his victories in different places are false. Arriving at Ping-yang, he could not manage the matter properly but again retreated. At that time he had eight regiments of foot and horse at An-chou with which he could have defended the place, but he did not, but crossed the Yalu river. He cannot direct and manage the matter and failed to do his duty.

The Admiral of the Navy Ting Ju-chang, having been deprived of his titles but kept in office, has directed the navy for many years. Since the Japanese [Wu jen] began hostilities we have ordered him twice to put his navy to sea to fight the enemy. The degraded officer was afraid, and delayed and neglected in all respects. He is the only person that is responsible for the safety of Port Arthur yet he could not send soldiers to save it. He is indeed timid and useless. He should be greatly blamed. We command that Yen Chih-tsan and Ting Ju-chang shall be sent to the Board of Punishments to treat them according to the degree of their crimes. Respect this.

According to the report of Yu Lu who stated the circumstance under which the soldiers retreated from Hsin Yen, when the degraded Military Deputy—Lieutenant Governor Feng Sheng-ah General-in-Chief Nieh Kuei-lin again retreated at Hsiu-chêng, we have deprived them of their titles and sent them to the Board of Punishments to treat them, stating that from the 19th to 21st of the 10th moon, the Japanese attacked the city of Hsin Yen chou twice, Feng Sheng-ah and Nieh Kuei-lin should have defended it, but they retreated to Lung Feng-ku and left the city attacked. This is indeed hateful. Let the Board of Punishments consider this according to law, together with their former crimes. He further states that the second Captain Chou Ting Chai and Lieut.-Colonels Chin Tê-feng and Chang Chan-kuei should be deprived of their titles and kept to regain Our esteem. The rest shall be dealt with according to the decision of the Board concerned. Respect this.

Owing to the loss of Port Arthur, we have commanded Li Hung-chang to find out whether the Director of the Port, Taotai Kung Chao-yu has secretly run away. According to Li Hung-chang's report, he requests Us to deprive Kung Chao-yu of his titles but keep him in office. He shall be deprived of his titles and not allowed to be kept in office. The degraded officer managed the works and also directed military and naval affairs. When the Japanese attacked the place, he could not have saved it together with his soldiers and therefore the Port was lost and he concealed himself at Chefoo. It is not enough to deprive him of his titles only, he shall be sent to the Board of Punishments to be dealt with. As to General-in-chief Wei Ju-cheng and Huang Su-lin, Brigade General of Lo Yuen-chou in the province of Yun Nan chiang Kuei Ti, Brigade-General Chung Jun-to, whose duties are to direct the soldiers to reside at and defend Port Arthur, it is not known where they have gone. We now command Li Hung-chang to find out and report. Chou Hung-yeh has been deprived of his titles and is to be sent to the Board of Punishments to be judged. The said degraded officer shall be found out wherever he is and be immediately sent to the Board concerned. Respect this.

Will the *invités* "respect" it? We do not think so.

Here is a paragraph from the *China Gazette*, suggesting that, after all, the reported "Jehad" may become a reality, though on a very small scale:—

A telegram has been received from the leader of the Mahommedans offering to lead an army of 8,000 infantry and 2,500 cavalry against the Japanese. A large part of this force has already arrived at Tsinghai, where they are waiting for arms and ammunition, which it is understood, are to be supplied by the Chinese Government. As soon as the necessary stores arrive the force now assembled at Tsinghai will move on to Fengtien without delay.

"Lieut.-General Ting Shuan-san, of Kweichow," says a correspondant of the *China Gazette*, "arrived at Yangchow on the 3rd of the present moon at the head of a large army of *Miau-ping* braves. He is on his way North to oppose the Japanese. During their march to Yangchow it is reported that the Miaotse treated the country people with the greatest civility, and did not give rise to a single complaint by their conduct."

"Contrary to what Reuter telegraphs from London," says the *Pekin and Tientsin Gazette*, "we are informed that the Tsung-li Yamên object, as we stated last week, to have foreign soldiers quartered at the Legations in Peking, but they have given a guard of about a hundred Chinese picked soldiers to each Legation. We do not know whether the foreign ministers generally have desired to have European troops at their disposal in the capital; but it would seem that if they have any fear of their persons and property it would be wiser for them to move to Tientsin with their archives and belongings, rather than take for their defence a body of foreign soldiers whose presence in Peking might exasperate the populace and could not possibly be large enough for efficient protection in case of need."

China seems to be still sending troops to Mukden. We read in the *China Gazette* that "General Chang Tsz-yuen, with his cavalry, left Tunlan a hilly district of Wuhu for Mukden on the 6th inst., in obedience to an Imperial decree from the Throne."

The largest kitchen in the world is that in a great Parisian store, the Bon Marché, which has 4,000 employés.

THE WAR.

THE capture of Kaiping on January 10th by a Brigade of the Second Army enables us to form a pretty clear idea of the military situation in Manchuria. Considering the events of the past six weeks, it seems reasonable to suppose that a brief interval of uncertainty occurred in the Japanese councils after the fall of Port Arthur—uncertainty whether to continue actively aggressive operations in the field, or to suspend them until climatic conditions should be more favourable. In view of its importance both as a loss to the Chinese and a gain to the Japanese, the capture of Port Arthur marked an epoch in the war, and might have been taken as a temporary halting stage. But, on the other hand, it was certain that inaction would be utterly misconstrued by the Chinese, and might even have the effect of undoing much that had already been accomplished. Hence the continuance of active hostilities was resolved upon, and by way of inaugurating the programme, Lieutenant-General KATSURA moved westward from Suiyen on December 9th. It has already been explained in these columns that the Chinese forces in Manchuria are working in three armies. One, under General I, threatened the right flank of the Japanese position northward of Chiulien, and finally attempted to recapture Fenghwan. Completely broken and demoralized in that attempt, I's men retreated among the mountains, and thenceforth ceased to be a vital factor of the situation. The second Chinese army has its head-quarters at Laoyang, whence it covers the roads leading to Mukden on the east *viâ* the Motien Pass, and on the south *viâ* Haicheng. The third Chinese army, under SUNG, aggregating about 30,000 men, had its head-quarters in Kaiping until a recent date. But when KATSURA, moving with the Left Wing of the First Japanese Army from Suiyen, took Kaicheng on December 13th, SUNG saw himself separated from the troops northward of that place, and saw also that so long as KATSURA held Haicheng, the Chinese forces centred at Laoyang would be unable to emerge from the mountains for the defence of southern Shinking. Realizing the gravity of these facts, SUNG made a bold attempt to dislodge KATSURA from Haicheng and re-establish communication with the Laoyang army. But his enterprise ended in a signal defeat at Kangwasai (December 18th). He fell back first to Kaokan, where he still covered the roads to Newchwang (modern), and ultimately to Tienchwangtai, about 18 miles westward of Newchwang. There he seems to have been joined by the greater part of the troops from Kaiping, who included many of the fugitives from Port Arthur, Chinchow, and Fuchow.

The situation then was this: SUNG'S forces operating as an independent army with its head-quarters at a point on the coast 50 miles from Haicheng; KATSURA at Haicheng, separating SUNG from the Laoyang troops and holding the latter sealed in the mountains.

On the other hand, it is plain that, under such circumstances, KATSURA could not continue to act on the offensive. To move north would have been to turn his back upon SUNG. To move south, would have been to expose his rear to the Laoyang army. But in point of fact there never can have been any intention that he should continue an offensive campaign unaided. Another element was wanting to complete the strategy of the situation, namely, cöoperation on the part of the Second Army in the Liaotung peninsula. We do not understand why such cöoperation was delayed, but delayed it certainly was, for not until some days after the battle of Kangwasai did the Mixed Brigade under Major-General NOGI move out of Chinchow. The capture of Kaiping by that Brigade now frees KATSURA'S left flank of all menace, while, at the same time, the tenure of Haicheng by KATSURA enables NOGI to move freely against SUNG'S forces.

It seems worth while to allude here to a singular report, apparently emanating from General SUNG, published by the Shanghai journals and reproduced elsewhere in our columns. We read there that, on December 22nd, SUNG'S army, aggregating nearly 23,000, and including 5,000 cavalry as well as an artillery park of 36 Krupp guns, was massed at Tienchwangtai (or Chiangwangtai), when the Japanese Second Army, numbering 30,000 men attacked it, and after a severe fight defeated it. SUNG retreated westward, but finding himself unpursued, countermarched, and entered Newchwang, where he was joined by 13,000 troops under CHANG and HSÜ. Now we know from Lieut.-General NODZU'S official report that on December 18th SUNG, with some 10,000 men, fought at Kangwasai; that he was defeated with heavy loss; that he retired to Tienchwangtai, and that KATSURA, having left a battalion to occupy Kangwasai, marched the rest of his troops back to Haicheng. In order, then to reconcile the two stories, we have to suppose that KATSURA'S forces marched 50 miles between the 18th and the 22nd, that they multiplied in the interval from ten or twelve thousand to thirty thousand, and that they left their line of communications altogether unprotected. SUNG'S report is obviously untrue, and so clumsily constructed that no intelligent person could credit it for an instant. The other stories contained in the same paragraph are equally silly. General I, so far from severing the First Army's line of communications, has been practically eliminated from the field—for the present at all events—and the troops of the First Army, so far from being starved out or frozen to death among the mountains, are in excellent health. There has been some fever among the Second Army's forces stationed at Chinchow and Talien. It is not due to the cold, however, but to insanitary conditions which have now been rectified, we are informed.

IT is not altogether surprising that mistaken ideas should prevail among the general public as to the movements of the Japanese troops in the field and the progress of the war. But we can not think that any foreign newspaper editor, writing in Japan, is entitled to publish article after article not merely betraying ignorance and total lack of discrimination, but also calculated to seriously mislead the public and to convey to the Chinese the impression that the Japanese army in Manchuria is in grave straits, and that the struggle with China has already nearly exhausted Japan's energies and resources. In point of fact, the Japanese forces, since they crossed the frontier into Manchuria, have been victorious in every skirmish and every engagement, with two most trivial exceptions—one at the Motien Pass; the other on the road from Fenghwan to Aiyangpien. The former of these affairs has been magnified into a great Chinese victory. It was, in truth, a reconnaissance on the smallest scale. Japanese scouts, examining the pass, found it occupied by a body of Chinese, and fell back with a loss of one man killed and two wounded. That, forsooth, *is* claimed as a great victory! The second affair was one of outposts, and it is by no means plain that the small force of Japanese engaged had any object whatever in holding their ground. On the contrary, the Japanese General's choice of position to meet I'S attempt against Fenghwan, involved the retreat of his outposts on the northerly road to Aiyangpien. Such incidents would not be counted at all in any intelligent record of belligerent successes or failures. The Japanese have won uniformly in Manchuria, and their position is perfectly intelligible. They are holding Fenghwan and the road thence to Tsaohokow, 40 miles farther north, and practically at the foot of the Motien Pass. But they are making no advance in that direction. Their only object in forcing Motien would be to reach Laoyang, and Laoyang is much easier to reach *viâ* the more westerly road—*i.e.* the Newchwang-Haicheng route. A portion of the right wing being left to hold the position at Chiulien, Fenghwan, and Tsaohokow, the left wing has marched westward, making Takushan its base, and moving *viâ* Suiyen and Tomucheng to Haicheng. This wing has engaged in active operations ever since the 8th of December, and has been uniformly victorious. Meanwhile, Lieut.-General NODZU, the Commander-in-Chief of the First Army, has transferred the general head-quarters to Suiyen, and a part of the right wing has apparently been

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

moved to the same place, so as guard the line of communications, and release for service in the front the troops hitherto engaged in that duty. On the other hand, a Brigade of the Second Army, moving up from Chinchow, has captured the important town of Kaiping, the result being that the Chinese line of defence is cut in two at Haicheng, and that General SUNG, with some 20,000 troops, is isolated at Yingkow, where he will presently be the object of a concerted attack from Kaiping and Haicheng. So far, then, from the position in Manchuria being serious for the Japanese, it is an eminently satisfactory position. They are winning everywhere, and the victory that they are now on the eve of scoring over SUNG'S Army will place them in possession of the whole of Southern Shinking from the Liao river to Fenghwan, as well as giving them the command of the great waterway of Manchuria. The Army is in excellent health, and though the snow prevents a northward movement through the mountains, it does not seriously impede operations in the littoral regions. So soon as Yingkow and the mouth of the Liao are in Japanese hands, it will be difficult, if not impossible, for the Chinese troops massed northward of Liaoyang to hold their ground. Their source of supplies will be stopped, and their line of retreat to China proper, *viâ* the northern highway, can easily be obstructed by a Japanese advance along the coast. At no time since the commencement of the war has the Chinese position in Manchuria been so desperate as it is at present. Expert knowledge is not needed to perceive this. Any one following the story of the campaign with a map before him, can satisfy himself that the Japanese plan is not only excellently conceived, but is also being consummated with steady success.

In addition to misconceptions and misrepresentations about the First Army, we find some singular inferences drawn from the fact that the Sendai Division has proceeded to Talien, instead of being carried direct over-sea to the neighbourhood of its final objective. The conclusions deduced are that the Division is intended to re-inforce the Second Army; that the original purpose of its assembly at Hiroshima has had to be abandoned, and that the situation in Manchuria must be very serious to demand such a large addition to the Japanese forces. These conclusions are due to ignorance of the elementary principles of military expeditions. Before the capture of Port Arthur, the Japanese base of operations was at the mouth of the Tadong river. There the transports carrying the Second Army assembled after leaving Hiroshima, and thence they steamed across to the Liaotung peninsula. Few people, we presume, were silly enough to imagine that because the estuary of a Korean river was the rendezvous of the Army, Korea must be the field of its operations. Similarly Talien is now the base. If the Sendai Division has gone thither in the first instance there is not the slightest reason to conclude that Manchuria will be its campaigning ground. Talien is merely the place where the expedition upon which the Division proceeds will be organized and its forces brought up to their full complement. So far from being absorbed into the Manchurian troops, the Sendai Division will receive a portion of the latter for the purposes of its ultimate operations.

Wild estimates are also published as to the numerical strength of the Japanese forces already in the field, but space fails us to explain the facts here.

THE YOKOHAMA HARBOUR WORKS.

THE House of Representatives engaged in a lively and protracted debate on Saturday with reference to the Yokohama Harbour Works. In the sixth session of the Diet the Government included in the Budget an appropriation for completing the Works, which had been suspended for a time pending investigation of the causes underlying a failure in the durability of some of the concrete blocks. The House of Representatives having been dissolved before the Budget came into existence, it resulted that the Budget of the preceding year had to be again carried out, which meant that no money was available for the Harbour Works. On the other hand, to leave the breakwaters unfinished involved their rapid deterioration. The difficulty was solved by including the necessary funds in the category of continuing expenditures, and putting them in a Supplementary Budget to which the House's *ex-post-facto* assent was sought this session. Very little question was raised by the House as to the propriety of the financial course adopted by the Government, but a most resolute attempt was made to prevent the passing of the item until the responsibility for the failure of the blocks could be fixed; until certain vague charges of irregularities in connection with the purchase of a dredger and of cement could be confirmed or disproved, and until some assurance could be obtained that the blocks used hereafter would not develop the defects shown by their predecessors. As to the irregularities alleged to have taken place in buying materials, we may dismiss them at once. The accusations preferred with reference to the dredger are known to be utterly baseless, and if any official lined his pocket by conniving at the supply of bad cement, no evidence appears to be forthcoming either that bad cement was furnished, and that it was wittingly received. It will be observed by our readers, if they take the trouble to peruse the debate, that the experts representing the Government carefully excluded the contingency of defective cement from their category of causes responsible for the failure of the blocks—a most important fact in view of the rumour circulated two years ago when the cracks in the blocks were first discovered. Many persons then confidently alleged that the fault lay with the cement, and that Japanese cement could not be trusted, but it would seem that no just grounds existed for such a conclusion. Mr. FURUICHI, Chief Engineer of the Home Department, let it be explicitly understood by the House that the failure of the blocks must be attributed to deficiency in the amount of cement used, not to its defective character. He said that blocks made of the same materials but containing a larger proportion of cement had showed no sign of weakness. He said also that the responsibility rested with the foreign superintending engineer, who, having died two years ago, can not be heard in his own defence. It is very regrettable, we think, that such an accusation should have been officially preferred. Nor can we appreciate its justice. If all, or nearly all, the blocks had failed in durability, there might be fair grounds for assuming that the superintending engineer's formula for mixing the ingredients was faulty. But when 96 blocks out of every hundred showed themselves thoroughly satisfactory and only 4 failed, it is surely unwarrantable to conclude that the general method of manufacture was bad. And if that conclusion is not warranted, how can the engineer-in-chief be alone held responsible? No human being is omniscient or ubiquitous. If, in the conduct of a great work, a few parts of the structure exhibit defects though the general results are good, is it not most probable that the fault lies with subordinates, as workmen or overseers, who through carelessness depart occasionally from their instructions or fail to detect such departure? The superintending engineer is of necessity obliged to trust largely to his assistants, and where the assistants are not of his own choosing, to lay the whole responsibility of every detail on his shoulders, seems to us very extravagant.

THE MOSLEM "JEHAD."

REPORTS have of late been frequently circulated that the Chinese Moslems, doubtless at the instigation of the Central Government, are about to proclaim a Jehad, or Holy War, against Japan; and this announcement has been magnified into the belief that many thousands of frenzied fanatics will, before long, confront the Japanese troops: fanatics to whom death is preferable to life, for to fall in a Holy War means instant translation to the highest Paradise, with the concomitant blessings of innumerable houris and every sensual pleasure that the worldly minded prophet could imagine. But divested of all rumance and looked

Digitized by Google Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

at in a serious light, there is, we fancy, absolutely nothing to be apprehended from the Moslemism of China. In the first place, there is the question of numbers. According to investigations made about a decade ago, there were, at that time, not more than half-a-dozen *bonâ fide* Mohammedan communities in China proper. Most of these had, moreover, not only lost or forgotten some of the vitally important tenets of their creed—such as the unity of the DEITY and the direct inspiration of the Koran—but were so contaminated with Taoist ideas that, with the possible exceptions of observing Friday as the Sabbath and wearing turbans, there was really very little difference between them and Chinese of wholly dissimilar views and practices. Take the little Moslem community in Canton for an example. They have, it is true, a mosque, wear white turbans, and are perhaps the strictest adherents of Mohammedanism to be found in China. Yet their "moolah," or priest, was, at the time we speak of, quite unable to read any but a few texts that he had painfully committed to memory; and the ordinary practices and observances of the handful of true believers were such as would have shocked any orthodox Moslem. It is supremely absurd to speak of arousing any Jehad among sectarians of this description. The Canton community, being close to Hongkong, where there is an orthodox mosque and many hundreds of Moslems to the manner born, might be expected to be much more thorough-going and zealous than are the Moslems in remote provinces. But even there the utmost laxity prevails, and almost nothing is known of the Prophet's teachings.

So much for the Moslems of China proper. Of course there are vast numbers of true believers on the outskirts of the Empire: on that debatable ground claimed by China and acknowledging her suzerainty. But how these people could be got to fight for China, no matter what the pretext might be, is quite incomprehensible. Their allegiance to the Empire as such is of so lax a description, so frail a tenure, that no man knowing the facts in the case could for a moment suppose that they would take up arms in defence of their suzerain: rather against than for, if anything. The accounts published by recent travellers more than bear out the truth of these statements.

If, then, there is to be a Jehad—which we very greatly doubt—the active partakers will perforce be confined to the few thousand Moslems scattered throughout six or seven cities in the southern and central provinces. Granting that sufficient incentive could be found to bring these men into the field, the actual number of combatants would be so small as not to deserve any notice whatever. Their religious views are neither sufficiently orthodox nor sincere to inspire them with the blind zeal that makes a "Ghazi rush" dreaded in India. It would require more than the usual amount of coercion to bring these men to the fore, and, once there, it may well be questioned whether they would prove of the slightest actual value. The Japanese Generals have frequently, since the outbreak of the war, sighed for foemen worthy of their steel; "fanatic Chinese Moslems" has a promising sound, and such men, if they really existed, would unquestionably prove far from being despicable opponents. But there is no hope—or no danger—of such combatants ever crossing swords with the armies of Japan.

THE STUDY OF JAPANESE.

THE most interesting mode of studying Japanese is to watch the identities of its words and grammatical forms with those of kindred languages. If it be true that both the words and the forms are of continental origin, as Mr. ASTON believes and as I believe, a great error is committed by those who study Japanese as an insular and isolated growth. They are under the influence of an erroneous philosophy of language during the whole course of their studies. They are quite as mistaken as the botanist who should fail in his examination of the plants of Japan to compare them with the plants of the adjoining continent. Ignorance of the resemblances and identities existing between the flora of the Japanese islands and that of Asia and Europe prevent him from making real scientific progress. The best help in education is found in the discovery of facts and laws contrasted and identical in different areas belonging to the field of knowledge.

Take the word "tongue" for example. *Shita* is the Japanese word. The English tongue is a verb in Chinese, that is to say, *chang*, to taste, old sound, *dung*. *Shita* is the Chinese *shet*, tongue, which is read by the Japanese *zetsu* or *set*. The pupil ought to be told by his instructor that *shita*, the old Japanese word, is really identical with *set*, which he finds in quite another part of his dictionary. The old word *shet* has become *shê* in modern Chinese, and *shita* in the original Japanese language. Here a law comes to view to which the attention of the learner should be drawn. There is a natural tendency for sonant letters to become surds, and this is a law of remarkably wide extent. The cause of this law is in the economy of energy. The meaning is understood without that addition of voice which makes the sole difference between sonant and surd. In Mongol, a language closely akin to Japanese, *dologoho* is to lick, and in this the root is *dol*. The Turkish for tongue is *dil*. In Tibetan, tongue is *lche*, and the *l* is dropped in pronouncing the word; originally it would be *det*. The superimposed *l* in Tibetan writing indicates a primitive *d*, and *ch* in all the eastern Asiatic languages is changed from *t*. What then does our word for tongue become farther west? In Arabic, *lisan* tongue, is the Hebrew *lashon*. In the Indo-European system it is our word *taste*. The Latin *gustus*, *gustare* to taste, as in *de gustibus non est disputandum*, is the Mongolian *heleon*, tongue, *helene* to speak. The letter *h* in Mongol comes from *g* and *k*. Our word *lick* is in Tibetan a noun meaning tongue, *jag*. Thus our three English words lick, taste, and tongue are in Japanese *tsugeru* speak, *shita* tongue, and *nameru* to taste. The roots are identical, the special sense varies. To speak and to taste are acts of the tongue. The amount of difference between the sense attached to these three roots is a measure of the distance in space and time passed by our ancestors and those of the Japanese since, somewhere not far from the Caspian Sea, many years ago, they parted to go their several ways.

Now I will briefly mention one of the conjugating syllables, the negative *nai* not, as in *wakaranai*, do not understand. It is *dzu* in *kikadzu*, not hearing. It is *de*, *ne*, *na*, *nu* in other parts of the negative conjugation. In Mongolian verbs it is *de*, as in *sonosde*, not yet heard. This is a convincing proof of the identity of the Mongol and Japanese verb. In Turkish any part of a substantive verb is made negative by prefixing *diyil*, or *deyl*. This is the Japanese and Mongol negative. The Turks have another negative, *ma*, used as in *yasmamak*, not to write. This is the Chinese *wu* from *mot*, "do not," in Mongol *bu*. But *m* changes to *n*, and *m* is more visible to the eye in conversation than *n* and is therefore primeval. Now it is plain that the negative was always required in human speech from the first. There never was a time when the command, thou shalt not kill, was not likely to be needed as a command or in deprecation. It is Japanese, *Koros na*, Latin *non occides*, Hebrew *tirtsak*, Chinese *mut shat*, Mongol *buala*, Turkish *katl ma*, Tibetan *ma sod*, English deprecative, do not kill; imperative, thou shalt not kill. Let the student carefully notice here that the negative in *m* or *b* is Chinese, Tibetan, Mongol, and Turkish, and that the frontiers of these four nations are conterminous. Is not this suggestive? Then notice that the negative in *n* or *d* or *l* is Japanese, Mongol, Turkish, Semitic, and Indo-European. The Semitic race must have gone from a higher latitude to the Arabian plateau and the valleys of the Tigris and Euphrates. The method I recommend to young students of Japanese leads to the ultimate identification both of the negative syllables in these examples, and of the verb to kill. Some languages have both forms. The Hebrew has *ratsak*, kill, and *katal*, kill. It agrees both with China and with Japan in its words having the sense, kill. Such a fact indicates that there was a primitive vocabulary from which all these languages drew their words. If then we are willing to be guided by facts and not too timid to follow the light of truth, we must see here

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

that we are justified in claiming that the Japanese *Koroshi*, the English kill, the Latin *caedo*, the Hebrew *katal*, are one word, as also that the Chinese, Hebrew, and Tibetan for kill (*shat*, *chod*, *vats*) are one word.

The study of Japanese is invested with a new interest when its unity with the common speech of Europe and Asia has been proved. I hope that young Japanese who read English may see this paper of mine. There is one man, KITASATO, who has done splendid work in the department of bacteriology. If the Japanese student will make researches in Mongol, and Tibetan, Hebrew and Greek, Latin and Welsh, he may secure a share with KITASATO in the applause of those who know what true science is. There is a mode of study required which shall embrace the whole period of the existence of the Japanese nation. Mr. SATOW limited himself to the time subsequent to the introduction of the Chinese language. Mr. CHAMBERLAIN has done the same with the exception of his work on the Aino. We are much indebted to Mr. BATCHELOR for the Aino legends which he has translated. Mr. ASTON knew that the vocabularies and grammar of Japan and of Tartary are identical, and this afforded him a stimulus to study Korean, which he did to good purpose.

To have a correct theory is of great importance. Nothing can be more dull and dispiriting than the isolation theory. If the teacher in his instructions maintains that Japan's legends, its vocabulary, its religion, and its grammar are all insular and isolated, he simply accepts native theory. But if the teacher shows how similar words, ideas, religion, and legends, are found among the nations of the continent, a flood of light is poured on the subject. There are two keys to the comprehension of old Japan. The one is at Tsushima, and the other at the head of the Gulf of Tartary, where Saghalien nearly meets the Russian province of the Amoor. The Japanese negative in verbs points to this northern key. Native Japanese scholars ought to prosecute these studies on the lines here pointed out. They will find an immense advantage in using the Old and New Testaments. With CRUDEN'S Concordance, all the words required for comparison can be easily found. I know a Chinese in London who greatly admires the Old Testament because its history is written on the same principles exactly as Chinese history. Any intelligent Japanese reader of the Old Testament will feel the same to be true of Japanese history. Japanese history is like Hebrew history. A love of Bible reading will be stimulated by philological inquiry into the resemblances between Japanese and the languages I have mentioned.

JOSEPH EDKINS.

Shanghai, December 1894.

CORRESPONDENCE.

THE JAPANESE NEW TESTAMENT TRANSLATION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The question raised by the Rev. J. M. McCaleb with regard to Acts. VIII. 33, and 1 Timothy III. 11, was simply this:—What authority is there for the words *tadashiki* and *joshitsufi*? My reply to this question was that "there seems to be no really decisive authority for the present translation." The statement of "A." in his letter of January 8th that we must translate not mere words but ideas, is a truism, of course, and has no special bearing on the question of authority raised by the Rev. McCaleb, for we must in common charity suppose that the translators of the Bible, whether they are recognized as authorities or not, have been aware of their duty in this respect everywhere and at all times. That in "A.'s" own opinion the interpretations of Hachett, Gloag, and Schaff are not sufficiently well established to justify the present translation, is evident from the fact that he himself holds another rendering to be more correct, viz., "the punishment appointed him was taken away," that is he does away not only with *tadashiki* but also with *ubawaretari*, and (by implication) with *sabaki* as well, a tolerably radical change of the present translation, yet well worthy of a careful consideration by some future committee on revision. If "A." thought that there was really decisive authority for the present translation, he would surely not himself prefer another and certainly very different rendering of the verse in question. As to the passage in Timothy, there is no difference of opinion between "A." and myself.

I may add, though this has nothing to do with the question raised by the Rev. McCaleb to which I have strictly confined myself, that I agree with "A.'s" substitution of "punishment" for "righteous judgment," for reasons to be found chiefly in the original Hebrew, of which the passage in the Acts is itself a mere translation. This is, however, a matter of little public interest and can be satisfactorily dealt with only by a future committee on revision.

Respectfully, EPSILON.

Tokyo, January 14th.

LETTER FROM CHICAGO.

(FROM OUR OWN CORRESPONDENT.)

Chicago, December 20th.

Rev. W. E. Griffis, D.D., delivered a lecture on the 12th inst., before the Brooklyn Institute of Arts and Sciences on "William Bradley, the Governor of Plymouth," which was the second of a series of addresses on "The Founders of New England." Dr. Griffis is now engaged in editing Townshend Harris's journals for publication. His book on "The Religions of Japan" will be issued on February 1st by Charles Scribner's Sons.

Prof. Geo. T. Ladd is to have an article on "The Mental Characteristics of the Japanese" in the January *Scribner's Magazine*.

The latest toy for sale on the street here is a *jinrikisha* with a slight motive power. The front window of Foreman's shoe store is adorned with a Chinese pagoda made of cork and with Japanese dolls and *jinrikisha*; and every pair of shoes in the window bears a business card with "Foreman's Shoe Store" in English and "Foreman, Kutsuya" in *kana*.

A report comes from Pittsburg, that the Japanese Government has placed a contract with the Carbon Steel Company, of that city, for light armour for torpedo boats; and that Millard Hunsicker, "Chairman Frick's assistant," is now on his way to Tokyo from St. Petersburg.

The news of the Port Arthur massacres has been read here with deep regret and shame, and has led some rash editors to affirm that Japan has "lapsed into barbarism again." But unprejudiced thinkers, while sorry for this one stain, accept the manly explanation of the Japanese Government, as may be seen hereafter—

Rev. French B Ellingwood, the Secretary of the Presbyterian Board of Foreign Missions, who has frequently visited China and Japan, said he regards the Japanese Minister's utterances as most manly, and calculated to go a long way toward wiping out such bad impressions as the individual atrocities of the soldiers may have created. "We would have had no such manly confession," said he "from the government of Turkey had like atrocities occurred there."

Rev. Dr. Charles L. Thompson, of the Madison Avenue Presbyterian Church from which the latest missionaries to China were sent, said:—"It is much more important to the civilized world to know how the Japanese Government looks at the atrocities charged as committed by Japanese soldiers than to know in detail what those atrocities were. The Asiatic spirit of barbarous warfare may have suddenly broken out among the Japanese soldiery upon great provocation, without any blame whatever upon the Government or the officers of the army, and the dispatch from the foreign Minister is regarded as frank, manly, and reassuring to all friends of civilization.

It certainly seems less reasonable to censure the whole nation for one lapse under great provocation than to praise the soldiery that such a lapse did not come sooner or oftener. It is interesting to note that this one outrage, flagrant as it was, did not seriously affect the judgment of the Senate Committee on Foreign Relations, which yesterday voted *unanimously* to recommend that the new treaty between the United States and Japan be confirmed.

It is a great mistake to say that the Chinese can not assimilate American ideas; note the following items:—

Philadelphia, Dec. 19.—A unique acquisition to the annals of labour troubles will be the strike which a local undertaker now has on hand. Recently he secured a contract for the removal of a number of bodies from an old downtown cemetery. Of the corpses there buried thirteen were Chinamen and, according to an agreement made at the time of interment, these were to be sent to China if ever exhumed. Lee Toy, mayor of Chinatown, furnished several Chinamen who agreed to dig up the bodies, strip the bones and boil and bleach them for shipment for $100. They began work on Monday morning, but at noon struck for $100 more. Their demand was granted and they returned to work. To-night the pink parasol, which in the flowery kingdom is the symbol of social distinction, was again put over the charnel house and they demanded $100 more. The undertaker vows that he will put alien labourers at the job in the morning, while Mayor Toy is making strenuous efforts to raise the cash, declaring that it is a profanation for any but a Chinaman to handle Chinese bones.

It is reported that Seattle and Tacoma have been conferring with the object of diverting their way the U.S. mail for Japan and China.

The correspondence between the Navy Department and Admiral Walker with reference to his mission to Hawaii has been laid before the Senate. His instructions were in the line of strict neutrality and protection to the American flag. His report particularly emphasizes "the attitude and ambition of Major Wodehouse," the British Minister in Hawaii, and calls him "a pronounced and partisan royalist."

The Nicaragua Canal is under discussion in the Senate, where the other day Senator Turpie, of Indiana, vigorously opposed it as a "gorgeous bubble."

War has not yet broken out between Mexico and Guatemala, and may be averted by negotiations.

"The revolutionary junta" in Brazil have no confidence in the peace propositions of President Moraes, and have decided the push the war. In the South they have met with some successes. Admiral Mello is expected to leave Buenos Ayres after January 1st to take command of the Revolutionary forces. Ex-Pres. Peixoto has a severe attack of locomotive ataxia.

Sir John Thompson, Prime Minister of Canada, died suddenly on the 12th inst., and has been succeeded in office by Hon. MacKenzie Bowell, Minister of Trade and Commerce.

Newfoundland also has been excited by a change of ministry as well as over the failure of several banks. It is, however, now believed that the financial panic will not continue.

The Sultan has withdrawn his invitation to the United States to participate in the investigation of the Armenian outrages; but has consented that the Consuls of Britain, Russia, and France sit with the Commission. There is some talk that Secretary Gresham may insist that U.S. Consul Jewett also be permitted to carry on an independent investigation.

Ex-Gov. Tillman has been elected U.S. Senator from South Carolina.

The Presidential appointments of Hon. J. C. Clements, of Georgia, to be an Inter-State Commerce Commissioner, and of Charles D. Clark, of Tennessee, to be U.S. District Judge (in place of Porter, nominated but not confirmed), have been confirmed by the Senate.

A bill to authorize railroad pooling has passed the House of Representatives by a vote of 166 to 110. This bill has been endorsed by boards of trade and State railway commissions, and will, it is thought, pass the Senate. It is aimed against rebates and other forms of rate cutting.

The House of Representatives has also passed an "urgent deficiency" bill, which includes an appropriation for the expenses of collecting the income tax. Cockran, of New York, tried to strike out that feature, but was defeated by a vote of 49 to 169.

The House Committee on Banking and Currency has decided to report favorably Secretary Carlisle's plan for financial and monetary reform. As two Democrats voted with the Republicans in opposition, the vote was close,—9 to 8. The House

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

will not, however, consider the measure until after the holidays. The opposition to the Carlisle plan is very strong, and seems to be growing, especially with reference to the banking system; and yet it is generally admitted that there is need of some kind of reform.

The gold reserve continues to sink fast; yesterday afternoon it had dropped a little below $91,000,000.

The Yankton Indian reservation in South Dakota will probably be opened for settlement next spring. It contains over 200,000 acres, of which about 75,000 acres have been reserved to the Indians.

The Lexow Committee in New York City is continuing its investigations of municipal corruption, and has elicited damaging testimony against Richard Croker, the ex Chieftain of Tammany. The Civil Federation and other organizations in this city are preparing for a similar investigation, which will undoubtedly reveal the fact that Chicago is not yet a model city.

The annual convention of the National Civil Service Reform League has recently been held in this city. The address of the President, Carl Schur, complimented President Cleveland's second administration, "its shortcomings notwithstanding," as having "materially advanced the reform cause." The civil service is being gradually extended.

The American Bell Telephone Company has lost an important case through the decision of Judge Carpenter in the U.S. Circuit Court in Boston, that the Besliner patent is void. This patent, the exclusive use of which was claimed by the Bell Telephone Company, "covers the use of the carbon or microphone contact used in the long distance transmission of speech." An appeal will be taken to the U.S. Circuit Court of Appeals and perhaps to the U.S. Supreme Court. If this decision is maintained, telephones will be very much cheaper.

Frank Lenz, the Pittsburg bicyclist who started out to girdle the globe on his wheel, was last heard from at Tabreez, Persia, on April 28, and has, it is feared, fallen a victim to Turkish brigands.

Frank C. Ives, "the young Napoleon of billiards," having recently defeated "the Wizard," Jacob Schaefer, in a six nights' match in this city, is now the champion.

Another death in a prize fight (at New Orleans) has thoroughly aroused public opinion against the pugilistic science.

The American Federation of Labour has recently held its annual meeting in Denver. President Gompers was defeated for re-election, and John McBride, President of the United Mine Workers, was chosen to succeed him. The headquarters were removed from New York to Indianapolis. A long series of resolutions was adopted.

Judge Woods has at last rendered a decision in the case of Debs *et al* for contempt of court in disregarding legal injunctions in the strike of last summer, and finds all the defendants guilty except one (James McKeen). Debs is condemned to six months, and his subordinates to three months, in jail. At first there was talk of an appeal to the U.S. Supreme Court; but it was finally decided to go to jail and pose again as "martyrs." The document giving the decision is a very long and able one, and goes into details in all points. It is the general opinion that the accused "got off lightly;" that, if they were guilty, and deserved any punishment at all, they ought to have had a much longer term than a few months in jail.

Labour Commissioner Wright's bill for a national board of conciliation and arbitration in the case of strikes has been introduced into the House of Representatives.

President Harper and Secretary Goodspeed, of the University of Chicago, have made a trip to New York City to confer with John D. Rockfeller; hence the gossips predict a handsome Christmas gift this year for the University.

Mrs. Chika Sakurai, of Tokyo, is in this city, and is trying to raise money for the education of Japanese girls.

There is a young Japanese lady in Hahnemann Medical College of this city.

A Chinese agent is said to be in Washington, negotiating with the Brazilian Minister for the purchase of the *Nictheroy* and the *Andrada*. If the *Nictheroy* is sold, the Zalinski dynamite gun will go with it, and "the vessel will be commanded and manned by Americans."

Ex Governor and ex-Senator Alcorn, of Mississippi, died this morning.

The eyes of birds that fly by night are generally about double the size of those of day birds.

Iceland, in the North Atlantic, the Isle of Man, and Pitcairn Island, in the South Pacific, have full woman suffrage.

ST. GEORGE AND ST. ANDREW.

We'll up an' we'll gie them a ba', a ba'
Wi' a hundred aubscribers an' a', an a'.
—*Old Song.*

One day last week St. George came doun tae
walk about the street,
And there he met St. Andrew in his bonnie
hielan' dress,
Wi' sporran, dirk, an' *sgian-dubh*, an' the brogues
upon his feet,
Gangin' back an' fore along the shore, as if he
owned the place.

"Hoo's a' wi' you?" says Geordie, "I'm weel
enough," says Sandy,
"But it's mony a day, I'm thinkin', since ever
I was meetin' ye.
"Will we hae a drap thegither, sir? The Club
is varra handy,
"An' I'm sure ye'll no refuse me, sir, the plee-
sure, sir, o' treatin' ye."

They took a drap o' whisky cauld, and syne a
drap o' toddy,
An' Sandy speired the reason o' his comin' tae
Japan:
"It 's they women saints," says Geordie, "they
winna leave a body,
"An' ye ken they're no for marryin' there, an'
I'm no *yon* sort o' man."

"But noo ye're here, my cannie man, I count on
your assistance:
"Leddies here is fond o' novelty, as nae doot
ye will hae heard;
"Noo, a walkin' competeetion—man, ye'd meet
wi' sma' resistance
"If ye'd use they bonnie wings o' yours just
like a muckle bird!"

"Gae awa wi' ye," says Geordie, "Ye ken that's
idle talkin';
"They deils o' judges wadna let me use the
wings at a';
"An' I'm no like Maister H——k, that 's sae
powerfu' fond o' walkin'—
"But I'll tell ye what I'm gaun tae do, I'm
gaun tae gi'e a ba'."

"Hoo daur ye then," St. Andrew cried, "encroach
on my monopolies?
"Hoo daur ye speak o' gi'in' a ba'? Hoo daur
ye mak sae free?
"There's just *ae* ba' in ilka year for fowks in this
metropolis—
"Ae ba', I mean, that's worth the name—and
that ane's gi'en by ME!"

"Ye donnart gowk!" St. George replied, "I
care na half a dollar,
"For a' your bletherin' windy words! Ye
needna say nae mair!"
Then Sandy took the hint an' gripped a hand o'
Geordie's collar
An' skelped him weel about the lugs, an' touzled
a' his hair.

An' Geordie wasna backward too wi' pummellin'
an' maulin';
Sae they banged awa wi' might an' main till
their strength began tae fail.
But the manager he ca'd the p'lice tae come an'
stop the brawlin';
An' sae, that pair o' fractious saints, they slept
that nicht in gaol.

Next day the judge gaed into court an' sat him
doun the bench on,
Wi' wig an' goun an' spectacles, an' mony
dryasdust tomes.
Then maister L——r up an' says, says he, "I'd
like tae mention
"My client's youth an' ignorance o' Yokohama
customs."

An' blate M——l was bauld tae say his Honour
recollected—
But the lad himsel forgot the rest afore he'd
weel begun;
Except "My client—fam'ly man—an' varra weel
respected,
"An' 'a' his freens can testify he doesna bear
the sun."

His Honour keeked into a book an' there he
found the law;
An' says he, "The case is plain enough an'
governed by authority.
"If Geordie here in ilka year had gi'en a bonnie
ba'
"Auld Sandy 'd no hae daured tae claim sic
proud superiority.

"An', Sandy man, ye'se just as bad. It's ill tae
bear, ye ken,
"Comparin' Geordie tae a bird, an' him a
patron saint.
"Sae ilka ane will need tae pay a fine o' thirty
yen,
"An' I'll quod ye baith, as sure as eggs, the
varra next complaint."

D.

LETTER FROM WASHINGTON.

(FROM OUR OWN CORRESPONDENT.)

Washington, D.C., December 4th.

Washington is unique among American cities, as it depends for its importance neither on manufactures, natural position, trade, nor railroads. It is a purely artificial product, as much so as Versailles was under French Absolutism. Its quarter of a million of breathers are here because of that magic word "government." Before the end of the last century Congress decreed that a Capital should be grown in the forests on the banks of the Potomac, and under the direction of our first President, the engineers blazed out avenues and marked out streets among the trees. For three quarters of a century afterwards, the place was famous for mud half a leg deep, roots, stumps, stones, material, and "magnificent distances." A witty French diplomatist exiled here, wrote home that there were needed only some houses, some pavements, some shops, and some few thousand people to make this a town. But twenty years ago a "promoter" or "developer," bluntly called rascal, by hook or crook got the civic helm in his hands. With the local treasury open to him, he tunnelled, bored, and ditched, spaded, carted, and leveled until roadways began to evolve from the primeval conditions. On the outer streets he laid cobble stones, while the busier quarters he macadamized, but on the chief paths he introduced a new substance, asphalte from the West Indies. Pugnacious trees that could hold their own against the thick layers of brick, rubble, cement, and bitumen, were planted in rows down both curbs. Underneath tortuous sewers wound along to discharge away down the river. There were loud cries of greedy bargains, "sells," corruption, bribery, venality, thievery generally, but the work went unconcernedly on till the sylvan village sprouted into the cosmopolitan centre. From first to last this social home has been built to order according to the original plan of checkerboard streets, with the Capitol as the hub of radiating avenues, running diagonally across the rectangles, while additional independent short cuts have been drawn across this system of spokes. The naming of the streets has pretty rigidly followed the design of the founder, streets from North to South being numbered, those from East to West being lettered, and avenues being called after the States. Owing to this simplicity a stranger can count off blocks on his fingers, and tell distances and directions as easily as an old resident. This strict adherence to a logical method relieves the memory of the tiresome burden put on it by such snarls and entanglements of street systems as those in any other large capital in the world, perhaps. Order in the arteries of traffic has been followed by beauty of feature. Nowhere else, in America at least, can there be found such taste in architecture, such richness of ornamentation, and such comfort of living. When they look on this municipal child, rigorously "brought up by hand" to suit, Americans are pardonable in their boast that "we have the prettiest, best laid out, and finest city on earth." But there is one fault, a failure to appreciate the effect of an artistic whole in the location of the public buildings. The White House, Treasury, and State Departments are all huddled together, so that each, a model in itself, is cramped and dwarfed by the other two. The Interior and Post Office Departments, each a creation of cold white marble after the classic Greek conception, areiouly a few yards apart. The vast stone pile on the Acropolis remained undisturbed in its hermit like grandeur up to a few years ago, and then some Vandal devoted to economy of the national wealth or of the Congressional leg muscles, got the magnificent national library right at the outer edge of the Capitol grounds, and the attention is distracted from either of these monuments of the builder's art by the propinquity of the other. Especially as you come up the Potomac do you regret that the historic halls of eloquence have not been left in solitary dignity. But delicacy of art is not apt to be evolved from rural politicians and ward bosses even by this great and glorious country.

In another respect Washington furnishes a strange anomaly in a self governing people. With our brag of Republican superiority over the "effete monarchies," it is a keen joke on us that the masses here in the very core of the greatest democratic state in existence have no more voice in the ruling of themselves than the serfs of Russia had in the councils at St. Petersburg. Owing to the large irresponsible negro vote in the District, the Republican party in Congress—the party that abolished slavery and put the ballot in the hands of the ignorant blacks—decided more than fifteen years ago to disfranchise the entire community and govern the city

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

by a commission of three members appointed by the President and Senate. It is a still sharper commentary on our braggart strutts of popular sovereignty to say that this is the best municipal administration of a large city in the United States. There are no "jobs," no "deals," no cries of "fraud," no "scandals," no rings, no bosses. There are no elections with their accompaniments of clubs, brass bands, discordant yells, and sputtering torch lights. The streets are well illuminated and clean swept. The police are civil and watchful, and do not treacherously dip down into the cess pool of corruption and danger that sweep into every large aggregate of human beings. Neither is there any collusion between the judges, and leaders of the criminal classes—a political partnership that has been charged and practically proven in New York city. Of course conditions are peculiar in Washington. A large temporary population of four-year-office-holders, and rising tide of office seekers and a steady stream of sightseers, and an irruption of the "brother in black" into his new found Mecca swelled the place with an irresponsible element. It was wise to take power from the hands of this thoughtless throng, and while the form of control may be perilously like autocratic management, yet we are a very decently composed municipality.

Washington stands apart also in having a roughly marked "society." It is official in tone and structure. No other city has a recognised head for the lighter functions of intercourse. The President stands at the top, with cabinet heads, senators, Supreme Court justices, congressmen, higher grades of army and navy, on the levels below all the different classes are fighting for precedence. The rank of none has ever been authoritatively settled, and these disputed points of etiquette have been provocative of much heart burning. It is a matter of history how long the wives of the senators and Supreme Court justices waged a petty warfare with each other as to which should call on the other first.

The special political and official influences give great leisure for culture. The place fairly swarms with social and debating clubs, reading circles, charity organizations, sociological classes in economies and civics, scientific associations, historical societies, and numerous others. The members are largely gathered from the officials, retired congressmen and politicians, and that ever thickening layer of wealthy people, slowly forming here from all parts of the land for rational amusement. The Government clerks number thousands, and ex-congressmen are ever increasing here. The poor toilers in the departments deserve all the more credit if they can turn their time to study. They endure a harrowing experience at least at the end of every Presidential term, as the axe hangs over them. If they could be sure of a permanent tenure of their posts, the attractiveness of Washington life could be greatly enhanced. President Cleveland is said to be cogitating a vast reform in our civil service, no less a step than the extension of the system to all offices under the general government, except a few at the top. Gradually this good work has gone on for the last ten years, and the domain of spoilsmen has been narrowed more and more. But if this revolution in the old method of appointment to office could be effected, Washington would be more than ever a unique city, unique in developement, in government, and in social life.

An old sensation is being mildly revived now in the courts here. A Captain Howgate is up on the charge of having once robbed the government of some hundred and odd thousand dollars. He was arrested, confined a few days, and then he earnestly begged to be taken to his home for a bath. The kind-hearted jailers drove with him to his residence and sat in the parlour while the prisoner went to the bath room. He was thirteen long years steaming and enjoying himself, or at least that time elapsed before the officers of the law again laid their hands on him in New York two or three months ago. He had been in the book trade there for years, walking the streets as boldly as any business man, and had even revisited Washington several times. It seems now he will be acquitted, and many people will be glad as he made hosts of friends by his genial manner and delightful entertainments. It is also felt by some that if he did abstract from his master, the offence was not so heinous because the government was so lax as to lay great temptation before him. He had charge of some military telegraph lines in the far west, and by a strange oversight he was not required to turn over to the treasury the receipts of private messages. The income came into his hands and he was to disburse it in the maintenance of the lines without any supervision being exercised over him. It is safe to say that under such a loose plan, most of us would filch a little.

One of the leading *connoisseurs* of Art is this country, died the other day, W. T. Walters, of Baltimore. He was very wealthy and worth some five or ten million dollars. But it was not shekels, but his rare taste that made him so well known. He had one of the finest art museums in this country, filled with some of the masterpieces of painting, choicest carvings, rarest vases, and curios from Japan, China, and the East generally. His rooms were in the most aristocratic part of Baltimore, and the public were admitted on certain months in the year by ticket, the proceeds going the charity. It was hoped that he would bequeath the collection to the city or to some public foundation, but it has passed with his other possessions to his two children, only about ten thousand dollars being given to charity. He made his pile on whiskey, being a wholesale dealer in that line for a number of years. Temperance fanatics are somewhat stumped when they think of his art museum.

The usual cry against football has been heard this fall, only it has been heard louder and harsher than before. Prize fighters piously claim that their sport is far less dangerous. In fact the per centage of serious and fatal accidents is considerably lower in fistic encounters than in foot ball. The great contest between Yale and Harvard called forth a broad ride of references to the old Roman gladiatorial shows. One of the most temperate of American papers calculated that in that game of the "goose egg," the wounded and disabled were far greater in proportion to the contestants than the bloodiest battlefield of modern times could show. And this after all the boasted reforms of the rules since last season. Here in Washington on Thanksgiving day, a game came off between a college team and a private Athletic Club. The latter had heavier men, and several of them piled on the smallest of their enemies and broke his back. The poor fellow has been paralyzed from his chest downwards, but meets his slow death bravely and cheerfully. The colleges seem afraid to tackle the evil, as their roll calls might be affected. The parents of ambitious boys are dazzled by the prospect of glory, and so the innocents are lured to slaughter by wild enthusiasm and careless applause.

JAPAN AND KOREA.

The following appears in *The Times* of November 26th:—

Tokyo, October 10th.

Korea is now entirely cleared of Chinese soldiers. The ease with which they have been driven out establishes the justice of Japan's contention that, while claiming the peninsula as a dependency, China was never competent to protect it. Had a Western Power—Russia, for example—been in Japan's place at this juncture, is it reasonably presumable that the Chinese would have made a stouter stand than they have done, or that the difficulty of driving them across the Yalu river would have proved more formidable? By the light of established facts, Japan's attitude becomes easier of public interpretation. During the past 25 years she has closely observed her big neighbour's curious relations with the petty States on its frontiers. She has seen that China, while utilizing those States as buffers to soften the shock of foreign impact, had neither the will nor power to preserve them from being crushed in the performance of the *rôle*. Tonkin, Annam, Burma, Siam—one after another the buffers dropped off, until Korea alone remained.

The statesmen in Pekin ought to have gathered some wisdom from these experiences. They ought to have perceived that, although in mediæval times the majesty of the Middle Kingdom might impart some element of substantiality to its anomalous pretensions, no such shadowy imposture could check the march of Western agression in the 19th century. But they did not read history with practical eyes. In Korea's case also they continued to play the farce of calling the peninsula a dependency of China, and at the same time asserting its independence towards all other nations. By-and-by they supplemented that policy by a fresh complication. The encouraged Korea to conclude treaties of amity and commerce with foreign States, hoping that the little kingdom might find security in the conflict of interests thus created. But again they ignored the lessons of their own experience. For they forgot that, when an Eastern country embraces Western intercourse, it must either become progressive or face the certainty of serious complications. China herself, remaining conservative, has had to encounter many troubles, and has not emerged from them without heavy loss. In the south and in the north considerable portions of her territory have been lopped away; the payment of indemnities has been a chronic necessity to her, and her suzerain titles have one by one been torn up. If her integrity survives, it is because her bulk endows her with comparative insensibility to minor disaster. Korea, too small to endure shocks, was nevertheless inevitably exposed to them when China with one hand introduced her to foreign nations and with the other held her fixed in the groove of unprogressive stagnation.

It has been claimed on China's behalf that she conferred upon Korea the only substantial element of progress it possesses, an efficient Customs administration. A strange claim surely, seeing that the Customs service in China is entirely controlled, managed, and organized by foreigners; that China's only merit in connection with it is the negative one of suffering it to exist to her own great convenience and profit, and that its extension to Korea was at once a necessity dictated by the opening of the latter's foreign trade, and a mutual advantage, since it secured a substantial revenue to the Government of the little kingdom and riveted China's hold on the latter. Could it, however, have been reasonably expected that China would encourage liberal tendencies in a border State while she resolutely abstained from putting her own hand to the plough of progress at home? She was not guilty of any such inconsistency. Her influence in Korea continued to be steadily thrown into the scale of conservatism. Moreover, it was exercised in a manner practical and resolute beyond all Chinese precedent. A Resident was placed in Sŏul, and a system of steady but covert interference in Korea's domestic and foreign affairs was inaugurated. The conservative statesmen of the peninsula soon learned that they could count on China's diplomatic alliance to suppress all liberal impulses, and upon her armed assistance to quell any aggressive elements of progress. Twice within a space of five years Chinese troops were employed to crush revolts that threatened the conservatives' tenure of power. Under the shadow of this interference the administrators of the peninsula lost all sense of national responsibility and gave unrestrained play to selfish ambition. The aristocracy had always been a congeries of rival factions perpetually intriguing for the acquisition of political power. It now grouped itself into two principal parties—the party of progress and the party of conservatism. The former looked for foreign sympathy, but, receiving no substantial aid, sank into insignificance. The latter, directly and indirectly supported by China, monopolized the governing power. Things went from bad to worse. Judicial and Executive functions alike came to be discharged by bribery only. Family interests over-rode those of the State. The imposition of taxes had no limit other than the greed of local officials. The welfare of the people and the development of the country's resources received no attention. Personal responsibility was unknown among officals, family influence over-shadowing all abuses and regulating all preferment.

Meanwhile, Japan looked on. Her interest in the future of the peninsula was not less vital than China's. If, from China's point of view, Korea commands the maritime route to Pekin and communicates directly with Manchuria, the cradle of the Tartar dynasty, from Japan's it looks across a narrow streak of sea to Tsushima and Kyushu, and its possession would bring a foreign Power almost within cannon's range of the island empire. It was, therefore, a source of the keenest uneasiness to Japan to see Korea's spirit of independence gradually crushed by the interference of a Power itself wholly incompetent to protect the emasculated kingdom; to see the development of the country's resources checked by the maladministration and corruption of its officials; to see struggles of rival factions and insurrections of suffering provinces furnish constant opportunities for foreign aggression; to see, in short, the peninsular kingdom steadily drift into a condition of administrative incompetence and national debility such as at any moment might afford a valid plea for alien interference. Moreover, this generally disquieting aspect of affairs was accentuated by specific complications. Japan's modern relations with Korea had their origin in a treaty explicitly acknowledging the peninsula's independence and placing that kingdom on a footing of equality with Japan. Yet in all her dealings with Korea, in all complications that arose out of her preponderating share in the peninsula's foreign trade, in all questions connected with her numerous settlers there, Japan found herself negotiating in effect with a dependency of China and with officials who took their orders from the Chinese representative. At every turn she was rendered acutely sensible of China's arbitrary and unfriendly interference. Her efforts to

Digitized by Google UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

tions officially imposed upon trade were hampered by the action of the Chinese Resident; an ultimatum addressed by her to the Korean Government in the sequel of long and patient negotiations elicited from the Viceroy Li Hung-chang a haughty threat of Chinese armed intervention; finally, so hostile and uncivilized did the spirit of Chinese interference become that, when a plot concerted on Japanese territory by emissaries of the conservatives in Sōul resulted in the inveigling of a Korean refugee from Tokyo to Shanghai and in his cold-blooded murder at the latter place, China, instead of punishing the assassin, conveyed him, together with the body of his victim, in a war-ship of her own to Korea, the murderer to be publicly honoured, the corpse to be savagely mutilated.

To appreciate the mood gradually provoked in Japan by all this, it must be remembered that her policy for many years had been one of conciliation and forbearance. In 1882 and 1884 China employed armed force to suppress disturbances fomented in Korea by the corruption and conservatism of the Government. On both occasions the partisans of the victors, regarding Japan as the head and front of progressive tendencies, attacked and destroyed the Japanese Legation in Sōul, compelling the Minister and his suite to effect a painful and humiliating retreat. These outrages did not provoke Japan to any display of resentment. She was content with the most moderate reparation. But in the subsequent negotiations she acquired conventional rights that touched the very core of China's alleged suzerainty. For in 1882 her title to maintain troops in Korea for the protection of her Legation was admitted, and in 1885 she concluded with China a treaty by which each Power pledged itself not to send troops to the peninsula without notifying the other, the two empires being thus placed on an equal military footing as regards Korea. Hence whatever obstructions and rebuffs Japan encountered in Korea through Chinese influence were accentuated by the remembrance of her own long-suffering, and by the consciousness that, as a matter of technical right, she ought to be guaranteed against such treatment. It should also be remembered that during the past 30 years China has looked upon Japan as a contemptible deserter from the canons of the Orient, and has regarded her progressive efforts with disdainful aversion, while Japan has chafed to furnish some striking evidence of the wisdom of her preference for Occidental civilization.

In the breast of each nation there had thus been smouldering a sentiment of jealousy and umbrage that could not fail to be translated sooner or later into hostile action. Thus, when, once more, in June of the present year, the peninsula was disturbed by an insurrection that overtaxed the strength of the statesmen whose corruption and tyranny had caused it, and when China was once more invited by the dominant faction in Korea to crush the insurgents by armed force, Japan understood that the old farce, or rather tragedy, was again about to be acted. Again China, while disavowing all interference in Korea's internal affairs, was to settle the little kingdom's domestic quarrels with the sword; again the nation's spirit of independence was to be stifled by a display of alien force; again the yoke of a greedy and corrupt oligarchy was to be fixed on the people's necks; again all hope of Korea's developing self-defensive competence must be abandoned. Then Japan resolved to interfere. It has been alleged against her that it had long been her intention to interfere, that her engineers had completed minute topographical surveys of the peninsula, and that she had actually constructed pontoon bridges to fit the rivers her troops might have to cross. Undoubtedly Japan was prepared in a military sense. Not to have been prepared would have argued the blindest fatuity. For 20 years the Korean problem had been staring her in the face. For 20 years foreign publicists had added their voices to the prophecies of her own statesmen that in Korea the battle between Chinese conservatism and Japanese liberalism must be fought. Japan looked ahead. She did not deliberately choose war, but she saw clearly that it might be thrust on her, and in that sense she certainly was prepared.

It has further been charged against her that the precipitancy of her action precluded an amicable settlement; that she ought to have exhausted all the resources of friendly diplomacy to procure China's co-operation before sending any troops to Korea. Such an argument would be valid were a different Power concerned. But surely no one acquainted with China's methods will imagine for a moment that by any every-day process of diplomatic representation she could have been induced to inaugurate a programme of reform in Korea. Had Japan, following the ordinary avenues of negotiation, approached the Tsung-li-Yamen with such a proposition, she would simply have involved herself in an interminable labyrinth of evasion and obstruction. At the end of five or ten years she would have been still fruitlessly negotiating. The Japanese have at least as clear a perception of Chinese procedure as any Western nation has. Being themselves thoroughly in earnest about the Korean problem, being fully persuaded that to defer its solution indefinitely would be to lose their control of its complications, they determined to assume at once a position such as would place them beyond the reach of diplomatic obstacles and enable them to pursue their programme of reform, even in the event of China's refusal to cōoperate. That was the motive of their very practical and resolute attitude from the outset. They simply guaranteed themselves against being the victims of vexations and abortive shilly-shallying. That their estimate of China's mood was correct the subsequent negotiations proved, for she could not be pushed beyond an expression of willingness to tender to Korea counsels which the latter should be free to reject or adopt at will—a graceful farce, in truth! That their estimate of China's incapacity to defend Korea was correct the recent campaign has proved, for her troops have been chased ignominiously from every part of the peninsula. And that their determination to reform the administration of the little kingdom is genuine they are now proving, by sending thither Count Inouye, one of the ablest and most experienced statesmen the empire possesses.

This *résumé* of Japan's attitude towards China and Korea deserves public attention at the present juncture, for the President of the Japanese Cabinet, Count Ito, has just laid before the Diet copies of the correspondence that passed between the Governments in Pekin and Tokyo immediately before the outbreak of the war. The despatches show that Japan emphatically stated her conviction of the danger involved in suffering "the deplorable condition of affairs" in Korea to remain unremedied; declared that, "for the purpose of enabling Korea to accomplish the desired reforms, nothing could be better than the co-operation of the Governments of Japan and China, which have in common a vital interest in Korea," and frankly proposed the despatch of a joint commission of investigation. China might have averted war at any moment by agreeing to that reasonable and practical proposal. But she wrapped herself up in a haughty assumption of suzerain majesty, treated Japan's suggestion with supercilious indifference, and plunged the two empires into a sanguinary conflict. The fact is that Japan was in deadly earnest. She meant to gain her point at any cost. But China merely vapoured. She did not anticipate any result other than a supply of material to fill fresh pigeon-holes in her big bureau of unsettled questions.

THE BLACK-FLAG CHIEFTAIN.

The following, which we take from the *North China Daily News*, is well worth perusal:—

We translate the following letter written by General Liu Yung-fu, ex-Black Flag chief of Annam, Brigadier-General of the Nanan Circuit of Kuangtung, and now Assistant Imperial High Commissioner of Defence for Formosa, sent recently to the Tsung-li Yamên in answer to two decrees sent successively to him ordering him to hasten up north with all his troops to assist those now fighting against the Japanese in Manchuria. The substance of the letter was to the following effect:—Ten years ago the writer was invited by the Emperor to enter China to receive the Imperial bounty in acknowledgement of his services during the war with France. Out of the many thousands of his veterans he was only allowed to take with him 1,100 picked men. Since then what with orders from the high provincial authorities of Kuang-tung who were trying to economise and cut down expenses, and despite his prayers and earnest entreaties, companies of this fine regiment of veteran Black Flags have been ruthlessly dismissed and left to shift for themselves in the usual way, until he has only about three hundred of them now left. When the present war began, he was ordered by Edict to go to the defence of Formosa and being practically without men he was compelled to do the next best thing and enlisted 1,000 Swatow "braves" whom he formed into two battalions. But what were these men? Nothing but a mob of lazy do-nothings, raised on the spur of the moment and utterly useless as a means of defence against the enemy. Furthermore, the Japanese have been preparing for this war for years, and that they should be able to commence war upon us in such an unexpected manner is a proof of their preparedness and ability to bring thoroughly trained men into the field. Hence to pit a mob of undisciplined and inexperienced men against a well-trained, well-provisioned, and well-accoutred enemy, the results may be prognosticated and not the most brilliant strategy of our most famous Generals would be able to save our armies from defeat. Experience in the war with France should teach us this.

Since coming to Formosa, the writer has been doing his utmost to put the country placed under his care (Southern Formosa) in a state of defence; but owing to the innumerable coves and inlets which indent the shores of the island, affording shelter and anchoring ground for an enemy's fleet, he thinks that unless the forces of the north and south of Formosa be placed within easy communication of each other, it will be impossible for him with the small force under him to make any show of defence against a landing in force of the enemy. To obviate this disadvantage, the writer bethought himself of the 3,000 odd veterans and dozen or more old and trusty lieutenants whom he had left behind him in Tongking. With this in view, he repeatedly tried to persuade first the Viceroy at Foochow, then the Canton Viceroy, and finally the Governor of the island to allow him to call to his standard his Black Flag veterans, with whose assistance he could effectively defend south Formosa, and, if need be, go to the assistance of the troops in the north of the island. Notwithstanding his most earnest prayers for permission to do so, and the extreme importance of the crisis, the writer was invariably met with this stereotyped and unconcerned answer, from all three dignitaries that "We will consult about the matter later on." Hence up to the present moment nothing has been done with reference to this important question, although he tried to bring the chief of the military secretariat (Provincial Treasurer) to his views. Thus often has the writer wept bitter tears to find himself baulked at every step; for what with lack of funds and lack of provisions, he can do nothing even to raise a small force at his own expense. In a word, although the writer has the *name* of being at the head of an army it is nothing but an empty title, for he does not possess the authority requisite for the General of an Army, with the result that his men are in a bad condition and utterly unprepared for their duties. In the midst of this very unsatisfactory state of affairs, the writer has twice received the Imperial call ■ go up north, being flatteringly told that the troops there were greatly in need of his assistance. But what can he do? It is not that he dare disobey the Imperial commands by dilatory conduct; but really because he has no proper soldiers, upon whom he can in any wise depend. Such being the case, how could he venture to fight a trained enemy in this reckless manner? Of course there are the regulation excuses such as the plea of inability and the request therefore, that the petitioner be dismissed from the service, etc., but the mind and ambition of the writer do not run in this groove, for having been a recipient of the Imperial bounty he vowed on the day when first he retraced his steps into China from Tongking that his only wish was to serve his country in its time of need, even if ten thousand deaths awaited him. Nor is he willing in his present state to risk the good name of his country in the face of an enemy of whose resources he is ignorant, and the courage and discipline of whose troops he has never tried. If he were to be guilty of such recklessness, he would indeed fail in the confidence that has been reposed in him by his sovereign. Yet the urgency of the Imperial commands cannot be disregarded by the writer, and he therefore, as a last resort ventures to state his case plainly to the high Ministers of State in the Tsung-li Yamên and prays that they memorialise on his behalf to the Throne craving permission to allow him on the one hand to return to Canton to enlist a few battalions of his old troops for service in the north, and on the other to first despatch, as an advanced guard, the 1,000 men raised at Swatow to Shanghai and thence overland to Tientsin. Eighty thousand taels are all that will be needed for the whole thing, which he prays that the Provincial and Salt Monopoly treasuries of Kuangtung may be ordered to pay him. Having got together his men as quickly as possible the writer will send them on in detachments, as soon as levied, to Manchuria, under their old officers, where they might get speedily accustomed to the tactics and fighting qualities of the foe, and obtain, as well, a knowledge of the nature of the country in which they are to manœuvre. All these are necessary for final success, and only well drilled and veteran officers and soldiers can perform such duties satisfactorily. But there are yet other difficulties in the way of recruiting his old troops. The principal is the pro-

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

spect of encountering the cold weather in the north without any additional inducement to entice the recruits to give up their life either as soldiers, hawkers, or agriculturists in the south and endure the rigours of winter in Manchuria. To get over this the writer, after mature thought, suggests that the men be paid on the same scale as the Army of the Siang increased by one-half. This step he thinks will act as an incentive and induce the old Black Flags to embrace their new life joyfully, enhanced by the prospect of trying conclusions with the much vaunted enemy. Again, the writer confesses utter ignorance of any of the high dignitaries in the north. The success of his brigade will naturally depend upon the efficiency and promptness of supply of the Commissariat, Ordnance, and Pay Departments. If any hitch should occur from having no patrons and friends in the north, and disaster follow in his footsteps, the writer of course cares *nothing* what will become of *himself* personally, but what about the result of the campaign? The writer therefore asks to be allowed to use the telegraph in his reports so that no time may be lost,—despatch and procrastination often decide success or *failure*—and that, finally, he may be allowed to place his brigade—to be named the "Fu Brigade"—under the immediate orders of Li Hung-chang, in order that the management of commissariat, etc., may be under a single chief. In the future the writer proposes to memorialise the Throne through the Viceroy Li only, so that there may be no hindrance to the straightforward despatch of his military reports during the progress of the campaign. In conclusion, the writer now awaits the Imperial Rescript at Taipehfu, the capital of Formosa, and prays most earnestly that his pleadings may be favourably received.

MR. P. EDULJEE'S ANNUAL BOMBAY YARN REPORT.

The following is Mr. Eduljee's yarn report for last year:—

Hongkong, January 1st.

In the last report it was pointed out that the mill industry of India had received a crippling blow through the closure of the Bombay and Calcutta mints towards the end of June, 1893, and that the trade in Indian yarn with China and Japan suffered a considerable shrinkage as compared with that of 1892.

A period of eighteen months has now elapsed since the closing of the mints and the trade has had time to turn round and adjust itself to the new conditions, but not until after having suffered some serious disasters.

For purposes of comparison a table of imports and exports and sales in Hongkong for the last nineteen years shows that the total imports to China and Japan increased from 337,560 bales in 1893 to 387,381 bales in 1894, or nearly 15 per cent., receipts in Hongkong alone showing an improvement of 24,325 bales over that of the previous year, or nearly 12 per cent., and direct shipments to Shanghai and Japan an increase of 25,496 bales, or nearly 21 per cent.

Consumption, however, has not kept pace with the general improvement in supplies, but this may be attributed solely to local causes, such as the prevalence of the black plague in Hongkong during last summer, the China-Japan war since the latter half of the year, and the growing competition of the local manufacture in Japan, which from all accounts is steadily superseding the demand for imported yarn in that country. Sales in Hongkong show a small falling off of 2,484 bales, or 1½ per cent., whereas a deficiency of 12,848 bales is noticeable in the consumption at Shanghai, or nearly 10½ per cent., and of 9,957 bales in that of Japan, or nearly 64 per cent.

The meagre amount of 10,000 bales odd being carried forward on a steady market in the beginning of the year caused considerable uneasiness to dealers, as almost immediately on the resumption of business stocks were found insufficient for requirements and importers were enabled to establish an advance of $1 to $2½ per bale. This position was steadily maintained during the whole of January and the first half of February, but towards the close of the latter month a sudden rise of eight points in rupee exchange weakened holders, and in their impatience to quit stock the advance was mostly lost. March opened with a smart decline of Rs. 10 in exchange in consequence of an impost of 5 per cent. import duty on silver by the Indian Government, and stocks were practically withdrawn from the market. Dealers then improved on their previous offers and with a simultaneous brisk demand for Shanghai an extensive business was transacted, over 20,000 bales changing hands at an advance of $3 to $5 on rates ruling in January, exchange being quoted Rs. 170½ to 171.

Towards the beginning of April exchange commenced to improve and by the end of the month had risen 13 points. Importers now became anxious sellers, but the partial failure of the rice crop in some of the consuming districts and the condition of our large neighbouring markets as well as of Shanghai greatly checked business, and with comparatively smaller off-takes stocks commenced to increase, prices having meanwhile receded fully $3 to $4 per bale. May opened with no better prospect, as rupees steadily continued to advance and by the end of the month had risen another 13 points, standing at 198½, the highest point of the year. Native buyers now became very cautious and bought only for immediate wants, and a perfect panic amongst holders to realize in a rising exchange set in. Under the circumstances heavy concessions in prices were again made here and there, but little or no benefit was derived, and sales continued as restricted as ever, unsold stocks reaching 23,000 bales. With the commencement of June the usual summer demand made its appearance simultaneously with a drop of five points in exchange, and dealers being tired of waiting now commenced to operate more boldly and a considerable and extensive business followed. Sales continued with unabated vigour until towards the close of the month, when the prevalence of the black plague frightened away most of the native buyers and traders and the market now subsided for a time, with an estimated unsold stock of about 25,000 bales.

The sudden collapse in the local native demand at the end of June was, however, somewhat counterbalanced in July by a considerable and well sustained foreign enquiry for Shanghai, which continued well throughout the whole of the month, and what with considerable off-takes and unprecedentedly heavy shipments northward, unsold stocks in the hands of foreign importers were reduced in spite of heavy arrivals to about 10,000 bales. In the beginning of August, thanks to the vigorous action of the authorities in grappling with the epidemic, the influx of native merchants and bankers set in and another extensive business followed and was intensified by reports of a continued advance in Bombay. The outbreak of war between China and Japan at this juncture, once more interfered with trade, and business greatly slackened toward the end of the month, prices remaining with little alterations as those of last month. After the first excitement of the war had subsided, the distance of Hongkong from the base of operations instilled a sense of security amongst native traders and buyers, and so far as our local trade was concerned business continued steady and unchanged. This position was, however, promptly assailed, as towards the beginning of September heavy floods in the interior curtailed for a time all business operations, and shortly after a report was received that rates in Bombay were weaker, with spinners pressing for offers, and the rest of September was passed in a dull, dragging state.

October did not open with any better prospect, and the dullness increased with the growth of the month, until at the close the market became well nigh inanimate, with an estimated unsold stock on hand of about 30,000 bales.

With the close of October prices appeared to have touched their lowest point, as during the early days of November another brisk and active demand for Pakhoi and Tonkin was experienced and considerable sales of favourite spinnings were effected at improved prices. It was at this juncture that the absence of the northern buyers from our market was keenly felt, and, in addition to this, we were inundated with reshipments from Shanghai, where the war scare, owing to the continued advance of the Japanese forces into the country, had almost put a stop to the trade of the port.

Rice harvesting commenced about the second week in November and was continued well into the middle of December, and during this period and up to the close sales were conducted on a very limited scale, and only the merest shadow of a trade has been done, the market closing extremely depressed, with about 25,000 bales of unsold stock to be carried forward.

Prices ruled steady in the beginning of January and gradually continued to harden with the end of April, when they stood at the highest point of the year, best No. 6s being quoted at $68, No. 8s $71, No. 10s $77, No. 12s $77, No. 16s $87½, and No. 20s $95. Since then rates commenced to recede, and after some slight fluctuations values at the close of the year show a depreciation of $6 to $7 in No. 6s and 8s, of $3 to $4 in No. 10s and 12s, of $14 to $15 in No. 16s, and of $12 to $13 in No. 20s. Exchange stood at Rs. 179½ at the close and nominal.—*Local Press.*

beginning of the year, and now closes at about Rs. 187.

In the spring and summer importations were attended with some profit and more than covering prices were obtained for the first five or six months of the year. After that receipts proved too general and overdone, and demand seldom gave importers much opportunity of regulating selling rates with costs, for the dealers, taught by previous bitter experience, confined their small and dragging purchases to actual requirements under country orders, and no amount of concession on the part of holders to effect sales would have induced free buying.

The most noteworthy feature of the market has been the prompt and steady clearance of goods from first hands during the past twelve months, importers finding little or no difficulty in delivery of their contracts. Extreme caution was observable in the dealings of native buyers, and the year passed off without any serious mishap, except the failure of a petty trader in July with liabilities amounting to nearly $10,000.

The products of no new mill has been introduced into our markets during the last twelve months; the mania for building mills, so far as the island of Bombay is concerned, has subsided, most of the leading spinnings having added weaving machinery to their concern for the manufacture of cloth for local consumption in anticipation of a gradually vanishing demand from China and Japan.

The spinning and weaving industry of India, particularly the latter, gives promise of a flourishing trade this year, as in addition to the abundant outturn of the Indian cotton the yield of the new American crop has beaten all previous records, being roughly estimated at 11,000,000 bales as against 8,500,000, the largest outturn previously known, and New Orleans can at present be laid down in Bombay at somewhere about the rates ruling in that market for the best Indian staple. Extensive orders have been sent to America by most of the leading mill-owners, and it is an analagous case of sending coals to Newcastle. The turn of trade may also lead to considerable manufacture of finer yarn than No. 20s in India, and it is not unreasonable to expect that the China markets will be more liberally supplied later on with the higher counts of Bombay spinnings than has hitherto been the case.

In this connection it may not be out of place to mention the impost of 5 per cent. excise duty on Indian cotton yarn and piece goods at the end of the year by the Indian Government to counterbalance the import duty levied at the same rate on English cotton yarn and piece goods. This will hardly interfere with exports of these articles from India to China and Japan, as the same are protected by the provision of rebate on shipments to foreign countries.

The number of cotton spinning and weaving mills working and in course of erection in India at the close of June, 1894, was 142, as against 141 in 1893, running an aggregate of 31,154 looms and 3,694,736 spindles, consuming 1,222,501 bales of cotton (392 lbs. to a bale), and giving employment to 130,460 persons daily. The total amount of capital paid up is Rs. 103,222,683, of which Bombay alone has embarked a capital of Rs. 53,020,514 on its sixty-seven mills. One mill is in course of erection in the island of Bombay, one projected, and two in course of erection the Bombay presidency, one in Bengal, and one in the central provinces.

Sales in Shanghai show a falling off 12,848 bales as compared with 1893. The prevailing hostilities with Japan during the latter four months of the year and the vicinity of the port to the base of operations have greatly interfered with the progress of the trade, whilst the advance of the Japanese forces into the interior has closed the northern ports before the advent of winter. Nothing of importance has been heard of the operations of the four mills which were in course of erection last year, the war and its progress entirely engrossing the attention of the natives.

Sales in Japan show a serious diminution, and it would now appear that the markets of that country have been almost lost to the India trade. With the exception of one or two spinnings for special requirements, the demand for imported yarn has been entirely superseded by local spinnings, and with the cessation of hostilities with China the chances of the Indian yarn ever regaining its lost position in Japan are very remote. The mill industry of the country is growing apace. There being at present no less than 60 mills, comprising about 50,000 spindles.

The war of freights on the Bombay and China route is at present in abeyance, the temporary withdrawal of the Japanese steamers from the line, in consequence of the prevailing hostilities with China, rendering the existing competition too in-

HONGKONG NEWS.

The P. & O. steamer *Sutlej*, which arrived at Hongkong on January 1st, touched a mud bank near the Tanjong Pagar Wharf, Singapore, as she was leaving for China on the 26th ult. The tide was falling, and the *Sutlej* remained fast for four hours. Shortly before eight o'clock that evening, the steamer floated off uninjured. In the interests of safety, however, it was deemed better to detain the *Sutlej* till the morning for examination. Accordingly, at daylight, divers went down and examined the ship's bottom and, their report being satisfactory, the *Sutlej* departed for China. A pilot named Marchant was in charge at the time.

A horrible murder was lately committed, we gather from the *North Borneo Herald*, near the Segama River, in which the victims were seven Chinese fishermen, who had been doing a good trade in fishing and drying the fish for export to China. It appears that some time about the beginning of September a fishing junk containing nine Chinamen arrived off the Segama from Sandakan and were visited by six outrigged boats, in each of which were three or four natives, who asked for some tobacco. Half a pound was given to them, but they demanded more, and on being told that they would get no more, they jumped on board and murdered seven of the Chinese, two others escaping although wounded, by getting below among the dried fish. The pirates set fire to the junk and left her, after taking away any little valuables they could find, and after destroying the sails, masts, and cordage. The junk drifted for four days, when they sighted another junk the crew of which helped them and brought them to Sandakan.

His Honour the acting Puisne Judge of the Hongkong Supreme Court has given a finding in favour of the defendant in the case of Moutrie v. McCabe. The claim was for $497.95, which the plaintiff urged was due from defendant to the old firm of Moutrie, Robinson, & Co., since dissolved, which was made up from various items of travelling expenses incurred in Kobe and Yokohama by Mr. McCabe, while defendant was in the firm's employ, and which plaintiff claimed were excessive and should be repaid by defendant. The Judge held that the expenses were not excessive. The plaintiff's attorneys have appealed to a Higher Court.

The *Bangkok Times* of the 27th ultimo has the following reference to the Crown Prince of Siam, whose death we reported yesterday:—H.R.H. the Crown Prince has been suffering from a serious cold during the past few days. On Wednesday evening his condition gave rise to some anxiety, and Drs. Hays, Tien Hee, Nightingale, and Upton were jointly in attendance. On Thursday evening a more favourable bulletin was sent to His Majesty the King, but the royal patient is still somewhat unwell. The Queen is constantly with him.

Mr. G. P. Owen, who has the reputation at Singapore of being a keen and successful *shikari*, bagged an elephant on the Castlewood Estate, seven miles out from Johore Bahru, on the 24th ult. This is, on the report of the Sultan, the first elephant taken in Johore.

The Italian cruiser *Cristoforo Colombo*, with the Duke of Abruzzi on board, was expected to sail on the 28th ult. from Bombay for Colombo, *en route* for Singapore and Hongkong. Her stay at Colombo and Singapore will be short, and, according to letters received by the last mail, she was expected at Singapore on the 11th inst.

A commencement has been made with the much-needed extension of the Tytam Water-works. It is proposed to raise the height of the dam 12 ft. 6 in., and to build a masonry wall, 10 feet high, across the present bye-wash. These works will give an increased storage capacity of about 100 million gallons, or, roughly, a month's supply at the present rate of consumption.

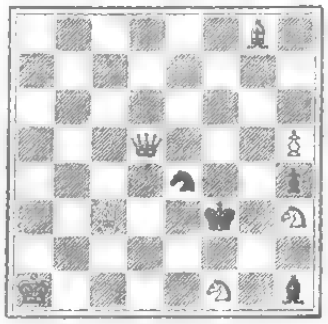
CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets at the Club Hotel, No. 5, Bund, on Monday and Thursday in each week from 5 to 11 p.m.

The Tokyo Chess Club meets at the Tokyo Hotel every Friday from 1 to 11 p.m.

Solution to Problem No. 159.



WHITE.	BLACK.
1—B to Q 6	1—Any
2—Mates accordingly.	

Correct solutions received from W.H.S., Omega, E. J. King, J.D., Digamma, E.D., Shoji, and King.

Problem No. 161.

By W. F.

BLACK.

WHITE.

White to play and mate in three moves.

Albin-Showalter Match.

There would seem to be some "hard pounding" in this contest. The last American mail brought the following intelligence:—The nineteenth game of the chess match between Albin and Showalter, was drawn after sixty-one moves. Albin opened the game with Ruy Lopez. Albin secured the twentieth game after sixty moves. Game was opened by Showalter. Albin excelled by wonderful play in the end game. The score of the match is now 8 to 6 in favour of Showalter, six games having been drawn.

Chess at Pontresina.

The following game was recently played at Pontresina between Mr. Gwinner and Mr. Carroll Smith, of the Philadelphia Chess Club.

Game No. 207.

BISHOP'S GAMBIT.

WHITE. H. G. Gwinner.	BLACK. C. Smith.
1—P to K 4	1—P to K 4
2—P to K B 4	2—P takes P
3—B to B 4	3—P to K Kt 4 (a)
4—Kt to Q B 3 (b)	4—Kt to K B 3
5—P to Q 4	5—P to Q 4 (c)
6—P takes P (d)	6—B to Q 3
7—Kt to B 3	7—B to Kt 5
8—Castles	8—Castles
9—Q to Q 3	9—B takes Kt
10—Q takes B	10—R to K sq.
11—B to Q 2	11—Q Kt to Q 2
12—Q R to K sq.	12—Kt to B sq.
13—Kt to K 4	13—Kt takes Kt
14—R takes Kt	14—Q to B 3 (e)
15—K R to K sq.	15—R takes ■
16—Q takes R	16—R to Q sq. (f)
17—B to Q 3	17—Kt to Kt 3
18—P to B 4	18—K to B sq. (g)
19—P to B 5	19—B to K 2
20—P to Q Kt 4	20—Q to Kt 2
21—P to Kt 5	21—B to B 3
22—B to ■ 3	22—P to K R 4
23—P to Q R 4	23—P to Kt 3 (h)
24—P to Q 6 (i)	24—B P takes P
25—P takes Q P	25—K to Kt sq. (j)
26—Q to Q 5	26—Kt to B sq. (k)
27—B to B 5	27—Kt to K 3 (l)
28—P to Q 7	28—K to R sq.
29—K to R sq. (m)	29—P to R 5
30—R takes Kt	30—P takes R
31—Q takes P (n)	31—Q to K 2
32—P to Q 5 (o)	Resigns.

(a) This is the defence of the King's Knight's Gambit, but inadequate in the Bishop's Gambit. 3..... Q to R 5 ch., followed, by P to Q 4, or *vice versa*, is the continuation.

(b) 4—P to K R 4 gives White an immediate advantage.

(c) 6—P to K 5 being threatened, he would have done better with 5..... P to Q 3.

(d) Better still 6—B takes P, keeping a good centre, or 6—Kt takes P. Black could then not capture the K P because of 7—Q to K 2. The text move gives Black a good chance of defending himself.

(e) Black's moves since note (d) have been the best at his disposal. Here, however, an alternative variation presents itself with 14..... P to K B 4; 15—R takes R, Q takes R; 16—R to K ■., Q to B 2, &c. It is, however, more than probable that Mr. Gwinner would have replied 15—R to K 6, giving up the exchange for a strong attack. The question now remains whether Black could have taken the rook. We believe he could, viz., 15..... Kt takes R; 16—P takes Kt, B to K 2, &c.

(f) We prefer here 16 ..... Q to Kt 3, with a view (if White does not exchange queens) of a counter-attack with P to Kt 5, &c.

(g) 18..... B to B sq. might be considered. The king is better placed at Kt sq.

(h) 23..... P to Kt 5 would have still threatened P to B 6, and would have had to be attended to by White.

(i) The initiation of a pretty final attack.

(j) This bears out note (g).

(k) He cannot play 26..... Q to B sq., because of 27—B takes Kt.

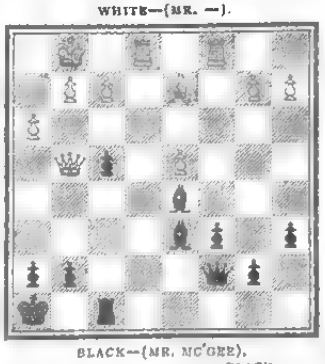
(l) In anticipation of 28—P to Q 7 and R to K 8.

(m) A subtle move in connection with the preceding one.

(n) Now the object of 29—K to R sq. is clear. Had the king been on Kt sq., Black could have now replied 31..... B takes P ch.

(o) Very pretty. If 32..... Q takes Q, then 33—P takes Q, and P to Q 7 cannot be stopped.

Lasker.



Lasker has written to a friend that he is much improved in health, but that he will remain at the St. Thomas Home, Lambeth, London, for some time. He has given up all ideas of playing another match with Steinitz, but will visit the United States again in case there should be an international tournament.

T. H. McGee.

We are glad to learn from a Toronto letter that the former Secretary of the Tokyo Chess Club (Mr. McGee) has not given up Chess; but is holding his own against the Canadian players. The following end-game records one of his exploits against a strong Toronto man:—

End-Game No. 20.

WHITE—(MR. —).

BLACK—(MR. MC'GEE).

WHITE.	BLACK.
	1—P to B ■
1—P to Kt 3	2—B × K Kt P
2—R to K 3	3—B ■ K B P ch.
3—K × ■	4—Q to R 7 ch.
4—K to ■ sq.	5—Q × B
5—Q R to K sq.	6—P to B 7
6—R to Q sq.	7—B to B 5 ch.
7—Resigns.	

Game No. 208.

Played by correspondence between Mr. F. J. Hingley, of Nottingham, and Mr. G. Thorp, Hull.

SCOTCH GAME.

WHITE. F. J. Hingley.	BLACK. G. Thorp.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3
3—P to Q 4	3—P takes P
4—Kt takes P	4—Q to R 5 (a)
5—B to K 2 (b)	5—B to B 4
6—P to Q B 3	6—Kt to B 3 (c)
7—Castles	7—Kt takes P
8—B to K 3	8—Kt takes Kt
9—B takes Kt	9—B to Q 3 (d)
10—P to K Kt 3	10—Q to R 3
11—B to Q 3	11—Kt to Kt 4
12—B to K 3	12—Q to B 3
13—Kt to Q 2	13—B to K 2
14—R to K sq.	14—P to Q 3
15—Q to R 5	15—Kt to K 3
16—Kt to K 4	16—Q to K 4
17—Kt to Kt 5	17—P to K Kt 3 (e)
18—Q to R 6	18—P to Q B 4 (f)
19—B to Kt 5 ch.	19—B to Q 2
20—Kt takes Kt	20—P takes Kt
21—B to Q 4 (g)	21—Q to R 4
22—Q to Kt 7	22—Castles
23—B takes B ch.	23—K takes B
24—B to B 6	24—K R to ■ sq.
25—R to K 4	25—P to Q 4
26—R to K R 4	26—Q to B 6
27—R takes P	Resigns.

NOTES.

(a) Mr. Steinitz used to consider this the best defence, but it is seldom played now.

(b) Blackburne, in his match with Steinitz, retreated the K Kt to B 3. Either this, or Kt to Kt 5, or Kt to Q B 3 is preferable to the move in the text.

(c) If 6..... B takes Kt; 7—P takes B, Q takes K P, White secures a good game by 8—P to Q 5.

(d) An ill-judged move. 9..... B to K 2 would be better, than if 10—B takes Kt P, R to K Kt sq. Black cannot play 9..... Castles on account of 10—B to B 3, &c.

(e) 17..... B takes Kt; 18—B takes B, Q to Q B 4 seems to yield a more defensible game.

(f) Quite useless, but it is difficult to see what he ought to do. If 18 ..... B takes Kt; 19—B takes B, Q to Q B 4; 20—Q to Kt 3, &c.; and if 18 ..... Q to Kt 3; 19—Kt takes Kt, Q takes Q; 20—Kt takes P ch., K to Q sq; 21—B takes Q.

(g) White's course is now clear, but the ending is interesting and instructive.

New York versus London.

The Manhattan Chess Club has issued a challenge to the British Chess Club for a team match, to be conducted on five boards at one sitting, the moves to be cabled by the Commercial Cable Company. This challenge has excited interest throughout England. Inquiries have reached the British Chess Club from all parts of Great Britain asking for details concerning the proposed

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

contest, and the challenge will undoubtedly be accepted.

The rules and regulations, as proposed by the Manhattan Club, provide that only the active members of the two clubs, elected prior to July 1st, 1894, shall be eligible as contestants. It is the desire of many of the members of the British Chess Club to match the chess-players of England against the chess-players of the United States. The conditions, as cabled by the Associated Press, are acceptable to President Munes, who is busy discussing details with members of the club. By the time the written challenge from the Manhattan Chess Club arrives they will be ready with an answer.

(FROM THE "SIAM OBSERVER.")

London, December 22.

The appointment to Lima of Captain Jones, late Minister at Bangkok, is now gazetted.

Colonel Shervinton, commanding the Hovas' army, and other British officers have landed in Madagascar. The French are patrolling the country round Tamatave.

(FROM MANILA PAPER.)

Madrid, December 28.

Mr. Cleveland, President of the United States, is about to impose special duties on imports from Spain and the Spanish colonies. It is probable that the new law will come into force on the 1st January. The reason is the difficulties thrown in the way of the importation of American flour into Cuba.

(FROM THE "N. C. DAILY NEWS.")

London, January 10.

A detachment of troops has surprised a considerable body of Waziris who yielded with but small resistance, losing three thousand head of cattle.

The growing destitution in Newfoundland is causing riots, and sailors are patrolling the streets of St. John's.

President Cleveland, in a message to Congress, recommends permitting Hawaii to lease to Great Britain a small island to be used as a station for the Canada-Australia cable.

(FROM JAPANESE PAPERS.)

Hiroshima, Jan. 17.

Mr. O'Shea, editor of the *China Gazette*, and war correspondent of the *New York Herald*, has arrived here.

The *Aikoku Maru* arrived here yesterday with three 37 c.m. guns and 1,000 cases of ammunition from Port Arthur.

A Shanghai telegram states that the Peking Government has enlisted 5,000 recruits at Tientsin for the protection of Changtz. They will be under the command of a Prince of the Imperial family. General Woo is staying at Shanhaikwan, and has command of 16,000 Kirin and Manchurian soldiers. More than half are in possession of repeating rifles. The road between Weihaiwei and Chefoo is strongly defended. New forts have been constructed both at the front and in the rear of Weihaiwei, where Seh and Ki's soldiers are encamped.

Shanghai, January 18.

The Chinese Envoys of Peace will not leave here this month.

A report from Newchwang states that some fifty thousand Chinese soldiers are stationed in the neighbourhood of that town, but are preparing to retreat and are concealing their repeating rifles.

Hiroshima, January 18.

The Chief Staff Officer of the Second Army telegraphed to Head-quarters on the 16th inst. to the effect that he had received a report from a staff officer at Kaiping, stating that a Chinese native has informed them that seven thousand men are at Yingkow, and that *more* soldiers have been stationed in the neighbourhood of Tienchwangtai.

Another telegram, dated the 17th instant, received by Head-quarters from the same source, states that the enemy withdrew from Rhtaiho *on the 16th instant*. Some natives say that the enemy's force consisted of 1,000 infantry and 100 cavalry, with 3 large guns. The retreat was along the Yingkow road. The Chinese soldiers encamped at Tangkwahotsz fled to Hamkwagakho on the 15th, and there are now no Chinese soldiers at Rhtaiho or Tangkwahotsz.

If the Chinese Envoys arrive in Japan in time, Mr. Foster will first be met at Kobe by the Japanese officials, and it is said among officials at the Head-quarters that the conferences with the Envoys will take place at Hiroshima.

Chinchow, January 17.

A military telegraph line was opened for public use from to-day.

Major-General Ibaraki, Chief of the Administrative Office at Chinchow, and Mr. Mitsuhashi, ex-Secretary of Kanagawa, arrived here to-day.

Shanghai, January 17.

Rumour says that the Japanese troops have arrived at a port situated at the southern part of Shantung.

Hiroshima, January 19.

No official report has yet been received as to the alleged damage to a Japanese war-vessel at Weihaiwei, and it is supposed that the statement is groundless.

Tin Plates, per box	6.25 to 6.50
Pig Iron, No. 3	1.70 to 1.72½

KEROSENE.

Moderate business in American Oil and prices all round tend in favour of sellers. Stock is increased again, being now about 600,000 cases (say 500,000 American and 100,000 Russian). This increase is caused by the arrival of steamer *Murex* from Batoum, and steamer *Waverley* from New York. Not much done in Russian Oil, but holders are strong at quotations.

Chester	$1.80 to 1.82½
Comet	1.77½ to 1.80
Devne'	—
Russian Anchor	1.77½ to 1.80
Russian Moon	1.75 to 1.77½

SUGAR.

Brown—Sales about 9,000 piculs; and, with trifling arrivals, stock is reduced. Prices unchanged, fresh supplies expected shortly. White—Quiet market with no change in quotations.

	PER PICUL.
Brown Takao	$4.20 to 4.30
Brown Manila	4.80 to 4.90
Brown Daitong (New)	3.45 to 3.50
Brown Canton	3.70 to 4.25
White Java and Penang	6.60 to 6.70
White Refined	6.50 to 9.00

EXPORTS.

RAW SILK.

Another extensive movement this week, principally for Europe, and all prices are advanced. Stock is down to 9,000 piculs, and holders begin to think there is no end to their good luck. Quotations are more or less nominal, for sellers are trying to push a further advance.

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

"MONEY,"

A JOURNAL OF BUSINESS AND FINANCE.

PUBLISHED EVERY WEDNESDAY MORNING.

Annual Subscription, post free, 15s., in the United Kingdom. Ditto, 17s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

Cable Address: Dinero, London.

MONEY is a fearless critic and exposer of all shams, frauds, and swindles.

"MONEY" is the Journal for Investors, Speculators and Business men.

"MONEY" is a thoroughly up-to-date Weekly Record of all Financial and Business Matters.

"MONEY" is not subsidised by any financial association, clique, or syndicate, but is absolutely free, independent, and honest.

BALANCE SHEETS of Assurance, Banking, Manufacturing Shipping, Trading, and Trust Companies, are fearlessly and impartially criticised in **"MONEY."**

THE MONTHLY FOREIGN AND COLONIAL EDITION, called "MONEY AND TRADE," is published on the last Wednesday in each month, and is forwarded direct to the Foreign Agents and Correspondents of all the leading English Merchants, and to all the large Wholesale Buyers and Storekeepers in the Colonies, India, China, Japan, South America, and other countries.

"MONEY AND TRADE" enjoys a very large circulation in all Foreign Markets where English goods are sold; and, as it goes DIRECT INTO THE HANDS OF THE WHOLESALE AND RETAIL BUYERS, it offers unique advantages to advertisers.

SPECIMEN COPIES POST FREE.

November 3, 1894.

THE GREATEST WONDERS OF MODERN TIME.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In I short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a tea, spoonful of Ointment was worth a fowl and any quantity of peas and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors the throughou World. May 1st, 1890.

THE PROCEEDINGS

OF THE

IMPERIAL JAPANESE DIET

IN BOOK FORM.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JAN. 26TH, 1895.

SUMMARY OF NEWS.

BIRTH.

On January 19th, at 16, Hirakawa-cho, Go-chome, Tokyo, the wife of YRENO DUER of a daughter.

DEATH.

On the 3rd December, in London, E. J. GEOGHEGAN, formerly of Yokohama, aged 59 years.

PRINCE ARISUGAWA TARUHITO has passed away.

THE Peers have rejected the Bill annulling the Peace Regulations.

THE Third National Bank declares a dividend of 11 per cent. per annum.

THE cost of reconstructing Osaka harbour is estimated at ten million *yen*.

THE total number of Chinese residents in Yokohama at present is 2,325, living in 239 houses.

THE *City of Rio de Janeiro*, recently ashore on the Coast of Satsuma, has gone to Hongkong to be repaired.

THERE are now 116,698 Japanese and Chinese works in the Tokyo Library, in addition to 30,434 foreign works.

THE House of Representatives have passed the Budget with only a reduction of *yen* 100,000 from the Government's estimates.

A BALL under Masonic auspices will be given in the Public Hall, Yokohama, on Friday evening, February 22nd.

SEVEN hundred and thirty-nine houses were destroyed by fire in Tokyo last year, of which 335 were in the rural divisions.

A FATAL snow-slide took place at Kanzaki-mura, Sekitan-gun, Hokkaido, the other day by which six persons were killed.

A SHAMAN named Putenas has been committed for trial in H.B.M. Court for stabbing an officer on the steamship *Waverley* with a knife.

THE 3rd Japanese Expeditionary Corps landed safely at Yungchang, on the Shantung promontory, on the 20th, 21st, and 22nd.

SOME 992 Hokkaido ponies to be sent to the Fourth Army Division in Osaka are expected to reach Kobe on the 1st and 2nd prox.

MESSRS. LANGFELDT and Company have declared a dividend of 25 per cent., for the past half year, and distributed $2,000 among their employés as a bonus.

SASAKI SHOTARO, a resident at Shiba, Tokyo, was sentenced by the Tokyo Local Court on the 18th inst. to ten years' hard labour for having forged some paper currency.

AT the annual general meeting of the Nippon Race Club, Messrs. Till, Thomas, Mitchell, Philip, and Knaff were elected on the Committee. The Club has a balance in hand of $3,482.42.

THE net profits of the Tokyo Godown Co. during the past half-year amounted to *yen* 19,208, of which *yen* 6,000 was declared as a dividend at the rate of 12 per cent. per annum.

THE Grand Stand at Uyeno, Tokyo, falling in the route of a new road chosen by the Tokyo City Improvement Committee, the buildings will be offered for sale by public auction on the 1st prox.

SOME influential Peers who are in favour of removing the Nobles' School for Boys to Kamakura from its present site in Tokyo, for hygenic reasons, propose consulting with other nobles upon the question.

THE net profits of the Tokyo Rice Exchange during the past half-year were *yen* 36,143.715, of which *yen* 21,000.000 was distributed among shareholders as a dividened at the rate of 42 cent. per annum.

MASUDA HIME, aged 31, of Omokata-mura, Minami-tama District, Tokyo, was sentenced in the Yokohema Chiho Saibasho on the 21st inst. to fifteen years hard labour on a charge of incendiarism.

MR. FOSTER, the foreign adviser to the Chinese Envoy of Peace, arrived from Vancouver on Monday. He passed straight through to Kobe, where he is awaiting the arrival of the Envoy Chang.

A HOUSE on the Bluff, Yokohama, two sheds at Nakamura, four houses in Japanese town, six houses in Honmura Road, and a kitchen at No. 166, Foreign Settlement, were destroyed by fire during the week.

THE business of the Yokohama Fish Oil Co. during the second half of last year was very unfavourable, owing partly to the rise in freights caused through the lack of steamers and partly to the poor supply of materials from Hokkaido. No dividend will be paid this half year.

DURING a severe storm on the 11th inst. a fishing boat was upset off Kawasaki-mura, Nishi-kubiki-gun, Niigata Prefecture, and a man was drowned. Another vessel was capsized at the same place the following day, but the crew were reacued.

AN official report concerning the damage done in Yokohama by the big earthquake on the night of the 18th inst. is as follows:—Native Town: 2 women injured; 1 brick house, 8 godowns, 20 houses, and 3 fences damaged; Foreign Settlement: one man killed, one man injured, 36 brick houses, 11 godowns, 9 houses, 9 fences, and 4 chimnies damaged. No damage was done in the rural divisions of Kanagawa Prefecture.

THE *City of Peking*, while on her way to Yokohama on the 20th instant, overhauled a Japanese fishing boat, about 250 miles from Yokohama. The storm which drove the boat out had abated when the vessels met, but the crew of the Japanese boat, numbering 8 in all, were suffering through want of provisions. Captain Ward offered to bring them to Yokohama, but the Japanese declined. Sufficient provisions were then given to the fishermen to enable them to reach their native place in Boshu.

REUTER telegraphs:—M. Felix Faure has been elected President of the French Republic, in the place of M. Casimir-Perier resigned. The Socialists are fiercely protesting against the result, but Paris is tranquil. A manifesto has been issued by the Duke of Orleans which states that the Republic is merely provisional, and when the country calls upon him he is ready to fulfill his task. The newspapers state that the United States Minister at Tokyo, acting under instructions from Mr. Gresham, the Secretary of State at Washington, has officially notified the Japanese Government that Mr. Foster's assistance to the Chinese envoys is entirely a matter of private arrangement with which the United States Government has no connection. The Bourgeois members in the French House of Representatives have made repeated attempts to form a Coalition Cabinet. The Italian Chamber has been closed and a dissolution is believed to be imminent. Fred Barrett, the jockey, is dead. Lord Randolph Churchill has succumbed to his malady.

THE Import trade continues in about the same condition as last reported, and if there is not a great deal doing at the moment, the outlook is said to be good. Exchange no doubt is a great a great drawback to transactions, holders being compelled to maintain values under present circumstances. Textiles in common with other commodities suffer through the condition of silver, and dealings in these are light. Inquiries are made for various descriptions of Iron, but actual transactions in Metals generally are small. There has not been much done in Kerosene, though the clearance of old contracts goes on well. There are buyers of Sugars, but holders decline the offers made, though it is said that short supplies in the interior will force transactions presently. The recent large deals in Silk have been followed by a period of quiet, and the settlements of the week have been small. Good parcels, however, are firmly held. Nothing to report in Waste Silk, though holders would like to move off some of the heavy lots on offer. Exchange (Sep.) are still very low. The hardening of silver early in the week kept rates firm, but since then a decline has set in, and rates close weak.

Digitized by Google

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The death of H.I.H. Marshal Prince Arisugawa Taruhito is referred to by the Metropolitan journals, without a single exception, in terms of the most profound grief. His life is reviewed and his death-bed described with all the accuracy possible under the circumstances. Several newspapers give a picture of the Prince in full military uniform. There is no mistaking the genuine character of the nation's mourning.

* * *

During the week, two of our Tokyo contemporaries have made themselves conspicuous, one by piling reason upon reason to establish the advisability of depriving the Government of the power of suspending newspapers and magazines; the other by adducing argument after argument in support of its own views with respect to the National Banks' problem. Needless to say the former is the *Nippon*, which, some time ago, used to be suspended so often and for such long periods that everybody familiar with Japanese journalism associates that paper with a conspicuous exercise of the power now impugned. The latter is the *Choya Shimbun*, which writes with equal vehemence and insistence in favour of extending the Banks' charters. Readers with scanty knowledge of Japanese politics and journalism will easily trace the *Choya's* connection if they glance at the proceedings of the Lower House in the present session and the utterances of the National Unionist Members upon the Bank question. The details of our contemporary's argument being probably of great interest to some of our readers, will be reproduced in a subsequent issue elsewhere.

* * *

The vernacular dailies, except the *Nippon* and the *Choyd*, have each devoted one or more leading articles to the Chinese Peace Embassy and the Hon. J. W. Foster. The *Jiyu* heads one of its leaders "Mr. Foster, Adviser to the Chinese Peace Mission," and, after giving a sketch of the former American Secretary's life by way of showing him to the Japanese public in quite a different light from Mr. Detring, proceeds to write as follows:—"Were the Chinese peace mission, now alleged to be *en route* for the Court of Japan, entirely of Chinese nationality, one might not unreasonably connect it with some sinister design on the part of the Pekin Government. But the fact that so exalted and learned a personage as Mr. Foster accompanies it, suffices to satisfy any enlightened and impartial observer as to the sincerity of China's desire to sue for peace. The distinguished American knows both Japan and China and their people from previous personal observation, and it cannot be conceived that he is in any manner imposed upon by the Chinese Authorities about the present situation. China, as a defeated State, having no right to propose any peace conditions, her Envoy must either accept or reject the terms placed before him by the Japanese High Commisioners. Mr. Foster is believed to have said in Yokohama that he intended to sail home to America by about the 1st of March. We do not know whether the negotiations will be concluded before that date. But in case Chang, the Chinese Ambassador dallies with the decision that Japan and the crisis demand, the American statesman will thoroughly acquit himself of his mission and preserve his honour unimparied by returning home in conformity with his professed intention." The *Niroku* advises politicians of the *soshi* type not to trouble the Authorities, at this important juncture, by presenting, either in the shape of memorials or demonstrations, peace conditions at once impractical and commensurate with nothing but their own irresponsible ambition. The same journal writes in another article that a rumour to the effect that the Government intends to appoint Count Ito, Viscount Mutsu, and Lieutenant-General Kawakami as Commissioners to meet the Chinese mission, is trustworthy. The ripe experience and ample erudition of the Premier, the excellent sagacity and quick wit of the Foreign Minister, and the broad views and stout heart of the Vice-Chief of the General Staff, will worthily represent their country. Our contemporary entertains no doubt of these personages' ability to carry on the negotiations so as to promote the best interests of Japan. From the point of view of the standing of the Chinese Envoys, the Tokyo paper says it would be sufficient did Japan appoint men like Messrs. Ito Miyoji, Hara Kei, and Kodama Gentaro to meet them as negotiators. Alluding to the rumour that H.I.H. Prince Kung has been appointed to the Court of Japan as China's Plenipotentiary Envoy, the *Kokumin* declares that China has at last shown herself serious in her desire for peace. She plays a mere farce, roughly asserts the independent paper, when she sends such men as Chang, essentially a second-rate or third-rate statesman, on so important a mission. Taking it for granted that Mr. Foster's great aim will be to ensure a lasting peace in the East, the *Yomiuri* advises him to make an extended tour of inspection both in Japan and China, before he undertakes the duty of advising the Chinese mission. The Progressionist organ assures him that he will have ample leisure for the tour it recommends, to such length does it expect that the dallying of the Envoys in Shanghai will be carried. The same joined repeats, in more impassioned words than ever, its already often declared opinion that no peace terms should be concluded until the gates of Pekin are in the hands of the Japanese forces.

* * *

Now that Japan has risen, writes the *Jiji*, to the place of a Power valuable as an ally and formidable as a foe, she may be invited by some European Power or Powers to enter into a secret alliance in connection with the politics of the Far East. But it would not be in her best interests to form any such alliance. Her wisest policy for the present is not to make any State her secret enemy or special friend, but to dexterously take advantage of the balance of power to promote her own interests. Both on the Continent of Asia and in the South-sea islands, there are valuable hidden treasures in abundance waiting to be exploited by Japanese enterprise. In the search for these gems, there is something to be feared from foreign intervention, which, however, may not be very difficult to avert by diplomatic means. Great days for Japanese diplomatists are indeed close at hand. The influence of the Irish Home-Rule partisans, who, though numbering only 70 or 80, in the the British House of Commons, wield to the advantage, the balance between the numerous Liberals and Conservatives, is a mirror in which Japanese statesmen ought to see clearly reflected the possibility of reaping for their country good fruits by remaining outside the European hierarchy of ambitious States.

* * *

The *Jiji* again publishes a strong protest against a foreign loan, which, we are told is now talked about with renewed favour among some Japanese financiers of respectable standing. The *Nichi Nichi* adopts a somewhat peculiar tone; it protests again the Lower House's altered attitude toward the Government. It also takes the Cabinet Ministers to task for their obvious readiness to avoid, even at the expense of their dignity, any serious collision with the Diet during the present session.

* * *

The *Shogyo Shimpo* has a leader entitled "The Past and the Future of the Japanese Money Market," the gist of which is as follows:—In 1895, the rise of new industries increased the demand for capital and led to a consequent rise of interest, from January onward. In June the rate of interest showed an increase of 3 *sen* per cent. as compared with the previous year. Here follows a table showing the rates of interest charged by the Tokyo Union Banks from January to June inclusive in 1893 and 1894:—

		max.	min.	aver.
January	1894	9.36%	7.77%	8.47%
	1893	9.09	7.74	8.22
February	1894	9.42	7.92	8.56
	1893	8.35	7.40	7.92
March	1894	9.34	7.95	8.68
	1893	8.52	6.74	7.39
April	1894	9.50	8.22	8.74
	1893	8.18	6.68	7.35
May	1894	9.51	8.14	8.75
	1893	7.49	6.20	6.80
June	1894	9.76	8.43	9.18
	1893	6.97	5.65	6.20

Advancing by such strides the rise of interest, even supposing that the war had not occurred, might have produced a panic on a small scale, had it not been for wise preventative measures taken by the Nippon Ginko. The following are the rates demanded by the Bank of Japan:—

		Rates of Interest. Max. per cent.	Rates of Interest. Min. per cent.	Rates of Discount. Max. sen.	Rates of Discount. Min. sen.
Jan.	1894	6.48	6.12	1.90	1.70
	1893	5.94	5.94	1.60	1.60
Feb.	1894	6.84	6.48	1.90	1.80
	1893	5.94	5.94	1.60	1.60
Mar.	1894	6.84	6.84	1.90	1.90
	1893	5.94	5.94	1.60	1.40
April	1894	6.84	6.84	1.90	1.90
	1893	5.40	5.46	1.40	1.40
May	1894	6.84	6.84	1.90	1.90
	1893	5.40	4.68	1.40	1.30
June	1894	7.20	6.84	2.00	1.90
	1893	5.40	4.68	1.40	1.30

The commencement of hostilities with China in July and consequent apprehensions and changes in the financial sphere, notably the raising of Government Loans, changed the rates demanded by the Union Banks during the latter half of last year, as shown in the following table:—

		Max.	Min.	Aver.
January	1894	10.32%	8.90%	9.71%
	1893	7.25	5.79	6.40
February	1894	10.76	9.23	10.03
	1893	7.42	5.67	6.40
March	1894	10.51	9.34	10.03
	1893	7.36	6.53	6.92
April	1894	10.62	9.18	9.87
	1893	8.49	6.55	7.22
May	1894	10.47	9.29	9.93
	1893	8.10	6.86	7.42
June	1894	10.82	9.20	9.91
	1893	9.99	7.63	8.86

Comparing these rates with those before the war, the difference is only 0.75 %. The Nippon Ginko raised its rate of interest from 7.20 % to 7.92 %, and its rate of discount from 2 *sen* to 2.1 *sen* in the latter part of July, and has not since changed them. Much credit is due to the Bank for behaving thus in time of war. The *Shogyo Shimpo* then proceeds to compare the amount of money in the Japanese market at the end of 1893 with that at the close of last year. The figures for the months of November and December respectively are 163,240,022 and 174,191,910 *yen* (1894), and 157,298,233 and 162,308,542 *yen* (1893). Our contemporary has not yet finished its elaborate article.

EDITORIAL NOTES.

SOME HUMOURS OF THE EARTHQUAKE.

DESPITE the fact that the great earthquake of Friday evening last carried with it loss and sorrow to not a few homes and hearts, it was not without its humourous aspects. Doubtless a great many residents were nervously unstrung by the severity of the shocks and, for the time being, irresponsible agents. Some people, men and women, act on such occasions in a manner that can but cause a laugh on sober reflection. In Sambancho, Tokyo, one woman ran absolutely naked out of a bath-house and in this condition raced for some distance through the dark and ice-cold streets. Another gentleman, living in the heart of the metropolis in a two-storied brick building, was aroused from his first sleep by the earthquake. The next thing that he knew he was astride the high brick wall that surrounds his premises, in nothing but his thin night-dress. In his sober senses he would never have dreamed of climbing

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

the wall, but the suddenness of the awakening and his mental perturbation had lent him unusual agility. A student narrates that a comrade in an adjoining bedroom, despairing of being able to find a safe refuge, piled all the bed-clothes, *futon*, quilts and all the rest, on his head, and while in this metamorphosis began to recite aloud, albeit in necessarily muffled tones, the Buddhist invocative prayer, *Namu horeng-kyo!* A number of people residing in the vicinity of the Yasukuni Shrine, rushed wildly into the little park, in more or less scanty attire, while some of the more energetic made frantic efforts to climb into the trees. One foreigner in an adjoining street carefully blew out his lamp as the shock grew severer, thus leaving himself in total darkness. The shaking continuing, he proceeded to walk towards the entrance-hall, stumbling over and entangling himself in a chair. Opening the front door he went out into the garden, making a mental note the while of a strange difficulty that he experienced in walking and attributing this fact to the many phenomena attendant upon earthquakes in general. When lights were brought, the gentleman found that one of his legs was caught between the rungs of the back of a chair, which he had unconsciously and in this manner dragged along with him into the garden. His action may with justice be considered phenomenal.

THE PHYSIQUE OF THE KOREANS.

THE Koreans are a splendid people so far as outward appearance goes, so much so that lately the Japanese have been unfavourably contrasted with them. That, however, according to the *Jiji's* Sōul correspondent, is a mistake. He says that with the view of organizing a trained corps one of the surgeons in the Japanese garrison in Sōul made a careful examination of the bodies of several hundred Koreans. The first thing that struck him was their uncleanliness, as the Koreans are not fond of washing. He then noticed the defective development of the chest and upper part of the body. When dressed, they wear wadded clothes round their chests, thus making their outward appearance splendid, but when stripped the deformity is at once discovered. The chest development is far below that of the ordinary Japanese, and the same may be said of the shoulders. The muscles of their arms are also remarkably weak. The lower parts of the body are better formed, though their legs are not quite straight, in which respect they resemble the Japanese. This physical defect in the people of this country is generally attributed to their habit of squatting on the ground, but as the Koreans do not squat the popular verdict is apparently incorrect. It is doubtful whether Koreans stripped of their stuffed stockings and head-gear are really taller as a nation than the Japanese. The teeth of the men examined were excellent, not one being decayed. They were also much freer from a certain class of diseases than Japanese soldiers.

ARREST OF NOTABLE BURGLARS.

TOWARDS the last days of December, the police of Saitama managed to arrest the whole seven members of a company of most daring robbers and murderers that had for many months embittered the existence of a large number of Saitama residents. The story of the misdeeds of these criminals is long and given in detail in the columns of the vernacular press: we note only the most interesting points. In February of last year two clerks, honest, hard-working men, employed by a very wealthy merchant in the prefecture in question, unfortunately accepted an invitation to dine with five men who had the reputation of being loose characters and confirmed gamblers. During the course of the meal their hosts revealed their true characters, and said that they really lived by robbery and burglary. The two clerks were, on pain of death, forced to become members of the band, and that night were made to take part in a burglarious raid. This seems to have completely changed their natures, for from that time forward they were the most daring of the lot. Owing to their exceptional skill and the effectual manner in which they managed to conceal their stolen goods, the robbers eluded all pursuit, until finally in November one of the band was arrested and convicted of having murdered an old man. He was pressed to betray his comrades, but positively refused to do that, knowing that the death-penalty awaited him in any case. At last the theft of some articles of clothing was traced home to the two youngest members, who were still ostensibly serving as clerks in the home of their employer. Upon being intimidated, these men made a clean breast of the whole matter, which led to the arrest of the entire band on the 29th ultimo. Subsequent investigations showed that at least six murders had been committed by the desperadoes; one hundred and twenty-eight houses broken into and robbed of eight hundred and fifty articles of various kinds, excluding clothing and money. Of valuable clothing alone three hundred pieces are known to have been stolen by them. In the house of the leader was found a great quantity of booty, including forty-nine swords, hidden between the ceiling and roof-tree, and thirty other lethal weapons, mostly swords and dirks, buried in different places in the adjoining garden. The depredations of the band had covered a district over six hundred miles square, and in this territory there was hardly a village that had not been plundered by them. The public is certainly to be congratulated on the arrest of such desperate and daring criminals.

FORCED MARCHES.

WE learn from the vernacular press that the Cavalry of the Imperial Body-guard has accomplished in a satisfactory manner an extraordinary forced march, which was undertaken in order to train the horses and men to great endurance and to test their strength. They covered in 22 hours a distance of 70 miles, both horses and men being in full fighting trim. Great apprehension was entertained as to the capacity of the horses to endure such a strain, especially as they were of different breeds and many of them, having been recently requisitioned, were not well trained. The Commander of the Corps therefore provided the officers and men with money for use in case of accident, but told them, at the same time, that if the disablement of any horse was attributable to the negligence of the rider, the latter would be regarded in the same light ■ if he had been taken prisoner by the enemy. Early on the morning of the 14th ult. the battalion, consisting of 159 troopers, set out for Yukinoshita, which is near Kamakura and is about 14 *ri* or 35 miles from the Barracks. In 22 hours from the time of starting they were back again at their quarters. Not one of the horses was disabled on the road. When the 159 horses were examined next day only 8 were found to be slightly injured, all of which were cured in a few days. The First Regiment of the Infantry of the Guards has also been indulging in similar exercise. It started from the Takebashi Barracks on the 13th instant, reaching Kawagoye—about 25 miles distant, if we remember rightly—on the same day; on the 14th it went to Hachioji, and on the third day covered in 7 hours the distance of about 38 miles back to Tokyo. Though the soldiers were much tired by this unusual exertion and arrived home with blistered feet, not a word of complaint was heard, all arriving at the Barracks in high spirits. Orders have not yet been received from Head-quarters for the Guards to proceed to the seat of war, and the officers and men are consequently burning with impatience. It is evident that when they are sent over to China the fame won by the Body-guard during the Satsuma Civil War will be fully justified. The Satsuma rebels were far better fighters than are the Chinese and yet the Guards struck terror into their hearts.

THE "MAINICHI" AND BISHOP WILLIAMS.

IN the latter part of the Tokugawa Regency, says the *Mainichi*, when an anti-foreign spirit prevailed in the country, all foreigners who came to Japan were actuated by the spirit of self-sac- [illegible] Drs. Hepburn, Brown, and Verbeck [illegible] Bishop Williams [illegible] of the all such men, and the benefit conferred by them on this country cannot be over-estimated. Bishop Williams is also one of the pioneers. He came here thirty-seven years ago and has spent more than half of his life in Tsukiji educating Japanese youths, superintending the work of both foreign and native pastors, and devoting himself with indefatigable zeal to good and beneficial deeds. All this is done, however, in such an unobtrusive way that few of the general public and not even all of those in the Christian circle are cognisant of his good works. The year before last he went home for the first time since his arrival here, and returned to the seat of his labours last year. He is a man of wide erudition, but his greatest pleasure seems to be to mix with boys and share their amusements. The Sanichi Kyokai in Tsukiji, the most beautiful church in Tokyo, and Sanichi School, that stands opposite, also a fine building, were both built at the Bishop's expense. He lives in two rooms in the dormitory of the School which are entirely without decoration. When the Bishop intended to re-visit America the year before last he did not tell anyone of his departure, not wishing to trouble his friends, and his return to Japan was made in the same quiet way. According to the present Treaty an American is only allowed to travel in the interior of Japan for purposes of scientific investigation or for recruiting his health. It is said that although many foreign missionaries go into the interior ostensibly on one or the other of the above pretexts, but really for the purpose of missionary work, the Bishop never goes except when his health requires it.

ARREST OF A SNEAK THIEF.

A YOUNG man named Yoshikawa Kanenojo, 23 years of age, was arrested at 3 a.m. on Friday by Detective Nakajima in the Yoshiwara. Complaints had been received by the police of thefts of overcoats and *haori* from the ante-rooms of foreign firms while Japanese merchants or their employés were engaged in transacting business. Descriptions of the stolen articles having been supplied, the police visited a number of pawnshops where some of the missing articles were found. Yoshikawa, as usual with criminals of his class, was very lavish with his money, and this attracting attention, he was watched; the fine clothes he wore also attracted attention. Unfortunately for him, on Friday night he wore a coat with a sample of cloth of which the police had been supplied, and he was arrested early in the morning. The thief is said to have gone to various foreign offices, and, being taken for a *kanto*, was unquestioned. He invariably left the ante-rooms with more or less plunder.

AN AMAKUNI BLADE.

THE earliest known specimens of Japanese swords are those classed under the name of Amakuni. According to a metropolitan contemporary, they date from at least two thousand years ago, and for that reason the number that still exist and are unquestionably genuine can be counted on one's fingers. An excellently preserved specimen was recently brought to light, says the *Miyako Shimbun*. In Tenjin-cho, Hongo district, Tokyo, their lives a vermicelli-dealer (*soba-ya*), named Osada. His ancestors had for centuries plied the trade of sword-sharpeners, in which he also was reared. After the fall of the Shogunate and the consequent disuse of the national weapon, Osada started in his present business, in which he has done well. Among the few heirlooms left him is one authentic Amakuni, in a state of perfect preservation. The weapon is about one foot eleven inches in length (English measure) and still bears tokens of exceptional skill on the part of the forger, who, if we are to credit all accounts, must have flourished about the time of Julius Caesar's first expedition against the British Isles. Deeming this a far too precious relic to keep in his own possession, Osada recently dedicated it to the shrine of Tenjin, in the same urban district, in whose *hozo*, or treasure-room, it is now kept. Tenjin is the popular name for

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

noblest and most pathetic figures of Japanese history. Tenjin, or Temmangu, ■■ he is now variously called, is worshipped as the god of literature. One other Amakuni is preserved at the Tenjin-shrine at Kameido.

COUNT OKUMA INTERVIEWED.

A REPRESENTATIVE of the *Kokumin* called the other day on the "Oracle of Waseda," and interviewed him as to his opinion about the war. The Count spoke first about the fighting capacity of the Japanese soldiers, observing that he considered them far above the level of Western combatants. He was especially pleased to find how well the Japanese stood a winter campaign. Dr. Baelz, who had accompanied the Prussian soldiers in the capacity of surgeon when they went to France in 1871, told him that though the temperature of France is far milder than that of Manchuria, the German soldiers suffered so much from the cold when the winter set in as to disqualify about a third for fighting. The eminent physician is said to have expressed to the Count his great astonishment at the power of endurance of the Japanese soldiers, only a very small number being reported as having suffered in any degree from frost-bite. The Count then went on to observe how the present war has suddenly raised Japan's status in the eyes of European Powers. Both by the prestige and the credit enjoyed by it, Japan has truly come to be regarded as the greatest Power in the Orient, and it has become necessary for her to enlarge her scope of action proportionately. In the executive, in finance, and in diplomacy, subsequently to the war, extended measures must be devised by the cordial cöoperation of Government and people. Diplomacy requires prime attention. A Chinese Embassy suing for peace is now about to come, and the nation must remember that with the arrival of that Embassy the period for diplomacy will set in and the country be subjected to a second ordeal. It cannot, of course, be ascertained with what proposals the Embassy will come, but it is just as likely as not that its object is to find out what terms Japan intends to exact from China, and then, by displaying them to the world, to appeal to the interference of other Powers. To snatch opportunities for the benefit of one's own country; to discern subtly the intentions of another, and always to anticipate and circumvent the other's projects—that is diplomacy. Fortunately, those entrusted with the present affair are all able men, and everything can be confidently left to their management. All that is needed at this juncture is departure from the routine hitherto followed and that a bold and comprehensive policy be pursued. It is an inevitable consequence of human weakness that power and glory are invariably attended by envy, and it is most likely that Japan will share the common fate sooner or later. She should, however, follow unflinchingly the dictates of justice even at the risk of rupture with other Powers. Success on the present occasion will require far greater strength than the country has put forth during the war. Japan must show the world that she has grit enough to undertake the task triumphantly.

MILITARY PHOTOGRAPHY.

THE Japanese Army is bent on thoroughly perfecting all military arrangements in connection with the war. It has even sent a photographic party to the seat of operations. Photography now plays an important part in military affairs. Military maps are, for instance, prepared with the aid of this art. The Japanese War Department has not been slow in introducing this new work into its field of action, and the Engineering Corps has not failed, whenever any important balloon experiment was in preparation, to cause experts to ascend and practise the art of military photography. When they Second Army was sent to the Liaotung peninsula, a Photographic Company was organized and attached to it, Captain Satoya being the Chief with two experts under him. This Company has always moved with the Army since it landed, taking photographs in the midst of a fight or entering far into the enemy's line and photographing its positions and so forth, thus greatly facilitating the reconnaissances of the Japanese Army. More than 100 pictures of battles and other scenes have been turned out by the Company and forwarded to Head-quarters and the Central Staff Office. The *Hochi*, from which we take the above particulars, says that this is the first instance in which photography has been so systematically and efficaciously employed in warlike operations, and thinks that Japan is justified in being proud of the development she has attained in this particular branch of military equipment.

CUSTOMS RETURNS.

THE following is a summary of the Customs Returns for December showing the foreign trade of the empire for the month :—

	1893: SILVER YEN.	1894. SILVER YEN.
Exports	10,078,401,130	11,778,622 850
Imports	9,688,372 900	9.579.006.280
Total exports and imports		21,357,629 130
Excess of exports		2,199,616.570

CUSTOMS DUTIES.

Exports	197 721.605
Imports	283.337.306
Miscellaneous	15,524.757
Total	496.583 668

FISHERMEN'S TROUBLE.

THE Inland Sea has once more been the scene of difficulty between fishermen of two neighbouring prefectures. The trouble involves the fishermen of Tokushima and Hyogo Prefectures, and is in connection with the jurisdiction of a fishing ground called Nakase, some distance from the Strait of Naruto. It seems that in pre-Restoration days the ground belonged to the lord of Tokushima, but when the local system was inaugurated it was incorporated into the jurisdiction of Hyogo Prefecture. On the morning of the 15th instant, quotes a metropolitan paper from the Tokushima *Nichi Nichi*, fishermen of Satoura in Tokushima Prefecture set out for the ground in 13 boats under the convoy of four other boats carrying 12 constables. When they reached the spot they found 4 or 5 boats of Fukura fisherman, who are from Hyogo Prefecture. A dispute at once arose between the rivals. The watch stationed by the Fukura fishermen on the nearest promontory, espying what was the matter, at once signalled the alarm according to a previous arrangement. Upon this, about 100 fishing boats, carrying some 300 fishermen and 30 constables, immediately put out and, approaching the Tokushima men, besieged them on all sides. They then seized the fishing implements and attempted to carry the Tokushima fisherman by force to Fukura. A convoy of the Tokushima men managed, however, to cut through the line and gave the alarm to the Itano Police Office. Four boats were instantly manned and about 30 policemen rowed quickly to where the Tokushima men were being held prisoners. After a long discussion, the latter were released, but the policemen were obliged to accompany the Hyogo fishermen as far as Awaji. The Chief of the Itano Police Office proceeded thence by steamer, but how the matter ended is not yet known.

MASONIC BALL.

IT has been decided among the Masonic fraternity of Tokyo and Yokohama to give a Ball at the Public Hall on the evening of the 22nd of February. The R.W. the D.G.M. of Japan, Bro. W. H. Stone, is President of the Committee, with Wor. Bros. C. D. Moss, and R. N. St. John, Vice-Presidents. The Committee is composed as follows :—Bros. R. Home Cook, E. Flint Kilby, Stuart Eldridge, H. I. Chope, H. J. Sharp (Treasurer), A. T. Watson, W. K. Burton, H. W. Lea, G. Hodges, E. P. Pallister, G. Booth, W. Tucker, W. S. Stone, and A. B. Brown (Hon. Secretary). By a happy coincidence the date fixed for the Ball happens to be the anniversary of the birth of George Washington, the first President of the United States of America, and a distinguished member of the fraternity, who, initiated on November 4th, 1752, became the first W.M. of the Alexandra Lodge, No. 22.

REJUVENATION.

IN the courtyard attached to the great castle of Kumamato says a provincial contemporary, there has for centuries past been an enormous *icho* tree, the circumference of which is nearly eighteen feet. It is believed to be the largest specimen of the kind in the Empire and is credited with an age of not less than seven centuries. At all events this great and beautiful tree flourished exceedingly until the date of the Satsuma War, when, for some unknown reason, it was cut down to within six feet of the roots, the giant stump alone remaining. Marvellous to relate, after considerably more than a dozen years of apparent lifelessness, the stump began in November of last year to show signs of rejuvenation, and now it is covered with myriads of buds that give promise of certain and luxuriant growth this spring.

SHOWENBERG.

PIETER JOHANNES SCHOWENBERG, the Dutch seaman accused of murdering a *jinrikisha*-coolie on Honmoku beach in September of 1892, who was first arrested by the Japanese authorities, then taken over by the Netherlands Consulate and lodged in the British gaol pending receipt of his registration papers, is now an inmate of the United States Consular gaol. It appears that the man was sent to Hospital some weeks ago, and upon attaining convalescence, took short strolls about the place. Hearing of this, the Japanese authorities had him re-arrested, and on the request of the Dutch authorities he was received in the U.S. gaol.

THE LOSS OF THE "BELLONA."

THE *Kobe Chronicle* learns that the Marine Court at Hamburg has decided that the loss of

Digitized by Google Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

the steamer *Bellona* on the Paracels was due to a temporary change in the sea currents as a result of the typhoon through which the *Bellona* ran, and that the Captain is free from all blame. The Second Officer, who was on the bridge at the time, is, however, reprimanded, as the Court is of opinion that with a better look-out the catastrophe might have been averted. The many friends of Captain Jaeger in Kobe will be glad to hear, adds the *Chronicle*, that he is held free from blame in the matter.

WIND AND TEMPERATURE IN THE GULF OF PECHILI.

It is a well-known fact, writes the *Kokumin*, that during the winter the prevailing wind in the Gulf of Pechili comes from the north. According to the statement made by a sailor who cruised in the Gulf in the middle of last December, and who lately returned home, for four days out of a week passed in the vicinity of Talien, a north wind blew with a force of 4 or upwards, and considerable difficulty was experienced in the handling of boats. The wind in the Gulf must be even stronger, though not of sufficient force to prevent the voyage of a transport. The wind started generally from the north-east, then veered round to the north-west and ultimately to the north. While the informant was on board the ship, the thermometer fell at one time as low as 10° (F.) below freezing point. Though the temperature of the air was so cold, that of the sea generally kept at about 35°. It is quite likely therefore that the sea in the vicinity of Talien is not frozen. According to the information of a Chinese who lived in Port Arthur for several years, during the three winter months, that is to say, December, January, and February, a north wind of above 4 in intensity generally blows for 20 to 30 days consecutively. This statement is corroborated by the Japanese men-of-war in Port Arthur, for they seem to have thus far experienced a north wind for about four days out of every week spent there. The strength of this wind is said to be more intense in the vicinity of Shanhaikwan. So strong is it, that launching of boats is entirely out of the question. When this wind blows, the water along the coast becomes shallower. In Talien the difference between the full and ebb tides is about 11 ft., but when the north wind blows it is generally reduced to about 7 feet. Before the wind sets in the atmospheric temperature rises for two days as high as 40° and the sea shows great disturbance.

EFFECTS OF THE EARTHQUAKE IN TOKYO.

The Legations in Tokyo seem to have suffered a good deal in the recent earthquake. The British Legation, which had only just been rendered habitable after the bad shaking it received last June, was again considerably demoralized on the 18th instant. The ceilings of several of the bed-rooms will have to be replastered, and other parts of the house will require a good deal of repair. The building now occupied as a temporary Legation by the German Representative, was also so much injured in the upper storey that His Excellency Baron Gutschmid has to move elsewhere pending the work of restoration. We believe that he comes to Yokohama. Perhaps the worst damage was inflicted on the Russian Legation—cumulative damage—for in this case the shock seems to have followed the lines of its predecessor in June. We understand that H.E. Mr. Hitrovo has taken a house in Yokohama, and will reside there while the Legation is in the hands of the workmen. The Italian Legation seems to have escaped with comparatively little damage, but it suffered sufficient last June to be entitled to some exemption on this occasion. Most fortunate of all, we believe, were the French and Belgian Legations, but these, being wooden buildings, are naturally less disfigured by evidences of shocks and twists than are solider constructions.

AN IMPERIAL GIFT.

In connection with the announcement from Pekin that the Chinese Emperor has foregone the usual festivities and celebrations not only of the rapidly approaching New Year but also those that were to have taken place on the birthday of the Empress Dowager, who will be sixty years old in the course of a few weeks, we read in a metropolitan contemporary that the Emperor of Japan had ordered for this occasion a marvellous robe of gold brocade, which was to have been sent as an Imperial Gift to the Empress-Dowager, with an autograph letter of congratulation. The robe is the work of the most famous Kyoto art-weavers, and has taken a number of months to complete, the fabric being of the rarest and most ornate description and heavy with gold. "For the present," remarks our contemporary naïvely, this gift cannot reach its destination; but it may very possibly be of use after the war is over."

THE FOURTH DOMESTIC EXHIBITION.

All opposition to the Fourth Domestic Exhibition, or rather to its actual opening in April, now appears to have given way. Come what will, the Kyoto townspeople have announced their aversion to the idea of a postponement of the date of opening, thereby undoubtedly rendering it impossible for a number of would be exhibitors to take part, as the belief in the almost certainty of a postponement at least until June or July, has been very wide-spread. It is said that the Kyoto municipal authorities have themselves been in favour of a later date, but all objections have been overruled by the ardent zeal of the local merchants, who foresee in the Exhibition a sudden turn of the commercial tide in favour of their city. It may indeed prove as they fondly prognosticate; yet one cannot help regretting that, as matters stand, the Exhibition will be less national than local.

CALENDARS.

Messrs. C. D. Splivalo & Co.'s calendar for 1895 is worthy of the lovely scenery amid which the Yosemite Flour Mills grind out their growing contribution to Japan's bread-stuffs. It is a charming chromo-lithograph, making a picture much better suited for the walls of a lady's boudoir than for those of a dingy newspaper office. More sumptuous and distinctly more useful, if less attractive, is the calendar issued by the Scottish Union and National Insurance Company, through their Yokohama Agents, Messrs. Fraser, Farley, and Company. It takes the form of a diary, beautifully printed on fine paper, offering just space enough to tempt useful entries and deter superfluities, and bound in a style at once sumptuous and artistic. This a fashion of advertisement that all can appreciate.

VIEWS OF FUJI.

"Fugaku Shinkyo," or Views of Fuji, is the title of a little album containing no less than 32 sketches of the summit of the peerless mountain, in all weathers and at all seasons. The exquisite symmetry and graceful shape of Fuji-yama evoke a kind of reverential love in Japanese bosoms. Never, we believe, has any natural object received such tender worship or played such a large part in the art of a nation. Mr. Haruna Shigeharu, the painter of these 32 pictures, must have made the mountain a perpetual study. It is worthy of such attention, and the public will be grateful for this result of his labour of love.

MR. FOSTER.

The Hon. J. W. Foster made but a short stay in Yokohama, leaving by the *Empress of India* for Kobe on the afternoon of the day of his arrival. He breakfasted at the U.S. Consulate with Consul-General McIvor, a personal friend, afterwards proceeding to the Grand Hotel. In company with H.E. Mr. Dun, Mr. Foster went up to Tokyo by the 11.25 train and had an interview at the Foreign Office with Mr. Hayashi, Vice-Minister of that Department. He returned to Yokohama by the 3.15 p.m. train, and was taken aboard the Empress by a Kencho launch.

PROF. MICHEL REVON.

A telegram received in Tokyo on Friday announces that Prof. Michel Revon of the Imperial University has been made Chevalier of the Legion of Honour. This distinction, which is rarely conferred on professors of French universities, and then only on men of well-known merit, goes to show that professors of the Imperial University here are not only equal but are frequently considered even superior to their colleagues in European institutions.

THE LATE PRINCE ARISUGAWA.

To-day's *Official Gazette* says that the funeral of the late Prince Arisugawa Taruhito will take place on the 29th inst. The cortége leaves the residence of the deceased at Kasumigaseki, Kojimachi, at 9 a.m., and the interment takes place on Toyoshimaoka. The following have been appointed to take charge of the obsequies:—Viscount Sugi Magoshichiro, Chief, and Messrs. Sannomiya Yoshitane, Tautsumi Masayoshi, Toda Komon, Yamanouchi Katsuaki, Konishi Arinori, and Taguchi Kanzo.

INCIPIENT FIRE.

The premises No. 166, until recently used as a Chinese Club, had a narrow escape from being burned on Wednesday afternoon. Some sparks from a *hetsui* in the kitchen communicated with several boxes of charcoal and wood stored near by, and these were burning fiercely when the fire was discovered. A few buckets of water were sufficient to put out the fire, although the ceiling was considerably scorched.

STEAMER WRECKED.

The steamer *Crown of England* has been wrecked on an island just north of Santa Cruz Island, off the coast of Southern California. The vessel left San Diego in a dense fog in ballast to load at Nanaimo. The crew were all saved. A very strong current sets in towards these islands; that and the dense fog prevailing at the time were undoubtedly the cause of the stranding. She is a total loss.

THE HUNGARIAN CABINET.

Saturday's *Official Gazette* prints a telegram dispatched by the Japanese Acting *Chargé d'Affaires* at Vienna, and received by the Foreign Department on the 18th inst., stating that the Hungarian Cabinet has been released from its position by the Emperor. A new Cabinet has been formed.

THE FRENCH CABINET.

The *Official Gazette* has another telegram received from the Japanese Representative in France. The message states that the President resigned on the 15th inst., and requested the French Cabinet, which had sent in its resignation, to remain in office until his successor could be appointed.

CARGO IN TANK STEAMERS.

A full cargo of rice, says a London paper, has just been taken from Siam to Bremerhaven in the British tank-steamer *Elax*. This is the second cargo of rice brought to the Weser by a petroleum tanker. The rice is stated to be not in the slightest degree tainted, the tanks having been well cleansed and lime-washed.

PURCHASE OF VESSELS.

It is reported that the German steamer *Brema* will be purchased shortly by Mr. Oya, and renamed the *Takenoura Maru*. The *Kobe Chronicle*, also understands that the little schooner *Abon*, of 30 tons, which has been lying there for some weeks, has been purchased by Japanese.

NEW "SHIRE" STEAMER.

The Sunderland Shipbuilding Company, Limited, Sunderland, launched on Nov. 27th the steel steamer *Merionethshire*; 343 ft. 41 ft. by 28¾ ft; about 4,600 tons deadweight, for the "Shire" line of steamers.

THE CHINESE ENVOY.

There appears to be no sign yet of H.E. Chang's departure from Shanghai. Such leisurely procedure on the part of a peace envoy augurs ill for the success of his mission.

THE NEW SECRETARY OF THE BRITISH LEGATION.

The new Secretary of Her Britannic Majesty's Legation, Mr. Lowther, and his sister, Miss Lowther, are expected to arrive by the P. & O. steamer *Ancona*, due here to-day.

IMPERIAL DIET.

FRIDAY, JANUARY 18TH.

HOUSE OF PEERS.

The House met at 10.40 a.m., the Order of the Day being :—

1.—Application for leave.
2.—Second Reading of Bill for amending the Pension and Gratuity Regulations.
3.—Bill relating to Fisheries.

Prince Nijo Motohiro, Chairman of the Special Committee, reported in favour of the Bill for amending the Pension and Gratuity Regulations, and said that the Committee recommended one change only, namely, that the time of the amendments' going into operation should be April 1st instead of July 1st, so as to suit the financial year.

The House voted for the Second Reading and proceeded with it at once, passing the Bill with the Committee's amendment.

The Third Reading was passed at once.

Mr. Murata Tamotsu, introducing the Fisheries Bill, reminded the House that the measure had been passed in a previous session but had failed to become law owing to the dissolution of the House of Representatives. There were three reasons in favour of the Bill. One was the necessity of exercising some control over fishing operations, so as to ensure the supply of fish against exhaustion. Already *bêche-de-mer* and *awabi* were becoming scarce owing to indiscriminate capture. Secondly, it was essential to provide against the disputes now so common among fishermen; disputes that too often involved recourse to physical violence. Thirdly, Japan, although essentially a country of marine products, was perhaps the only civilized state in the world where no fishery laws existed.

After various questions, the Bill was entrusted to a Special Committee nominated by the President, the Government Delegate having explained that the Government approved the general principles embodied in the Bill, but might have something to say about details when the Special Committee's report was presented.

The House rose at 11.50 a.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.15 p.m., the Order of the Day being :—

1.—Representation for the Establishment of an Iron Foundry.
2.—Bill for granting State aid to Local Agricultural Experimental Stations.
3.—Bill relating to the Special Financial Control of Forest-land Capital.
4.—Bill relating to Open Ports.
5.—Bill for amending the Medical Diploma Regulations.

Mr. Kurihara Ryoichi, introducing the first Bill, said that every one, he presumed, was agreed as to the necessity of having an iron foundry in the country. The Government had already presented a Bill in that sense, but being unable to furnish accurate statistics as to the quantity of iron procurable in Japan and its quality, had failed to obtain the Diet's consent. Since then, a committee of investigation had been at work, and its report showed that there was an ample supply of iron available, while as to its quality, experiments conducted at the Osaka Arsenal gave most excellent results. The only point in which deficiency presented itself was that of fuel: Japanese coke was inferior to foreign. Making full allowance for that factor, however, it appeared that iron could be smelted and worked in Japan at two-thirds of the cost of imported iron. The question of experts to carry on the work might present some difficulty, but surely such an obstacle was not insuperable. No question could be entertained about the advantage of making the country self-supplying in this respect. Taking the item of railways, he was informed that one-third of the cost of construction was absorbed in the rails alone. That signified that of the 100 million *yen*, roughly speaking, hitherto spent by Japan on her railways, 33 millions had gone to foreign countries. They were only on the threshold of the work of railway building, and immense quantities of rails would be needed in the future. It further appeared that even now the War Office used 361,000 *yen* worth of imported iron yearly, and the Naval Department, 881,400 *yen* worth. All that might be supplied at home if foundries existed. As to the matter of private enterprise against official control, he did not undertake to pronounce any decided opinion.

Mr. Kaneko Kentaro, Government Delegate, said that the Government entirely agreed as to the necessity of having an iron foundry, and had been conducting experiments with a view to determining the possibility of such an undertaking. As to the question of raw material, researches made by experts showed that ample supplies were available at various places along the Pacific coast of Japan, in Kiushu, Moji, Akaishi, Kamaishi, and so forth. From ores obtained at these places various kinds of iron had been successfully manufactured, but the experiments in that direction, though sufficient to furnish general results, could not yet be called exhaustive. The great difficulty was to obtain a supply of fire-proof bricks. Many attempts had been made, but up to the present a good article had not been obtained. The best was that made at Mitsuishi, but it still left something to be desired. Coke, too, as the introducer of the Representation had told them, was a difficulty. But by mixing three kinds of coal, those of Tokushima, Amakusa, and Nagasaki, a tolerably satisfactory coke could be obtained. Specimens of the various kinds of iron manufactured from Japanese ores had been laid out in the members' retiring rooms for inspection.

Mr. Hamada Giichiro said that the explanations offered by the Government Delegate and the introducers of the measures were amply instructive. He moved that the Representation be at once entrusted to a Special Committee.

The House agreed.

Mr. Tada Sakubei, introducing the next Bill, dwelt on the vital importance of improving agricultural methods, and pointed out that, although farmers throughout the country were agreed as to the necessity of reform, they lacked education and ability to conceive and elaborate improvements without expert aid. At present there was only one experimental station, namely, that at Nishigahara. Similar institutions ought to be established in every Prefecture. They would cost only 3,000 *yen* each, and it would suffice if the State bore one-half of the outlay. Very simply experiments made in rice culture had resulted in an extra yield of 3 *to* per *tan* of land, which meant 800,000 *yen* annually if the same improvements were universally introduced.

Mr. Fujita, Government Delegate, said that the Government would have introduced a similar measure had not the expenditures involved in the conduct of the war rendered it impossible to find funds. Consent to the Bill could not be given during the present year.

The Bill was entrusted to a Special Committee.

Mr. Nakamura Yaroku briefly introduced the next Bill, being assured that the House was with him in considering that the present system of forest-land finance demanded reform. The Government estimated the area of the forest land in over five hundred thousand places at 740,000 *cho* (1,850,000 acres), valued at 17 million *yen*, but he believed that the area aggregated 2,000,000 *cho*, and that the value was 50 millions.

The Bill was entrusted to a Special Committee.

Mr. Taguchi Ukichi introduced the next Bill for opening to foreign and Japanese owned vessels the ports of Tokyo in Musashi, Shimizu in Suragaoka, Yokkaichi in Ise, Shimonoseki in Nagato, Moji in Buzen, and Otaru in Shiribeshi, the date of opening to be fixed by Imperial Ordinance. The chief hope of increasing the wealth of the country lay in developing its foreign commerce. It was true that the places indicated in the Bill were already ports of export; but that meant very little. He proposed that they should be thrown open to the entry of all vessels, and that the loading and unloading of goods be permitted there. The present open ports had all been selected with a view to trade carried on by foreigners, and foreign settlements consequently existed there. But the ports now indicated would be opened simply in the interests of the empire's foreign trade and would have no foreign settlements. Doubtless the present small volume of the trade was in part due to the people's want of enterprise. But it was also due in part to want of facilities for moving goods. That the country should derive a revenue of only five millions annually from the customs was absurd, when they remembered the revenues accruing from the same source in England, France, Germany, America, and so forth. In answer to questions, he said that although a foreign settlement already existed in Tokyo, the place was not an open port, but only an open market. As to the Bill's not including any port on the Sea of Japan, that would be a matter for subsequent consideration.

Mr. Obata Iwajiro asked whether the prosperity of Yokohama would not be seriously impaired by making Tokyo an open port.

Mr. Taguchi replied that it had always been a subject of perplexity to him why Yokohama had been chosen as an open port in preference to Tokyo. As a matter of fact, seven-tenths of the goods coming to Yokohama were destined for Tokyo. They had to be transferred to lighters in Yokohama, and towed thence to Tokyo, a process obviously not conducive to tradal convenience. He believed it to be greatly in the interests of commerce that Tokyo should be thrown open.

Mr. Megata, Government Delegate, while thoroughly endorsing the principle of developing the country's foreign commerce, reminded the House that simultaneously with the opening of new ports new duties would devolve upon the State. There would be the questions of establishing custom houses, of building jetties, of adopting precautions against epidemics, or regulating the traffic, and of re-adopting the programme of military defences. All these things required consideration and legislation, and the Government's attention was already directed to the subject. But whatever might be possible or desirable in the future, it certainly was not possible to carry out the proposed measure at once, and for that reason the Government's consent must be withheld.

Mr. Taguchi pointed out that the Bill fixed no time, and that the necessary preparations might be made at leisure.

The Bill was entrusted to a Special Committee, more than one member urging the Committee to fully examine into the expediency of adding some ports on the Sea of Japan.

Mr. Toda Yugen briefly explained that the object of the next Bill was to amend the Medical Diploma Regulations, in the sense of extending due recognition to the long practised medical systems of China and Japan.

Mr. Wakizaka Gyozo said that when this Bill was before the House in a previous session, the Government had intimated its inability to conduct examinations in the old medical systems of the East.

Mr. Tsuzuki, Government Delegate, failed to understand what was implied by "the systems of the East." There was no east and west in science. If Japan adopted the scientific methods of the Occident, they became Japanese after adoption. The Government recognised only one science of medicine, properly so called. A hen might be kept in a neighbouring village, but, after all, it could only lay one kind of egg.

The Bill was entrusted to a Special Committee.

The House rose at 3.50 p.m.

SATURDAY, JANUARY 19TH.

HOUSE OF PEERS.

The House did not meet, the Special and Standing Committees alone assembling.

HOUSE OF REPRESENTATIVES.

The House met at 1.10 p.m., the Order of the Day being :—

1.—Bill providing for the Parliamentary Representation of Hokkaido.
2.—Bill for amending Notification No. 16 of the 13th year of *Meiji*, with reference to Local Tax Regulations.
3.—Bill for supplementing the Trade and Miscellaneous Tax Regulations of Notification No. 70, 13th year of *Meiji*.
4.—Bill for rescinding Imperial Ordinance No. 6 of the 20th year of *Meiji*.
5.—Representation relating to the Management of Public Forests.
6.—Bill for amending the Supplementary Sections of the Penal Code promulgated by Law No. of the 23rd year of *Meiji*.

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

Mr. Yoshimoto Yeikichi said that as the first four measures on the Order related to the same subject, Hokkaido, they might be considered together, but the President ruled to proceed in regular sequence.

Mr. Kashima Hidemaro, introducing the Bill for establishing a Local Assembly in Hokkaido, said that the population of the northern island now amounted to over 940,000 souls; that the industries of the various districts were making rapid progress, and that the need of a local parliament was keenly felt. A Bill in the same sense had been presented to the Diet every session, but had failed to become law. The only objection urged by the Government was that the great distances of the divisions of Hokkaido from any central point, as well as the extent and sparse population of the districts themselves, constituted serious obstacles to the institution of a local assembly. But such objections had lost much of their validity since they were originally advanced, and were rapidly ceasing to be worthy of consideration. Meanwhile, the large population of Hokkaido suffered much inconvenience through the want of a local assembly, and it must be noted that if Hokkaido were too extensive to permit the introduction of parliamentary management, then it was also too extensive to be controlled by one Governor and central administrative task. The large and multifarious duties devolving on the Governor could not be discharged to the entire satisfaction of the inhabitants, who naturally clamoured for some share in the the direction of their own affairs.

Mr. Banto Kanguro said that fifty million *yen* had already been devoted to the development of Hokkaido, to starting industries, to providing educational facilities, and to inaugurating a sanitary system. Yet the island still needed a great deal. At the lowest calculation a yearly outlay of a million *yen* was required, whereas the sum available from taxes was only 370,000. Despite these disquieting financial conditions, the expense of establishing and maintaining a local assembly was now suggested as a proper addition to the burdens of the people. He wished to know whence the necessary funds were to be procured. In the second place, the franchise and representative qualification provided by the Bill referred to land ownership only. But great numbers of the inhabitants of Hokkaido, the fishing population for example, held no land. Were these people to be excluded from the contemplated privilege. In the third place, he noted that Chishima was not included in the circuit embraced by the Bill. Why was that?

Mr. Kashima replied that he did not share Mr. Banto's uneasiness on the score of finance. It was true that some assistance from the Imperial Treasury would be required, but a small appropriation would suffice, and he had no doubt that the people of Hokkaido would gladly make up the difference for the sake of having a local assembly. With regard to the fact that no provision was made for the representation of the part of the population engaged in the industry of marine products, he admitted that an apparent injustice existed, but in truth such folks were so far removed from any central position that to require them to take part in elections and in the sittings of an assembly would be very irksome to them. Further, by adopting a land-ownership qualification, the great majority of the islanders would be included. Finally, the exclusion of Chishima (the Kuriles) was inevitable at present.

Mr. Banto apologised for troubling the introducer of the Bill, but asked for information as to the limits of districts in Hokkaido. They were already very uncertain, and it seemed to him that in view of the rapid development of the island, further and frequent changes must be apprehended.

Mr. Kashima did not attach any importance to that objection. He warned the House against regarding Hokkaido as an unopened and undeveloped place. In point of fact it had passed the juvenile stage and was in a very virile condition.

Mr. Tsuzuki, Government Delegate, in answer to questions, said that the Government, while fully sharing the desire of extending to the people of Hokkaido the privilege of local government in its fullest sense, apprehended that very great obstacles stood in the way at present. In view of the undeveloped and rapidly changing conditions of the large districts involved, it was almost impossible to fix a properly qualification that would be just and comprehensive. Further, the imperfect character of means of communication, the sparse population, the great distances, and many other difficulties stood in the way. The Government was even now engaged in investigations undertaken with a view of determining how far the system of local autonomy might be applied to Hakkaido. It was a matter demanding serious reflection.

Mr. Hiyakuman Umeji observed that the Government had told them the same thing in a previous session. Then, too, they had been informed that investigations were in progress. He wished to know when the investigations were likely to be concluded.

The Government Delegate was unable to indicate any definite date. That was obviously impossible.

After some further questions, the Bill was entrusted to a Special Committee, and the next three Bills also were handed to the same committee without debate.

Mr. Saito Ryosuke briefly introduced the Representation relating to reform of the system of managing public forests. He said that all were agreed, presumably, as to the necessity of such reform, and that the principles embodied in the Representation had already obtained the endorsement of the House in previous sessions. Shortly speaking, the object of the Representation was to transfer from public to private ownership all forests the possession of which by individuals would promote agricultural convenience and prosperity, or remove obstacles now encountered by farmers.

The Representation was entrusted to the Special Committee already charged with the duty of reporting upon the Bill with reference the Management of Forest Lands' Finance.

Mr. Seki Shinnosuke, introducing the last Bill, explained that its purpose was to reduce the expenditure connected with criminal processes. The present law provided that a witness in a criminal case should receive 50 *sen* for each time of attending in court, 10 *sen* per *ri* travelling allowance, and 50 *sen* per day sustenance. The Bill proposed to make the allowance for attendance 50 *sen per diem*, and that for sustenance 25 *sen*. The effect of the change would be to reduce the present expenditure on account of witnesses from 85,110 *yen* annually to 42,550 *yen*.

Mr. Kioura, Government Delegate, said that the Government agreed with the general principles of the Bill, but would recommend some changes in details if the measure were entrusted to a Special Committee.

The Bill was handed to a Special Committee.

The House rose at 3.34 p.m.

MONDAY, JANUARY 21ST.

HOUSE OF PEERS.

The House met at 10.35 p.m., the Order of the Day being :—

1.—Bill for amending the Banking Regulations, sent up from the Lower House.
2.—Bill embodying a Project of Press Law; sent up from the Lower House.

Mr. Tajiri, Government Delegate, in answer to Viscount Tani, said that the Government did not offer any special opposition to the first Bill.

The Bill was entrusted to a Special Committee.

Mr. Suyematsu, Government Delegate, referring to the Second Bill, said that its chief provisions were the abolition of the power of suspension and of the payment of security money by newspaper proprietors. The Government did not think that, at the present stage of journalistic development, these provisions could be altogether dispensed with. Some modification of the present law was, doubtless, possible, but not such a drastic change as that contemplated by the Bill now before them.

In answer to questions, Mr. Suyematsu further explained that the chief use of the power of suspension was to check a newspaper when it seemed to have pledged itself to a course of criticism likely to disturb public peace. Further, there could be no question that the existence of such a law served as a wholesome check upon reckless writing. The number of suspensions in 1893 had been 80. Last year the penalty had been applied more frequently owing to the fact that a greater variety of exciting topics had presented themselves. Suspensions in the interests of public morality had been very few.

The Bill was entrusted to a Special Committee nominated by the President, the House having voted against a Committee chosen by the Sections. The Committee was instructed to present its report within a week.

The House rose at 11.50 a.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.15 p.m., the Order of the Day being :—

1.—Representation relating to Materials for History.
2.—Representation relating to the Increase of Agricultural Districts.
3.—Bill relating to the Prevention of Contagious Diseases
4.—Bill for amending the Private Railway Regulations.
5.—Bill for amending the Railway Construction Law.
6.—Bill for amending the Railway Construction Law.

Mr. Suyehiro Shigeyasu presented four Questions relating to the manner of obtaining supplies for the Army and Navy at the seat of war, and the means adopted for their transport. He described at considerable length the sufferings and bravery of the troops, the labours of the Emperor, the loyalty and generosity of the people, and the sacrifices made by the country, and dwelt on the disgrace of allowing dishonest contractors to take advantage of such an occasion to enrich themselves. The thing had become a subject of common talk, and anxious as they all must be to avoid troubling the Government at such a time, they could not forget that the duty of the House was to superintend the proceedings of the Administration. He trusted that the Government would not treat his Questions in the usual cavalier fashion, but would answer them in full, so as to set the nation's mind at rest.

Mr. Banto Kangoro asked permission to introduce an urgency motion with reference to the report that certain members of the House had received bribes in connection with the Bill for continuing the National Banks as private institutions. He spoke at length on the disgrace of leaving such a charge unanswered, and moved that a Committee be appointed to investigate it.

The House agreed to grant urgency.

In answer to questions, Mr. Banto said that the newspapers most conspicuous in preferring the accusation were the *Mesamashi* and the *Yeiri Nippo*. As to the manner of conducting the investigation, that must be left to the Committee.

Several members insisted that the proposal amounted to nothing more than inquiring into a rumour started by some petty journals.

Mr. Tanaka Shozo contended that the House should not so far forget its dignity as to waste time over such a discussion. The newspapers referred to were altogether petty sheets. To appoint a committee on the strength of mere rumours ventilated by such insignificant journals would be a distinct disgrace to the House.

Mr. Hoshi Toru asked whether it would be in order to entrust a Committee with the duty of investigating a question not embodied in a definite form.

The President pointed out that he was merely following a precedent established by Mr. Hoshi himself when in the chair.

Much desultory discussion ensued, the House gradually growing excited.

Mr. Kusakari Shimmei, while strongly approving Mr. Banto's motive, could not approve his proposal, since it amounted simply to asking the House to take a grave step on the strength solely of shadowy allegations made by petty journals. For his own part, he had read the statements alluded to, and found them to be of the vaguest character, no title of evidence being produced in support of them. The House would be merely making itself a butt for public

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

ridicule did it pay serious attention to such accusations. It would be like bringing a suit where there was no defendant.

After some further discussion, the closure was put and carried.

The House rejected the motion.

Mr. Suyehiro Shigeyasu briefly introduced the first Representation, reminding the House that it had been fully discussed in a previous session. They might suppose that this time of war was ill suited to the adoption of taking measures to collect materials for history, but, on the contrary, it was precisely at such a time that such a step was most needed. All experience showed that history written after the events it described could not be trusted. Everyday that passed without collecting materials meant an additional risk of error, and they ought to be specially influenced by that consideration at a moment when the country was passing through a great crisis of its history.

Mr. Kokure Budayu pointed out that, if the plan proposed in the Representation were adopted, the outlay involved would be 280,000 *yen* in 7 years, whereas the same work, if left in the hands of the Government, might be accomplished much more cheaply.

Mr. Suyehiro said that the Government had already spent 60,000 with very trivial results. Besides, the Government was chiefly engaged compiling a pre-Restoration history, whereas he projected a history of the *Meiji* Era.

Mr. Komura Shigehiro supported the Representation, speaking at some length, his chief argument being that the history thus far compiled by the Government had not been of a satisfactory character, and that the proper persons to undertake such a work were specialists chosen from the public at large.

The Representation was entrusted to a Special Committee.

Mr. Hirajima Matsuo, introducing the second Representation, said that the country was now divided into 7 districts, and consequently there were only 7 experimental stations for agriculture, a number much too small. He proposed that the districts be increased to 11. The cost would be only from eight to nine thousand *yen* per station.

The Resolution was entrusted to the Special Committee already charged with the duty of reporting on the Bill relating to agricultural experimental stations.

Mr. Tsunematsu Riukei, introducing the next Bill, pointed to the fact that the number of persons attacked by dysentery last year had been over 154,000, and the deaths 37,000. In the whole country the Prefectures of Ibaraki and Tochigi alone had escaped. There might be several causes for such a calamity, but certainly one was the fact that insufficient funds were appropriated for purposes of sanitation. The Bill proposed to remedy that by providing that the Treasury, acting under the authority of the Minister of State for Home Affairs, should be authorized to grant a part or the whole of the expenses required by a Prefecture for purposes of sanitation, on the representation of the Governor.

After a brief discussion, the Bill was entrusted to a Special Committee.

Mr. Kagami Kahei briefly introduced the next Bill providing that extensions of construction period granted to projectors of private railways already sanctioned, should not exceed one half of the period originally fixed. He said that the lines sanctioned were needed by the public, and private companies should not be allowed to consult their own convenience as to the time of building them.

The Bill was entrusted to a Special Committee, to which were also handed the next two Bills, the object of the first being to separate the Iwakoshi and the Hokuyetsu lines, and that of the second, to extend the Awamori-Tsuruga line to Maizuru.

The House rose at 4 p.m.

TUESDAY, JANUARY 22ND.

HOUSE OF PEERS.

The House did not meet.

HOUSE OF REPRESENTATIVES.

The House met at 1.15 p.m. the Order of the Day being :—

1.—Bill for amending the Chamber of Commerce Regulations.
2.—Bill for amending the Official Pensions and Gratuities Regulations; sent down from the Upper House.
3.—Bill relating to Joint Stock Private Railway Companies; Second Reading.
4.—Bill for rescinding Law No. 7 of the 23rd year of *Meiji*; Second Reading.
5.—Bill for rescinding Notification No. 2 of the 18th year of *Meiji*; Second Reading.
6.—Bill for amending a portion of the Code of Civil Procedure; Second Reading.
7.—Bill for the Conservation of Forests.
8.—Bill for the Special Disposal of unnecessary State-owned Forest Lands.

Mr. Wakamiya, Government Delegate, briefly explained that the object of the first Bill was to extend the membership of Chambers of Commerce, to facilitate the election of Presidents, and to increase the number of such institutions should occasion arise. There were already 36 Chambers of Commerce in the Empire, and the amendments proposed by the Bill had received their endorsement.

The Bill was entrusted to a Special Committee.

The second Bill was similarly treated without question or discussion.

Mr. Tateishi Ki, on behalf of the Special Committee, reported in favour of the Bill relating to Joint Stock Private Railway Companies, with some slight amendments, and explained that the Government approved the Bill in its present form. The principal purpose of the Bill was to enable a company to commence operations so soon as one-tenth of its capital had been paid up, instead of waiting until one-fourth had been paid up, as was the law generally applicable to joint stock companies.

After a brief discussion the House voted to carry the Bill to a Second Reading and to proceed with the Reading at once.

The Bill was passed as amended by the Committee.

Mr. Kusakari Shimmei, on behalf of the Special Committee, reported in favour of the next Bill, namely, that for amending the Law that required a deposit of 20 *yen* by way of preliminary to an appeal from a lower to a higher tribunal in cases of major crime. The proposed amendment was to dispense altogether with a deposit in cases of major crime, and to require a deposit of 10 *yen* in cases of minor crime. The Government Delegate had opposed the Bill on the ground that it would lead to a great increase of litigation as well as of prison expenditures, but the Committee failed to appreciate such an objection.

Mr. Kioura, Government Delegate, had not intended to speak, but it was necessary to correct some statistical errors committed by Mr. Kusakari. (The Delegate then gave figures showing that the last speaker's information as to criminal cases and their results was inaccurate.)

The House voted for the Second Reading and dispensed with the Third.

The next Bill, being correlated, was similarly passed, as was also the Bill for amending a portion of the Criminal Code in the same sense.

Mr. Nakamura Yaroku was not present to introduce the next Bill relating to the Conservation of Forests. Briefly speaking, the object was to provide that no cutting of timber, except for purposes of strengthening, should be allowed in any forests exercising an influence upon inundations, storms, land-slides, rain-fall, and so forth. The introducer of the Bill not being present, the President asked one of its supporters to take his place, but the member thus called upon explained that Mr. Nakamura would arrive in a moment. Meanwhile, it was moved that the Bill be entrusted to the Special Committee already charged with the duty of reporting upon another Bill relating to Forests, and the House agreed.

Mr. Tada Sakubei, introducing the last Bill, said that not a few forests now in State ownership had no national character whatever, and would be much better treated were they transferred to the District or Division in which they stood.

The Bill was entrusted to the same Committee as that charged with the duty of reporting upon the last.

The House rose at 3.05 p.m.

WEDNESDAY, JANUARY 23RD.

HOUSE OF PEERS.

The House met at 10 a.m. the Order of the Day being :—

1.—Bill for abolishing the Peace Preservation Regulations; sent up from the Lower House.
2.—Bill for rescinding Notification No. 70 of the 15th year of *Meiji*; sent up from the Lower House.

Baron Makimura, on behalf of the Special Committee, reported that the Committee, by a majority, had decided to recommend the rejection of the Bill abolishing the Peace Preservation Regulations. The reasons assigned for the Bill were very brief, namely, that the Regulations had been enacted prior to the promulgation of the Constitution; that they were incongruous with representative institutions, and that no need for them existed. But the majority of the Committee considered that the Regulations were still necessary.

Mr. Sekida Katsu expressed surprise that the Special Committee should have formulated such a conclusion. Had the Committee been all present at the voting, and had there been much discussion?

Baron Makimura replied that all had been present, and that the discussion had not been warm. Four had voted against the Bill and three for it.

Viscount Nomura, Minister of State for Home Affairs, addressed the House, dwelling on the necessity of preserving the Regulations in the Statute Book. The Regulations were not in any sense a fetter on the liberty of respectable and law-abiding folk. They were intended solely to restrain persons who might be betrayed into excesses in their advocacy of any cause, political or otherwise. Unfortunately such persons existed. There was no concealing the fact. The Government judged that in the interests of public peace and in order to enable quiet people to pursue their avocations in security and exercise their public rights without illegal obstruction, positive measures must be adopted to check lawless or excitable agitators. On the strength of that conviction, he asked the House to reject the Bill.

Mr. Ando Sokumei strongly supported the Bill. Nothing could be more unconstitutional or less consistent with the liberty of the subject than that the Authorities should be invested with power to expel a man from the capital without legal process of any kind. To affirm that such a power was exercised in the interests of public peace was a palpable error. On the contrary, procedure so inconsistent with the spirit of representative institutions was calculated to provoke breaches of the peace. In point of fact, these objectionable Regulations were a weapon devised by those in power to facilitate their own unconstitutional administration. The Regulations provided that persons deemed likely to disturb the peace might be banished to a distance of 3 *ri* from the Imperial residence. That was merely a subterfuge; a cowardly scheme on the part of Ministers to hide themselves under the shadow of the Throne, and shift to the Sovereign's shoulders responsibilities that ought to be borne by themselves. There never was, never could be, any question of treasonable designs against the Throne. The Government might banish men like himself from Tokyo, might even send him to prison at Tsukudajima, but he would nevertheless remain a loyal subject, loving his country and opposed only to measures that disgraced it. The House would be running directly counter to the wish of the nation if it rejected the Bill.

Viscount Tani spoke at some length in favour of the Bill. He admitted that the Regulations may have been necessary at the time they were enacted, but asserted that the manner of their enactment had been hasty and ill-considered. He held that the time was passed for such a law, and that it could not stand side by side with the Constitution. Were there any need hereafter for such Regulations, they could be re-enacted with the consent of the Diet.

Digitized by Google UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

Viscount Nomura pointed out the unpractical character of Viscount Tani's suggestion that Regulations, eminently calculated to meet a sudden emergency, could be effectively enacted by the slow process of parliamentary legislation.

Mr. Suyematsu Kencho reminded the House that the punitive processes of the Regulations could not be enforced except in the case of persons refusing to obey the orders issued by the Executive. It was further to be noted that if a necessity for such Regulations admittedly existed seven years ago, no one could possibly declare with confidence that a similar necessity might not arise now. As to the alleged disgrace of the Regulations, they should remember that cognate laws were in existence in certain European countries, and had been enacted in Italy as lately as 1894.

After some desultory discussion and questioning of the Government Delegate, an Open Ballot was taken, when 107 voted against the Bill, and 57 in favour of it.

Prince Konoye, on behalf of the Special Committee, reported in favour of the Second Bill, as sent up from the Lower House.

Mr. Tsuzuki, Government Delegate, spoke against the Bill. He admitted that it had never been necessary to actually enforce the provisions of the Notification in question, but that was probably because they existed. At all events, there were already evidences of combinations among the members of neighbouring local assemblies such as might greatly embarrass the Administration.

Viscount Sakai contradicted the Government Delegate, and cited an instance from his own personal experience of the law having been applied to disperse a meeting of members of neighbouring Prefectural Assemblies.

Mr. Mitsukuri Rinsho spoke in favour of the Bill.

The House voted for the Second Reading, and passed the Bill at once, rising at 2.15 p.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.15 p.m., the Order of the Day being :—

The Budget for the 28th Fiscal Year of *Meiji*.

After a short report from the Chairman of the Petitions Committee,

Mr. Taketomi Tokitoshi, on behalf of the Budget Committee, reported that, after 33 sittings of the Sections of the Committee and 3 general meetings, it had been decided ■ recommend the passing of the Budget as presented by the Government, with reductions aggregating only a little over 598,000 *yen*. Moreover, these reductions included a sum of half a million *yen* in the appropriation for the Second Reserve. Consequently, the actual expenditures had been cut down by only some 98,000 *yen*. Probably some members might be dissatisfied with that result, but the Committee considered that, in view of the circumstances of the time, no other course was open. In answer to questions, he said that no promise had been given by the Government or sought by the Committee with reference to next year's Budget.

Mr. Ozaki Yukio spoke in support of the Committee's Report. It was the House's plain duty to render every possible assistance to the Government in the conduct of the great enterprise now devolving on the nation. On the other hand, the Government, in consideration of the attitude thus necessarily assumed by the House, was morally bound to make every possible reduction in the administrative expenditures. It appeared that the Government had done so, and the House, although one of its prime functions was to take care that the utmost economy was practised in spending the public funds, could not, on this occasion, withhold its consent. Did there appear in the Budget any expenditures of an unconstitutional or illegal nature the House could not choose but excise them. Fortunately, however, there were no such items, and the House was therefore in a position to avoid hampering the Administration at a crisis when official energies were all needed in another direction. Should it eventuate that any improper steps were taken in carrying out this Budget, the House would have it in its power to adopt corrective measures hereafter.

Mr. Takenouchi Seishi opposed the Report. He failed to see why reductions applied to the ordinary expenditures should embarrass the Government in the conduct of a war, funds for which were provided by special measures. If the House passed the Budget in its present form, they would be stultifying themselves. He therefore moved that the Budget be re-entrusted to the Committee.

The House rejected the motion.

Mr. Inouye Kakugoro was astonished and delighted to find the representative of the *Kaishin-to* support the Budget. In point of fact no one had changed his financial views, but all were agreed that the time called for absolute harmony between the Legislature and the Executive.

Mr. Kawashima Jun supported the Budget as amended. He thought that great improvements had been effected in the management of the public finances since the Diet first sat. But he did not pretend to be by any means satisfied yet. Nevertheless, they were engaged in a war that seemed still far from its conclusion, and it was their duty to subserve all minor questions to the great need of the hour. He should, therefore, vote for the Budget, promising himself to urge large reforms on a future occasion.

The House then proceeded to vote upon the various Sections of the Budget.

The Sections of Foreign Affairs, Home Affairs, Finance, Army, and Navy were passed without discussion.

On coming to the Department of Justice,

Mr. Shigeoka Kungoro moved that the reduction proposed in the 9th part by the Committee be rejected and the Government's estimate restored.

The House agreed, and passed the whole section as presented by the Government.

The Sections of Education and Agriculture and Commerce were passed ■ amended by the Committee, but the Government appropriation was restored in part 6 of the Communications Section.

The Extraordinary Expenditures Budget was similarly passed, the only discussion that took place having reference to the Tanko Railway, the Government's subsidy, the price of coal, and other matters.

All the other correlated Budgets were passed without discussion.

The House rose at 4.50 p.m.

REVENUE.

THURSDAY, JANUARY 24TH.

HOUSE OF PEERS.

The House did not meet.

HOUSE OF REPRESENTATIVES.

The House met at 1.20 p.m., the Order of the Day being :—

1.—Second Reading of the Bill relating to the Control of Pawnbrokers.
2.—Second Reading of the Bill for amending the Sureties Regulations.
3.—Bill for taxing the Bank of Japan.
4.—Bill for amending the Bank of Japan Regulations.
5.—Bill relating to the Election of Members of Prefectural Assemblies and of the House of Representatives.
6.—Bill for amending the Brewery Tax Regulations.
7.—Bill for amending the Post-al Regulations.

Mr. Komuro Shigehiro presented a Question relating to the Sodo Sect disturbance, which he asserted was entirely due to improper interference on the part of the Home Department.

Mr. Yumoto Yoshinori asked permission to change the Order for the purpose of introducing a Representation on the subject of the Control of Rivers.

The House gave permission.

Mr. Yumoto confined himself to handing in the Representation without offering any explanation. The Representation simply called attention to the fact that in the 4th and 6th sessions the House of Representatives had submitted Representations on the same subject without result, and that, despite the existence of a state of war, some measure should be adopted at once, if the public finances permitted.

Mr. Kusakari Shimmei opposed the Representation on the ground that all the available funds of the State were required for the conduct of the war, and that if any surplus remained it must be applied, in the first place, to relieve the distress caused in the Prefectures of Akita and Yamagata by earthquakes.

Mr. Kawashima Jun declared that nothing was of such importance as the proper control of the rivers responsible for inundations that devastated the country, causing losses many times greater than the sum needed to avert such calamities. Already in the various localities money had been spent for the purpose, but unless the work were thoroughly done, these outlays were simply waste, being wholly ineffective. He too had presented a Representation urging that the necessary funds should be obtained either by means of a public loan, or by appropriations from the Treasury, and he moved that the two Representations be handed to a Special Committee.

The House refused to hand the Representation to a Committee, and passed it at once.

Mr. Higashiwo Heitaro, on behalf of the Special Committee, reported in favour of the Bill relating to the Control of Pawnbrokers, with certain amendments, and said that the Government Delegate had expressed approval of it.

Mr. Kusakari Shimmei put several questions, a process that evoked a vehement protest from Mr. Tanaka Shozo, who declared that the House was not a school, and that Mr. Kusakari had better inform himself before he came there.

Mr. Hashimoto Shogo also addressed some questions to the Government Delegate, but while the latter was replying cries of "Closure," "closure," were raised.

The House voted to carry the Bill to a Second Reading.

Mr. Komuro Shigeshiro, on behalf of the Special Committee, reported against the Bill for amending the Sureties Regulations, on the ground that it conflicted with the Code of Civil Procedure.

After a brief discussion the closure was applied and the House voted against the Second Reading of the Bill.

Mr. Ishida Kwannosuke, introducing the Bill for taxing the Bank of Japan, said that no just reason could be adduced for exempting such an institution from the imposts levied upon all industries and commercial enterprises. The Bank enjoyed many privileges, conspicuously that of issuing notes, and was able to pay its shareholders a dividend of 15 per cent. annually. It ought to be taxed like all other money-earning concerns. Objections were raised on the grounds that it was an instrument of public finance, and that to tax it would be merely to take money out of one pocket of the Treasury and pay it into another. But the former objection applied in an almost equal degree to all banking institutions, whether national or private; and the latter had no force seeing that the stock of the Bank of Japan was on the market like the stock of all other banks or companies.

After a few questions, a vote was about to be taken as to entrusting the Bill to a Special Committee, when the President announced the receipt of the following Imperial Message :—

His Imperial Highness, Prince Taruhito, took an active part in the great work of the Restoration, and performed deeds so meritorious that they find no parallel in ancient or modern times. Recently, from the time that the war broke out with China, His Imperial Highness, remaining always by the Sovereign's side, spared no pains to tender counsels that proved of high value, and helped materially to raise the country's prestige. The end was almost in sight when death removed him, to the infinite loss and grief of the nation. (At this point the President faltered in his reading and many of the members were in tears.)

In consideration of the above, the President suggested that the House should instruct him to convey its reverential condolences to the Throne; that its sitting for the day should be suspended, and that it should also refrain from sitting on the day of the funeral.

The House agreed, and rose at 3.15 p.m.

Little Jack prays every night for all the different members of his family. His father had been away at one time for a short journey, and that night Jack was praying for him as usual. "Bless papa and take care of him," he was beginning as usual, when suddenly he raised his head and listened. "Never mind about it now, God," ended the little fellow; "I hear him down the hall!"

WAR NEWS.

MONDAY, JANUARY 21ST.

On the 17th instant the Chinese forces having their head-quarters at Laoyang repeated the attempt made by General Sung from the south just a month previously. Sung tried to recover Haicheng by attacking it from the direction of Yingkow. He had 10,000 men under his command. The result was his signal defeat at Kangwasai on the 18th of December. The Laoyang forces, also numbering 10,000 or upwards, made a similar essay from the north, and sustained a similar defeat. They appear to have begun to move southward from Laoyang on the 13th instant, and approaching Haicheng by three roads, one direct from Laoyang on the north, one from Pulaitien, on the north-west, and one from Newchwang (the old town) on the west, they delivered their assault on the 17th instant. It appears to have been a most spiritless affair. Deploying, so that their line of attack extended over about 5 miles, they pushed their right wing forward to within some 1,500 metres of the Japanese outports and opened fire with field artillery. The Japanese, meanwhile, had moved out of Haicheng, and taken strong defensive positions, where they awaited the enemy's onset, making no attempt to return his fire. At about 1 p.m., however, it having become evident that the Chinese did not intend to come to closer quarters, the Japanese artillery was brought into action, and after a cannonade of two hours, the Chinese began to withdraw. Thereupon the Japanese assumed the offensive, and pushing forward their guns, opened fire at shorter range, with the result that, in a short time, the Chinese were in full retreat, the main body taking the Laoyang and Pulaitien roads, but a portion falling back toward Newchwang. The Japanese casualties were 1 killed and 40 wounded; the Chinese, from 200 to 300 killed and wounded. The Chinese in their retreat abandoned 5 field pieces and 2 old-fashioned *fusils de rampart*. As yet we have no other details of the affair. It seems to have been a very half-hearted effort on the part of the Chinese, but fighting at this season demands the exercise of qualities such as the Chinese have not hitherto shown.

The *Hochi Shimbun* publishes information, on what authority we do not know, to the effect that Sung, having abandoned all hope either of defending Yingkow or of effecting a junction with the forces massed about Laoyang, has retired to Tienchwangtai. On the other hand, the *Yomiuri* alleges that Sung has received large re-inforcements from Shanhaikwan, and that he entertains a dream of recovering Haicheng, Kaiping, and Port Arthur.

A telegram from Shanghai published by the *Jiji Shimpo*, says that the Japanese fleet has been bombarding Tangchow harbour since the 18th instant, and that the sound of the cannonnade was heard distinctly at Chefoo on the 19th. Tangchow is one of the most important coast towns of Shantung. It lies westward of Chefoo at a distance of 40 miles as the crow flies. This Shanghai story is difficult to credit.

The *Hochi Shimbun* publishes a Shanghai telegram forwarded from Hiroshima, to the effect that discontent has again broken out among the troops at Weihaiwei owing to non-receipt of their pay; that they have mutinied, killed several of their officers, and that numbers of them are deserting.

The *Nichi Nichi* publishes an exact statement of the casualties in Major-General Nogi's Brigade at the taking of Kaiping. They were much heavier than the first intelligence led us to suppose :—

Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

The *Jiji Shimpo* says that there are no Chinese troops at Yingcheng, or to the south of it, and that the people pay no attention to the coming of foreigners. In Tangchow, however, there are over 10,000 troops. Yingcheng is a fortified city on the most easterly promontory of Shantung. It is only 25 miles from Weihaiwei.

The *Nippon* publishes a mysterious telegram from Sasebo saying that the marines at Port Arthur all embark in two ships on the 16th or 17th instant, and set out for some anonymous place.

The fighting with the Tong-haks continues. Major Asukai, telegraphing to the Chief of the Commissariat, says that, on the 12th instant, a detachment of Japanese soldiers sent to Poun, attacked the rebels at 10 p.m., and renewed the attack the following morning at 7 a.m., routing the Tong-haks completely after two hours' fighting. On the Japanese side an ensign was slightly wounded. The Tong-haks lost several hundred men, a number of draught oxen, and a quantity of arms. Another telegram from Major Minami, the head of the troops sent to quell the insurrection, reports that the work is being carried on vigorously, and that the inhabitants are aiding the troops.

The Empress has subscribed a considerable sum from her private purse to pay for artificial hands and feet for soldiers that have lost limbs through wounds in battle or through frost-bites.

TUESDAY, JANUARY 22ND.

There appears to be very little doubt that the third Japanese expeditionary force landed at Yungchang on the 20th instant. Shanghai telegrams, announcing the fact, speak of the troops as numbering 25,000, and being conveyed in 50 transports, but this estimate of numerical strength is probably an exaggeration. We cannot ourselves affirm with certainty, however, whether the expeditionary force consists of a Division and a Brigade (half of a Division), or of a Division and the Head-quarter Staff of the Second Army only. The landing is said to have been effected with very little difficulty, the slight resistance offered by some earthworks being easily overcome by three Japanese men-of-war. This failure of the Chinese to organize any resolute opposition at the very time when opposition could be most effective, becomes the more remarkable when we remember that Yungchang is only 27 miles from Weihaiwei, and that the possibility of a landing there must have been apparent to the most perfunctory of commanding officers. It was commonly reported that China intended to concentrate all her strength for the defence of Weihaiwei, Shanhaikwan, and Pekin, and that having massed a powerful force in the neighbourhood of the first named place, and taken thorough measures to distribute her troops along the coast at all likely places, no possibility of an unopposed landing need be apprehended. It is conceivable that the ruse adopted by the Japanese completely deceived the defenders of Weihaiwei. For on the 18th instant, a small Japanese Squadron, reported to have consisted of three men-of-war, appeared off Tungchow and commenced a furious cannonade against the forts there. Tungchow is an important town on the coast of Shantung, 40 miles to the west of Chefoo. The evident object of sending a squadron there was to divert attention from the real expedition, which was about to land 90 miles farther east at Yungchang. If telegrams from Shanghai may be trusted, the ruse was conducted in a most thorough manner, for, the day after bombardment, a force is said to have landed from the ships and attacked the Tungchow forts. Our readers may remember that among the items of war news published by us some days ago, one was to the effect that a force of marines had embarked in certain ships at Port Arthur for a certain purpose. Probably it was by these marines that a landing was effected at Tungchow, though we confess that such an operation seems like carrying the deception beyond necessary limits. However, the final result, the debarkation of the expeditionary force, an operation that must have been contemplated with some anxiety by the Japanese military authorities, has been successfully accomplished. There is talk of the attack upon Weihaiwei taking place on the 25th instant, but the landing of a considerable body of troops and their stores in mid-winter on an exposed coast—Yungchang Bay is at Shantung Promotory—is a business the duration of which can not be predicted with any accuracy. Yungchang is only 27 miles from Weihaiwei, but between the two places there lies a range of hills reaching an altitude of 1,860 feet, and the Chinese may possibly find a position there easy of defence. Thus far, however, the Japanese may congratulate themselves on their success. To have landed without loss is no small matter, but to have landed almost under the walls of a town where good quarters can be found for the men is not less important at this time of year. We may add that Marshal Oyama is in command of this expedition, with Lieut.-General Yamaji for second. The Peiyang Squadron seems to be still lying inactive in Weihaiwei. It might as well be at New Zealand for all the aid it renders in defending the shores of Pechili. But its presence at the point of attack invests this chapter of the war with special interest. Unless Admiral Ting succeeds in effecting his escape, the assault upon Weihaiwei may signify the loss to China not merely of her last fortified harbour in the north, but also of her only powerful ships. The events of the next week should be fateful.

The importance of the above intelligence dwarfs everything else, and in truth there is no other news worth mentioning. The *Yomiuri Shimbun* says that the Chinese troops reported to be at Rhtaoho and Kaokan were in reality reinforcements sent by General Sung to assist the garrison in Kaiping, but that, having failed to reach the latter town in time, they proceeded no farther. We do not understand, however, why re-inforcement sent from either Yingkow or Tienchwangtai should march round by Kaokan.

We read in the *Nippon* a telegram from Hiroshima to the effect that China is resolved to devote her whole strength to the defence of Shanhaikwen, Weihaiwei, and Woosung; that Wu Tacheng is at Shanhaikwan, and that several Germans are waiting for a steamer to take them thence to Weihaiwei. They will probably find some difficulty in reaching their destination.

WEDNESDAY, JANUARY 23RD.

The *Jiji Shimpo* refers to the news recently telegraphed from Shanghai to the effect that a Japanese man-of-war had been struck by a shell from the batteries at Weihaiwei and badly injured. According to our contemporary, an official report of the occurrence has reached the Authorities. The ship in question was engaged reconnoitering Weihaiwei and had approached within 2,000 metres when the Chinese opened fire. Not a shell hit the vessel, but one passed close over her, and it is supposed that the Chinese mistook that for a hit. The name of the ship is not given—for some reason that we fail to understand—but it is declared that she sustained no damage whatever. It is a little difficult to appreciate the extreme reticence of the Japanese in such matters. Even if one of the ships of the squadron did receive a shell on her deck, and did suffer some injury, we do not perceive why there should be any hesitation about acknowledging the fact. But when, in denying it, not even the name of the vessel is allowed to be known, public credence is severely taxed.

News of the landing of the Japanese forces at Yungchang bay does not appear to have been officially received yet by the Japanese Authorities. The *Nichi Nichi Shimbun*, however, writes as though it credited the intelligence. It says that the bay is protected from the north wind, and that it offers much greater facilities for landing than did the place (Hwayuenkow) chosen for the debarkation of the expedition against Port Arthur. Ships can lie at a distance of 800 metres from the shore. Probably the batteries said to have been silenced by Japanese men-of-war were among those erected at various places along the coast when it became known that Weihaiwei was to be attacked. A line of telegraph to Tientsin *vid* Weihaiwai was erected from Yungchang last September, but has doubtless been cut by the Japanese troops.

The *Chuo Shimpo* says that there are 13 foreign men-of-war at Chefoo, and that a fourteenth, carrying the French Admiral, proceeded in the direction of Weihaiwei on the 19th.

The same paper says that the cold in northern Korea is something quite exceptional this winter. Since the 26th of December the whole country has been covered deeply with snow frozen so hard that man and beast travel easily over its surface. The thermometer averages 14° or 15° below zero, and cases of injury and even death from frost-bite are not infrequent. At Fenghwan it is still colder. All the surrounding country is a sheet of ice, and without special foot-gear there is danger in walking. Horses when they fall cannot rise, and lie until they are frozen to death. Nevertheless, the spirit of the troops is said to be excellent, and all, the coolies not excepted, are longing to advance against Pekin.

According to a report received at the Naval Department, the First Flying Squadron bombarded the Tungchow forts on the 19th instant (not the 18th, as previously stated) for a considerable time, and then drew off. None of the ships were touched. The report does not mention any landing of forces, from which we infer that that part of the affair was a Chinese canard.

A telegram from Shanghai, received yesterday afternoon, says that the Chinese Envoy and his suite were then endeavouring to make arrangements for crossing to Japan by the *Empress of China*, leaving Shanghai on Saturday 26th. They wished to have the steamer stop at Shimonoseki, where a Japanese vessel would be ready to take them off.

THURSDAY, JANUARY 24TH.

We are still without any official information of the landing of the Japanese troops on the Shantung promontory. The *Kokumin*, however, publishes a somewhat oracular telegram from Hiroshima dated 10.30 a.m. on the 22nd instant. It runs thus:—"A certain Division yesterday morning overcame without casualty the great initial dangers. Great engagements on sea and on shore may be expected within a week." For the rest, the vernacular press contains various paragraphs about Yungcheng Bay and Tungchow, but nothing is added to the details already published in these columns.

Of course the subject of paramount interest at present after the capture of Weihaiwei itself is the fate of the Peiyang Squadron supposed to be still lying there. The *Jiji Shimpo*, on the strength of a telegram from Hiroshima, says that Taotai Kung sent a message to the Squadron ordering it to effect its escape as speedily as possible, but that the order could not be complied with inasmuch as the measures taken to preclude the ingress of Japanese ships were equally effectual in preventing the exit of Chinese and the removal of these obstacles could not be accomplished within the time available. That is a singular story. If true, it caps all the examples of ineptitude hitherto recorded in this war. Obstacles placed at the mouth of a harbour to avert the invasion of hostile vessels are always disposed by people of ordinary intelligence in such a manner as not to interfere with the exit and entry of ships acquainted with the plan of defence. It is inconceivable that the Chinese should have strewn torpedoes and booms at the mouth of Wei-hai-wei so indiscriminately as to imprison themselves. However, a few days more must settle the question. Meanwhile, the *Kokumin* gives an accurate list of the ships supposed to the lying in the harbour. We need not reproduce the names. It will be sufficient to say that there are 5 of the Peiyang Squadron; one of the Southern Squadron; 8 Coast Defence ships, with 2 tenders and 6 torpedo boats.

The *Nichi Nichi* says that between July and December the *Takachiho Maru* steamed a

Digitized by Google Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

distance of 9,787 miles. Moreover, she covered that mileage in 58 days.

The *Kokkai* publishes a rumour that a body of Manchurians, numbering about 3,000, have raised the standard of revolt in Wanyuen and threatened to attack Mukden, the garrison of which place is consequently placed in the predicament of having an enemy upon either side. Considering the outrages said to be committed by the Chinese soldiers, we should never be surprised to hear that in the sequel of their defeat by the Japanese the inhabitants of Manchuria had risen against them *en masse*.

Friday, January 25th.

Official intelligence of the landing of the third expeditionary force on the Shantung promontory was received yesterday morning. The delay seems to have been caused by an interruption of the telegraph to the north of Phyôngyang, and the consequent necessity of communicating *vid* Ujina instead of from Port Arthur. The *Satsuma Maru* carried the news to Ujina. She reported having left Talien Bay at 1 p.m. on the 19th in company with other transports, and reaching Yungchang at daybreak on the 20th. The *Yayeyama Kan* and other vessels-of-war had preceded the transports for the purpose of clearing away any resistance, and finding earthworks with four guns mounted and some 300 artillerymen, had silenced the former and dispersed the latter. Marines were then landed, and without incurring any loss they took possession of the 4 guns and transferred them to the *Yayeyama*. There consequently remained nothing to obstruct the debarkation of the troops. It was commenced at once, and at 3.40 p.m., when the *Satsuma Maru* left for Ujina, nearly the whole of the first batch of troops had landed, and an advance toward the town of Yungchang had commenced. The second flotilla of transports arrived on the 21st, and the troops carried by them landed with equal celerity, the weather being most favourable. In the Shantung lighthouse was found two Englishmen and a German charged with the duty of tending the light. They were placed on the same pay and allowances as before, and directed to continue in the discharge of their functions. The *Satsuma Maru* arrived at Ujina on the afternoon of the 23rd, carrying the above intelligence, which was subsequently confirmed by a telegram from Port Arthur, sent thither by Count Oyama himself.

We erred in saying that Lieut.-General Yamaji had gone to Shantung as second-in-command of the expeditionary force. The second-in-command is Lieut.-General Sakuma of the Sendai Division.

The *Nichi Nichi* says that a portion of the Southern Squadron (Chinese) left its anchorage on the 20th, and steamed toward the island of Chusan.

Saturday, January 26th.

Naturally the news from Shantung is still limited to details of the landing. It appears that the first detachment of the expeditionary force, embarking in 19 transports and convoyed by the *Yayeyama* and other ships-of-war, steamed out of Talien Bay at 1 p.m. on the 19th instant. The distance to Yungcheng Bay, the place of debarkation, was 115 miles, and before daylight on the 20th, the flotilla was off the Shantung Promontory. Before the transports entered the Bay, the men-of-war went in, and lowering some boats, despatched a party to effect a landing. The probability of Yungcheng Bay being chosen had evidently occurred to the Chinese, for they had constructed near the shore a sand battery mounting 4 guns. On the approach of the Japanese boats, fire was opened from this battery, which was manned by about 400 men. The boats rowed back a little way, and the ships at once began to fire shrapnel at the battery. A few well directed rounds settled the business. The Chinese, throwing away their rifles, discarding their uniforms and abandoning the cannon, took to their heels, leaving 4 of their number dead. After 6 a.m. all resistance was at an end, and the landing of the troops commenced. Only one house on the shore was destroyed by the shells, though the Japanese vessels considered it necessary to continue desultory firing until about 9 a.m. in order to deter any advance of Chinese troops from the direction of Yungcheng. The water in the Bay was found to be very deep and the transports had no difficulty in taking up excellent berths. Moreover, when the boats containing the troops rowed shoreward, they were able to get so close that the planks carried by them—planks 9ft. long by 2ft. broad—proved sufficient to allow of the troops' landing without a man wetting his feet. Numbers of Chinese boats were drawn up on the shore, but the facilities for landing were so good that none of these had to be used, the boats and launches of the fleet proving amply sufficient. In a very short time the Engineers succeeded in constructing a landing stage with lighters, and the landing of horses and guns took place without difficulty, so that, at an early hour in the afternoon, the advance guard was able to start for the town of Yungcheng, 7½ miles distant, which place it occupied the same night without encountering any resistance. The artillery, however, were obliged to bivouac for the night on the sea-shore, whence they set out on the 21st at daylight. That same morning (21st), the second batch of 20 transports arrived, and began to land the troops they carried, the whole of the combatants getting ashore without accident in the afternoon. Our latest intelligence from Yungcheng is dated at 5 p.m. on the 22nd. It is an official message dispatched by the Staff, and as it says nothing about any third batch of transports, we presume that all the expeditionary forces were carried in the two flotillas of 39 transports mentioned above, though some of our vernacular contemporaries seem to think that the transports arrived in three detachments, namely, 19 on the 20th, 12 on the 21st, and 8 on the 22nd. Another message sent by the chief of the Commissariat Staff from Lungshui island at 10 p.m. the same night (22nd), says that about 1,000 of the enemy were posted at Puliu-tsun, a small town some 6 miles distant from Yungcheng in a south-westerly direction, but that the Japanese scouts had driven them out, and pushed on to Tienye-cheng. It does not appear that the Chinese have attempted to mass any troops in the vicinity of Yungcheng, for another telegram says that Shihchia-ho and Shakochwang (hamlets on the coast road from Yungcheng to Weihaiwei) are unprotected. Most of the troops in the district are reported to be volunteers recently raised. The military staff report that no difficulty whatever was experienced in getting the field guns to Yungcheng, and that from thence to Tienye-cheng there is a road that can be made fit to pass the guns over by a little repairs upon which the Engineers are already engaged.

It would seem that a naval fight of some sort took place at Weihaiwei on the 21st instant. Lieut.-Colonel Tojo, reporting from Yungcheng on the evening of the 22nd, says that the sound of big guns was heard in the direction of Weihaiwei from noon on the 21st, and that, during the night of that day, the electric search light was reflected on the sky and more firing was heard. It looks as if the Peiyang squadron had made an attempt to escape and been intercepted.

The population of Yungcheng and its vicinity are reported to be apparently quite peaceful, but their demeanour is not thoroughly trusted.

The *Jiji* says that General Tsang has set out with 2,000 men for the purpose of disputing the advance of the Japanese from Yungcheng, but from what place he has marched, we are not told.

The telegraph has evidently been interrupted, as we surmised yesterday, for we were not placed until yesterday in receipt of a message from Lieut.-General Nodzu, dated 10.20 p.m. on the 18th inst. The General says that in the attack on Haicheng on the 17th inst., the enemy's left wing numbered about 8,000 under the command of General Chang; and his right wing, about 6,000 under the command of General I. Only 21 dead bodies were found upon the field, but the people of the vicinity allege that more than a hundred were killed or wounded in the action. The Chinese, after halting for the night at a distance of some miles, retreated on the following morning in a northerly direction.

It would seem that their defeat on the 17th did not deter the Chinese from further attempts to recover Haicheng, for according to a telegram from the Chief Medical Officer of the Third Division, sent from Haicheng at 7.20 p.m. on the 22nd, another force of about 10,000 men, advanced against Haicheng from the north-west, by the Laoyang road, and commenced an attack. By 2 p.m. they were driven back, leaving over 100 dead upon the field. The Japanese casualties were 28 wounded and none killed.

In the neighbourhood of Kaiping, also, the Chinese are disposed to assume the offensive in a half-hearted kind of way. The Chief of the First Division's staff, telegraphing at 8.30 p.m. on the 24th, says that at 2 p.m. on that day about 10,000 of the enemy advanced from the direction of Takwei-shan, apparently to attack Kaiping, but after a brief cannonade, they retreate in two columns at 4.50 p.m. in a north-westerly and northerly direction.

KOREAN NEWS.

The King having been cured of his eye trouble, writes the Sôul correspondent of the *Jiji*, he conducted on the 7th instant the ceremony of visiting the tombs of his Imperial Ancestors and announcing the inauguration of the reform of Korea. The ceremony was extended over two days: the visit to the tombs being undertaken on the first day and that to the State Shrine on the second. Although the procession was only about one-fourth as grand as was usual on occasions of the kind, it seemed to the Japanese unusually pompous and not as dignified as it ought to have been, resembling somewhat the procession of a Kanda Shrine fête in Tokyo. Flags, cymbals, drums, and lanterns were carried in profusion by footmen in strange livery. The King was borne aloft in a sedan chair by a number of these men. The Queen did not take part in the ceremony on either day, but the Crown Prince was present on the second day. Behind the King came the various Ministers of State and other high dignitaries in *kago* or on horseback. A number of troops both preceded and followed the procession. They carried rifles with fixed bayonets that were entirely rusted, and marched in a most irregular way. The citizens carried on their various occupations as though entirely ignorant of what was in progress, and only here and there could the national flag be seen in the streets along which the procession passed. In front of the Mausolea fire was kindled in many places and a wick lamp was lit before each of the tombs of the Imperial Ancestors. The King then read the Announcement before the tomb of the Founder, after which all the high dignitaries bowed, one after another, before the tombs. The procession left the Palace Gate at 11 a.m. and by 3 p.m. the ceremony was over. Both the Crown Prince and the Tai Wôn-kun took part in the formal visit of the King to the State Shrine. The particulars of the second day's procession and so forth were similar to those we have just described.

The *Nichi Nichi's* Sôul correspondent writes of Mr. Hoshi, who, he says, arrived there unpectedly on the 6th and was to leave on the 11th. Unlike other Japanese visitors in a high position, he neither called on the Korean statesmen nor visited the Court. He saw Count Inouye frequently and Mr. Saito once. There is no doubt that after the termination of the present session of the Diet, he will again be seen in Sôul.

In an article in the November *Gleaner* the Rev. W. Salter Price pointed out that this year, 1894, was the Jubilee year of the C.M.S. Missions in East Africa and China. It was in 1844 that Smith and McClatchie began work at Shanghai. A lady, observing this remark of Mr. Price's, sends a letter, stating:—"I will give £5, if another 50 or 100 will do the same before the end of the year, to celebrate the Jubilee of the East Equatorial Africa or China Mission."

THE UNITED STATES REVISED TREATY WITH JAPAN.

Commenting recently upon the Revised Treaty between the United States and Japan, we said that the action of the former in dispensing with the safeguards of a conventional tariff and agreeing to submit her imports forthwith to whatever dues Japan might choose to impose statutorily, did not signify much in practice, since the most-favoured-nation clause secured to the United States all benefits accruing from the conventional reservations made by other Powers. Our conclusion was not strictly just, inasmuch as it failed to note the important fact that America's principal staples of export to Japan will not be protected by the statutory conventions of other Powers. Her kerosene and flour belong to the category of special articles, to which the statutory tariff now in process of elaboration by British and Japanese commissioners will not extend. It would be more correct to say, therefore, that America has relied frankly on Japanese good will. She has, in truth, recognised Japan's tariff autonomy and submitted to it. There is little, if any, reason to apprehend that Japan will ever be disposed to subject flour or kerosene to heavy import duties, but, on the other hand, if she ever does develop such a disposition, nothing in her revised treaty with America need stand in the way. We must, therefore, give to the United States full credit for exceptional liberality.

THE BUDGET COMMITTEE.

Some difficulties appear to have arisen about the Budget, writes a vernacular paper. It seems that most of the items have been approved with the result that the total reductions do not exceed 300,000 *yen*. The members identified with the *Kaishin-to* and a certain allied Club are dissatisfied at the retrenchment being so small. They contend that it is out of all comparison with that effected by the Opposition in previous sessions, and that the public will therefore interpret it in the sense that the Opposition entirely approves of the Budget as framed by the Government. Rather than invite such comment, it would be better, say those members, for the Opposition to refrain from making any reduction at all, on condition that next year's budget be radically retrenched. This suggestion was laid by a member of the Club before the conclave of members of Parliament marshalled under the auspices of the Strict Foreign Policy Party, and was at once supported by the members identified with the Progressionist party. The adherents of the Constitutional Reform Party opposed the suggestion, on the ground that to cancel the amendments made with such trouble by the Committee with the concurrence of the Government simply on the ground that the amount retrenched is very small, would be an action involving waste of time, and therefore not taken in the interests of the people whom the members of the Lower House represent. In conformity therefore, with the original policy of the party, continued the Constitutional Reformists, they should demand, at the last reading of the Budget, both from the Government delegates and from their colleagues of other parties, an engagement that greater retrenchments will be effected hereafter. That advice being inefficacious, they could then set before the House the reasons why they were obliged to rest satisfied with such small reductions. Thus the *Kaishin-to*, *Kokumin Kyokai* and the Club will give their support to the Government Bill when the question is discussed before the House, while the Constitutional Reformists will vote for the Committee's Report. As the Strict Foreign Policy Party is divided in that way about the Budget, the matter will be determined according to the attitude taken by the Radicals. They will vote for the Committee's Bill, which will therefore most likely pass the House.

THE EARTHQUAKE OF THE 18TH INSTANT.

The Central Observatory reports on the earthquake of the night of the 18th instant as follows:—Duration 4' 4"; direction S.S.E. to N.N.W., maximum horizontal motion, 41 m.m. in 9"; maximum vertical motion, 11 m.m. in 7"; character, severe.

The following damages are reported in the different districts of Tokyo:—

Nihonbashi Quarter.—A bath-house in Hakozaki-cho, apparently of durable construction, was partially destroyed, and one woman severely injured in her leg while attempting to escape from it. The eaves of several godowns of the Yusen Kaisha fell, but fortunately no one was hurt. A store-house in Horidome and a clock tower in the same street collapsed. Minor damages to houses and other buildings were innumerable and crockery shops, lamp shops, and wine merchant's shops were considerable damaged, but only to the extent of 20 per cent. as compared with the results of the earthquake of last June.

Kyobashi.—The Ginza thoroughfare escaped without injury. In this ward only one house suffered partially, other damages to buildings being insignificant.

Kanda.—This district appears to have suffered most. A young woman was killed while rushing out of her house in Omote Jimbocho, by the fall of the brick wall of the next house. A man was also caught in the débris and sprained his hip-bone and leg. A man and his wife and child, living in Higashi Matsushita-cho, were severely wounded, as was also the servant of a tailor in Konya-cho. The returns thus far reported to the Police Office as to injury to life and buildings are as follow:—Killed 1; wounded, 6; ware-houses severely damaged, 15; ware-houses slightly damaged, 67; dwelling-houses severely damaged, 7; dwelling-houses slightly damaged, 31; chimneys injured, 4; brick houses damaged, 3, etc.

Shiba.—An elderly woman in Rogetsu-cho was severely injured by the débris of a ware-house falling through her dwelling. The stone wall at the rear of the Karasumori shrine collapsed entirely, and the stone approach to the Shrine was also damaged. Four buildings in Mita Shikoku-cho were considerably injured.

Akasaka.—The eaves of a building in Tamachi Ichome fell, wounding three persons, but not fatally. Sixty-five warehouses and 79 dwelling-houses were more or less destroyed in this quarter; six chimneys were damaged and eight brick walls thrown down.

Kojimachi.—The Houses of Parliament and Government Offices sustained no special injuries. In the Barrack of the Second Regiment of the Body-guard in Takebashi about 12 soldiers were injured by jumping from the top of the stair-cases in their eagerness to get out of the building, which had been considerably damaged by the June earthquake.

Azabu.—About 16 dwelling-houses, ware-houses, and brick walls were more or less damaged, and two persons were wounded.

Honjyo.—Four chimneys collapsed causing considerable damage to buildings standing close by. The water in the artesian wells of this district temporarily fell by as much as 6 feet. In the next ward—Fukagawa—two chimneys fell and one shed.

Asakusa.—A woman in Abegawa-cho and a little boy in Yoshino-cho were more or less wounded. The wall of the Higashi Hongwanji collapsed, causing great terror to the Chinese captives in the temple, who raised piteous cries though they sustained no injuries. The Asakusa tower was not damaged, but three chimneys fell in other parts of the district. Four gas-lamp stands on the Azuma bridge were thrown down. Fifteen houses and twenty-five ware-houses were more or less destroyed, and one brick wall collapsed. Yotsuya, Ushigome, Shitaya, and Koishikawa seem to have been comparatively free from injury both to persons and buildings.

In Senzu 4 persons were wounded and 14 chimneys and several buildings more or less damaged.

According to official news, Mito appears to have suffered greatly from the earthquake. A bath-house was destroyed and one person killed while seven others were wounded.

Telegraphic reports sent from the localities to the Central Observatory are as follow:—

Yokosuka	10°48'24"	p.m. Strong—Clocks stopped and articles thrown down.
Utsunomiya	10°48'54"	p.m. Strong—Ditto.
Choshi	10°47'	p.m. Strong—Ditto.
Kofu	10°49'	p.m. Strong—Ditto.
Yamagata	10°48'	p.m. Strong.
Fukushima	10°48' 7"	p.m. Strong.
Aomori	10°51'30"	p.m. Strong.
Miyako	10°50'30"	p.m. Weak.
Ishinomaki	10°49'10"	p.m. Weak.
Kushiro	10°51'10"	p.m. Feeble.
Nagoya	10°49'55"	p.m. Strong.
Osaka	10°49'	p.m. Strong—Clocks stopped and articles thrown down.
Hikone	10°49'40"	p.m. Weak.
Gifu	10°49'58"	p.m. Weak—Thundering noise heard underground.
Kyoto	10°49'35"	p.m. Weak.

Hamamatsu	10°50'	p.m. Feeble.
Fushiki	10°49'40"	p.m. Feeble.
Niigata	10°49' 5"	p.m. Feeble—Clocks stopped and articles thrown down.
Nagano	10°48'20"	p.m. Strong.
Numazu	10°49'	p.m. Strong.
Tokushima	10°50'29"	p.m. Feeble.

Among the houses in the Yokohama Settlement most severely damaged by the earthquake we may mention, in addition to the list given in Saturday's issue, are Messrs. North and Rae's premises. Here the substantial columns adorning the principal façade have been twisted completely out of position; several of the blocks of stone composing them now stand at various angles and different distances apart. The adjoining house occupied by Madame Launay also suffered severely, the plate-glass windows having been forced several inches outward. At Messrs. Brett & Company's some large blocks of stone fell out into the street. Messrs. Cabeldu's also injured somewhat extensively. Damage is also reported by Messrs. Kelly & Walsh, where some plate-glass has been cracked in the windows.

THE NATIONAL BANKS PROBLEM

The *Choya*, generally believed to be an organ of the National Unionists, is behaving in a most reckless manner in connection with the National Banks problem. It devotes two columns to the ventilation of highly personal remarks about the Party favouring the continuance of the Banks as private concerns. Among other things, it alleges that the advocates of Government Bill, are trying to intimidate the weak-minded among the followers of the rival party by saying that the Government will dissolve the House should the Renewal of Charters Bill be passed. It also maintains that they circulate absurd rumours about the bribery of those who uphold the Renewal Bill, the rate paid being 200 *yen* per head, and even goes so far as to say that Messrs. Kono Hironaka, Ishihara Hanyemon, Goto Goroji, and two others who at first signed the Renewall Bill, were subsequently inveigled by the Nippon Ginko schemers; that as Mr. Misaki Kamenosuke, a prominent member of the Radical Party and at the same time the Nippon Ginko's lawyer, has attempted, in several questionable ways, to win over the men of his party to support the Bank's cause, a reaction has been evoked among them, and that that is the reason why the Radicals have this year decided to oppose the Government Bill. It has a similar strange tale about the secession of Mr. Kono Hironaka, and follows it with another of a yet wilder character to the effect that the members of the Tokyo Commercial and Industrial Society, who support the Government Bill, decided, at their last meeting, to raise a sum of 50,000 *yen* for the purpose of furthering the passage of the Bill. We do not suppose that the *Choya's* remarks will in any way affect the cause of the Renewal Party, but what such an influential paper as the *Jiji* writes about the affair deserves attention. The *Jiji* does not doubt that the affair is favourable turn

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

for the Renewal Party is owing to some mysterious cause, especially as many men of unquestionable probity affirm that the total sum disbursed by a certain Bank for the Renewal agitation reaches 160,000 *yen*. It is now a problem of public morality whether the Renewal Bill be carried through the House or not. Radicals that are not members of the Diet have raised an agitation against the Renewal Bill, but that has evoked a counter-movement on the part of its supporters. The adherents of the Tokyo Commercial and Industrial Society have, as mentioned above, decided to fight against the passage of the Bill, while out of the six commissioners elected by the Tokyo Chamber of Commerce to investigate the affair, four have declared themselves against it. The *Jiji* says that at first the Renewal Bill counted 167 supporters, but six of them have withdrawn. The Government Delegate has, it is said, requested the Committee nominated by the President of the House of Representatives to inquire into the Bill, to postpone the deliberation upon it until the Budget Committee shall have completed their discussion on the Budget, as he deems it of too grave importance to be dealt with in a haphazard way. The attitude taken by the *Nippon* about the affair is suggestive. That paper has hitherto been, and still is, an earnest advocate of a firm foreign policy, and is therefore very friendly to the Strict Enforcement League got up by the coalition of the Progressionists, National Unionists, and Constitutional Reformists. Mr. Kawashima Jun is one of the most prominent members of the last party, and his utterances in the House have always been reported in the columns of the *Nippon* in a very favourable manner. Now, however, it has suddenly turned against him and writes of him and his doings most mercilessly. The way in which it reported his speeches when the Renewal Bill was first discussed in the House would have amply justified Mr. Kawashima in suing the paper for libel, had he been so disposed.

THE DEDICATION OF ST. ANDREW'S CHURCH, TOKYO.

The Dedication of St. Andrew's Church, Tokyo, took place on Sunday, the 20th instant. The Church had been so much injured by the earthquake of June 20th that complete re-construction became necessary. Contributions were immediately set on foot, and a liberal response from the Tokyo residents and others enabled the work to be undertaken with such celerity that the edifice was ready for opening within seven months, a matter of sincere congratulation. It was a curious coincidence that the very day chosen for the dedication service was the anniversary of that on which the Venerable Archdeacon Shaw, with whose ministrations the church will always be associated, sailed from Yokohama on leave of absence.

The new church is a wooden building without buttresses or other external embellishments and gives much larger accommodation, seating from 150 to 200 worshippers. The exterior is decidedly plain and unpretentious, though not unpleasing in its proportions, whilst its clapboarded walls give it the appearance of a temporary structure, which, we believe, is what its projectors always intended it to be. Internally, the architect, though hampered by certain salvage from the old church, such as stained glass and furniture which had to be readapted, has succeeded in obtaining pleasing proportions and admirable accoustic properties; whilst the judicious use of unobtrusive tints combined with stencilled lines and diapers of colour upon the walls and arches has produced a decorative harmony and unity which leaves little to be desired. Those who took part in Sunday morning's inaugurative service must have been struck by the excellent taste displayed in sacred broideries and floral adornments attributable to the handiwork of the Tokyo ladies.

There were present at the Dedication the Right Rev. Bishop Bickersteth, the Rev. L. B. Cholmondeley (chaplain to the Bishop), the clergy of St. Andrew's Mission, as well as the Right Rev. Bishop McKim and the Rev. Arthur Lloyd, of the American Episcopal Mission, and the Rev. W. T. Austen, of the Seamen's Mission, Yokohama. The Introit (Psalm XXIV.) was sung in procession up the church. Bishop Bickersteth, standing within the Sanctuary, read the Dedicatory Prayers from the American Prayer Book, the English Prayer Book not having any special service for such an occasion. A hymn was then sung, followed by Matins. The service, choral throughout, was intoned by the Rev. H. Moore, the Proper Psalms being LXXXIV., CXXII. and CXXXII. Mrs. Squire presided at the organ. The lessons, both special (Genesis XXVIII. and St. John II.), were read by the Rev. L. T. Ryde and the Rev. Arthur Lloyd, respectively. After Matins the Holy Communion was celebrated, the Rev. L. B. Cholmondeley being the celebrant, assisted by the Rev. H. E. Webb, the Right Rev. Bishop McKim reading the Gospel. The sermon was preached by the Right Rev. Bishop Bickersteth, who took for his text Heb. XII. 27:—"The removing of those things that are shaken, that those things which can not be shaken may remain." The offertory, amounting to $80.10, was devoted to the building and furnishing fund. It should be noted that the dorsal and side curtains for the Altar, the gift of the ladies of the congregation, were made by the Japanese members of the Church Needlework School, under the Superintendence of St. Hilda's Mission. Other special gifts were the two seats for the use of H.B.M. Legation, presented by His Excellency the Hon. P. Le Poer Trench; the brass Altar Cross, by Mrs. Bickersteth, and the Prayer Desk for the Bishop's seat, by Bishop Bickersteth. The Service was well attended. It was gratifying to see, among those present, several members of the American congregation from Tsukiji, and also many friends from Yokohama, testifying to the goodwill and sympathy of the community in general.

We learn that the accounts of the building expenses have not yet been fully made up, but it appears that almost the whole of the required amount is forthcoming. The reseating, however, is only half completed, the seats of the old building being used, and that detail as well as the interior decoration and furnishing have had to be postponed until further funds become available.

THE BURNING OF THE NANJEN TEMPLE.

By the burning of the Nanjen Temple on the evening of 12th instant, Kyoto lost one of its most beautiful and famous shrines. It appears that an old servant of the temple, employed as a watchman, had been warned by the Abbot of the dangerous character of a lamp that he used in the principal apartment, and had promised to obtain a more secure vessel with a less inflammable illuminant. Within a few hours of the last warning, a priest living on the Temple premises noticed volumes of smoke issuing from the main building. It was about 9 o'clock in the evening, and the massive doors had long been bolted for the night. The priest tried to force an entrance, but all to no purpose, as the doors were secured from within, the old watchman always passing the night inside the building. Others had by this time come up, but they also failed to force open the doors. Then the alarm bell was rung from the temple belfry to summon the firemen. Some time had thus been wasted and the flames began to make their way through the roof, and from thence spread in all directions. Seeing the extent of the damage already done, the firemen hastily pulled down the wooden corridor connecting the burning building with other apartments of the temple. A plentiful supply of water was obtained from the artificial canal running through the grounds and the fire was got under control, the building in which it originated being left to its fate. At 2 o'clock the following morning, the fire was almost out and a search was instituted. The whole of the famous art objects and antique treasures in the main building of the temple were destroyed, and the old watchman also could not been found. It is feared that he perished in the flames, for he was of advanced years and infirm. The building destroyed was erected by Toyotomi Hideyoshi, and the timbers used in its construction were mostly brought from China. Upon the ceiling was emblazoned an enormous dragon, the work of Sansetsu. The walls were of equal splendour and finish.

CHINA NEWS.

"Wu Tacheng," says the *China Gazette*, "the Governor of Hunan, has been appointed to the command of 30,000 troops, who are to be entrusted with the defence of Shanhaikwan. The force is to be divided into nine brigades. Governor Wu though a civilian, possesses great military capacity, and is endowed with qualities which enable him to preserve perfect order amongst his troops."

Liu Kun-yih has arrived at Tientsin, or was there on Dec. 22nd, but it is extremely difficult to make out what offices he has actually agreed to accept. Apparently, the Throne would have appointed him Viceroy of Chili, Imperial High Commissioner of Trade for the Northern Ports, and Commander-in-chief of all the forces employed by land or by sea to resist the Japanese. But Liu is said to have declined everything except the Commandership-in-chief. Liu's reputation as chief of the Black Flags during the Franco-Chinese war has, we think, been greatly exaggerated. He managed to embarrass the French, and once or twice he surprised small parties of them, but he never made anything like a successful stand. Against the Japanese we look for a similar record.

Troops appear to be arriving in Tientsin perpetually. The latest detachment was no less than 18 batteries of field-guns sent from Hankow by the Viceroy Chang Chih-tung. The Tientsin correspondent of the *China Gazette* ridicules the difficulty encountered by the Chinese in moving these guns, but after all the transport of artillery is one of the most embarrassing problems that any General has to solve.

The Newchwang correspondent of the *China Gazette*, writing under date December 18th, says that the Japanese had then taken Haicheng and Newchwang (the old town) and that they were expected to move either to Mukden or Shanhaikwan. He adds the interesting intelligence that General Sung and his troops had gone to Shanhaikwan, but we know that on the very day when this letter was despatched Sung with 10,000 men was fighting at Kangwasai within 12 miles of Haicheng.

Truly, China has an ostrich-like faculty of self-deception so large as to compel admiration. Chinchow in the Liaotung peninsula has been in Japanese possession since the beginning of November, yet the Chinese Government goes through the farce of appointing officer after officer to be commandant of the place. Six weeks ago a certain Manchu was named Brigadier-General of the town, but [redacted] its re-capture from the Japanese would have been an essential preliminary to entering upon office, and as the Manchu had no forces available for that enterprise, he set himself to discover ailments in his own body incapacitating him for the honour, and the Emperor at last became so exasperated at this sequence of maladies that he degraded the invalid and handed him over to the Board of Punishments for treatment. Another luckless wight, named To Sheng-a—the terminal of whose name seems appropriate to his fate—has now been appointed to the same post and will probably find his way also to the Board of Punishments.

"General von Hanneken," says a Chinese journal quoted by the *North China Daily News*, "and sixty-four foreign officers are occupied in constantly drilling a picked body of 6,000 officers and

Digitized by Google UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

ablest of the officers so instructed will be given important posts in the other corps, but the nucleus will be constituted into the body-guard of the Viceroy Li, commanded by General von Hanneken himself."

If that be true, von Hanneken's military position in China has dwindled to something very small. Instead of directing the empire's forces, instead of being authorized to memorialize the Throne directly, instead of being invested with dignities and trusts so conspicuous as to inspire editorials about the awakening of China and the Imperial Court's signal recognition of Occidental merit, he is acting as a species of drill-sergeant, or, at best, as the captain of a body of men intended to protect the Viceroy Li himself. *Sic itur ad astra.*

The *Shanghai Mercury* has been publishing in recent issues a carefully compiled history of the war, up to date, which, though useful as recording the sequence of events, is disfigured by many errors long since exploded. For example, we are told that the *Saikyo Maru* was so seriously damaged in the battle of Haimang as "to have been considered incapable of repair," and that the result of the battle was to "cripple both sides for some weeks." Surely the writer in the *Mercury* must know by this time that the *Saikyo's* injuries were quite trivial, and that the Japanese Squadron, so far from being crippled, did not even put into port to refit, two ships only being in need of repairs. Referring to Phyŏngyang, the same authority says:—" The Japanese unfortunately did not content themselves with a plain statement of facts, but gave most exaggerated stories of their prowess. According to official reports the loss of the Chinese was placed at 6,600, and the army was reported to have surrendered. Neither of these statements was true. The loss was great, but came down eventually to much under a thousand." Evidently the writer is labouring under some strange misconception. Considering that the Chinese prisoners alone numbered about 600, it is plainly erroneous to say that their loss came down to under a thousand. The Japanese official reports, so far from containing "exaggerated stories of their prowess," were couched in the baldest and least varnished terms. The killed were estimated at 2,000; the wounded were believed to be about double of that number, and nothing at all was said of the army's having surrendered. The Japanese loss did not reach a thousand in killed and wounded, but that the Chinese loss was correctly stated in Japanese official reports, there has never been any evidence to disprove. Another assertion made is that the Japanese troops landed in Korea "probably amounted to about 50,000 men." Truly, it is wonderful to find writers talking of an over-sea expedition of 50,000 men as though it were a kind of Sunday picnic. Japan should be complimented by the extraordinary estimate formed of her military capacity. It is extremely doubtful whether there were 25,000 Japanese troops in Korea when Phyŏngyang was taken, and certainly not more than 15,000 marched against that place.

The Viceroy Chang has been instructed to send 20 battalions, or about 10,000 men, belonging to the Siang army to Chihli. China must have a very large force in the field by this time. Here, for example, is a statement of the troops and material of war contributed by one part of the Empire only, as translated by the *N.-C. Daily News* from a Chinese source:—

Since August, according to military statistics and ordnance reports compiled at Nanking and Wuchang, there have been sent from the Liang-kiang and Hukuang provincial administrations to the Peiyang, a total of 77,500 men; 109,200 stand of modern breech-loaders and magazine rifles; sixty-nine field pieces of the Armstrong type; and forty-six mortars and howitzers. These do not include 2,300 kegs of powder; 267,000 catties of lead, and 11,000 muzzle-loading muskets also sent up to the North from the Nanyang.

Folks in Tientsin continue to be perplexed about the military operations in Shinking. Their latest story is that General Sung with 20,000 men was practically surrounded by the Japanese near Haicheng and suffered a total defeat. The fabricators of such stories must have nearly as wild notions of the Japanese army's numerical strength as are published by some of the foreign local newspapers in Yokohama.

The Tientsin correspondent of the *N.-C. Daily News* has seen a portion of Liu Kun-yi's 10,000 braves, now doubtless counted among Chihli's chief defenders. Among 30 or 40 men forming a detachment the correspondent saw three different varieties of arms, the prevailing type being cap-and-hammer muzzle-loaders.

Three hundred wounded Chinese soldiers from Talien and Port Arthur arrived in Tientsin in the closing days of December. The majority of them had suffered from cold, rather than from bullets or bayonets. Only the very serious cases, we read, were retained in hospital. To the other sufferers one tael each was handed *for* travelling expenses. That sum being obviously insufficient for the purpose, nothing remains for the wretched soldiers but to live by pillage as they make their way homewards. It is terrible to think of the sufferings that have to be endured by China's troops in the field. The commissariat arrangements are virtually *nil*, and those on account of the sick and wounded, even less. The wounded men above referred to had to travel more than 200 miles to Shanhaikwan in order to reach the railroad. Badly wounded men could not of course attempt anything of the kind. Nothing remained for them, we presume, but to lie down and be frozen to death. No wonder that troops confronted by such a prospect refuse to fight. The best and bravest soldiers in the world would be utterly demoralized by such incapacity and inhumanity on the part of their commanders. A telegram recently sent to London from Manchuria spoke of frozen corpses lying in heaps. Very likely.

Sung, we read in the columns of the *N.-C. Daily News*, is spoken of as a coward by the Chinese, who, on the other hand, extol the bravery of the Japanese, their discipline and marksmanship. We do not think that Sung is a coward. On the contrary, we think that when strategists come to write the history of this war they will record among its most creditable exploits Sung's attempt to recover Haicheng.

The following note from Shensi correspondence is eloquently suggestive:—

The sudden and imperative summons to arms that was recently issued to every military centre has shown how utterly undisciplined are the ordinary troops. There is little *esprit de corps* and as for the *dulce et decorum est pro patria mori* sentiment it does not exist. The General here, when ordered to muster his men and march, committed suicide. His lieutenant was beheaded for hesitation and hundreds of the rank and file have been beheaded for attempting to scuttle. Thus utter despair or death by decapitation—these are the fate of the "braves." I have seen several battalions start for the North but in the "rag-tag and bob-tail" fashion. Mobocracy seems the only principle of mobilisation. They enjoyed one decided advantage, no baggage, not even a wallet.

It is stated by the Tientsin correspondent of a Shanghai contemporary that even in official and nominally well-informed circles there are many persons that do not yet know or admit the fall of Port Arthur. Pekin is said to be in a similar condition of happy ignorance, but we do not perceive how that can be the case seeing that one of the Emperor's principal occupations at present is to issue urgent invitations to the fugitive Generals of Port Arthur and other places to come to Pekin and get properly punished.

It will be remembered that a telegram reached Japan a few days ago indicating the existence of a strong feeling of indignation among the Cantonese on account of the peace mission of His Excellency Chang Ying-huan. People in Japan were probably perplexed to know what Canton had to do with the matter, but it now appears that Chang belongs to that city and that his fellow-citizens naturally feel themselves entitled to discuss any important function entrusted to him. Accordingly, the Cantonese in Shanghai posted placards of which the following translation is given by the *N.-C. Daily News*:—

Being a well-known fact, it is unnecessary to dwell at length upon the great anger we all feel at the audacity of Japan in first invading our tributary state and now in attacking our frontiers. Hence, when the war began, we, the people of Kuangtung, organised the *Chungyi T'ang*, or Patriotic Association, for the purpose of collecting subscriptions and organizing our sons into volunteer bands to assist our Government in the war against the enemy. The signal only was waited for to see thousands of the sons of Kuangtung spring joyfully to the rescue of the sovereign. What was all this for then? We answer, in order to wipe away the disgrace of our country. Our fellow-provincial, Captain Lin Kuo-siang, after fighting against superior odds at the mouth of the Yashan river, although left to his fate, succeeded in escaping from almost certain death. Captain Tang, at the battle near the Yalou river, sought death rather than dishonour, and is reported to have sunk three of the enemy's ships before losing his own. The examples shown by such heroic devotion to country proved that they were indeed true sons of Kuangtung. Furthermore, we are all aware that our countrymen are now assembled in the North, in fighting battalions as innumerable as the clouds in heaven, ready to battle for our country and eager for the fray, while on the other hand there is opposed to them an enemy exhausted by the climate and dispirited on account of want of funds and men to prosecute the war. Indeed, the maxims of war should teach us the importance of playing a waiting game under such circumstances, and then at the right moment we will spring upon a dispirited enemy and sweep him man and ship from the tributary state and national territory. What official or commoner would not feel his heart gladdened at such a sight? But, to our disgust, certain of our fellow provincials who are a disgrace to their manhood and have failed lamentably in the confidence of their country, in order to save their own hides and hoardings, think not of joining us in a universal spirit of resistance to the last, but are anxious to bow their heads in the dust and grovel before the audacious *Wofên* in order to ask for a disgraceful peace—conduct which will bury the five lofty peaks of our province in shame, which all the waters of our Pearl River can never cleanse, and which will scatter like chaff before the wind the patriotism of Kuangtung, famous for centuries! Who, ask we, amongst our numerous fellow-provincials, here, abroad and at home does not gnash his teeth with rage when informed of the intended disgrace to be heaped upon the name of China by our own fellow-provincials? Yet it is so; and now we learn that these disgraces to our nationality are coming to Shanghai *en route* for Japan on their ill-omened errand. We, therefore, now call upon every true patriot and son of Kuangtung to assemble at the rattle of the drum and by force of arms even, if necessary, to expel these persons should they dare to darken the thresholds of either the Canton or the Swatow guilds, and endeavour if we can to prevent them from casting this indelible stain of disgrace and shame upon the loyalty of our beautiful province. Should they, however, aware of the estimation we sons of Kuangtung hold them in, try therefore to hide their diminished heads and filthy plight from us within the shelter of some other place of abode, woe be to the son of Yüeh (patronymic of Kuangtung province) who should try to contravene the unanimous will of the people and endeavour to curry favour with these people by associating with them. They should rather be avoided by us as the pestilence, and no recognition or welcome should be extended to these disgracers of the name of Kuangtung, men who, on any other errand but the present, from the fact of being fellow-provincials and possessing the high rank they do, would rightly be received by us. But they go to bring disgrace upon us, and may the Gods above be our witness that this is the will and determination of the people! A unanimous proclamation by the scholars and people of Kuangtung."

These placards were subsequently torn down, but their appearance indicates the existence of a feeling in the face of which it will be scarcely possible for the Chinese Government to offer through its Envoys terms acceptable to Japan.

The much-talked-of Mahommedan Jehad against the Japanese becomes more and more puzzling. We are now told that there have arrived at Kalgan, after a long and arduous journey across Mongolia, some 20,000 troops recently levied in the north of Kansu at the foot of the Great Wall. Among these new levies there are said to be a number of veterans who fought under the late Tso T'sung-tang against the Chinese Mahommedans of the

Digitized by Google UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

"Great North-west." The suppression of the Mahommedan rebellion occupied 15 years and its incidents must be fresh in the recollection of every living follower of the Prophet. Tso was killed at Phyŏngyang, yet rumour says that a Jehad is to be undertaken by the Mahommedans to avenge his death. It would seem more natural that the Mahommedans should join the banners of his opponents. The arrival of these troops at Kalgan incidentally suggests an idea of the enormous extent of the Chinese Empire. We read that they have been joined by a Turki contingent of 4,000 cavalry led by Khoja Bek, a descendant of the Caliphs. Khoja, it appears, was sent last August to Hami by Prince Yusef to collect these troopers. We seem, as we peruse these names, to be reading again the Arabian Nights or the Light of Asia. Then there is a contingent of Chinese Mussulmen "conspicuous by their black skins and rough, uncouth manners." These men claim to be descendants of Bokhara emigrants who came to China in the 9th Century. If the war continues long enough the Japanese will garner some interesting experiences of men and manners. What we should like to see is a "march past" of the Chinese Army.

The War Loan of 5 million taels is being gradually raised in Canton. A little over half the amount has already been subscribed. The forced contribution, however, is less successful. Only half a million has been collected thus far.

It is to be hoped that the following excellent decree issued by the Emperor of China will be strictly obeyed, but we have our doubts:—

Strict discipline is the principal axiom of every military organisation. Now that Chihli is covered with numerous armies, it is necessary that we make known our earnest wishes to the various Generals commanding our forces, either facing the enemy or on their way from the interior to join the Northern armies, that they keep a strict watch and discipline over their troops. They are not to allow their men to pillage or raid the inhabitants on the march, nor are they to permit their men to trust to numbers and arms to evade the payment of articles purchased from the markets. We earnestly enjoin upon our Generals not to be guilty of the least laxity in keeping their troops under strict control and command; that if any of their men be found guilty of pillaging the inhabitants or otherwise maltreating them, the guilty ones are to be decapitated on the spot before the whole army. If any commander of battallion be found guilty of encouraging his men to acts of violence, etc., thereby breaking our law, his immediate superior is to report at once to the Throne in order that the guilty one may be immediately and severely punished. Let this decree be published as widely as possible.

His Majesty has further ordered that 15,000 fur coats be at once sent to General Sung's army in Manchuria.

Concerning the Peace Mission, the *North China Daily News* says:—

H.E. Chang Ying-huan, the Envoy appointed to proceed to Japan to arrange terms for peace, arrived at Shanghai on Sunday night (13th January) by the *Kungyi*. The steamer, after leaving Chefoo, was ordered to proceed to Taku where signals would be made conveying instructions as to the point of embarkation of the Envoy. When the *Kungyi* arrived off Taku the signals indicated that the Envoy was there and would go off to the *Kungyi* in a tugboat. This was accomplished and the steamer left for Shanghai direct on Friday afternoon, arriving here on Sunday evening. Among his Excellency's suite are the expectant Taotais Liang Ch'eng (a returned student from the United States) and Wu T'ing-fang (Ng Choy) one of the Directors of the North China Railway, and several Peking Board Secretaries. The majority of the mission, including, we hear, His Excellency, are now quartered in the T'ungwên Chromo-Lithographic Printing Company's compound on North Seward Road, Hongkew. The all-pervading influence of the Li party is evident in the *personnel* of the mission by the presence of the Taotai Wu T'ing-fang, whose legal training as a Hongkong barrister-at-law has qualified him to be also the legal adviser to the Viceroy Li Hung-chang and stamps the origin of the mission in question.

The news of the loss of Kaiping seems to have reached Pekin very promptly for we read in a Shanghai contemporary of the 15th inst. that [illegible] had already been issued acknowledging receipt of Sung Ching's report of the capture, and censuring the responsible Generals. We learn, incidentally, that the Japanese erred in speaking of Nieh as present at Kaiping. The commanders on the Chinese side were Chang Kaoyuan, Brigadier-General of Tungchow, and Hsü Pangtao, Brigadier-General of Chenting.

The Tientsin correspondent of the *N.-C. Daily News* gives the following interesting information about the *personnel* of the Peace Mission:—

Chang Ying-huan, one of the Imperial Commissioners appointed to negotiate the conditions of peace, is expected here to-day (January 10th) and will if possible embark at Taku to-morrow. Taotai Wu T'ing-fang (Ng Choy), joins him here as foreign secretary. As your readers probably know Wu is a barrister of the English Bar, a good linguist, and fairly conversant with Europeans and foreign methods: Chang himself although he does not speak English or Japanese, has very considerable experience in diplomatic procedure and etiquette, and is probably as good a selection as could be made for a thankless task from the ranks of Chinese officialdom. Both in the Legation at Washington and in the Tsung-li Yamên he made a reputation for suavity and intelligence. Wu has probably been added to the commission as the confidential agent of Li Hung-chang who has been his steady patron for many years. He is an open-minded and clear visioned man and, barring the fact that he has little power of taking the initiative and lacks grit, will make a fairly good secretary. He at least knows the real state of contrast between Japanese and Chinese arms, and is under no delusions as to the actual facts of the military and political situation, and this is something.

Of the other Commissioner, Saan Yulien, little is known up here, and that little not much in his favour for the business now on hand. He also has considerable experience of foreigners, having been in Russia at the negotiation of the famous treaty which allowed the cession of Kashgaria during the "seventies." At Shanghai your readers must have learned something about him. A recent issue of the *Peking and Tientsin Times* made a strong protest against his appointment on the ground that at the beginning of the present hostilities, he, acting as Governor of Formosa, offered a price on Japanese heads. This, if true, seems to many people here a final bar to the success of the mission, and it is very difficult to understand how the Chinese Government can have appointed a man of such antecedents for so delicate a negotiation; some of our local Chinaphobes see in it another example of the insincerity of the Chinese appeal for peace, but the probable explanation lies in the utter indifference with which they regard a proclamation offering blood-money for heads. They deem such a thing the merest bagatelle, in no way reflecting either on a man's personal character or on the national reputation. If the commission meets with a rebuff on this account they will probably deem it one more proof of the impracticable and testy nature of the Japanese. It is not known up here that the Commissioners have full powers; and were it not a fact that General Foster had been asked to join them as a sort of *amicus curiæ* there would be less confidence in the sincerity or reality of the mission. The *Kungyi* (late *Hasan*) arrives to-day, and should Taku prove impassible from drift ice she will go up to Shanhaikuan and embark the Commissioner there. This has been done more than once in the last ten years, but in the best of winters it is a risky business.

General Su, Provincial Commander-in-chief of Kuangsi, is to lead a division of 7,800 troops to Pekin. "They are all armed with modern breech-loaders and have without exception seen fighting in Tongking during the last war with France. In fact more than a third are said to be old Black Flags who joined General Su's command, when the Government refused their old chief, Liu Yung-fu, permission to bring more than one regiment of eleven hundred men into China at the close of the war. As for the artillery belonging to the division, it consists of forty-eight Krupp field guns, thirteen Krupp mountain guns mounted on mules, and eight machine guns.

Man has never seen inside of some of the Egyptian pyramids since they were first built, so far as known.

The capital letter "Q" will be found but [illegible] in the Old Testament and three times in the New.

KOREA'S FOREIGN LOAN.

The *Keisai* writes as follows on the above topic:—According to rumour, the Korean Government has decided to float a loan of 5 million *yen* in Japan, and the Nippon Ginko has decided to extend its help, thus practically ensuring the successful raising of the loan, which will bear interest of from 8 to 10 per cent. The *Keisai* proceeds to suggest how the Korean Government might procure at home the sum necessary for the prosecution of its reforms. It wonders, in the first place, why the Korean Government does not follow the policy adopted by Japan when placed in a similar difficulty at the outset of the Reformation. The latter issued inconvertible notes and in that way met the exigencies of the time. Such a course would, perhaps, be more favourable to Korea than it was to Japan, for while the issue of inconvertible notes in this country resulted in an exodus of specie, no such thing would happen in Korea as she has only copper coins which are taken above their face value. Korea is a poor country, still her population is over 10 millions and the issue of 10 million inconvertible notes would not produce any bad effect. A sum of 5 million *yen* ought therefore to be raised without difficulty. The *Keisai's* second suggestion is to empower the Nippon Ginko to issue notes. For that purpose the Bank should establish a branch office in Sŏul where, on the security of the foreign bonds of the Korean Government, which should be transferred to the Bank, the latter should issue notes and thus accommodate the Government. This second method should, however, only be made use of if it be found that the credit of the Korean Government is too low to justify its issuing notes independently. The third and last plan is to be had recourse to in case both the first and second are found infeasible. It is to found a bank in Sŏul by joint efforts of the Koreans and Japanese, and to invest it with note issuing power. These notes would be for the use of the Korean Government which in exchange give bonds. This should, however, only be done if the founding of a bank entirely by strangers is objected to. Many Japanese are desirous of investing their money securely in Korea and in the enemy's territory occupied by Japan. The cŏoperation of Koreans in such a matter would be attended with great benefit to them as they would then be initiated in important banking business.

H.I.H. PRINCE ARISUGAWA.

In the death of Prince Arisugawa Japan has lost a pillar of State. The Prince was a son of Prince Arisugawa Yoshihito and an adopted son of the Emperor Ninko, the grandfather of the present Emperor. He was born on the 18th of October of the 1st year of *Kayei* (1834). From his youth he took keenly to heart the decline of the Court, and kept the restoration of its ancient prestige constantly in view. For the purpose of compassing that great object, he held secret communications with many of the feudal lords of pronounced loyalty. When the Court committed itself to the principle of expelling foreigners, the Prince was one of its supporters. He was frequently consulted on the subject by the late Emperor, and repeatedly visited the Shrines in the capacity of Imperial Messenger to invoke their aid for the furtherance of the cause. When the present Emperor ascended the throne, the Prince was entrusted with missions of great importance. He was Commander-in-Chief of the Imperial Army that marched upon Yedo just before the inauguration of the Restoration *régime*. The Prince received the key of the citadel of Yedo, and established an Occupation Office in order to bring the Kwanto Districts into submission. In the 2nd year of *Meiji* (1869), a hereditary pension of 1,200 *koku* of rice was bestowed upon him in recognition of the great services rendered by him to the cause of the Restoration, and the following year he was appointed Chief Minister of the Department of W[illegible]. Though [illegible]

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

the most decided resolution, and the Head of each *han* appointed Governor of the locality, the change was far from complete, as feudalism had taken deep root throughout the country. In a *han* of large dimensions the internal condition was therefore much the same as it had been before. At that juncture a forgery trouble arose in the Fukuoka *han*, in which the principal officers of the district were implicated. The Prince was ordered to proceed thither and settle the difficulty. He remained there for about a year in the capacity of Governor, and succeeded in restoring order and tranquillity. When the Senate was created, he was at first appointed one of the Senators, and about a year later, in May, 1876, he was promoted to the post of President of the Senate. The Prince was trusted with the task of quelling the Satsuma Civil War that broke out the following year. During the Rebellion, congratulatory messages were frequently sent by the Emperor in recognition of the success attained by the Imperial Army under the command of the Prince. When order was restored in the south, and the Prince returned to the capital, he received the additional dignity of Field-Marshal while still retaining his post as President of the Senate. He was at the same time decorated with the Grand Order and the Grand Cross of the Chrysanthemum. In 1878 the Prince was appointed First Minister of State. In June, 1882, he was ordered to proceed to Europe as Representative of the Emperor at the coronation ceremony of the late Czar. His connection with the Ministry ceased with the abolition of the positions of First and Second Ministers. Thereafter he devoted himself almost exclusively to military affairs. He was for some time Commander of the Body-Guard, then Inspector-General of the Army, and at the time of his death he held the office of Chief of the Central Staff. Previous to his decease, he was decorated with the Grand Collar of the Chrysanthemum Order, and presented with the 2nd Class Medal of the Golden Kite. The trouble that ended fatally was typhoid fever which set in on the evening of the 11th of December, and despite the earnest efforts of many able doctors to combat the disease, he gradually sank. In the latter part of December, the patient was carefully conveyed to his villa in Suma. The trouble extended to his heart and brain, and he eventually succumbed to paralysis of the former. His Imperial Highness was the eldest of four children, two Princes and two Princesses. The elder of his sisters was the late Countess Ii, whose demise took place about a week ago, and the younger sister is Princess Fushimi. The Prince had no children, and therefore adopted his younger brother, Prince Arisugawa Takehito, some time ago as his successor. The Emperor has announced his intention of not holding Court for three days, beginning on the 24th inst. and of mourning for two more days. It has further been given out that the Prince will be granted a State funeral. The temporary ceremony will be performed on the 29th inst., but the real one will not take place till after the war is over and the Emperor has returned from Hiroshima.

"THE SUN."

A new magazine has just made its appearance in Tokyo under the editorship of Mr. Tsuboya. It is characteristic of Japan's association with the West that nearly all ventures of this kind have now an English portion, and it is unfortunately also characteristic of the Japanese student's inexperience that he generally essays to compose these English portions without the aid of an Englishman. In "The Sun," out of 212 pages of reading matter, only 13 are in English, and as the articles in this section have passed under the pen of Professor Kanda, of the Imperial University, their English is remarkably good. We quote the opening article in full for its own sake, as well as for the sake of its style :—

When Posterity turns over the pages of our nation's history will find the closing years of the 19th century filled with events of intense interest and far-reaching influence. The seed of progress planted in soil rich with the culture of centuries has shot up into a vigorous plant with the rapidity of the prophet's gourd, and while our neighbours have slept, lo! from among its pendent branches is hanging the ripened fruit of the Constitution. When we see with what hopeless stubbornness our peninsular neighbour persists in turning aside from the helping hand that would lift him out of the mire and set him on sound ground we are tempted to reflect, with a touch of self-complacency, on the comparative readiness with which our people on first awaking from its Rip van Winkle slumber accepted from the outer world every friendly suggestion for its amelioration. We are, indeed, passing through a pregnant epoch, for who knows what wonderful, perhaps even unexpected, course Providence has marked out for us even in the few remaining years of this century; nay, what turn of events the next breeze from the bleak northwest will bring to our expectant ears. We are not given to foolish fears and misgivings, such as a traveller in an unknown country might be subjected to or as a Chinese commander would be on the eve of a battle with Japanese forces,—the one from his ignorance of the locality, the other from the knowledge of his sure destiny. But we cannot help feeling that, however sanguine one might be, he could not be utterly blind to the fact that the eminence attained at present, however dazzling to many, casts a shadow of deep significance in future. We are told that astronomers can, by the aid of a powerful telescope, detect the great canals on the planet Mars, millions of miles away. Would that some astrologer could furnish us a horoscope to catch a single glimpse of the path of Destiny on the planet Earth!

We have just passed through a most eventful year of this eventful era. Casting a retrospective glance beyond the all engrossing subject of the War, we see the agitation of the question of strict enforcement of the treaties causing small ripples on the political sea. More of a weapon of the Opposition than a reflection of national sentiment, it caused a mere surface ruffle, losing itself in the mighty ground-swell in which the mass of this people moves in profound unison toward power and light. These momentary hitches in the wheel of progress are but signs of life, unavoidable to a national career and, we might say, as necessary to its healthy growth as the living waves are to keep the mighty ocean from stagnation. We are not surprised to meet with these apparent retrogressions. Even if they were less superficial they would not give cause for any serious solicitude. A nation in its path of progress must advance like a traveller climbing a steep mountain side. It would be unreasonable to expect the latter to direct his course straight from the foot to the top. He must turn now to the right now to the left, and only by this tedious plodding journey may he gain the summit, whence he may survey and wonder by what tortuous path he has attained his goal.

Other memorable events in the past year were the celebration of Their Majesties' Silver Wedding, on the 9th of March, which in the outside world will be remembered by every philatelist when his eyes fall upon the Jubilee stamps, and which the Emperor commemorated by graciously ordering grants to be made to the Kuge nobles; the assassination, in Shanghai, on March 29th of the Korean exile Kim, at the instigation of the Ming family, the then dominant faction in Korean politics. Subsequently, when the body-guard of the Japanese Minister scattered the Korean soldiers, who, instigated by the same hostile faction, had fired upon them, the ever prolific artists of those inimitable *ukhikies* represented the skirmish before the King's palace, over which the ghost of Kim stands gazing with a terrible expression of revenge and grim satisfaction. Then the insurrection of the Tong-haks against oppresive administration, the discomfiture of the Korean government, which offered China an excuse to send troops to Korea in violation of the Tientsin Treaty, thus plunging Japan into the greatest of her foreign wars. But before dwelling on this fruitful topic we must not forget to mention that other catastrophe which gave us a shaking literally from our very feet,—the destructive earthquake of the 22nd of June; nor should we omit in the same category the outbreak of the Plague in Canton and Hongkong, which at one time threatened to make us hear the second recital of De Foe's horrible narratives; the self-sacrificing mission of Drs. Kitazato and Aoyama, our joy at the receipt of the telegram that "the origin of the plague had been discovered," our sorrow on hearing that Dr. Aoyama and one of his assistants had fallen victims to the dire monster. O! what anxious weeks they were as report followed report announcing the precarious state in which those brave souls lay. Thanks to the untiring attention of Dr. Lowson, of the Hongkong Civil Hospital, those brave sons of Japan were snatched from the very jaws of death and restored to us.

If the past year was marked with hostility with a foreign power it was, on the other hand, made memorable with tokens of increasing amity with others,—with Great Britain in the conclusion of the revision of her treaty with us, and with Hawaii, whose people are declared by an Imperial ordinance to receive henceforth in Japan the same treatment as Japanese subjects, with the exception of the privilege of holding real estate.

These items, we believe, complete the list of the most notable occurrences in our country's record of the year 1894. In the latter half of the year events may perhaps seem somewhat distorted from real proportions by the overwhelming nearness of the great subject of the Japanese-China War. An ordinary-sized man, looks like a dwarf on the thumb of Daibutsu. In conclusion it is scarcely an exaggeration to say that the whole nation, united as one man, thinks, talks, and dreams of the war, and nothing but the war.

As in the life of an individual, there are times in the life of a nation when the accumulated culture of the past, all the potential energy of the present, have to be put to the severest test. Such in the career of an individual is the time when he emerges from scholastic associations to assume the duties of manhood. Japan has had schooling in modern civilization for the past quarter of a century. Her time has come to pass the terrible ordeal, and whether she will hereafter be numbered among the Great Powers of the world or the East depends on how she will acquit herself in the critical eyes of the whole civilized world.

For a resumé of the leading events since the opening of the war we refer the reader to the following pages.

The other articles are equally well written, so far as syntax is concerned. As for the Japanese part of the magazine, it abounds in excellent matter of all kinds, and is admirably illustrated with collotypes by Mr. Ogawa. The frontispiece is a collection of likenesses of the members of the Cabinet—excellent likenesses, too, though in one or two cases their Excellencies may fairly complain that the photographer has unfairly added to their years—and this is followed by likenesses of the Presidents and Vice-Presidents of the Houses of the Diet. Altogether the new magazine is a most creditable addition to the literature of the day. The table of the first number's contents is as follows :—

CONTIBUTED ARTICLES.

A Great Revolution in the World of Letters. By Kunitake Kume, Late Professor at the College of Literature, Imperial University.
The Influence of the War upon Education. By Kiyoomi Chikami, *Bungakushi*.
The Influence of the War upon Education. By Tetsujiro Inouye, *Bungaku hakushi*.
The Influence of the War upon Literature. By Yuzo Tsubouchi, *Bungakushi*.
Advantages and Disadvantages of Chinese Ideographs. By Yujiro Miyake, *Bungakushi*.
On the Study of the Archaic Japanese Language. By Mannen Uyeda, *Bungakushi*.
On the Study of Changes of Social Phenomena from Anthropological Points of View. By Shogoro Tsuboi, *Rigakushi*.
The Economic Warfare. By Tatsukuro Inoue, *Hogakushi*.
Agricultural Education. By Jikei Yokoi, *Nogakushi*.
Our Future Policy towards China. By Yukio Ozaki, M.P.
The Responsibility of the Japanese Empire. By Ushiro Nakanishi.

BIOGRAPHY AND HISTORY.

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

DEATH OF PRINCE ARISUGAWA.

ON Thursday the official announcement was made of the death of His Imperial Highness Prince ARISUGAWA. The cause of this most lamentable event was typhoid fever. The Prince being in his sixtieth year, his seizure by such a malady inspired much anxiety from the first, but his robust constitution seemed to have carried him happily through the worst stages of the disease when a relapse occurred, and he expired on the 15th instant at Hiroshima. The delay that took place in making the sad fact publicly known was due, we believe, to the circumstance that, according to the etiquette of the Imperial Household, a certain routine has to be observed within a certain time with respect to obsequies and mourners, and the absence of the Court from the capital, as well as of his Imperial Highness' successor, Prince ARISUGAWA TAKEHITO, placed difficulties in the way of immediate compliance with the prescribed forms. The body lay in vermilion at Hiroshima until the 22nd instant. and was then carried by train to Tokyo, where it arrived late on the night of the 23rd, and was received at the Shimbashi station by an immense concourse of notables.

His Imperial Highness was born on the 23rd of March, 1835. He was a descendant of Prince YOSHIHITO, seventh son of the Emperor GO-YOZEI (1587-1612), and as uncle of the reigning SOVEREIGN, his House would supply the next Heir to the Throne failing direct male issue. In 1873 he married the third daughter of the feudal chief of Shibata in Echigo, and having no child, he is succeeded by his younger brother, Prince TAKEHITO, Heir Presumptive to the Throne. The Prince had not reached his thirtieth year when the events preliminary to the Restoration culminated, and he played a prominent part among the leaders of the great movement for the overthrow of the TOKUGAWA and the centralization of the Government. Ten years later he filled the important post of Commander-in-Chief of the forces sent against the Satsuma insurgents, and it has always been believed that his presence with the Imperial Army contributed materially to its ultimate success. Subsequently he was appointed Chief of the Military Staff, and it was in the active discharge of the onerous duties connected with that post at such a time as the present, that he contracted his fatal malady. That the deceased Price was beloved and revered by the whole nation is beyond him to men's hearts were in no sense of a striking character. At the head of the list must be placed an innate love of virtue, that led him steadily along the path of an absolutely blameless life. He had the faculty of doing right by instinct, not by rule. Quiet and self-effacing, he never courted fame, caring only to do his duty, and like all men worthy of the highest trust, he never erred in placing his confidences or shrunk from the necessity of seeking and accepting good advice. Such Princes are rare. We do not employ the superficial words of a conventional epitaph when we say that his loss to the country is heavy.

It has been announced that all Court functions will be suspended for three days, and that there will be general mourning for five. The obsequies are to be public: the Diet will to-day be asked to vote the necessary funds.

The deceased Prince had the Military rank of Field-Marshal, and had been honoured by the EMPEROR with the Grand Order of the Chrysanthemum.

THE NUMBER OF JAPANESE TROOPS IN THE FIELD.

MOST singular estimates have been published by local foreign newspapers with regard to the numerical strength of the Japanese forces in the field. In every case there is a palpable tendency to exaggerate, but whether it is due to mere thoughtlessness or to a desire to minimise Japan's successes by magnifying the armies that have achieved them, we need not pause to consider. In the early days of the war, when all the military preparations of this country were wrapped in a cloud of obscurity, editors possessing no previous knowledge of the army's organization, nor having any access to sources of intelligence, could scarcely be blamed if they perpetrated blunders. But so much is now known that we can not but be profoundly surprised to find a statement, advanced with all assurance, to the effect that, before the Sendai Division left Hiroshima a few days ago for the seat of war, the Japanese troops in the field must already have numbered fully a hundred and thirty thousand. Nothing can excuse such a wild assertion. It could have been avoided by a most trifling exercise of care; by reference, for example, to statistics universally accessible. The Japanese standing forces consist of the Imperial Guard and six Divisions. We may omit the Imperial Guard from the present calculation, as it constitutes a special branch. On a peace footing, the establishment of the six Divisions, considering combatants only, represents fifty-six thousand, in round numbers. Infantry of precisely uniform strength; they vary within narrow limits, but that point need not concern us. Now, we know exactly how many Divisions had been sent to the field before the embarkation of the Sendai troops—three and a half Divisions in all, namely, the Third and Fifth, forming the First Army; and the First, together with one half of the Sixth, forming the Second Army. Had these Divisions been of their peace strength only, the total force could not have exceeded thirty-two thousand. But the figures that we have to deal with are those relating to the forces on a war footing, and here, though we can fix a superior limit, it is not possible to speak with perfect accuracy. The Divisions are brought up to their war footing by means of the Reserves, which aggregate—we still exclude the Imperial Guard—eighty-five thousand. Let us explain here what the Reserves are. In Japan the military system of conscription fixes the periods of service at 3 years with the Colours, 4 with the First Reserves, and 5 with the Second Reserves. In other words, a man having served 3 years with the Colours, is borne on the roll of the Reserves for the ensuing 9 years, and, while a Reservist, he is called out for drill during a period of 60 days annually. The Reserves consequently represent a force needing only a little exercise to be fit at any moment for active service. There is also a territorial Army composed of men who, having completed their total term of 12 years with the Colours and in the Reserves, remain liable during the next 8 years to be called out in the event of war or emergency, but in times of peace are not called out at all. The Territorial Army numbers a hundred thousand men, between 32 and 40 years of age, who can be utilized at once for purposes of home defence. This Territorial Army, however, has nothing to do with our present calculations. What we have to deal with is the fifty-six thousand men with the Colours of the six Divisions, and their Reserves of eighty-five thousand. Were the two combined to place the Divisions on a war footing, we should have a total of a hundred and forty-one thousand men, and it would then follow that the three Divisions and a half in Manchuria aggregate 82,250 of all ranks. But of course such a rough method of calculation would be erroneous. The whole of the Reserves are not drafted into the Divisions for foreign service: a considerable portion must be left at the Divisional Head Quarters in Japan. How, then, is the distribution made? Here we confess that it is not possible for outsiders to speak with absolute accuracy, the drafts taken from the Reserves being an obviously elastic factor. We can, however, make a trustworthy approximation. A Division is composed of 2 Brigades of

Digitized by Google Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

Thus the Infantry of a Division consists of 24 Battalions, and the nominal strength of each Battalion on a war footing being 800 of all ranks, we have a total of 19,200 Infantry. Of Artillery there are 15 Batteries of 6 guns each, the establishment of each battery being 80 men. Thus the Artillery represents 1,200. Finally, there are 2 Battalions of Cavalry, or about a thousand sabres. Hence, the aggregate combative strength of the Division on a war footing is 21,200. We repeat that these figures do not pretend to absolute accuracy, but they may be taken as representing superior limits. It is certain that the two Divisions forming the First Army were on a peace footing only when originally sent to Korea, but they have probably been increased gradually, until they now muster something like 40,000. But the Second Army has not been brought up to that standard. Its Division and a half do not exceed 22,000. Thus, the final result of the calculation is that, before the Sendai Division embarked, the Japanese forces in Manchuria did not exceed 62,000, a figure less than one half of that confidently asserted by a local English newspaper some days ago.

A word may be said here about the fighting strength of such Divisions. Civilian readers are apt to infer that when fifty or sixty thousand men are spoken of as composing an army, the General in command may be considered to have a force of that magnitude available for any belligerent operation. But, in point of fact, out of every 3 Battalions in a Japanese *corps d'armée*, 2 only are placed in the line of battle. The third remains in reserve to fill up the vacancies occurring in the other two. Calculating on that basis and assuming that two-thirds of the cavalry and artillery go into the fighting line, it results that a Division's combative strength is 14,200, approximately. That will explain to our readers how it happened that, although NODZU was supposed to have two Divisions under his command, he could not launch more than about 14,000 men against the fortifications at Phyöng-yang. His Divisions, not having been brought up to their war footing, did not aggregate more than 20,000 of all ranks, and fully one-third were not available for the fighting line.

Now that the Sendai Division has crossed to the Liaotung peninsula, Japan may be said to have 80,000 troops, approximately, fighting her battles in a foreign country over-sea. It is a mighty effort. Modern history offers no parallel. European countries with their huge military organizations and their spendid systems of railways, can march hundreds of thousands of soldiers across their frontiers into the territories of neighbouring States. But which, even of those colossal Powers, would willingly undertake the task of sending eighty thousand men to fight beyond

THE OPERATIONS IN MANCHURIA

THE latest intelligence from the seat of war possesses great military importance. We have endeavoured to keep our readers in touch with the operations of the contending forces in Manchuria, and another brief explanation at this stage will probably be useful. The high-road from Shanhaikwan to Mukden, after travelling in a north-easterly direction along the western coast of the Gulf of Pechili, assumes, generally speaking, a curved form, the highest point of the curve touching the forty-second parallel of north latitude 35 miles before entering Mukden. The place at which the road begins to curve is Shisanshan. There, also, it bifurcates, the northern, or main, branch proceeding, as we have said, toward Mukden, the eastern leading along the northern coast of the Liaotung Gulf, to Kaiping *vid* Yingkow (modern Newchwang), and thence to Suiyen and Chiulien. In other words, Chiulien and Shisanshan lie at the eastern and western extremities, respectively, of the chord of an arc at the highest point of which is Mukden, while the road from Mukden *vid* Laoyang to Haicheng and Kaiping bisects the arc and meets the chord at right angles. At first the Japanese forces, after crossing the Yalu river, advanced into Manchuria along the eastern periphery of the arc, but so soon as they struck westward toward Haicheng, they placed themselves on the chord. The Chinese troops, on the other hand, were distributed chiefly along the sector from Mukden to Laoyang. Haicheng, and Kaiping, thirty to forty thousand being to the north of Haicheng, and twenty to twenty-five thousand to the south of that place. Hence, when the Japanese obtained possession of Haicheng they cut the Chinese line of defence in two. Moreover, at Haicheng they were within 75 miles of Shisanshan, whereas the Chinese at Mukden were 135 miles from the same place. In other words, the Japanese, by advancing 75 miles farther west along the chord of the arc, could easily intercept the China-ward retreat of all the Mukden and Laoyang forces. That has been the strategy of the Japanese Generals throughout the war. They have always succeeded in taking a position such that, while having direct access to the enemy's front, they also threatened his line of retreat. Previously, however, the manœuvre had been carried out on a small scale in connection with the attack of some particular fortress or entrenchment, but in Shinking the plan was extended so as to embrace the whole field of immediate action. It is true that to obtain the position at Haicheng, the Japanese accepted large strategical risks. Lieut.-General KATSURA'S march from Suiyen to that place exposed him to a concerted attack from north and south that might have proved very troublesome. But Field-Marshal YAMAGATA, to whom the programme is understood to be due, based his calculations on the qualities hitherto shown by the enemy. With Chinese for adversaries he doubtless felt safe in dispensing with precautions essential in the face of a more enterprising foe. The Chinese, however, though they failed to prevent the cutting of their line, evidently understood the significance of the operation after it had been consummated. For, two days after KATSURA'S capture of Hai-cheng, General SUNG moved up from Kaiping, with 10,000 men, to try and recover the place, and intelligence has now been received that, on the 17th instant, a similar attempt was made by the Chinese forces on the north. Such details of the fight as have reached Tokyo are given elsewhere in our columns. As usual the Chinese were defeated, and as usual their fighting proved incomprehensibly innocuous to their enemies. At least ten thousand men moved against a position from three directions, struggled to recover it from a little after daylight until nightfall, and ultimately retired, having inflicted on their foes a loss of only one man killed and forty wounded. It is the most farcical fighting on record. What on earth the Chinese do with their arms of precision, how they point them and how they discharge them, we can form no conception. Apparently, in the battle on the 17th, they never ventured nearer to the Japanese outposts than from fifteen to sixteen hundred metres. Rifle fire at such a range is virtually useless. Even artillery fire cannot effect much. If the Chinese expected to recover Haicheng by standing off from it and discharging futile bullets in its direction, they must have a childish conception of warfare. At all events, they were beaten back, and considering the very perfunctory character of their attempt, there is little reason to expect that it will be renewed. The importance of the affair is that it radically affects the position of the Chinese in Shinking. The troops assembled to the north of Haicheng, with Laoyang for head-quarters and the defence of Mukden for final object, have now to consider the possibility of getting back to China. Their base of supply has hitherto been Newchwang (Yingkow), which must soon fall into Japanese hands. There will remain then for them only one line of retreat and means of communication with China, namely, the high-road from Mukden to Pekin *vid* Shanhaikwan. But we have seen that the Japanese, by moving 75 miles along the coast, can emerge upon that road at Shisanshan, whereas the Chinese must march 135 miles to reach the same place. Of course SUNG'S army, variously estimated at from fifteen to fifty thousand, has to be dealt with before Newchwang falls into Japanese possession. But nearly all the men now under SUNG'S banner are beaten soldiers. They have encountered the

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

Japanese either at Tomucheng, or at Kangwasai, or at Haicheng, or at Kaiping, or at Chinchow, or at Port Arthur, and already there is talk of their melting away without awaiting another conflict. In short, from whatever point we view it, the position of the Chinese armies in Shinking is very critical. If the Japanese take Yingkow, and advance thence along the coast until they strike the Mukden-Shanhaikwan road at Shisanshan, we do not see what remains for the Laoyang-Mukden army except to disperse and get out of the field as speedily and secretly as possible. Inclement weather may slightly alter the complexion of affairs, but apart from that contingency the Chinese are in what may be called a very tight place.

THE DIET AND THE BUDGET.

ON Wednesday an unprecedented scene was witnessed in the House of Representatives. The Budget for the incoming fiscal year was passed almost as presented by the Government, the amendments made in the actual expenditures aggregating less than 100,000 *yen*. That result had been anticipated by the general public, it being understood that the leaders of the various political parties had agreed to abstain from every semblance of opposition to the Cabinet, in order to present to the world the spectacle of a nation absolutely united in the face of a foreign foe. Yet it cannot be concealed that the Government itself did not feel entirely confident of a peaceful result, and indeed when we recall the almost fanatic fractiousness displayed by the politicians of the Opposition in preceding sessions, it becomes difficult to credit the exceedingly placable mood shown by the House yesterday. That Mr. OZAKI YUKIO, who never previously, so far as we can remember, had ascended the rostrum except for the purpose of hurling invectives at the heads of the Cabinet Ministers, should stand there uttering the most gentle and conciliatory phrases on such an occasion as the discussion of a Budget presented by those very Ministers, was a spectacle not to be reckoned among any reasonable contingencies. Yet that is what happened on the 23rd instant. Mr. OZAKI not only supported the Budget, but actually went so far as to express pleasure in being able to do so. The leaders of all the other parties followed in succession, piping the same peaceful strains. One member only ventured to advance the obvious proposition that the mere fact of the country's being engaged in a foreign war ought not to preclude parliamentary scrutiny of the ordinary administrative expenditures. But nobody paid any attention to him. Incomparably stronger than the strife of parties or the ambitions of hungry politicians is the conviction that, at a time like the present, all patriotic Japanese must stand shoulder to shoulder at the shrine of a great national duty. The House has added not a little to its reputation by this attitude. It has shown that the country occupied the first place in its thoughts, and that is a conviction by which many critics did not believe its counsels to be swayed.

CHINA AND THE TREATIES.

ERRORS die hard, and we doubt if their vitality is anywhere more remarkable than in Yokohama. Time and again local newspapers have declared that China constituted a serious stumbling-block in the path of Treaty Revision. They have based this allegation on the hypothesis that were the country thrown open to Western peoples, it must also be thrown open to the Chinese; that Japan could not safely face the consequent risk of an inundation of Chinese semi-pauper immigrants, and that China's Treaty must therefore be made the subject of special arrangement, an exception to which China's consent would have to be purchased dearly. Almost as often as that ignorant blunder has appeared in print explicit contradictions of it have also appeared. Yet the error, like a Jack-in-the-box on imperishable springs, thrusts its head up again perpetually. We encounter it in all its old dimensions in a local contemporary's columns no later than two days ago. It is a point that touches the history of this war, and we may therefore be pardoned for referring to it again. The plain fact—a fact ascertainable by reference to any book containing copies of the Treaties—is that, except in the matter of tariff, China has nothing whatever to do with Treaty Revision. Her Treaty with Japan contains no most-favoured-nation clause entitling her to participate in any privileges granted to other Powers. She stands entirely apart, and was not represented at any of the Treaty Revision conferences that took place in Tokyo in the days of combined negotiation. Hence, though Japan were to freely admit all Europe and all America to the interior of her Empire, she would not be under any obligation to admit a single Chinese. We do not see that any plainer statement of the fact is possible, but at the same time experience forbids us to expect that any statement of facts, however plain, will kill this hydra-headed error. As to the tariff, it might and probably would have proved a difficulty. Revising her Treaties with Western Powers and leaving her Treaty with China unrevised, Japan would be in the position of differentiating in favour of Chinese merchants, since imposts passing through their hands would be smaller than those levied under the revised tariff upon goods imported by American or European merchants. That difficulty, obviously of minor dimensions, could not have proved insurmountable. At all events, it represents the sum total of the obstacles that China could have placed in the way of Revision, and it has now ceased to exist since the war has put an end to all treaties or Conventions between the two Empires. Nothing, however, could show greater ignorance than to allege that one of the issues involved in this war was the erection of an adequate safeguard against the influx of Chinese. Japan always had the solution of that problem in her own hands.

IMPERIAL ORDINANCE.

We hereby give Our sanction to the present Ordinance relating to the Coast Defence Regulations and order the same to be promulgated.

(His Imperial Majesty's Sign Manual).

(Great Seal).

Dated the 15th of January of the 28th year *Meiji* (1895).

(Countersigned)

Count SAIGO TSUKUMICHI,
Minister of State of the Navy and of War.

IMPERIAL ORDINANCE No. VIII.
COAST DEFENCE REGULATIONS.

GENERAL PROVISIONS.

ART. I.—The present Regulations shall determine the duties relating to operations to be undertaken by the Army and Navy in cooperation.

ART. II.—Though operations connected with the capital and posts of defence permanently established along the coast shall be undertaken by the Army and Navy combined, duties which, according to their nature, should be specially entrusted to either the Army or Navy, shall be divided thus:—

A.—Those to be undertaken by the Army.
1. Matters relating to the watch on land.
2. Matters relating to works of defence on land.
3. Matters relating to forts.
4. Matters relating to communication between one post of defence and another.

B.—Those to be undertaken by the Navy.
1. Matters relating to the watch at sea.
2. Matters relating to the laying of submarine obstacles, such as torpedoes.
3. Matters relating to communication at sea.

ART. III.—The defences of the capital and of posts permanently established along the coast shall be divided into four classes.

1.—THE DEFENCES OF TOKYO.

The Commandant of the Tokyo Defences shall plan and conduct all matters relating to the defence of the capital by issuing directions to the Commanders of important military posts and of Military Divisions and to the Commander of the Yokosuka Admiralty. The organization of the Tokyo Defences Superintending Office and the duties to be undertaken by it at ordinary times shall be specially determined.

Of the staff officers attached to the Commandant several shall be made to undertake at the same time the staff business of the Navy, to provide against mistakes in devising plans and giving directions.

In view of the isolated defence of the station, the Commander of the Yokosuka Admiralty, by issuing orders to the garrison of the Yokosuka fort and to the sections of the Navy placed under his control, shall plan and direct all matters relating to the defence of the station. A staff officer under the Commander of a naval or an important military post shall change places in time of peace to provide against mistakes in devising plans.

2.—THE DEFENCES OF KURE AND SASEBO.

For the Defences of Kure and Sasebo the Commander of the Admiralty shall plan and direct all matters relating to the defence of the Naval Stations by issuing orders to the Commanders of important military posts and to the various sections of the Navy placed under his control.

A staff officer of the Army shall be appointed under the Commander of the Admiralty to provide against mistakes in devising plans.

3.—THE DEFENCES OF KI-TAN, NARUTO, GEI-SO AND SHIMONOSEKI STRAITS.

For the defence of the above, Commanders of important military posts shall plan and conduct all matters relating

Digitized by Google Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

Commanders of Marine Defences and to the various garrisons.

Staff officers of the Navy shall at the same time undertake staff business under the Commanders of important military posts to provide against mistakes in devising plans.

4.—THE DEFENCES OF TSUSHIMA.

The senior of the Commanders of the Insular Troops and of posts of strategic importance shall at the same time discharge the duties of Commander of the Tsushima Defences, and plan and conduct all matters relating thereto by issuing orders to the troops under his control and to other commanders.

Art. IV.—Although in matters connected with active operations the naval stations, garrisons, and squadrons are to be placed under the direction of the Commandant of the Tokyo Defences, Commanders of naval stations, of important military posts, or of the Tsushima Defences, shall in matters connected with *personnel*, accounts, sanitation, and the supply of arms, ammunition, and other material whether naval or military, be subjected to arrangements determined by the respective offices.

APPENDIX.

Art. V.—The period of enforcing the present Regulations shall be determined by notification of the Ministers of State of War and of the Navy.

IMPERIAL ORDINANCE.

We hereby give Our sanction to the present Ordinance relating to the Tokyo Defences Superintending Office and order the same to be promulgated.

(His Imperial Majesty's Sign Manual).
(Great Seal).

Dated the 15th of January of the 28th year of *Meiji* (1895).

(Countersigned)
Count SAIGO TSUKUMICHI,
Minister of State for War.

IMPERIAL ORDINANCE No. IX.

TOKYO DEFENCES SUPERINTENDING OFFICE.

Art. I.—The Tokyo Defence Superintending Office shall be located in Tokyo.

Art. II.—The post of Commandant of the Tokyo Defences shall be filled either by a Field Marshal or a Lieut.-General who shall undertake the defence of Tokyo under the direct control of the Emperor.

Art. III.—The Commandant of the Tokyo Defences shall superintend all matters relating to the protection of the capital, and shall cause the Commander of the Division to carry them into effect.

Art. IV.—In matters relating to military policy and to *personnel*, the Commandant of the Tokyo Defences is to be subjected to the control of the Minister of State for War, and in matters relating to plans of defence, to that of the Chief of the Central Staff.

Art. V.—The Chief of the Staff shall regulate the business of the Office, and the staff officers and *aide-de-camps* shall, subject to his supervision, discharge the respective duties assigned to them, for which they shall be held responsible.

APPENDIX.

Art. VI.—The period of enforcing the present Regulations shall be determined by notification from the Minister of State for War.

CORRESPONDENCE.

THE STRANDING OF THE "CITY OF RIO DE JANEIRO."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I recently noticed in one of the local papers that the sunken Rock on which the steamer *City of Rio de Janeiro* struck is supposed to be not only well known to local shipmasters, but also marked on the latest British Admiralty charts.

Should such be a fact, then I may venture to predict that the above vessel struck on the sunken Rock marked She-wan-she on the British Admiralty Chart No. 358, corrected to July, 1892. This Rock is in lat. 31° 20′ 30″ N., long. 130° 8′ 15″ E., and bears from Mesaki N.W. by N. distant 7 miles, and from Noma-no-hana S. by E. ½ E. distant 4¼ miles. It lies about one mile outside of a line joining these two points, and 2½ miles from the nearest point of the Main Island of Kiushu. A vessel having cleared Mesaki at a distance of one mile and steering so as to clear Noma-no-hana at the same distance, would run straight for the rock.

In the Sailing Directions published by Captain Mahlmann, this rock is alluded to in the answer to Question 398, page 127, which may be here quoted to some advantage:—

Question 398.—Being off Satano-misaki, distance 3 miles, during day time, and intending to pass eastward or inside of the Koshiki Islands, how would you steer if bound to Nagasaki?

Answer.—My first course would be N.W. ½ W., the same as if I was going to pass southward of the Koshiki Islands, *but*, instead of only running 30 miles as far as Mesaki, I should run until 35 miles had been made, or, in other words, I should steer N.W. ½ W. until I had run 5 miles past Mesaki and brought Noma no hana, a point situated 11 miles N.N.W. ½ W. from Mesaki, on a N. ½ E. bearing, *so as to clear the She-wan she, a sunken rock which lies N.W. by N. 7 miles from Mesaki*. Noma-no-hana bearing N. ½ E. distant 8½ miles, I should steer N. ½ W. straight for the two small Islets called Kuokami (72), then distant 37½ miles. This course would clear Noma-no-hana point 1½ miles, &c., &c.

As the sunken rock She-wan-she is not marked on the older charts, shipmasters are advised to take note.

I am, Sir, yours very respectfully,
O. SEWA.

Yokohama, January 21st, 1895.

DERIVATOLOGY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Mr. Joseph Edkins, and the readers of his very interesting article in the *Japan Mail* of the 15th inst., may like to be reminded of a couple of examples of the above mentioned branch of philology, similar in many respects to those which he gives.

First, there is our English word *bread*, which is, no doubt, derived from the Greek *artos*. Cut off the last two letters, which are merely inflexional, and of no value, and we get *art*. Transposition, which every philologist has a right to employ, gives us *rat*. Euphony suggests the addition of the letter *b*, which gives *brat*. To avoid confusion between this word and another in common use, the pronunciation *bret* was adopted. As *t* and *d* are practically identical, we get *bred*, which was the old form in use before we had learned how to spell.

The second instance is the derivation of the word *cucumber* from the name of its original cultivator, the late respected JEREMIAH KING, Esq. *Jeremiah King = Jerry King = Jer. King, = gherkin = * * * = cucumber*. The intermediate steps will be obvious to any philologist who remembers the natural tendency for sonant letters to become surds—and *vice versâ*.

Hoping the above instances may be of service to Mr. Edkins and his readers,

I remain, &c.,
W. SILVER HALL.

Tokyo, 19th Jan., 1894.

THE WOMAN QUESTION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—One who reads current literature is led to believe that one of the greatest problems before the world to-day is that subtle but rather broad term known as the woman question. In ancient times woman was in all lands more or less what the etymological meaning of "oku-sama" is—dweller in the back rooms. She was considered a beautiful plaything, a most inspiring subject for love ditties, and her physical—not mental—charms were even the causes of some of the world's greatest battles and national revolutions. Notwithstanding all these records of the past, it has been left for man of the nineteenth century to discover woman, as some one has facetiously remarked. And now that he has discovered her, he finds that she is a white elephant on his hands. And in order to know exactly what she is, whether she is made up of the same number and quality of the sixty-four elements of matter as man is, she has been carried into the laboratory and analyzed even to the brain, hoping thereby to discover sex in mind. But one of the most important discoveries made by these chemical investigations is that she is composed of bones and sinews, flesh and blood, all of which needs fresh air and exercise such as one gets on the tennis court, on bicycles, or on mountain heights, and that she thrives better on these than she does in the *oku*, the *harem*, and the *senana*.

But while man was making these discoveries, woman herself took up the question and has pushed it with an enthusiasm characteristic of her intense nature. She has about come to the conclusion that sex should not be a barrier to any undertaking. Whatever head, heart, or hand can do. She claims that the age has passed when woman is a mere ivy clinging to the oak for support. She is already attempting to do almost everything that man does, from the simple process of casting a ballot to the perilous undertaking of the discovery of the North Pole. And because there is a good deal of slow conservatism in man's nature that causes him to antagonize some of these radical innovations by woman, she flies into a passion and declares that man is a tyrant that must be dethroned, and "that if nature had not implanted a troublesome amount of affection in woman's composition, she could, by her greater force of will and character, drive man into a corner of the universe, just as the inferior races of the past have been driven before the superior ones—only more so, the disparity being greater."

It is just at this point that some phases of the so-called woman question would be ridiculous if they were not serious. The inimitable Sam Jones, when asked what he thought should be the limit of woman's sphere of action, replied that he was willing for her to occupy every place that man does, except one, that is to be the father of a family; here he must draw the line. And perhaps there was never a more forcible illustration of the figure of irony than a convention composed of old maids and mothers who have left their offspring to the nurture and admonition of ignorant servants, passing resolutions about how to make good citizens, and demanding the ballot in order to reform society. The only hope of the world is that such anarchy in home-life is not universal. When she has accomplished everything else that satisfies her mind the woman's rights' woman will then, no doubt, set herself to the odd task of getting rid of that "troublesome amount of affection in woman's composition," which is, under the present condition of things, a serious barrier to the goal of her ambition. But even if that were accomplished, there is another and a more radical problem to be solved—the propagation of the human race. Until science discovers some other method, future generations must still look to her for their existence, even after man has been driven "into a corner of the universe." It would seem to a layman that the holding, by one class, of such a complete monopoly as the production and care of the whole human race, ought to compensate the most radical believers in woman's rights for some other privileges they are still contending for. Any way, we are constrained to believe that the same old methods will be continued until some process of innoculation or vaccination has been discovered which will relieve woman of this troublesome affection that now burdens and retards her in her aspirations. Until that is done, man will continue to honour if not worship her, help if not serve her, defend if not fight battles over her, love if not indite sentimental verses to her.

Yours, &c.,
WILL PATTILLO.

January, 22nd, 1895.

THE JAPANESE NEW TESTAMENT TRANSLATION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—"Epsilon's" answer to the critical questions raised by Mr. McCaleb would have been amply sufficient had it not been for the subsequent contribution signed "A." The fact that an important principle seems involved must be the apology for this further trespass on your space.

The phrase *tadashiki sabaki* appears in the Japanese rendering of 2 Thes. I. 5, but there we find an equivalent for "righteous" in the original, whereas all seem to concede there is none whatever in Acts VIII. 33. This of itself would seem sufficient to little the question; but mark further that no such rendering appears in any translation accessible to your correspondent, the Japanese alone excepted. "Accessible" here includes the Latin of Stier and Theile's great Polyglot, the German of Luther, the commoner French and English versions, and the Chinese translation reprinted in Tokyo in 1884.

It is important to remember that the passage in Acts is a quotation from the Septuagint rendering of Isaiah LIII. 8. And that the true old Testament text is very obscure appears from the widely different translations of our Authorized and Revised versions; the former being:—"He was taken from prison and from judgment," while the Revised reads:—"By oppression and judgment he was taken away." The word righteous does not appear either in the O. T. original or in the translations; indeed, the Revised rendering would point to anything but a righteous judgment. The Japanese of the passage in Isaiah reads, in accordance with the R.V., *sabaki ni yorite*. Now, if any explanatory adjective at all is to be added to the quotation in the Acts, the translators would have been consistent with their O. T. rendering in using the adjective employed. The only one that would appear from a rendering cited by Mr. McCaleb; namely, "In

Digitized by Google UNIVERSITY OF ILLINOIS URBANA-CHAMPAIGN

his humiliation his condemnation was extorted"; and from that of Thayer, quoted by "A." himself, who prefers the word *punishment* to "righteous judgment." Thus it is clear that the passage may employ "judgment" as denoting just the opposite of righteous judgment.

But it would also be permissible to make the "judgment" of the original refer to the great prerogative of Christ as judge or lord of the world. In this sense the same Greek noun *krisis* is often used, as, for example, in Jno. v. 22, 27. Then the words, "In his humiliation his judgment was taken away," would seem in harmony with that theory of *kenosis* supported by Phil. ii. 7, 8, denoting that during the period of His humiliation Christ yielded up much of His divine power. On the other hand, other commentators, followed by Dr. Learned's vernacular work, support the Japanese version. But they are commentaries; and it is supposed to be a translation.

Yoshitsuji (1 Tim. iii. 11) is equally unwarranted by textual authorities. Some commentators, from Chrysostom down to De Wette, say that the meaning is probably "deaconesses," but then such high authority as Conybeare and Howson repudiate that rendering, giving their reasons (*Life and Ep. of Paul.* Vol. ii. p. 453, note 1). None of the translations mentioned above venture to give it. In this case, as in the other just dealt with, there are three possible interpretations of the text, but there is only one text. Yet the translators, by an actual alteration of the text, have made it appear that one of these interpretations alone is possible. They have more than translated, they have commented. What is more, their commentation appears as a translation.

"A.'s" assertion that not words, but ideas, must be translated, is a remarkable addition to the rules of textual criticism. Is it not the sole aim of modern criticism to determine, as far as may be, simply the pure text? And in cases of authentic text with an ambiguous meaning, would not A.'s canon mean the translation not, necessarily, of the idea, but of one's own ideas? It is nothing more nor less than interpolation.

To assert that reasonably equivalent words cannot be found in Japanese would seem to demand good proof. But even if such proof be forthcoming (which is doubtful), then A.'s statement that a translation more restricted in its sense than the original is preferable to one still wider, seems to me the exact reverse of the truth. Surely it is better to widen the field of individual judgment than to narrow it.

It is very easy to find fault, and to seem pedantic when doing it. But there is a principle here that we cannot afford to lose sight of: namely:—*In Bible translation a pure text should be the one aim, and not comment.* The translators of the present version, faithful and humble though they were, seem in numerous instances, of which examples are cited above, to have deviated from that principle. The purpose of this letter is not to blame them, but to oppose the application of A.'s position to the Revised Japanese Version we shall some day have.

J. A. B. SCHERER.

Saga, January 17th, 1895.

WASHINGTON PRINCIPLES?

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Would you have the kindness to tender my best thanks to your correspondent from Washington for his admirable sincerity in saying (see *Japan Mail* Jan. 18th, 1895):

It is safe to say that under such a loose plan, most of us would filch a little.

"Little"—by the way—in that particular case meaning "some hundred and odd thousand dollars."

The undersigned, in honourable companionship of your correspondent from Washington, proudly maintains the beautiful sentiment, that honesty—a very good thing in itself as far as it goes—*may* become, and does *become*, troublesome in many cases, especially where dishonesty pays better. In such cases it would be improper, nay even little short of disgraceful, to remain honest, especially where there is some "loose plan"—no supervision exercised—in a word, where "*everything* depends on a man's *honesty only*. In such cases it would be *more* than shameful not to pocket on one's own account first.

Fully agreeing as I do with your respected correspondent's principles, I beg, at the same time, to suggest, that, if the same corresponding gentleman would be contented to speak in future for himself only without generalizing more than necessary, many of your readers would understand his style of writing better than they do now.

Yours, &c., ONE "OF US."

Tokyo, January 20th, 1895.

LANGFELDT AND COMPANY, LIMITED.

The semi-annual general meeting of shareholders in Messrs. Langfeldt and Company, Limited, was held in Kiel's Building, Main Street, on Monday afternoon. There were present Messrs. O. Kiel, Chairman of Directors, H. Klingen, F. Retz, A. Egli, H. Grauert, J. F. Lowder, J. Strauss, W. Berger, and J. Feicke, Secretary.

The CHAIRMAN called the meeting to order, as he considered that the rules of their Articles of Association—that five persons representing 10 per cent. must be present to form a meeting—were satisfied. They were gathered at the eighth semi-annual general meeting of the Company, and as the accounts and report had been circulated amongst them for over a week past, and had doubtless been earnestly and carefully examined, he would propose that they be taken as read.

Mr. KLINGEN seconded.—Carried.

The CHAIRMAN—We now come to a consideration of the accounts. This has been a most extraordinary half-year. You all know the old adage, that it is an ill wind that blows nobody any good, and therefore it has come to pass that the lamentable war now proceeding between Japan and China, has enabled us to make the profits which the Directors now propose to distribute amongst you. The gross profits have been something near $34,000. From this sum the Directors propose to write off $5,537.42 for furniture, etc. This includes plant, fixtures—fixtures in store and boat house, ship chandlery, butchery, etc.—and furniture which we hold at the disposal of our manager, and which formerly appeared in our books at $7,537.42. This we have reduced to $2,000. Then the Directors have also written off $209.38 for bad debts. They are not really bad debts, but are debts that have been forgotten by people, people who have left, etc. After deducting various other amounts for working expenses, fees, etc., we arrive at a net profit of $28,372.57, out of which we propose to pay you a dividend of 25 per cent. and to give $2,000 as a bonus to our employés. This bonus has been well earned by them. Our business has been a business of day and night, night and day. Our employés have been at work at 5 o'clock in the morning, and half-past two next morning has see them still there at work; yet at five o'clock they were back at work again. Gentlemen, if our employés had not worked like this we should have been obliged to engage extra hands, and their wages would have absorbed, doubtless, an amount almost equal to that which we suggest should now be given as remuneration to our men for their extra work. Then again, had we engaged extra men we should now have been in this position:—we should either have had to keep them on, which would have been unpleasant for us, or we should have had to discharge them, which would have been unpleasant for them—for we have no present need of extra work. We hold over to the next account a balance of $1,372.57. The accounts are now before you for your disposal—either you will accept them or else reject them. I have nothing more to say about them now, but I have a few remarks to make later on.

REPORT.

The Statement of Assets and Liabilities, and the Profit and Loss Account for the half-year ended the 31st December, 1894, accompany this Report.

The Net Profit for the half year, including balance brought forward from the 30th June, 1894, and after providing for General Expenses, Directors' and Auditor's fees, Depreciation and Losses amount to $28,372.57 which it is proposed to apply as follows:—

In payment of a Dividend of 25 per cent. for the half-year	$25,000.00
In payment of a Bonus to the employés of the Company	$ 2,000.00
Balance to ■ carried to new account	$ 1,372.57
	$28,372.57

Messrs. Meyerdirks and Retz retire from the Board, but offer themselves for re-election.

The Directors have much pleasure in recommending the re-election of Mr. Thos. S. Baker as Auditor.

O. KIEL,
J. F. LOWDER, } Directors.

Yokohama, January 14th, 1895.

STATEMENT OF ASSETS AND LIABILITIES ON DECEMBER 31ST, 1894.

ASSETS.

Stock of Merchandise, Ship Chandlery, and Coal	$35,473.44
Plant, Fixtures, and Furniture	2,000.00
Cash in hand	2,804.84

Yokohama, December 31st 1894.

O. KIEL,
J. F. LOWDER, } Directors.

J. FEICKE, Secretary.

I have examined the foregoing accounts and compared them with the vouchers of the Company, and certify them to be correct.

Yokohama, January 9th, 1895.

THOS. S. BAKER, Auditor.

Mr. GRAUERT moved, and Mr. LANGFELDT seconded the adoption of the accounts.—Carried.

The CHAIRMAN—I have now two points to bring before you. The first is this. We have had a very good half-year, and as far as I know about the working of the business, we may look forward to a decent and reasonable half-year to come, and many of them, I hope in the future. I know that history is said to repeat itself, but I warn you not to expect such a dividend as this every year. Fair, hard work will continue to be done by all in your employ, and you may reasonably expect a fair and good return for your money, but I add again that you must not expect such a return as has been made this year. The second point is somewhat peculiar. This half-year, as I have already remarked, has been most extraordinary. Two years ago you reduced the pay of your Directors from $500 to $200, giving as your motive that the business done with our capital was not quite sufficient to justify the larger sum. Now your business this year has been quadrupled, and I ask you to make a vote to your Directors in consideration of the extra work done by them, and would propose, as your Chairman, that you double their remuneration this half-year, as a mark of your good sense and good nature towards them.

Mr. KLINGEN moved that the Directors' fees be not doubled, but tripled.

Mr. STRAUSS seconded.

The CHAIRMAN—It is very kind of you to do this, but I think that my suggestion that the Director's fees be doubled for this year, will be quite sufficient. Next year they would be at the ordinary rate, but this year, as a mark of your recognizance of the good work they have done, you double their fees. That would be quite sufficient, and I am sure that they will continue to work in your interests as faithfully in the future as they have done in the past.

Mr. LANGFELDT said he thought the Chairman's suggestion, that the Director's fees be doubled, should be carried.

Mr. KLINGEN then withdrew his proposition.

Mr. LANGFELDT proposed that the Directors' fees for the year be doubled—that is increased to $400.

Mr. GRAUERT seconded.—Carried.

The CHAIRMAN in thanking the meeting on behalf of the Directors, said the vote had been well earned.

The CHAIRMAN announced that the retiring Directors, Messrs. Retz and Meyerdirks offered themselves for re-election.

Both gentlemen were re-elected by acclamation.

The CHAIRMAN proposed the re-election of Mr. Thos. S. Baker, of the Hongkong and Shanghai Bank, as auditor.

Mr. LANGFELDT seconded.—Carried.

Mr. LANGFELDT said he should like to make a few remarks upon their report. The public upon reading that a 25 per cent. dividend had just been made, might run away with the idea that they charged exhorbitant rates. From his knowledge of the business he might tell them that the profits made were extremely moderate. It was owing to the extraordinary amount of their sales that they had made so much that year. The gross profits on the average had not been more than 10 per cent., which was very little for a business of this kind. He made these remarks so that their business should not be misjudged.

The CHAIRMAN thought that their business would not be misjudged by the public. They had made money because the business had come in

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

their way. If the business had not come to them, they would not have made the profit.

Mr. RETZ said there was something in what Mr. Langfeldt had remarked. He had himself been approached by persons outside upon the reason for declaring so big a dividend, and he had explained that it was solely due to the larger amount of business which they had done. They did not charge exorbitant rates, in fact they were less than other people in some respects; but they had had to supply the men-of-war who had been called out East through the outbreak of war in Korea.

The CHAIRMAN thought that his remarks in introducing the accounts would safeguard the business from any misconception. He only hoped that they might have many such years.—(Hear, hear.) The dividend warrants were ready at the meeting.

Mr. LANGFELDT proposed a vote of thanks to the Directors for their services.

Mr. GRAUERT seconded.—Carried.

The CHAIRMAN having replied, the meeting separated.

NIPPON RACE CLUB.

ANNUAL GENERAL MEETING.

The annual general meeting of the Nippon Race Club was held on Tuesday afternoon in a room kindly lent by the Club Hotel directorate. There were present the Hon. P. le Poer Trench (in the Chair), Dr. Wheeler, Messrs. N. P. Kingdon, W. W. Till, A. C. Read, E. O. Kenyon, W. R. H. Carew, S. Isaacs, H. Blum, U. Durand, V. Blad, B. Hyde Pearson, H. S. Thompson, E. Knuff, H. R. Campbell, A. Fleisch, K. Kingdon, W. B. Walter, T. Thomas, G. Philip, J. Dodds, A. J. Easton, A. S. Mottu, R. D. Robinson, J. W. Lee, P. de C. Morrias, G. F. Watts, M. Wilson, Chev. de Waepenaert, A. Bianchi, and J. F. Pinn, Secretary.

The CHAIRMAN said—Gentlemen,—Before proceeding to the business of this meeting, I wish to express the pleasure it gave me shortly after my return to this country, and on the departure of Mr. de Bunsen for Siam, to be offered once more the presidency of the Nippon Race Club, and how proud I am to occupy this chair to-day. It is most gratifying to me, as an old and warm supporter of the Club, to find it in such a flourishing state. I feel sure I am right in saying that the present prosperity of the Club is in a large measure due to the warm and valuable support of the ladies. During the several years I had the honour of being President of this Club, the ladies always graced the race meetings by their presence; they do so still; but they do more; they now not only take a keen great interest in the races but also in the ponies, and many of them are regular in their attendance at the training. As long as the ladies thus identify themselves with racing and set such a good example to the young men, we need have no fear for the future of the Club. Turning to the accounts, I think the members are to be congratulated on the very successful year's working of the Club, as notwithstanding extra expenses and larger prizes, the accounts show a larger balance at the end of 1894 than at the close of 1893. The total receipts and expenditure amounts to $20,114 in 1894 against $17,910 in 1893. Members' subscriptions were $2,420 against $2,140. Entries were $4,880 against $4,733. The gate money in the autumn showed a slight falling off owing to the absence of the Emperor. Presentation cups were also less, none being given by the Emperor or Japanese. On the other side, the Club had expended $800 in repairs to the Grand Stand, which is now guaranteed for 5 years, and had also spent $7,645 in prizes as against $5,337 in 1893; and the balance in hand is now $3,482 as against $3,290 a year ago, an increase $192. This, however, was not the actual saving on the year's working. The accounts include on credit side $130 and $80 received from dependencies outstanding from 1893; deduct from this $119 paid for printing during 1893, and you have the exact figures for 1894, say a net saving of $91. Before leaving the accounts I may mention that the $130 just referred to was received by the Hon. Treasurer on account of the debt due to them by their late collector. The original debt was $940; since received $130; still owing $710. I hope more may be recovered, but as it is doubtful the debt still owing cannot be regarded as a good asset. With respect to racing matters; we procured two lots of ponies from China but they hardly turned out as anticipated; but two lots of Japan ponies were considered fairly good for the money. In my opinion, however, comparing the ordinary Japan pony of to day with those of ten years ago there is not only no improvement, but a very marked deterioration, and this I attribute to the short sighted policy of the Japanese Government. It will be within the recollection of some of the gentlemen present here to-day, that many years ago when occupying this chair I pointed out that if the Japanese Government desired to improve the breed of Japan ponies, one way was to grant an annual subsidy to this Club to be spent on prizes for races for Japan ponies. That by offering prizes of $500 and $1,000, racing men would be willing to give large prices for Japan ponies, and farmers would find it in their interest to breed really good ponies. The annual subsidy required was not large, about $10,000, and I venture to say that had my advice been followed the Japan pony you would to day see on our race-course would be vastly superior to the ten we last got down from the Hokkaido, that the small sum given by the Government would have brought four times that amount of foreign money into the pockets of the breeders of Japan ponies, that we should be able to give you better racing, and that one of the objects of the Nippon Race Club, viz., the improvement of the breed of Japan ponies, would to a certain extent have been carried out. The young Half-breds mentioned at the last meeting had not turned out satisfactory, but through the kindness of Viscount Fujinami they had now secured a lot of Half-bred mares which gave every promise of giving good sport. The new system which the Committee had organized of putting the new ponies up to auction had been a financial success as regards the Shanghai ponies, and it seemed satisfactory to members; at least they had an opportunity of backing their own opinion of a horse instead of having one given them by lot. With a view of encouraging sport, the Committee had also introduced open races for Half breds which had been successful, and they would be glad to see these events more patronized and more of these animals on the course. I may perhaps mention that in compliance with a numerously signed requisition from owners, the Committee had changed the distance of the Ladies' Purse race from half-a-mile to three-quarters. With reference to Members' Races, the Committee had found it impossible to increase them in consequence of the lack of enthusiasm shown by the younger members during the training. Members might remember that at the last annual meeting the Committee had been authorized to lease the ground formerly occupied by Mr. Winstanley's dairy as a paddock and for stables, but they had not been able to get sufficient support to justify them in carrying out the plan. It is greatly to be regretted that political circumstances prevented the Emperor from honouring either of our meetings with his presence. His Majesty is very fond of races, and on his return to Tokyo I have no doubt His Majesty will again do us the honour of patronizing our meetings.—(Hear, hear.) The Ball given by the members was, despite the inconvenience of a postponement, a decided success. I think a Race Ball should become a permanent institution and that one should be given after each of our race meetings.—(Hear, hear.) Viscount de Labry is away at the war and will be unable to serve on the Committee, and Mr. Mitsuhashi, to whom we are indebted for many services rendered to the Club, has also left for China. One of the first duties of the incoming Committee will, I understand, be to re-roof the stabling. I must apologise for taking up so much of your time with my favourite hobby, but as you know I like to ride, and therefore I like a good hack. It was consequently a great disappointment to me when I returned to Japan to find that my advice had not been followed, and that a good hack among the Japan ponies could not be found. If my advice had been followed I think that by this time it would have been possible to have found for $500 a good hack which would have given one a pleasure to ride. As a hack the China pony may have its very good points, but as a racer it is not to be compared with the Japan pony.—(Loud applause.)

Mr. KINGDON—It is with very great willingness that I rise to call especial attention to the great pleasure which we of the Nippon Race Club feel in having Mr. Trench back among us again.—(Hear, hear.) Many of our younger members may not be aware of the fact that it is to Mr. Trench that we are indebted for the Grand Stand as it is at present, but such is the case. I move that the accounts now presented and explained to us by our Chairman be taken and accepted without question.—(Hear, hear.) I shall, later on, have some remarks to make in reference to the stalls at the race-course. Our Chairman has referred to the presence of ladies at our morning training, and the remarks which I shall have to make will have reference to the stabling of their ponies as well as the stabling of their husbands' ponies on such occasions. At our last meeting there was some disappointment expressed at the difficulty experienced in obtaining stalls. As the Club has just a large surplus, I think it would be to the Club's interest to provide accommodation for the ladies' ponies. I think that we ought to take the first opportunity to increase the number of stalls, not only for the benefit of ladies who are members of the Club, but also in the interests of non-racing members who ride up to the course during the training. There should be more stalls built for the accommodation of such members' hacks. But in the meantime, I propose the adoption of the accounts.

Mr. EASTON seconded.—Carried.

E. & O. E.

Yokohama, January 19th, 1895.

GEORGE PHILIP, Hon. Treasurer.

I have examined the Subscriptions and Vouchers with the Books, and find the same to be correct.

T. F. CRUICKSHANK.

Mr. KINGDON—There is one other point in my proposal which I should like to bring to the attention of the Committee. There was a proposition brought before the Club that we should take in the land lately occupied by Winstanley's dairy, and upon it stalls were proposed to be built. I think, however, that the Committee found that there was not sufficient support accorded the scheme, and it fell through. This was owing, I think, to the connection, or supposed connection, of some outside individual. For myself I was opposed to it. And for this reason. This Club being an amateur Club, I consider that it should have as little connection as possible with non-amateurs. It was proposed, I believe, that certain members' ponies should be placed in charge of a man named Morton, who should train them for the racing. I think that the more individual members look after the training of their own ponies the better it will be for the Club.—(Hear, hear.) The majority of the members of the Nippon Race Club do so look after and train their own ponies, and therefore these members would have been handicapped by the professional being engaged to look after the training of other members' ponies. The taking in of that ground was therefore abandoned. Now I think that there is plenty of room in the paddock and enclosure whereon to build the additional stalls which are now required. During the last meeting, as I have said, some disagreeableness arose through the inconvenience experienced by

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

some of our visitors. There ought to be, I contend, sufficient accommodation provided to meet these requirements, and I therefore propose that a certain number of stalls be added to those at present in the paddock. The expense would not be more than two or three hundred dollars at the most.

The SECRETARY announced that during the discussion of Mr. Kingdon's proposal the ballot for the Executive Committee would be taken. The old Committee were:—Messrs. Till, Thomas, Mitchell, Philip, Knaff, and Vicomte de Labiy; the latter had resigned owing to his leaving for China.

Mr. HYDE PEARSON seconded Mr. Kingdon's proposition that the stalls should be increased.

Mr. DODDS said that he would propose an amendment. He would propose that the proposition be not of a definite character, but rather it should take the form of a suggestion to the incoming Committee. This would be much better, and he moved as an amended proposition that the question should go to the Committee as a suggestion instead of in the form of a hard and fast resolution.

Mr. KINGDON said that the reason for bringing the matter before the general meeting as a resolution was simply on account of the bad feeling which existed at the last race meeting.—(Hear, hear.) This bad feeling had arisen through people who had applied for stalls not being able to get them. In fact, they were rudely informed that they could not have them; and upon this they withdrew their ponies from the races. It was therefore more proper to bring the subject up as a formal proposition than to let it go out as a mere suggestion. There would still be left sufficient space for the ladies to use as a promenade between the races. It was in the interest of the racing men of the Club, as well as of the ladies and non-racing members, that he raised the question.

Mr. THOMAS (Clerk of the Course)—Mr. Chairman, the gist of Mr. Kingdon's proposal is a vote of censure on the Clerk of the Course. He alleges that I made rude remarks—(Mr. Kingdon—No, no)—and I wish to say that I did no such thing. As Clerk of the Course now for some years, I have made it a rule that the stalls at the course shall be at the disposal of the first applicant. The stalls in question ran from 16 to 26, I think, and I will, with your permission, explain the matter. At the previous meeting these stalls were taken by Messrs. Sharp, Catto, Campbell, and Company. At the last meeting, Mr. Catto having left Yokohama, I asked Mr. Campbell whether he wished to have the stalls again. He replied that he thought he did not want any stalls. I then asked Mr. Sharp a similiar question, and he said that possibly he would require one or two, and if it was convenient he would like them in the same place as before. This was out of the question, for by giving him stalls in the middle of these numbers, an arrangement would be made that might interfere with a large stable. Mr. Pearson eventually took seven of the stalls and Mr. Durand the other three. After they had been allotted, complaints came to me in an underhand way, and I heard that they originated with a person who had not even applied for these particular stalls. It seems that some people whose ponies were under the care of Messrs. Cobb & Co., some livery stable keepers of this place——

Mr. J. W. LEE rose to a point of order. He did not see how these things could be discussed there.

The CHAIRMAN said the Clerk of the Course was explaining some question which had arisen in the course of the discussion.

Mr. THOMAS—I was accused just now of employing rude remarks towards some people who had applied for stalls, and I was explaining that I had not acted rudely, and the question as to the allotting of stalls has arisen. The persons who seem to have made complaints as to the way in which the stalls were allotted were connected in some way with Messrs. Cobb & Co. I beg leave to state that at the last meeting all the stalls were not taken up, there were five still to let. I don't think that it would be economy on the part of the Club to build more stalls until the Committee knows definitely that they can be filled. I have made enquiry of the man who owns the ground adjoining the place where the carriages stand, but he demands a high price for his land—$120 for 500 *tsubo*. I may add that at the last meeting posts were put down for the convenience of tethering the ponies of ladies visiting the course. If ladies require stalls for their ponies, the stalls can be set apart for them at the regular price—$5 per stall, but while these posts are there the ponies belonging to visitors can be very conveniently tethered to them. Hitherto the arrangements in regard to the allotment of stalls has worked smoothly; the disagreement spoken of seems to have been the work of a small clique. Generally speaking, there was quite sufficient stabling for the purposes of the Club.

Mr. KINGDON—I withdraw willingly any imputation I may seem to have made against the Committee or any member of the late Committee. I only referred in my remarks to the bad feeling which certainly did exist at the last meeting. Mr. Thomas in his remarks inferred that the members I have spoken of do not wish to pay $5 for the use of the stalls. I beg to say that they are all willing to pay for them.—(Mr. Thomas—I beg your pardon, I did not make the inference.) I hold that it is necessary and incumbent on the Committee to do all that it can to conduce to the convenience of members, whether they be ladies, or racing or non-racing members. I propose that the stalls should be increased in number.

Mr. THOMAS—In view of the number of applications for stalls, it was decided at a Committee meeting that the first consideration should be extended to owners of race-ponies, and therefore race-ponies have invariably, since I have been Clerk of the Course, had the first consideration extended to them in the distribution of stalls. The posts that have been put up in the paddock have proved of great convenience to those ladies and members who ride up to the morning training, and so far as I can see there is no occasion for an increase in the stabling.

Mr. R. D. ROBISON seconded Mr. Dodds' amendment. It was far better to put the matter before the incoming Committee as a suggestion than to dictate to them what should be done.

The CHAIRMAN then put the amended proposal to the vote, when 19 voted for and 8 against the amendment. The original proposition was therefore lost.

Mr. KINGDON said he was glad he had been able to bring the matter before the meeting: it would give the Committee something to think about. He had now another point to bring up for the meeting's consideration. It also had reference to the stalls. He thought that when the notice was issued and put in the Coffee-room that training had commenced, two days only should be allowed in which previous occupants of stalls could intimate to the Clerk of the Course their desire to occupy their old stalls for the purposes of the coming meeting. This arrangement would save a lot of trouble.

Mr. ROBISON thought two days were hardly sufficient. A member might be up country when the notice was issued.

Mr. KINGDON—You could always have some one here to apply for you.

Mr. ROBISON—But I should not like to trouble you so often.—(Loud laughter.)

Mr. THOMAS—A notice is always posted in the Coffee-room announcing when stalls will be allotted, and a date is fixed; after that date the stalls are allotted.

Mr. KINGDON said his object in raising the discussion was merely to induce the Committee to be more careful in future.—(Laughter.) They should draw up a diagram of the stalls and upon it should be placed the applicants' names. This they should suspend in the Coffee-room.

Mr. THOMAS—There is generally a plan of the stables hung up when the training starts.

Mr. EASTON—I think that this is a matter we can leave to the Clerk of the Course. He should, I think, put a notice regarding the stalls, in the papers.—(Hear, hear.)

The CHAIRMAN thought that Mr. Kingdon's suggestions were all made for the benefit of the incoming committee.

Mr. KINGDON—That is all I desire.—(Laughter).

The CHAIRMAN—Well, I think we can rest assured that the Committee's great and only desire is to promote the general good of the Club.

Mr. EASTON—I think the Coffee-room notices should appear in the papers.

Mr. J. W. LEE—I was under the impression that the Clerk of the Course was paid for his services.—(Laughter.) I don't think that he should be asked to do all this work for nothing. In justice to him I move that he be paid.—(Renewed laughter.) I certainly think he deserves remuneration for all the work he has done.

Mr. R. D. ROBISON moved a vote of thanks to the outgoing Committee and more especially to the Clerk of the Course.—(Hear, hear.) He had done a good deal of work for them, and his work deserved recognition.—(Applause). The affairs of the Club had never been better managed.

The proposition was carried *nem. con.*

Mr. KINGDON—I think the Clerk of the Course should allow us sometimes to train on the inside of the course.

Mr. ROBISON—I also would suggest that that be a recommendation to the Committee. I think the Clerk of the Course should be a little more liberal to us in this respect, and let us have the inside grass occasionally. Until a member has had a chance to take his pony over the inside course he cannot know what it can do. No harm could possibly be done if two, three, or even four ponies were allowed to train over the inside course now and again. It is within the discretion of the Clerk of the Course to allow us this liberty. It would be a benefit which we should appreciate.

Mr. KNAPP seconded Mr. Robison's suggestion. He thought that the Clerk of the Course should allow them the inside track occasionally.

After some further desultory conversation on the point,

The CHAIRMAN announced that the following gentlemen had been elected on the committee:—Messrs. Till, Thomas, Knaff, Philip, Mitchell, and Easton.—(Applause.)

Mr. THOMAS wished to withdraw from the position. There were many younger and abler men among the members who could fulfil the duties more to the satisfaction of everybody than he could possibly hope to do.

The CHAIRMAN said he should regret that upon the occasion of his return to his old position as Chairman of their meetings, Mr. Thomas, whose interest in the sport was so keen and well-known, should feel obliged to retire from among them. He, himself, should personally regret it. He was sure that all present would regret Mr. Thomas' retirement as deeply as he did.—(Hear, hear.)

Mr. KINGDON—My remarks were not prompted by any personal animosity whatever, and I will withdraw them if Mr. Thomas feels aggrieved. I merely referred to the fact that at our last meeting a certain amount of bad feeling existed, but in drawing attention to what I was given to understand was its cause, I assure you, there was no personal feeling in the matter at all. It would be unfortunate for the Club if Mr. Thomas did not reconsider his decision. As the Chairman had remarked, they would all regret Mr. Thomas' retirement.

Mr. EASTON said he was obliged to decline the honour of serving on the Committee.

The CHAIRMAN, upon Mr. Easton declaring that his decision was final, said that they would take the next name on the list, that of Mr. Isaacs.—(Loud applause.)

Mr. ISAACS declined. He had requested the meeting not to nominate him for the committee.

The CHAIRMAN—Then we must leave it to the Committee to fill up the vacancies.

Mr. KINGDON said he would withdraw all his remarks in order that Mr. Thomas might be induced to serve.

Mr. KNAPP hoped Mr. Thomas would serve. He was a most useful member of Committee—(Hear, hear.)

The CHAIRMAN remarked that Mr. Thomas was a pillar of the Club, and in these earthquake times they could not afford to allow a substantial support to be removed.

Mr. THOMAS said he was quite willing to serve as a member of the Committee, but the position of Clerk of the Course he would not take. The duties of the position were most invidious—(The Chairman—Most onerous)—and the person who tried to carry them out got for his pains nothing but blackguarding. Thanks were not expected.—(Mr. Robison—But we have just given them to you.) He had tried to carry out the duties of Clerk of the Course to the benefit of the Club, but he found it impossible to please everybody. He thought the time had come for some one else to attempt the duties and then they would see what they were like. As a member of the Committee he accepted re-election, but as Clerk of the Course he declined.

Mr. ROBISON suggested that some few loads of sea-sand would greatly improve the approach to the course.

Mr. KINGDON then proposed a vote of thanks to the Chair, which was carried with acclamation.

The CHAIRMAN is acknowledging the compliment, hoped that he would be able to promote the interests of the Club even more fully in the future than he had done in the past.

The meeting then terminated.

LETTER FROM CHICAGO.

(FROM OUR OWN CORRESPONDENT.)

Chicago, December 31st.

The January *Arena* contains an article by Helen H. Gardener on "Our Little Neighbour in the East"; the January *Harper's* contains a finely illustrated article on "Fuji-san" by Alfred Parsons; the January *Demorest's* contains an illustrated article about "The Empress of Japan," by Frank G. Carpenter; and the January *Scribner's* contains a thoughtful analysis of "The

Mental Characteristics of the Japanese," by Prof. Geo. T. Ladd.

Mr. F. W. Gookin, cashier of the North-western National Bank of this city, is an ardent student of Japanese art, and has a large and fine collection of Japanese art objects.

H. K. Tetsuka and Co., who have a store in the Palmer House building in this city, have recently been advertising their business by having a real *jinrikisha*, containing a lay figure of a Japanese lady, drawn through the streets.

It has not yet been made public whether the U.S. Senate has ratified the new treaty with Japan. The Blair resolution, calling for information with regard to mediation by the United States between Japan and China, has not yet been reported for fear that it might complicate the proper consideration of the treaty.

In this connection, Walter Wellman, the Washington correspondent of the Chicago *Herald*, tells an interesting story :—

Some day or other a most interesting story of diplomacy will be given to the world. It will relate the efforts made by our ministers to Japan and China to bring those warring governments together in negotiations for peace, efforts which have at last been crowned with success. The story will describe the intense hatred which each of the belligerents bears the others, the implacable spirit of revenge, the fierce desire to cut each other's throat. It will dwell upon the deceitfulness of the Chinese authorities, their practice of ways that are dark and tricks that are vain in an effort to overreach their adversaries, and the vanity, suspiciousness and vindictiveness of the Japanese. Minister Denby, at Pekin, has had much the more difficult task, though Minister Dun, at Hiroshima, has had his hands full. Both have gone through a siege of cross-firing and backing and filling and jockeying almost unparalleled in the annals of diplomacy, as frequent reports made to our state department, and which some time will see the light of day, amply show. But at last they have led their refractory horses to the brook. If the beasts don't drink each other's health and stop their fighting it will not be Uncle Sam's fault.

Hon. John W. Foster, ex-Secretary of State, will arrive at Yokohama on the *Empress of India* (carrying this letter). He goes in a purely private capacity as an adviser of the Chinese peace plenipotentiaries. He now holds the position of counsellor of the Chinese Legation in the United States. While *en route* from Washington to Vancouver, he issued the following telegram to the Associated Press :—

Harrisburg, Pa., December 29th.—Please announce that I have no connection with alleged Chinese silver loan negotiations reported in certain newspapers to-day.

The Hawaiian Legation in Washington denies that there is any alarm felt by their government over Royalist plots, and says that the new Republic is safe.

The reports from the Brazilian Republic are conflicting. On the 25th inst. we were informed that the Moraes administration started in auspiciously with peace secured; two days later we read that Rio de Janeiro is "in a state of panic," with the whole country "on the brink of rebellion again"; the next day a dispatch states that "the government has ordered a million dollars' worth of war materials from the Armstrongs"; and since then there has been nothing exciting.

The Sultan has positively declined to allow U.S. Consul Jewett (who is a missionary's son) to make an independent inquiry into the Armenian troubles.

It is now reported that France also will bar out American meats; and that Austria will join the ranks of retaliators because of the sugar duty.

The reduction of the tariff on woollen goods, and the free admission of wool, have begun to show a most beneficial result in reducing the price of clothing, whether ready-made of tailor made. And the Minesota Democrats, undismayed by the outcome of the recent election, have come out with a radical address in favour of absolute free trade and direct taxation.

Congressman Springer has introduced into the House of Representatives a substitute for the Carlisle Bill. The new bill allow the national banking system to run along without requiring the present banks to reorganize under the new system; and it does away with the attempt to make banks responsible for the notes of all other banks. Secretary Carlisle is said to have approved the substitute.

It is now a certainty that Hon. John M. Thurston (Rep.) will be elected U. S. Senator from Nebraska to succeed Manderson (Rep.)

The Populist Conference in St. Louis spent two days in talking and submitting resolutions, and finally issued a long "address to the people."

James G. Fair, one of the "Bonanza Kings," died in San Francisco on the 28th inst., and left a fortune of about $40,000,000. He served one term as a U.S. Senator (Democrat) from Nevada. On the 30th inst. at Lincoln, Neb., died John E. Fitzgerald, ex-President of the Irish National League and a prominent Fenian.

Eugene V. Debs and the other officers of the Railway Union obtained from Judge Woods a stay of execution in their sentences till January 8th, 1895; so that they were enabled to spend the holidays with their friends.

The policemen of Chicago are now subjected to an examination in writing, reading, spelling, arithmetic and practical questions relating to their duties.

At the winter convocation of the University of Chicago on January 2nd, President Seth Low, of Columbia College, will deliever an address on "The University and Its Relation to Questions of the Times." Among those who are to receive the degree of A.B. is Kichi Tanaka.

On Dec. 25th Rev. Dr. Edward McGlynn, who had been reinstated by Mons. Satolli, officiated at solemn high mass in the Church of the Holy Cross in New York City.

An interesting New Year's event in this city will be the reunion of the World's Congresses of the Columbian Exposition. The following are the important features of this programme :—

"The Ministry of Culture, Literature and Art," Rev. Dr. A. W. Gunsaulus, president Armour Institute.

"Higher Education and Government." Dr. Henry Wade Rogers, president North-western University.

"The Public Schools and Good Government," Mrs. J. M. Flower, trustee University of Illinois.

"Higher Education and International Peace." Dr. William R. Harper, president University of Chicago.

"The Religious Congresses of 1893, crowned by the World's Parliament of Religions," Rev. Dr. Frank M. Bristol, Rabbi Emil G. Hirsch, Rev. Lewis P. Mercer and Rev. Jenkin Lloyd Jones, members of the general committee of organization.

"The Brotherhood of Science and Faith." Dr. Andrew Morrissey, president Notre Dame University; Dr. R. N. Foster, chairman general committee on science and philosophy.

"The Religious Future." Rev. Dr. N. D. Hills, successor of Professor Swing as pastor of the Central Church.

"Relation of the Church to Industrial and Social Progress." Dr. Graham Taylor, professor of sociology in Chicago Theological Seminary.

"Greeting from the Orient," Professor S. Choyo, late of the University of Tokyo; interpreted by C. O. Boring, chairman committee of arrangements.

"Messages from Absent Friends," read by Dr. Paul Carus, secretary general committee on world's congress extension.

Christmas Day was mild, but was followed by a big blizzard during the 27th and 28th. This storm seems to have been very extensive; was most severe in the North-west; and visited also the sunny south, where it seriously damaged oranges and other fruits, even in Florida.

A bloody race war near Quitman, Georgia, grew out of the murder of a white man by a party of negroes. Seven negroes were shot in revenge, and more slaughter would certainly have ensued if State troops had not been quickly sent to the scene of trouble.

The Delavar House at Albany, N.Y., was destroyed by fire last evening, and three or four persons were fatally injured. Inasmuch as it was filled with politicians, it is a wonder that there was not a fearful loss of life.

Reports continue to come of terrible destitution in western Nebraska. Thousands are without fuel; are "subsisting on food insufficient for beasts of burden;" and are almost without clothing. There will undoubtedly be numerous opportunities for charity this winter in all parts of the country. In this city a thorough organization has already been effected. The boxes for the big "Charity ball" of June 10th has been sold for $10,000. Inasmuch as it is expected that $13,000 more will be realized from the sale of tickets, and that the expenses will not exceeds $3,000, it is probable that there will $20,000 to distribute among certain charitable institutions.

R. G. Dun and Co.'s *Weekly Review of Trade* and *Bradstreets'* agree that the holiday trade was smaller than usual and was generally confined to needful articles. There will, of course, be dullness after the holidays; but the general outlook for business is good.

"A Wish Fulfilled," is the enigmatic title of an article by Lafcadio Hearn on the war in the Orient in the January *Atlantic Monthly*.

THE "RIO DE JANEIRO."

The *Nagasaki Express* has gathered the following particulars of the accident which befel the Pacific Mail Co.'s steamer *City of Rio de Janeiro*, off the coast of the province of Satsuma, on the afternoon of Sunday, 6th inst., shortly after passing through Van Dieman's Straits, whilst on her passage from San Francisco to Hongkong, *vid* Nagasaki. The *Rio* was taking the usual course adopted by the company's steamers on this voyage, generally termed the outside passage, which necessitates passing through Van Dieman's Straits, at the southern end of Kiushiu. Everything appears to have gone well until shortly after passing through the Straits, on Sunday, the 6th, when at about 1.35 p.m., she struck a sunken rock, about two miles from shore. The engines were stopped, and every preparation made in an orderly manner for any emergency that might arise. In the meantime, an examination of the ship proved that serious damage had been sustained under water on the starboard side, forward of the foremast, and that water was rushing in to such an extent as to necessitate immediate beaching to prevent the ship sinking. She was at once headed for the shore, and in a short space of time was landed safely on a sandy beach, just below Nomamisaki, from whence a messenger was sent overland to Kagoshima, the nearest telegraph station, with a message to the local agent, requesting immediate assistance. The message did not arrive until Monday noon, when every possible haste was made to despatch the Mitsu Bishi Co.'s tow-boat *Yugao*. By midnight diving gear, pumps, and other things considered necessary under the circumstances, with a number of workmen and overseers, were all on board, and at full speed she started on her errand to assist the disabled ship, which was in a dangerously exposed position, in the event of bad weather. About 7.30 the next morning (Tuesday) the *Yugao* fell in with a boat from the *Rio*, bound to Nagasaki in search of assistance, as no reply had been received to the telegraphic message sent on Sunday. Proceeding on the journey, the *Yugao* arrived at at her destination at about 10 a.m., and was received with welcome. Work was at once commenced, and with alacrity worthy of the highest praise, the hole, which was found to be about 15ft. by 4ft., was temporarily patched up, a 12-in. centrifugal pump got to work, and the ship pumped out and afloat, all in the short space of the about seven hours, the credit for which is due to the united efforts of the Mitsu Bishi Co.'s staff and the engineers and officers of the *Rio*. In the meantime, of course, considerable cargo had been jettisoned from the forward hold; the cargo in the other part of the ship being undamaged so far as we can learn. At 9 p.m. (Tuesday) it was decided to go in search of a safer place, in which to effect repairs to enable the ship to proceed to Nagasaki without any risk; and after steaming slowly for about 12 hours, a sheltered sandy harbour was found at Iwafune, where she was beached and the work of patching up the hole in her side continued. Shortly after arriving at Iwafune, the *Yugao* took on board the passengers, mails, and specie, and brought them on to Nagasaki, the latter being in charge of the purser, Mr. Freeman. Mr. D. F. Robertson was in attendance on the ship as Lloyds' Surveyor, whilst Captain Wilson Walker went down to render any nautical advice and assistance that his knowledge of the local coast might enable him to do. The *Rio* arrived at Nagasaki about 8 p.m. on Monday, and next day discharging of cargo was commenced, preparatory to her going into dock. As the damage is below the waterline, it is impossible to estimate how long the repairs will occupy, until she has been surveyed.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets at the Club Hotel, No. 5, Bund, on Monday and Thursday in each week from 5 to 11 p.m.

The Tokyo Chess Club meets at the Tokyo Hotel every Friday from 1 to 11 p.m.

SOLUTION TO PROBLEM NO. 160.

WHITE.	BLACK.
1—Q to K 7	1—P × Kt
2—P to Q B 6	2—K × Kt
3—Q to K R 4, mate	
	if 2—K to Q 5
3—Q to Q Kt 4, mate	
	1—K × Kt (B 5)
2—Q to R 4 ch.	2—K × Kt
3—Q to K Kt 4, mate	
	1—K × Kt (B 4)
2—B to K B 3	2—K × Kt
3—Q to B 6, mate	
	1—P to K Kt 7
2—Kt to Kt 3 ch.	2—K to Q 5
3—P to K 6 (dis. mate)	
	if 2—K × Kt
3—Q to B 4, mate.

Problem No. 162.

By W. B. Mason, Tokyo.

BLACK.

WHITE.

White to play and mate in three moves.

Game No. 209.

Played February 19th, 1894, in the Vaughan Medal Competition, at the Newcastle Chess Club:

"HAMPPE ALLGAIER GAMBIT."

WHITE. G. C. Heywood.	BLACK. J. W. Robson.
1—P to K 4	1—P to K 4
2—Kt to Q B 3	2—Kt to Q B 3
3—P to B 4	3—P takes P
4—Kt to B 3	4—P to K Kt 4
5—P to K R 4	5—P to Kt 5
6—Kt to K Kt 5	6—P to K R 3
7—Kt takes K B P	7—K takes Kt (a)
8—P to Q 4 (b)	8—P to Q 3
9—B to Q B 4 ch.	9—K to Kt 2
10—B takes P	10—B to K 2
11—Castles	11—Kt to B 3
12—Q to Q 2	12—B to Q 2 (c)
13—P to K 5	13—P takes P
14—P takes P	14—Kt to K ■ 4 (d)
15—B takes P ch.!	15—R takes B (e)
16—R to B 7 ch.	16—K to Kt 3
17—Q to Q 3 ch. (f)	17—B to B 4
18—Q takes B, mate.	

(a) The only difference between the Allgaier Gambit proper and the Hamppe Allgaier at this stage is that the Queen's Knights on each side are in the field—a distinction slightly in favour of the attacking player.

(b) First introduced by Mr. Thorold, and stronger than the older move 8—B to B 4 ch.

(c) Up to this point all is "book," and this is given as best in Freeborough's "Chess Openings." After White's next move the game is dismissed as being in Black's favour; but White retains a dangerous attack which is very difficult to meet in actual play.

(d) The natural move, but Kt to Kt sq. would have avoided the catastrophe which follows.

(e) Obviously there is nothing better.

(f) A problem-like wind up. Two of Black's pieces are utilised to force the mate.

Game No. 210.

Played some time ago at the Manchester Chess Club between Mr. N. T. Miniati and another member.

"SALVIO GAMBIT."

WHITE.	BLACK. N. T. Miniati.
1—P to K 4	1—P to K 4
2—P to K B 4	2—P takes P
3—Kt to K B 3	3—P to K Kt 4
4—B to B 4	4—P to Kt 5
5—Kt to K 5 (a)	5—Q to R 5 ch.
6—K to B sq.	6—Kt to Q B 3 (b)
7—Kt takes B P (c)	7—B to B 4
8—Q to K sq.	8—P to Kt 6
9—P to K R 3 (d)	9—P to Q 4
10—B takes P (e)	10—P to B 6
11—Kt takes R (f)	11—B takes P
12—R takes B	12—Q takes R (g)
13—P takes Q	13—P to Kt 7 mate.

(a) This constitutes the Salvio Gambit. White may also leave the Kt to be taken and play 5—Castles, 5—P to Q 4, or 5—Kt ■ B 3 the [Muzio Gambit], thus obtaining a powerful attack for the piece sacrificed.

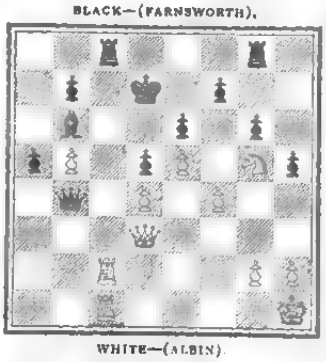
(b) Salvio's move was Kt to K B 3. Kt to K R 3 and P to B 6 are also recognised alternatives.

(c) 7—B takes P ch. is, perhaps, a little better; but this also works out to Black's advantage. If 7—Q takes P, Q takes Q; 8—Kt takes Q, P to Q 4; 9—P takes P, Kt to Q 5 with the better game.

(d) 9—P to B 3 is the correct move here.

(e) If 10—P takes P dis. ch., Q Kt to K 2; 11—Kt takes B, P to B 6, with a winning attack.

(f) 11—P takes P would be successfully met by either Kt to Q 5 or B takes P ch.



(g) A truly artistic finish.

End-Game No. 21.

AN ENDING IN NEW YORK.

Mr. Farnsworth, who played at Buffalo in the recent contest, is one of many new men who have lately come forward. The following is the finish of his game with Albin:

BLACK—(FARNSWORTH).

WHITE—(ALBIN).

White to play at move 30.

Continued.

30—R takes R	30—R takes R
31—R to Q sq.	31—K to K 2
32—P to K R 4	32—R to B 5
33—Kt to B 3	33—Q takes P

And White resigns a hopeless struggle.

Leipzig.

Herr Janowski was probably the greatest chess enthusiast at Leipzig; Dr. Tarrasch was the most unapproachable during the hours of play. Courteous and genial to a degree at social gatherings, during the progress of his games no one must interrupt him, and nothing but the most unusual disturbance can distract his attention from the position before him. The game, though always calmly surveyed, with no confusion or slovenly movement, evidently absorbs his whole intellectual powers; the style is perfection all round, and although you may feel doubtful about the wisdom of some of his moves, regarding them only cursorily, a little further insight will disclose how much has been foreseen, provided for, and avoided. Dr. Tarrasch is always ready to explain this as soon as the game is over, and the usual inquest is being held. It is said that Morphy's style was equally impressive. Every spectator feels that Dr. Tarrasch is an artist.

Game No. 211.

Played recently by correspondence. Companion game to the one published last week.

RUY LOPEZ.

WHITE. G. Thorp. (Hull).	BLACK. F. J. Hingley. (Nottingham).
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3
3—B to Kt 5	3—B to B 4 (a)
4—P to B 3 (b)	4—K Kt to K 2
5—Castles	5—Castles
6—P to Q 4 (c)	6—P takes P
7—P takes P	7—B to Kt 3
8—P to Q 5	8—Kt to Kt sq.
9—P to Q 6	9—P takes P
10—B to R B 4	10—P to Q 4
11—P takes P	11—P to Q 3
12—Kt to B 3	12—Kt to Kt 3
13—Kt to K 2 (d)	13—B to Kt 5
14—K to R sq.	14—B takes Kt
15—P takes B	15—Q to B 3
16—Q to Q 2	16—Kt to R 5
17—Kt to Kt sq.	17—B to Q 5 (e)
18—B to Kt 5	18—Kt takes P
19—B takes Q	19—Kt takes Q
20—B takes B	20—Kt takes R
21—R takes Kt	21—P to Q R 3
22—B to Q 3	22—Kt to Q 2
23—Kt to B 3	23—P to B 3
24—R to K Kt sq.	24—Q R to Q sq.
25—B to K B 5	25—K R to K sq.
26—B to K 6 ch.	26—K to R sq.
27—Kt to R 4	27—Kt to ■ sq.
28—Kt to B 5	28—R takes B (f)
29—P takes R	29—Kt takes P
30—P to K R 4	30—Kt takes B
31—Kt takes Kt	31—R to K sq.
32—R to Q sq.	32—P to K Kt 4
33—P takes P	33—P takes P
34—R to Q 2	34—P to K R 4
35—K to Kt 2	35—K to R 2
36—Kt to B 3	36—P to Kt 5
37—Kt to R 4	37—R to K 3
38—Kt to B 5	38—P to Q 4
39—R takes P	39—K to Kt 3
40—Kt to R 4 ch.	40—K to R 3
41—R to Q 6	41—Resigns.

Notes.

(a) A weak move in this opening. Steinitz plays 3..... P to Q 3; other authorities prefer Kt to B 3; and a few of them still adhere to 3..... P to Q R 3.

(b) He might play 4—Kt takes P, Kt takes Kt; 5—P to Q 4; or 4—Kt takes P, B takes P ch.; 5—K takes B.

(c) White would gain a distinct advantage by 6—Kt takes P, &c. [illegible] 7—P to Q 4, B to Q 3; 8—P to B 4.

(d) It would be safer to retreat the B to Kt 3.

(e) A miscalculation. Black would obtain a fair game by 17..... Kt to Kt 3.

(f) There is nothing to be done. If 28..... Kt takes B; 29—B takes Kt, R takes P; 30—Kt takes Kt P, K R moves; 31—B takes P, and wins.

Paris versus St. Petersburgh.

Paris has been victorious in one of the correspondence games; the other had got into a drawish position when the last mail left home.

Game No. 212.

FRENCH DEFENCE.

WHITE. H. W. Trenchard.	BLACK. Dr. Smith.
1—P to K 4	1—P to K 3
2—P to Q 4	2—P to Q 4
3—Kt to Q B 3	3—Kt to K B 3
4—B to K Kt 5	4—B to K 2
5—B takes Kt	5—P takes B (a)
6—P takes P	6—P takes P
7—Q to R 5	7—B to K 3
8—B to Q 3	8—Q to Q 2
9—P to K R 3 (b)	9—Kt to B 3
10—K Kt to K 2	10—Castles Q R
11—P to B 4 (c)	11—Kt to Kt 5
12—Castles Q R	12—Kt takes B ch.
13—R takes Kt	13—P to K B 4
14—Q to B 3	14—K R to Kt sq.
15—Q to B 2	15—R to Kt 3
16—Kt to Q sq.	16—Q to R 5 (d)
17—K to Kt sq.	17—B to Kt 5
18—Kt to K 3	18—P to B 4
19—P to B 3	19—P to B 5
20—R to Q 2	20—B to B sq.
21—P to K Kt 4 (e)	21—Q to Q 2
22—P to Kt 5 (f)	22—P to Kt 4
23—P to K R 4	23—P to Kt 5
24—P to R 5	24—R to Kt sq.
25—P takes P	25—B takes P
26—Kt to B 3	26—Q to Kt 2
27—R to Q B sq.	27—K to Q 2
28—K to R sq.	28—P to K 4
29—R to K 2	29—R to Q R sq.
30—Q to Kt 2	30—B takes Kt
31—R takes B	31—Q to B 2 (g)
32—Kt takes Q P	32—Resigns.

Analysis.

(a) An experiment tried by Burn, and, in a somewhat similar position recommended by Steinitz. On principle it cannot be endorsed. Black, as the defending side, breaks up his King's Pawns in the expectation of getting up a counter attack, should White castle on the King's side. White, however, castles on the other side, as in this game, and Black remains with his weak Pawns, which should fall in the ending.

(b) An unnecessary precaution. 9—K Kt to K 2, B to Kt 5; 10—Q to R 6 is good enough.

(c) 11—P to R 3 would have prevented the exchange of the Bishop, so that White should not remain with two Knights against two Bishops.

(d) Black could succeed with his counter attack if he himself were otherwise secure. At present he has insufficient forces for an assault, and, as the sequel shows, he has soon to retreat.

(e) Mr. Trenchard has spotted the weak point in Black's strategical disposition of his forces, and commences a well-planned attack.

(f) He could even play P to K R 4 at once.

(g) To avoid 32—R, or Kt takes Q B P; but he leaves one other important pawn en prise. If 32..... Q R to Kt sq. then White could, perhaps, sacrifice the Knight in taking the Q P and so win. The game furnishes a good illustration of Black's inferior 5th move. He got a weak double pawn, and lost the game through it.

LATEST TELEGRAMS.

[Reuter "Special" to "Japan Mail."]

London, January 18.

M. Felix Faure has been elected President of the French Republic, in the place of M. Casimir-Perier resigned. The Socialists are fiercely protesting against the result, but Paris is tranquil. A manifesto has been issued by the Duke of Orleans which states that the Republic is merely provisional, and when the country calls upon him he is ready to fulfill his task.

London, January 22.

The Bourgeois members in the House of Representatives [France] have made repeated attempts to form a Coalition Cabinet.

The Italian Chamber has been closed and a dissolution is believed to be imminent.

Fred Barrett, the jockey, is dead.

London, January 24.

Lord Randolph Churchill is dead.

Bourgeois has failed to form a Coalition Cabinet.

Churchill, the Right Hon. Lord Randolph Henry Spencer, M.P., second son of the sixth Duke of Marlborough by his marriage with Lady Frances Anne Emily, eldest daughter of the third Marquis of Londonderry, was born Feb. 13, 1849, and educated at Merton College Oxford. He represented Woodstock from Feb., 1874, until April, 1880, and again from that time [when he was returned with a diminished majority] until Nov. 1885. He then stood for Birmingham but was defeated, and was then returned for South Paddington. From 1874 to 1880 he was almost silent in the House; but from 1880 onwards he made himself conspicuous in the House of Com-

Digitized by Google UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

mons and on public platforms by the violence of his speeches against the Liberal party, and he was the chief member of that small section of the House known as the "Fourth Party." On the accession of Lord Salisbury's Government to office in 1885, Lord Randolph Churchill filled the post of Secretary of State for India; and his promotion to that high place was a proof of the importance that he had assumed in the ranks of the Conservative party. In the country, indeed, he was already regarded as almost if not quite the Tory leader; and it was commonly said that the mantle of Lord Beaconsfield had fallen upon the young, able, irrepressible, unscrupulous, but acute and hardworking chief of the Tory Democracy. Lord Randolph's short tenure of the India Office was marked by the annexation of Upper Burmah. Departmental work, however, did not prevent his taking a great part in the struggle which, at the general election of Nov. 1885, again returned the Liberals to power. He resigned office with Lord Salisbury only to return after six months, not as Secretary for India, but as Chancellor of the Exchequer and Leader of House of Commons. This post he suddenly resigned at Christmas, and since then his political influence has been steadily on the wane. Lord Randolph married, in 1874, Miss Jennie Jerome, of New York, who has since become a prominent member of the Primrose League.—*Men of the Time.*]

["SPECIAL" TELEGRAM TO "JAPAN MAIL."]

London, January 21.

The newspapers state that the United States Minister at Tokyo, acting under instructions from Mr. Gresham, the Secretary of State at Washington, has officially notified the Japanese Government that Mr. Foster's assistance to the Chinese envoys is entirely a matter of private arrangement with which the United States Government has no connection.

Nagasaki, January 21.

The *City of Rio de Janeiro* has been undocked after temporary repairs, owing to the Mitsu Bishi Company being unable to guarantee the occupation of the dock in consequence of their agreement with the Government. The *Rio* will probably proceed to Hongkong on Wednesday to effect her permanent repairs.

(FROM THE "N.-C. DAILY NEWS.")

London, January 11.

Mr. Edmund Robertson, M.P., Civil Lord of the Admiralty, speaking at Dundee, stated that no Liberal Government would hesitate to incur any expense to maintain the naval supremacy of Great Britain.

London, January 12.

The parleying between France and Great Britain on African questions is to be concluded next week, and it is expected that it will result in important advantages to British trade.

The French have bombarded a Hova fort in the neighbourhood of Tamatave. The Hovas retired, having suffered a heavy loss.

A French cruiser has started from the scene of the present operations to occupy Majunga, a town on the northwest coast of Madagascar.

London, January 14.

The French have captured a Hova cruiser and have arrested and expelled five British subjects for crossing the lines at Tamatave. The French troops are said to be suffering from fever.

Major Wissmann has started for the Cameroons.

The King of Ashantee is defiant with regard to the declared suggestion of the Governor of the Gold Coast that another expedition is considered probable.

London, January 15.

The Chinese arriving from Manchuria bring ghastly reports of affairs in those parts. Many of the population are said to have perished and groups of frozen corpses are to be seen. The exhausted state of the country is hindering the movements of the troops on both sides.

A bomb-explosion has taken place in one of the fashionable quarters of Paris, when much damage was done but nobody was hurt.

London, January 16.

The Times correspondent in Paris says that an almost revolutionary temper animates the Radicals and Socialists.

The Newmarket Bench of Magistrates have granted the "Anti-Gambling League" a summons against the Stewards of the Jockey Club.

London, Jan. 17.

The French Press unanimously blames M. Casimir-Périer in the severest terms, accusing him of deserting his Party.

An exultant manifesto by the Socialists states that his base flight from office heralds the downfall of capitalism.

A letter from M. Casimir-Périer was read in the Chambers, when great excitement was displayed, cries being raised of "*Vive le Roi!*"

The election of a successor to M. Casimir-Périer, as President of the French Republic, appears to lie between M. Waldeck-Rousseau and M. Brisson, the latter having been Premier in 1885.

The Italians have surprised and defeated the Abyssinians at Coatit, with heavy loss to the latter.

Mr. W. E. Maxwell, Colonial Secretary of the Straits Settlements, has been appointed Governor of the Gold Coast.

London, January 18.

The state of affairs in Paris is quiet, mainly on account of the Duke of Orleans having gone to Dover, where he will await the course of events.

M. Casimir-Périer's letter has been generally condemned as a feeble production.

(FROM JAPANESE PAPERS.)

Hiroshima, Jan. 25.

H.I.M. the Empress, who lately announced her intention of giving artificial arms and feet to Japanese soldiers who have lost such limbs during the war, is now said to have intimated to the Minister of War her intention of bestowing similiar gifts on the Chinese prisoners brought to Japan.

Mr. Inouye, Secretary of the Foreign Department, who was to proceed to Shimonoseki to receive the Chinese Envoy, will now leave for Kobe in a few days to meet the Envoy there.

Kobe, January 25.

Mr. Foster has abandoned his visit to Kyoto, and Mr. Henderson, his secretary, set out today to visit Kyoto and Nara alone. Mr. Foster sent a lengthy cipher telegram to Shanghai this morning.

Shanghai, January 25.

The Chinese Envoy and party will come to Japan by the *Empress of China*, and proceed to Kobe. The suite comprises over fifty persons.

China's Envoy will arrive in Kobe on the 30th inst. He will have an interview with Mr. Foster there, and then proceed to Hiroshima.

Kobe, Jan. 25.

Mr. Foster intends to proceed to Hiroshima in a day or two before meeting the Chinese Envoy in order, it is said, to be previously informed of the intention of the Japanese Government in regard to the question of peace.

REPORTS.

The American steamer *City of Peking*, Captain Wm. Ward, reports:—Left San Francisco the 3rd January at 4.06 p.m. in strong S.E. gale; crossed meridian on the 12th; good weather until the 17th and 18th, when encountered heavy gale. Arrived at Yokohama the 21st January. Time, 17 days. January 20th at 3 p.m. spoke Japanese fishing junk in distress 250 miles from land made for them, came alongside, and gave them provisions and water.

LATEST COMMERCIAL.

IMPORTS.

The outlook in general is not bad, but there is not much doing at the moment. The "Chinese New Year" interferes with business in the country districts where the old calendar is still observed. Holders will do their best to maintain values, as the further drop in Exchange will increase the lay-down cost of all imported goods from Europe and America.

Brown Manila	4.80 to 4.90
Brown Daitong (New)	3.45 to 3.50
Brown Canton	3.70 to 4.25
White Java and Penang	6.60 to 6.70
White Refined	6.30 to 9.00

EXPORTS.

RAW SILK.

After the large business earlier in the month, the market exhibits a quieter tone and settlements are now comparatively small. Prices, however, are well maintained for choice lots, and holders are satisfied with the present and prospective positions. The English mail (20th) took a large cargo for Europe; the French and German mail steamers are expected to follow suit.

A JOURNAL OF BUSINESS AND FINANCE.

PUBLISHED EVERY WEDNESDAY MORNING,

Annual Subscription, post free, 15s., in the United Kingdom. Ditto, 17s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

Cable Address: Dinero, London.

"MONEY" is a fearless critic and exposer of all shams, frauds, and swindles.

"MONEY" is the Journal for Investors, Speculators and Business men.

"MONEY" is a thoroughly up-to-date Weekly Record of all Financial and Business Matters.

"MONEY" is not subsidized by any financial association, clique, or syndicate, but is absolutely free, independent, and honest.

BALANCE SHEETS of Assurance, Banking, Manufacturing Shipping, Trading, and Trust Companies, are fearlessly and impartially criticised in "MONEY."

THE MONTHLY FOREIGN AND COLONIAL EDITION, called "MONEY AND TRADE," is published on the last Wednesday in each month, and is forwarded direct to the Foreign Agents and Correspondents of all the leading English Merchants, and to all the large Wholesale Buyers and Storekeepers in the Colonies, India, China, Japan, South America, and other countries.

"MONEY AND TRADE" enjoys a very large circulation in all Foreign Markets where English goods are sold; and, as it goes DIRECT INTO THE HANDS OF THE WHOLESALE AND RETAIL BUYERS, it offers unique advantages to advertisers.

SPECIMEN COPIES POST FREE.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In I short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad Breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until in last a tea, spoonful of Ointment was worth a fowl and any quantity of peas and the demand became so great that I was obliged to look up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 21st, 1890.

THAMES ELECTRIC & STEAM LAUNCH Co

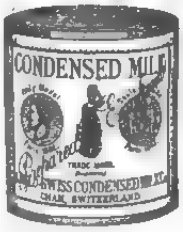
ELECTRIC LAUNCH "GLOW-WORM," 38ft. by 7ft. 3in.

Are prepared to Estimate and Furnish Drawings and Specifications for Launches in Wood, Steel, Delta Metal, or Composite, either with Steam or Electric Power—Speed from 6 to 20 miles per hour; —also Tugs, and Stern Wheelers, which, if required, will be prepared and constructed in Sections.

Launches of specially Light Draught constructed for Shallow Waters.

Electric and Steam Pinnaces for Harbour or Ferry purposes.

Builders of Electric Charging Stations, Floating or Stationary; and makers of all required fittings and equipments.



A selection of Electric Launches always ready for prompt delivery, of which particulars will be forwarded on application to

W. S. SARGEANT, M.I.M.E., Manager.

TWICKENHAM, ENGLAND.

April 23rd, 1893.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

September 8th, 1894.

YOKOHAMA: SATURDAY, FEB. 2ND, 1895.

SUMMARY OF NEWS.

H.I.H. PRINCE KOMATSU has been appointed Chief of the General Staff.

ONE of the oldest foreign residents of Japan, Capt. J. U. Smith, of Nagasaki, is dead.

THE Yokohama Engine and Iron Works has declared an interim dividend of 3 per cent. for the last half-year.

THE funeral of the late Prince Arisugawa Taruhito took place in Tokyo with much solemnity on Tuesday.

THE Houses of the Diet adjourned for the day on Tuesday, as a mark of respect for the late Prince Arisugawa.

THE Japan Cement Co. has made a net profit of *yen* 13,071 during the past half-year. It declares a dividend of 8 per cent.

THE Meiji Life Assurance Company of Tokyo has declared a dividend of 10 per cent., after adding 210,176 *yen* to the reserve.

H.E. CHANG, the Chinese Envoy, arrived at Kobe on Wednesday. He proceeded to Hiroshima the same day, accompanied by Mr. Foster and *suite*.

THE Grand Hotel, Limited, has declared a dividend of 3 per cent. for the half-year, and carried forward a balance of $2,318.14.

THE smallest of the two proposed Yokohama Docks will, it is said, accomodate the largest vessels of the Nippon Yusen Kaisha.

MESSRS. AMENOMORI KIKUTARO and Suzuka Benzaburo have been elected President and Vice-President of the Kyoto City Assembly.

FIFTY-FIVE houses, a school, and several sheds were reduced to ashes by a fire which broke out at Haneda, Ibara-gun, Tokyo, on the 29th ult.

THE Tokyo Woollen Cloth Manufacturing Co. distributed *yen* 14,175 as a dividend for the past half-year at the rate of 9 per cent. per annum.

A FOREIGN sailing vessel, with over two hundred Chinamen on board, was wrecked on the coast of Nodame, Chikaku-gun, Kagoshima Prefecture, on the 6th inst.

THE net profits of the Mitsui Bank during the second half of last year amounted to *yen* 389,349.324. A dividend has been declared at the rate of 8 per cent. per annum.

THE magnificent new steamer of the M.M. Company, the *Ernest Simons*, has been visited by a good many folk since her arrival in Yokohama harbour on Wednesday.

THE funeral of the late Major Sakibara took place in Tokyo on the 27th ult. The bier was escorted by a battalion of infantry. Over six thousand persons attended the ceremony.

THE great war rejoicings at Uyeno Park cost *yen* 12,466.854. The Committee have a balance in hand of over 1,800 *yen*, which they intend to spend upon another rejoicing.

THE value of policies issued by the Imperial Life Insurance Co., reached *yen* 10,375,300,000 at the end of the last year, and the amount of premia paid by insurers *yen* 386,676,612.

THE members of the Yokohama Choral Society are busy practising Hillier's "Song of Victory," and Stanford's "Revenge," for their next Concert, which takes place on Shrove Tuesday.

DON FRANCISCO DEL SOLIVERES, Secretary of the Spanish Legation in Tokyo, has been appointed Minister Resident in Colombia, and his position in Tokyo has been given to Don Carcere y Salamanca.

A SEAMAN named Puckuas pleaded guilty on Tuesday to stabbing an officer on the steamship *Waverley*, while on the high seas, and was sentenced by H.B.M. Judge to nine months' hard labour.

THE Yokohama Amateur Rowing Club has re-elected Mr. J. Rickett as Captain, Mr. F. J. Hall as Secretary, and appointed Mr. E. T. Nicholas, Treasurer, for the ensuing year. The Club has a balance in hand of $1,161.56.

THE war news of the week relates principally to the landing of the third expeditionary force at Yengchang, and the rumoured taking of Weihaiwei; while the Chinese in Manchuria are said to be displaying renewed energy.

THE Tokyo-Gas works have declared a dividend of 14 per cent. for the half-year. The company during the period used 3,397 tons of coal; 33,015,510 cubic feet of gas was made, an increase of 6,762,843 cubic feet as compared with the correspondnig period of the previous year.

REUTER telegraphs:—Lord Rosebery, speaking at Cardiff, has stated that a campaign against the House of Lords is inevitable. An agitation has been started with the object of inducing the Indian Government to legislate with regard to the accommodation of Lascar crews. This has been inspired by the Labour Unionists, whose object is the ousting of Asiatic in favour of European seamen. Ex-Captain Dreyfus, on arriving at La Rochelle on the way to his internment on the island of Ré, was attacked and beaten by sticks by a furious crowd whom his guards were powerless to resist, and he was taken on board the steamer with great difficulty. M. Lobonoff has been appointed Russian Ambassador to Berlin. A rising at Hawaii on the 6th ult. with a view of restoring Queen Liliuokalani has been quelled after two days desultory fighting, in the course of which only slight losses were sustained. Mr. Stephen H. Gatty, Puisne Judge at Singapore, has been appointed Chief Justice at Gibraltar. The Textile Factory Workers' Society have voted a sum of five hundred pounds to the Bimetallic League. This is the first instance of a labour body having subscribed to a public movement. In consequence of a strike and riots in Brooklyn, seven thousand troops have been called out to preserve order, and several conflicts have taken place between the military and the mob. The Greek Ministry has resigned. The President of the Argentine Republic has resigned. A letter written in a resolute tone by Izmirlian, the Armenian Patriarch, informs the Sublime Porte that he intends to send an independent enquirer to Sassun. M. Nicholas Delyannis, son of a former Greek Premier, has formed a Cabinet outside Parliament, during the conduct of the General Election. The betting summons against the Albert Club has been dismissed, but an appeal has been granted. M. Ribot has formed a Cabinet. The Socialists intend to attack M. Ribot in the Chamber forthwith. The Chamber, however, has passed, by a large majority, a vote of confidence in the Government. *The Times* states that it expects great success for the British Dollar in the Far East. The Emperor of Russia, in receiving delegates from all parts of the empire, has declared that he will firmly uphold the autocracy.

THERE is not much to be said about the Import trade, and the slackness in demand which exists at the present time is mainly to be traced to exchange, buyers holding off on account of prevailing rates, which are decidedly against them. Thus Yarns are lifeless, and very little has been done in Shirtings. The call for Fancy Cottons has been small, and Woollens are hardly looked at. The Metal trade is by no means brisk, Bar and Pig Iron being the principal lines taken at late rates, Wire Nails having slightly improved in value. Kerosene is strongly held, and buyers hesitate, especially to dabble in Russia, which has the pull for the time being of American Oil. The Sugar trade has been confined to very small dimensions, and values may be said to be lower for all kinds, with an ample supply. The Raw Silk market is quiet, with not sufficient business to make quotations, but owners, nevertheless, of good parcels seem inclined to hold on to them. At length a movement has been made in Waste Silk, and a heavy business has resulted, the stock having been reduced to 16,000 piculs. For desirable fibre holders are strong, but the present stock includes some very rough parcels. There is nothing to be said about Tea. Exchange remains steady.

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The arrival of the Chinese Peace Mission is naturally the topic of the hour. All our metropolitan contemporaries have something to say about it. A brief *résumé* will suffice to convey their sentiments to our readers. Prudence evidently directs their pens. It may almost be said of the Japanese press that many of its representatives are always in extremes. Sometimes they are so circumspect ■ to suggest that their editors have attained the three score years and ten, when, according to the Japanese proverb, no virtue remains to a man save caution. At other times, their recklessness reminds one of schoolboys. "We may take it for granted," writes the *Nichi Nichi*, "that the Chinese Envoys for Peace are vested with full powers such as those with which Mr. Okubo and Mr. Ito (now Count Ito) were furnished when the former was dispatched to Pekin and the latter to Tientsin some years ago. We believe that we are fully justified in making this statement, since we learn on good authority that the mission was despatched after letters had been exchanged, through the medium of the United States Ministers at Pekin and Tokyo, between the two Governments concerned. What, then, will these Plenipotentiary Envoys propose, and what do our High Commissioners mean to demand from them? Mr. Go, a Secretary in the suite of the Mission, said, in an interview our representative had with him, that the terms of peace may be inferred from the weakness of China, which has been made so apparent in the course of the war. That view, taken by one of the most talented young statesmen of China, as Mr. Go is, may not be shared by the Envoys. But the facts of the war warrant the supposition that the Envoys will meet our Commissioners in a not less conciliatory spirit than their secretary showed to the *Nichi Nichi*'s representative. Under the circumstances, our Commissioners have to lay before the mission such terms as are satisfactory to Japan and acceptable to China. They should, however, bear in mind that they must not propose any terms until they have fully satisfied themselves as to the absence of any desire on the part of the Envoys to terminate the war by an appeal to a Western Power or Powers for mediation, or until the Chinese messengers have sworn to accept whatever reasonable conditions Japan, as the victor, may impose. The nation is to be congratulated if peace can be procured in such a fashion. The Diet will prove itself ignorant of the situation, and, what is of more significance, disrespectful to the Sovereign's Prerogatives as to the declaration of war and the conclusion of peace, should it adopt any inconsiderate measure, such as rumour alleges that it contemplates, in the sense of urging the Government to push on the war, and declaring that the object of the contest is still far from being achieved." The *Yomiuri's* remarks run as follow:—"The present war is not fought for its own sake, or for any partial accomplishment of its object. Any premature termination would be contrary to the interests of the State. To sue for peace is China's business. We need not greatly concern ourselves about it. The Mission just arrived, ill-satisfied as we are with its *personnel*, should be politely welcomed by the Government, as the Envoys are quite different from Detring in many respects. Our High Commissioners, who will be appointed within a few days, should be ever fully responsive to the will of their Sovereign and to the wishes of the nation at large. They should not for a moment forget that diplomacy, by a slight blunder, may undo all that the expeditionary forces have hitherto accomplished.' The *Jiyu* considers it important, before the negotiations are opened, to make China consent to the occupation of Taku and Shanhaikwan by the Japanese troops, and to the withdrawal of her forces to places over 70 miles away from the Japanese positions. The papers representing the six united political parties attach little importance to the Chinese Embassy, and urge the Japanese forces abroad, in terms [illegible] to hasten to seize the gates of Pekin. The *Kokkai* counts it an insult on China's part to send such men as Chang and Shao on so important a mission. Our contemporary is of opinion that the Chinese as yet have been only half chastised. It entirely shares the view of the *Kaishin-to* organs, and other advocates of a strong foreign policy, as to the advisability of the conquering armies hastening toward their final goal. The *Nippon* is apprehensive about the advent of what it calls "troublesome foreign intervention," and, for the purpose of averting anything of the kind, advocates active movements on the part of the Japanese forces in China.

* * *

Speaking of the forces that landed at Yungcheng on the 20th ultimo, the *Nichi Nichi* says it has heard that Li Hung-chang made haste to despatch the Embassy in order to save Weihaiwei and the Northern squadron from destruction. It therefore urges that the expeditionary forces should make all possible haste to capture Weihaiwei and destroy the Peiyang Squadron in conjunction with the Japanese Fleet, arguing that the distruction of the Chinese ships would exercise a material influence on the nature of the treaty to which China may be forced to consent.

* * *

"Japan," writes the *Mainichi*, has been acknowledged by world as a great Power in war. She ought to aim at being recognised, after the war, as a country great in the arts of peace. For that purpose she must enrich herself, and to become rich, she must fight a stout commercial battle and win it. The field of that battle should not be confined to the Orient. The world itself must be the arena. The conclusion of the present war should be so contrived by the Authorities as to strengthen the country's capacity for fighting the mercantile battles that lie before it."

* * *

Alluding to the National Bank affair, as discussed in the Lower House, the *Niroku* writes as follows:—"Theory and practice are hard to reconcile. Men that always advocated liberty and independence in their past careers, have now declined to have the national banks turned into private concerns; that is to say, to have them delivered from Government interference. Men that have always inveighed against the evils of clan supremacy, have now listened to the selfish complaints of the officers of the 15th National Bank."

* * *

The *Jiyu* regrets that the House of Peers has rejected the Bill for amending the Newspaper Regulations. Were the members of the Upper House mere creatures of the clan government, without any ambition more exalted than to remain such, it would not be surprising that they should reject a popular Bill. But it is to be extremely regretted that the Upper House, while doubtless anxious to promote the national interests in its legislative capacity, should have again placed itself in antagonism to the wishes of the people

EDITORIAL NOTES.

THE MINISTER OF FINANCE AND THE BANKS' PROBLEM.

The following is the gist of the speech delivered by the Minister of Finance at the meeting of the Committee for the National Banks' Bill. Two schemes are now on the *tapis*, one being the continuation of National Banks in the capacity of private concerns, and the other the renewal of the charters of the Banks enabling them to carry on their business as hitherto. The point to be decided is which of the two measures is likely to benefit the economic world at large. As is generally known, the initiation of a company or bank a decade or two ago required the special protection of the Government, not only because no capitalist would consent to invest money in any enterprise of the kind unless it were under Government supervision, but also because, unless that were the case, a concern [illegible] to enjoy the confidence of the general public. It was at such a time that most of the National Banks now in existence were started. Since then, however, that state of affairs has undergone such a radical change that there are now about 700 private banks that have been established without receiving any protection from the Government. These outnumber the National Banks from six to seven times, there being only 130 of the latter. All those private concerns carry on an active business without relying in the least upon the Government. It is therefore somewhat inconsistent to hold that Bank Regulations enacted at a time when circumstances were entirely different, should be prolonged for a number of years and the charters of National Banks renewed. It is as if we were to insist on the use of lamps and lanterns when the sun was high in the heavens. The Government deems it unnecessary to renew the charters. As already remarked by a member of the Committee, various contradictory rumours have been circulated about this question. A certain vernacular paper represents the Finance Minister as having said that the Government does not particularly care about having the Re-organization scheme carried through. That, however, is a gross mistake. Twice was the Bill approved by the Emperor and twice introduced to the Diet by the Government. The Finance Minister feels constrained, under the circumstances, to persist more strongly than ever in the scheme. It is absurd to suppose that he, who was himself one of its introducers, is vacillating in his opinion on the subject.

THE STRENGTH OF THE JAPANESE NAVY.

Now that the *Iwami Kan* has been added to the Navy, the total number of Japanese warships is 31. In addition to these, writes the *Nippon*, there are 26 torpedo cruisers. Additions to the Navy to be effected this year are as follow:—A 2nd class cruiser now in process of construction in Yokosuka is to be launched within the 28th fiscal year, as are also the two torpedo cruisers in course of building in the same place. Though not directly connected with the increase of naval strength, the construction of a dockyard in Sasebo, to be finished this year, may be mentioned in this connection. Other warships in process of building are a 3rd class cruiser at Yokosuka; and a 1st class despatch vessel in Kure. The two ironclads of over 10,000 tons each, which are being built by the Armstrong Company for Japan, will most likely be added to the Navy in three years. ■ the Government has asked the Diet's consent to shorten the period of completion by two years. The Diet will doubtless agree to this.

THE HORRORS OF WAR.

War, says the *Daily Telegraph* of Dec. 4, in referring to the war in China, even as conducted by civilised nations, is more than sufficiently horrible, by reason of the appalling sacrifices of human life and all kinds of property which it entails upon those engaged in its prosecution. That the extremest terrors of war have been to some extent mitigated is mainly due to the Red Cross Society and other associations of merciful and self-sacrificing women and men, and to the salutary influence upon public feeling of compulsory education, the humanising effects of which upon Western nations are undeniable. Many years have elapsed, and many battles have been fiercely fought, since any atrocity has come to light so shocking as the wholesale mutilations of the dead lately ascribed to both parties to this pitiless war. Some excuse, perhaps, may be advanced for the sudden outburst of cruel fury that seems to have maddened the Japanese soldery, usually so amenable to discipline, after they had taken possession of the works and town of Port Arthur; for nothing is so eminently calculated to exasperate troops, already incensed by the heat of conflict, as the sight of fallen comrades wilfully and malignantly mangled by dastardly foemen. Such horrors as this irresistibly suggest reprisals to angry men, and we may not forget that but little quarter was accorded to the rebel Sepoys by British soldiers who had looked upon the ghastly results of the [illegible] of English men, women, and chil-

Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

dren carried out at Cawnpore and other Indian stations. There is nothing, however, that has as yet transpired to palliate the atrocities committed by the Chinese, who have proved themselves to be utter savages as well as cowards. They appear, regarded by the light of recent events, to be absolutely devoid of patriotism, of any sense of military honour, and even of the elementary brute courage which is instinctive in the vast majority of human beings, whether civilised or barbaric. They cannot fight to any purpose, although armed with effective modern weapons, ensconced behind stone walls, or occupying virtually impregnable positions; but in the panic of defeat and the confusion of precipitate flight they can be relied upon, seemingly, to torture the living and mutilate the dead. In all probability, these wretches are stoically indifferent to the detestation and loathing with which their paltry cowardice and wanton cruelty are regarded by all civilised peoples, who, however sincerely they may condemn and deplore the ferocious acts of retaliation to which the infuriated Japanese soldiery are said to have committed themselves, can hardly be expected to regret the circumstance that some measure of retribution has been dealt out, and with no sparing hand, to the miscreant garrison of Port Arthur.

RELIGIOUS JAPANESE SOLDIERS.

It appears, according to the vernacular press, that quite a number of the Kumamoto soldiers are most religious in their notions and discipline. Especially so are the officers and privates of the 6th Company of the 23rd Regiment. In 1890 the officers of that Company began to attend the services of Hotta Doryu, officiating priest in a certain temple of Kumamoto, and to study the doctrines of the Zen Sect. When tolerably well initiated in the cult, the officers commenced to impart their religious knowledge to the soldiers under them. The priest admired their zeal and offered, with the aid of another priest, to deliver sermons to the soldiers every Sunday. The religious fervour of the Company spread through the regiment and the number of soldiers that attended the Sunday meetings became so numerous that the Temple was invariably filled to overflowing. The place of meeting was therefore removed to a more commodious building. The officers and soldiers of the 6th company organized a society the aim of which was the cultivation of virtues and self-denial. Last fall the 23rd Regiment was ordered to proceed to the seat of war. Resolved not to return alive unless the object of the war was realized, the officers and men decided to erect in the Temple grounds a *kesshi-hi*, or "monument attesting a resolute intention." This was completed on the 31st of December, and a ceremony was celebrated at which the Rev. Hotta Doryu and his assistants delivered suitable sermons and the men of the Company headed by Captain Okajima, burned incense and bowed before the altar. A feast was then held in front of the monument after which the men gave three cheers for the Emperor, the Army, and their own Company, and then returned to barracks. The regiment left for the war by the mid-night train of that day. Before their departure the officers and men of the 6th Company presented their photographs to the two priests with minute descriptions as to the name, age, native place, and so forth of each man. A letter was also forwarded to the priests in the name of the Society organized by the Company expressing its gratitude for the benefit derived from their kind instruction.

THE PEACE EMBASSY.

Through the intermediation of the United States of America, writes the vernacular press, China communicated to Japan her wish to send a Peace Embassy to this country. As America's action in the matter could not be viewed in the light of interference, but was simply friendly, Japan accepted it as such, and intimated that should China sincerely wish to sue for peace, her course was to despatch a duly accredited Embassy to Head-quarters in Hiroshima where negotiations could be undertaken. It was further intimated that previous to their departure, the names and official ranks of the Envoys should be communicated to Japan. Not only has that been done, but the number of the suite and the date of the Embassy's arrival were duly communicated by China. The Embassy and suite called first at Nagasaki, where they remained 12 hours, and then came to Kobe. There they will be provided by the Japanese Government with a steamer by which they will proceed, together with their Adviser, Mr. Foster, to Ujina. The Japanese Peace Commissioners will be appointed two days after the arrival of the Embassy. The *Kokkai* gives a telegram from Hiroshima stating that Viscount Mutsu, Minister of Foreign Affairs, will be entrusted with the task of meeting and negotiating with the Embassy.

ROMAN CATHOLICISM AS AND AID TO ART.

The *Keisai Zasshi*, in the course of some outspoken remarks about Christianity, says that Buddhism in Japan is destined to be at last ousted by Christianity. It therefore becomes a matter of importance to decide which form of Christianity should be adopted. Our contemporary can see merely a historical difference between Roman Catholicism and Protestantism: their underlying tenets are the same. Putting aside the question of doctrine, the *Keisai* gives its preference to the older form of Christianity simply because it is the more artistic. In Roman Catholicism the fine arts play a conspicuous part, both in the building of churches and in the rites and ceremonies of the faith. The newer Christianity regards these things as of slight consequence, and in many instances disregards them altogether. In Europe, consequently, we find that the nations more predisposed to the influence of the fine arts, the Italians and the French, are centres of the Roman Catholic creed, while the less subtle minded Teutonic races, the English and the North Germans, embrace Protestantism. It is a matter for regret that the historic Buddhist temples of Japan are gradually being destroyed by fire, for they seldom or never rise again to their original splendour. It would be well then, that the religion taking the place of Buddhism in Japan be that lending itself to the greater artistic expression.

"PREACHING IN SINIM; OR, THE GOSPEL TO THE GENTILES."

One would suppose the above to be a rather narrow subject for the theme of a book, but into his seventeen chapters Dr. Du Bose has succeeded in putting a great deal of valuable and interesting matter. The style is simple, terse, and vigorous, at times rising to eloquence. The book is written by a man evidently full of his subject, in the sense of being thoroughly in love with it, as well as of thoroughly understanding it. He is very enthusiastic, but by no means a blind enthusiast: his practical good sense is evident on every page. In some of the earlier chapters he discusses various practical problems of missionary work in a manner full of interest to any one at all connected with these matters, and his occasional mild thrusts at mission methods in Japan will add zest to his pages for his fellow workers in this Empire. The chapter on Literary Preparation and Style of Preaching has value for young missionaries in all Eastern lands. Into the chapters on Natural Theology and The Light of Ethics he has concentrated the practical lessons learned in his twenty-one years of preaching to the people of China. These chapters are literally packed with seed-thoughts, hints and suggestions of how to reach the heart and conscience of people absolutely unacquainted with the Christian doctrine and severely satisfied with themselves and their own religion. Presumably that is the aim of all missionaries, and therefore these chapters will furnish food for much reflection. The remaining chapters, while not so valuable, are more or less of the same character.

JAPANESE CAVALRY.

The *Mainichi* has lately been discussing the question of the Cavalry of Japan, and gives some interesting information about the arm of the service. A Division of the Army, it says, is composed of the following:—12 battalions of Infantry (one battalion=4 companies of 200 men each); 3 battalions of Artillery (6 companies); one battalion of Cavalry (3 troops of about 120 troopers each); one battalion of Engineers (2 companies). Thus in a Japanese *corps d'armée* there are only 240 troopers; a very insignificant body when compared with the position held by the Cavalry in the German army. Under these circumstances, the Cavalry is not used by the Japanese Commanders on services of assault, pursuit, and other duties connected with actual fighting operations: they employ it almost entirely for purposes of reconnaisance. The only instance in the present war in which the Cavalry formed a part in the regular plan of fighting, was at the battle of Phoyng yang, when the main column under Lieut.-General Nozu engaged the fleeing Chinese cavalry. One of the principal reasons for the small numbers of the Japanese Cavalry is the old-style fashion of fighting in Japan, which had few movements necessitating the use of horse soldiers. Then again, Cavalry costs twice as much as the Infantry to maintain, there being a horse as well as a man to accoutre and keep. By an Imperial ordinance issued in the 23rd year of *Meiji* (1890) it was provided that a battalion of Cavalry consisting of three troops, should be established in each Division. But this provision has not been carried into effect owing to the great cost it would entail. To remedy the deficiency in the nation's defensive forces, the Government asked the consent of the Diet, in the present session, to an additional grant of money to be devoted solely to this one purpose. The Diet granted the appropriation, and the additional Cavalry will be raised during the 27th, 28th, and 29th fiscal years of *Meiji*. The money granted will provide for 360 troopers, but this is far from being a satisfactory increase. The Japanese Cavalry should be raised to the strength of one regiment to each Division.

KOREAN TALES.

Tragical to the last degree were the fates of many who joined Kim Ok-kyün and Boku Yeiko in their abortive attempts to reform the administrative government of Korea ten years ago. The little Kingdom was then completely in the toils of the oppressive Mings, and their faction. When Kim and Boku and many of their prominent followers fled the Kingdom, the families left behind were arrested, flung into prison, tortured, and, in many cases, all put to death. Most of the rebels who escaped came to Japan, where they found hospitable shelter and safety. Communication with members of their families who, having escaped the vigilance of the Korean detectives, were still living the peninsula, was impossible; and so on both sides of the Sea of Japan were fears entertained of the death or imprisonment of some loved one who had fortunately escaped both. The events of the last six months have led to many joyful reunions, for now the one-time hunted rebels can return to Korea without let or hindrance, after some ten years of wandering in foreign lands. The present Minister of War is a case in point. He had fled to Japan with Kim and Boku, but afterwards proceeded to America. There he was fortunate enough to obtain a clerk-ship in the War Department of the United States Government, and for ten years he was a resident of the States. All this time he was in utter ignorance of the whereabout of his wife, and she on her part was entirely without news of him. Now they are living happily together again, all the years of parting and sadness put behind. A sad story is that of Boku Yeiko's wife. On the failure of their schemes of reform, she fled from Sôul with a baby of a month old at her breast. Her steps were directed toward the mountains in which the Sôul river has its source. But the fear of being captured and put to an ignominious death gradually overcame her resolution, and she resolved to put an end to her life and thus join her husband in the other world—for [illegible] and

Digitized by Google UNIVERSITY OF ILLINOIS URBANA-CHAMPAIGN

killed. She could not, however, bring herself to kill her baby. A farm-house happened to be in sight, and she hastened to it, and left her baby, warmly wrapped up, upon the doorstep. Then she went to the river and breaking the thin ice which had formed on the surface of the water, cast herself into the water, and was drowned. During the night the inmates of the farmhouse, hearing a baby's piteous cries, searched outside the building and found a female infant lying in their doorway. It was clad in garments of rich texture. From marks upon the clothing the peasants discovered the paternity of the child, and notwithstanding their poverty they determined to rear it. Upon Boku's return to Korea last year, the farmer took the child, now a maiden of ten, to the capital, and gaining admittance to Boku's presence, related the tale of the foundling. Boku was overjoyed at the discovery of his daughter, but his gladness was marred by hearing of the death of his wife. It is said that the wife and daughter of the late Kim Ok-kyün are staying in Boku's house.

THE TONKIN PIRATES.

L'Extreme Orient states that the French troops encountered a band of pirates on the 11th ult., at Tu-long, on the Red River. After a desperate resistance by the pirates the position was taken, but the French contingent had four Europeans killed and ten wounded and five natives killed and thirteen wounded. Amongst the wounded were Commander Gouttenegrie, commanding the Laokay column, who was shot in both legs; Lieut. Bollardiere, of the Marine Infantry, who had the misfortune to be wounded four months ago; and Capt. Pironneau, of the Foreign Legion, who was shot in the chest. Lieut. Bollardiere was seriously wounded that it was impossible to move him to the Hospital in the rear. As will be seen, says our contemporary, the pacification of this Colony, which M. de Lanessan had reported to be complete, is not yet *un fait accompli*.

THE EMPRESS DOWAGER OF CHINA.

A STRANGE story is to told by the *Mainichi* of the Empress Dowager of China. Though now the most influential woman in China—so influential that it was intended to celebrate the 60th anniversary of her birthday at a cost of 25 million *taels*—she is the daughter of parents so poor, that, about fifty years ago, they were obliged to sell her for a slave. This is no fiction, avers the *Mainichi*, as the following facts will show. In 1849 there lived in a suburb of Canton a poor couple who had one son and one daughter, the former 14 and the latter seven years of age. Times went hardly with the family, till finally the daughter, who was remarkably intelligent and very pretty, offered to relieve her parents' distress by selling herself as a slave. It was a bitter thing to do, but no choice was left, and so with tears and heartwrung anguish the wretched parents handed their daughter over to a slave-dealer. Her attractive appearance soon drew notice, and a military officer of high rank finally obtained her at a moderate figure. He took her to his house, and as their acquaintance ripened, the General discovered that his slave-girl possessed sterling qualities of heart and mind rarely to be found in Chinese women of her class. He became so attached to her at last that he adopted her as his own daughter, and thenceforth her fortune was made. On being appointed to fill a high position in Pekin, the General took his adopted daughter with him. He rapidly gained the esteem of the Emperor, and then sought about for a suitable present to make his Imperial master as a token of his gratitude. He determined at last to offer his adopted daughter for service in the Palace as a maid-of-honour. The Emperor became fascinated by the extreme charm of the young maiden, and little by little she rose in his favour, until at last the erst-while Canton slave-girl became the legitimate wife of the ruler of [illegible] of China. The first thing she did upon being exalted to the lofty station was to send a messenger to Canton to search for her parents and brother. The house of her childhood was found to be in ruins, while her father and mother had long since died; the brother was eking out a bare existence as a coolie. Imagination cannot describe the surprise of the poor fellow when the news of his sister's advancement was conveyed to him. The rest of his life has been spent in the Court at Pekin. It will be remembered that when the late Emperor of China died, the Empress Dowager was made Regent of China until the present Emperor—who was then seven years old—came of age; but she did not shrink from the immense labours involved in governing so vast an Empire. It is only quite recently that she handed over the supreme power to the Emperor of China.

SUSPENSION OF THE "KOKUMIN NO TOMO."

THE *Kokumin-no-tomo* has been placed under the ban of suspension for publishing an article considered prejudicial to the maintenance of public peace. It advised the House of Representatives to tender an address to the Throne in connection with China's appeal for peace. The article was permeated with an unfriendly spirit towards the Cabinet and was, at the same time, somewhat inflammatory in tone. It observed that a crisis of the Japan-China trouble is now impending, ■ the matter is being transferred from the hands of the greatly trusted Army to those of the Cabinet, and urged to Diet to be on the alert. The people, not the Ito Cabinet, declared war against China, and it was therefore right that peace being now on the *tapis*, the people should express their opinions about the matter. This was all the more important considering how little the Diet had been accustomed to place confidence in the foreign policy of the present Ministry. The House should therefore decide, first, whether the time for peace negotiations has really come, and, secondly, what conditions on those two points should be embodied in an Address to be submitted for the perusal of the Emperor before the arrival of the Peace Embassy.

SUDDEN DEATH ON THE "NURNBERG."

AT Kobe on Thursday afternoon a sudden death occurred on the steamer *Nürnberg*. A man named Frederic Dupres, an A.B. belonging to the *Metapedia* (the vessel recently sold to the Japanese), went on board the steamer in the afternoon, passage to England having been taken for him and other members of the former crew of the *Metapedia*. Shortly after getting on board he complained of feeling faint and ill, and it being evident that he was in great pain, Dr. Miller was summoned, and at once ordered the removal of the man to the hospital, where he died an hour or two afterwards. He is believed to have been suffering from heart disease.

THE NATIONAL BANKS.

YESTERDAY the House of Representatives rejected the Government's Bill for the re-organization of the National Banks, a problem that occupies a large share of Japanese public attention. We hold over our report of the debate, in order to give it more clearly than we could do did we rely solely on the greatly abbreviated stenographic reports available on the evening of the session.

THE H. AND S. BANK DIVIDEND.

SUBJECT to audit, the Directors of the Hongkong and Shanghai Banking Corporation propose to pay a Dividend of £1 5s. per share, place $500,000 to credit of Reserve Fund, to write $100,000 off Property account, and carry forward about $130,000 to next half-year.

NEW P. AND O. STEAMER.

MESSRS. CAIRD and Co. launched on the 13th December from their yard at Greenock a new passenger and cargo steamer for the Peninsular and Oriental Company named the *Nubia*. This vessel, besides having accommodation for 80 first and 60 second saloon passengers, will carry a large cargo. She is 430 ft. long and 48 ft. broad, and her registered tonnage 5,700. She is one of three sister ships which Messrs. Caird are building for the Company, the first of which, the *Nimla*, was to leave London for Calcutta on the 4th January.

PRESS CENSORSHIP AND THE PLAY.

The *Kokumin-no-tomo* has a sensible article by Mr. Fukuchi against the conduct of Press Censors in connection with plays. Whenever a theatrical performance is to be held, the manager is obliged to submit the play on paper for the inspection of the Press Censors, whether it be old or new, and they, after reading it through, decide whether its representation may be allowed or not. In Tokyo the censorship is undertaken by the Metropolitan Police. Many are the plays returned with objections to their being performed. Mr. Fukuchi is exceedingly desirous to know what standard is kept in view by the Censors when making their decision. He gives us his opinions on the subject at some length. The enforcement of a special standard, says he, necessarily offers serious obstacles to the active development of the drama, reducing it to a mere conventionality. Mr. Fukuchi feels this restraint particularly when he intends to write a comedy, being always prevented from giving full scope to his ideas. He considers that all that the Censors should aim at is the maintenance of public peace and morality. Another great drawback to dramatists is the injunction that no play relating to the Court may be represented on the stage. Mr. Fukuchi has himself experienced great inconvenience in this respect. A few years ago, in compliance with the request of a certain gentleman, he wrote a play about the murder of Iruka by Prince Nakanooye, afterwards Emperor Tenchi. It was intended that the piece should be acted at a charity performance to be given in aid of the Red Cross Society. When the manuscript was formally submitted to the Censors, however, it failed to obtain their sanction. A few weeks after, the author met one of the Censors and asked him why the representation of anything relating to the Court is forbidden. The reply was that the precedent of Germany was being followed. The author adduced the case of England where all such matters are left entirely free, but the officer adhered obstinately to his former assertion. Mr. Fukuchi thinks that such a point ought to be determined according to the nationality of a country. In many countries of Europe restaint on stage performances may be necessary, but it is not so in Japan. The representation of matters connected with the Court of olden times would serve only to awaken the loyalty of the people. Though due perhaps to the relative insignificance of the Court in the days when the military was everything in Japan, many plays were written at that time about the Emperor and Court by celebrated dramatists, as Chikamatsu Monzaemon, Takeda Izumo, or Ki Haion, such matters being left in those days without supervision. Far from impairing the dignity of the Court, those plays tended to deepen the sentiment of loyalty in the country. The Censors are very inconsistent in their decisions. Although most of the pieces just mentioned may not now be publicly recited or represented, not a few are performed on the stage with the consent of the inspectors. A point that strikes an outsider considerably is the great difference between the rigidity of control over the *No* performance and that exercised over ordinary plays. Quite a number of *No* pieces are directly connected with the Court, and yet they are not forbidden. Mr. Fukuchi is extremely solicitous for all such checks to be removed and for more freedom to be given to the writers of dramas. There are many subjects pertaining to the Emperor and the Court, which, dramatized by great authors, would not fail to stimulate the loyalty of the people.

IMPERIAL DIET.

FRIDAY, JANUARY 25TH.

HOUSE OF PEERS.

The House met at 11.10 a.m., the Order of the Day being :—

1.—Application for Leave of Absence.
2.—Report of Prince Tokugawa Iyesato, Chairman of the Petitions Committee.
3.—Bill relating to Joint Stock Railway Companies; sent up from the Lower House.
4.—Bill for rescinding Law No. 7, of the 23rd year of *Meiji*; sent up from the Lower House.
5.—Bill for rescinding Notification No. 2 of the 18th year of *Meiji*; sent up from the Lower House.
6.—Bill for amending a part of Code of Civil Procedure; sent up from the Lower House.
7.—Petition relating to the Control of Pawnbrokers.
8.—Petition relating to the Shonai River.
9.—Petition relating to Agricultural Experimental Stations.
10.—Petition relating to Railways in Hokkaido.
11.—Petition relating to Okinawa Prefecture.

The President announced the death of H.I.H. Prince Arisugawa, and asked the House to approve a brief message of profound condolence which he read. The House agreed.

The President consulted the House as to the advisability of rising for the day, in token of the reverential sorrow felt by the members for the death of a Prince whose services to the State had been so conspicuously meritorious.

The House agreed.

The President further announced that the obsequies would take place on the 29th instant, and that as it would be the wish of the House to attend in a body, the sitting on that day also would be suspended.

The House rose at 11.15 a.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.15 p.m., the Order of the Day being :—

1.—Bill for taxing the Bank of Japan.
2.—Bill for amending the Bank of Japan Regulations.
3.—Bill relating to the Election of Members of Prefectural Assemblies and of the Diet.
4.—Bill for amending the Brewery Tax Regulations.
5.—Bill for amending the Postal Regulations.

The first Bill, having been discussed on the preceding day, was entrusted to a Special Committee nominated by the President.

Mr. Taketomi Tokitoshi moved that the Order of the Day be changed for the purpose of introducing a Supplementary Estimate presented by the Government. The House agreed.

Mr. Taketomi said that the estimate referred to a most lamentable circumstance, the decease of His Imperial Highness Prince Arisugawa. It was scarcely necessary to refer to the eminently meritorious services rendered by the late Prince. In the days preceding the Restoration, when the great mass of the people were completely subservient to the Tokugawa rule, he appreciated the national necessity of restoring the Imperial Administration, and employing the high talents with which he was endowed, succeeded in achieving that great purpose. Then, as Commander-in-chief of the Imperial forces, he had reduced Kwanto to complete order and subjection, and subsequently applying himself to State reform, had contributed materially to the progress of which the country now enjoyed the fruits. He had in truth been distinguished not less by civil than by military capacity. Various posts had been filled by him with distinction. He had served as Governor of Fukuoka Prefecture; then as a Senator; then as President of the Senate, displaying in every case admirable talent and judgment. In 1877, as Commander-in-Chief of the country's troops, he had quelled the Satsuma rebellion, and afterwards, being appointed to the important post of Chief of the Staff, his counsels and experience had been of the greatest value in the prosecution of the war now being waged. The successive and uninterrupted victories achieved by the Japanese arms were, of course, due in the first place to the Sovereign's virtues, but the eminent services of the deceased Prince must have contributed not a little to the result. It was a subject of the deepest grief and pain to the 40 millions of Japanese people that death had removed His Imperial Highness at the moment when the armies of his country, having penetrated far into the enemy's territory, were on the point of marching against Pekin itself. That a State funeral should be given to His Imperial Highness would undoubtedly be the wish of the whole nation, and the House would assuredly vote the necessary expenses without a dissentient voice.

The appropriation sought, amounting to 20,000 *yen*, was granted at once.

Mr. Ishida Kanosuke introduced the Second Bill, providing that, after paying a dividend to the shareholders, from $\frac{1}{10}$th to $\frac{3}{10}$th of the remaining profits should be devoted to increasing the Reserve Fund and equalizing dividends. This differed from the method now in practice, in that it contemplated a superior instead of an inferior limit in making appropriations for the Reserve Fund.

Mr. Tajiri, Government Delegate, opposed the Bill. It was a corollary to the preceding Bill for taxing the Bank of Japan, which measure the Government considered premature.

In answer to questions, Mr. Tajiri explained that the sum allotted to the Bank of Japan for handling the public funds had been 550,000 *yen* in the 23rd fiscal year, and would be 450,000 in the present year. Such payments would continue until the 30th year, when it was in contemplation to abolish them.

The Bill was entrusted to the previous Committee.

Mr. Kokure Budayu introduced the next Bill. Under the present system, the voting for members of Prefectural assemblies took place at District Offices, with the result that a large number of voters were brought together at one place, disturbances and inconvenience often resulting. The Bill proposed to extend to the election of members of Local Assemblies the system obtaining in the case of members of the Diet, namely, the use of Divisional offices for voting purposes.

Mr. Kusakari opposed the Bill in view of the fact that a measure dealing radically with the question of elections was already in the hands of a Special Committee, and until its fate had been decided, the House need not consider such a minor detail as that touched upon by this Bill.

The House refused to entrust the Bill to a Special Committee, and, after a brief discussion, threw out the Bill.

Mr. Kajima Kahei introduced the next Bill. Its object was to consult the convenience of brewers by altering the periods of paying the Brewery Tax.

Mr. Megata, Government Delegate, saw no reason for altering the present system.

The Bill was entrusted to a Special Committee.

Mr. Hirose Sadamaru introduced the next Bill. Its object was to reduce the postage upon agricultural seeds send by post, from two *sen* per 30 *momme*, the present rate, to one *sen*.

Mr. Suzuki, Government Delegate, while approving the principle of the Bill, drew attention to the fact that its details required careful drafting on account of its bearing upon other matters.

The Bill was entrusted to a Special Committee.

The House rose at 2.25 p.m.

SATURDAY, 26TH JANUARY.

HOUSE OF PEERS.

The House met at 10.45 a.m. the Order of the Day being :—

1.—Application for Leave of Absence.
2.—Report of Prince Tokugawa Iyesato, Chairman of the Petitions Committee.
3.—Resolution relating to time for examining and reporting upon the Budget.
4.—Bill relating to Joint Stock Railway Companies; sent up from the Lower House.
5.—Bill for rescinding Law No. 7, of the 23rd year of *Meiji*; sent up from the Lower House.
6.—Bill for rescinding Notification No. 2, of the 18th year of *Meiji*; sent up from the Lower House.
7.—Bill for amending a part of the Code of the Civil Procedure; sent up from the Lower House.
8.—Petition relating to the Control of Pawnbrokers.
9.—Petition relating to the Shonai River.
10.—Petition relating to Agricultural Experimental Stations.
11.—Petition relating to Railways in Hokkaido.
12.—Petition relating to Okinawa Prefecture.

The President announced that, as the House's Representative, he had proceeded to the Palace of Prince Arisugawa on the preceding day, and presented the House's condolence. He had been received by H.I.H. Prince Arisugawa Taruhito, who begged him to express his sincere appreciation of the House's action, and to convey his thanks to the members.

The House then proceeded to consider, as an urgency measure, the supplementary Budget providing funds for the late Prince Arisugawa's public funeral.

Viscount Soga paid an eloquent tribute to the virtues and ability of the deceased Prince, and called upon the House to vote the necessary appropriation without question.

The House voted the Budget unanimously.

On the motion of Viscount Soga, the House agreed that the Budget Committee be instructed to present its Report within 15 days.

Prince Tokugawa, on behalf of the Petitions Committee, reported that the Committee had examined 132 petitions, and had selected 26 for submission to the House, rejecting the rest.

With regard to the first Bill on the Order, the Government Delegate explained that the Government had no objection to the proposal that Joint Stock Railway Companies be allowed to commence operations so soon as one-tenth of the face-value of their shares was paid up, instead of one-fourth, as fixed by the existing law, the Bill was handed to a Special Committee nominated by the President.

The Government Delegate, in answer to questions, said that the Government neither offered any special objection nor expressed definite approval of the next Bill, namely, that for rescinding the law that required a deposit of 20 *yen* from persons desiring to appeal in case of major crime. So far as concerned the principle of bringing the privilege of appeal within reach of all, the Government agreed, though, in point of fact, the law now in force placed no real obstacle in the path of impecunious defendants, since the Courts had power to dispense with any payment should the circumstances seem to demand such a concession. But the House must note that the tendency of the Bill would be to increase litigation, and to increase, also, the number of persons held in prison pending the final settlement of their cases. That, however, was not a consideration that ought to have much importance as compared with the rights of the subject.

In answer to a question from Mr. Mitsukuri, the Delegate said that the last returns showed the number of persons held for major crimes to be 3,129 annually, and those held for minor crimes, 78,107. Assuming that ½ of the former and ¼ of the latter appealed, in consequence of the proposed change, and that they had to be detained 45 days longer at a cost of 20 *sen* daily, the difference in expenditure would be over half a million *yen* annually. Probably, however, that was an over-estimate. The extra cost might not be more than 180,000 or 190,000 *yen*.

The Bill was entrusted to a Special Committee nominated by the President, to which was handed the next Bill also, without question or debate.

In answer to Mr. Mitsukuri, the Government Delegate said that the Government did not oppose the next Bill, and it was handed to the preceding Committee.

The five Petitions standing next on the Order were adopted for presentation to the Government, without debate.

The House rose at 12.20 p.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.15 p.m., the Order of the Day being :—

1.—Measure relating to the Reserves for the 26th year of *Meiji*.
2.—Bill relating to the Office Expenditures of the Department of Home Affairs and the outlay connected with the repairs of the Chikugo River.
3.—Second Reading of the Game Law Bill.
4.—Bill relating to ineffective Ballots; Second Reading.
5.—Bill for amending the Regulations relating to Dealers in Second Hand Articles.
6.—Second Reading of the Bill for amending Law No. 102 of the 23rd year of *Meiji*.
7.—Bill relating to relief of Soldiers' Families.

Mr. Saito Ryosuke presented a Question with reference to State Forests.

Mr. Yoshimoto Yeiji asked whether the first Measure on the Order had not been presented to the House and rejected last session. The President replied in the negative, explaining that the Measure had been re-entrusted to the Committee, and before the latter could prepare its second report, the House had been dissolved.

The Measure was handed to a Special Committee nominated by the President, as was also the next Bill on the Order.

Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

Mr. Komatsu Sansei, on behalf of the Special Committee, reported in favour of the Game Law Bill, with some slight amendments.

The House voted for the Second Reading, but refused to proceed with it at once.

The next Bill was withdrawn by its introducer.

Mr. Tsunoda Shimpei, on behalf of the Special Committee, reported in favour of the Bill for amending the Dealers in Second Hand Articles Regulations, with a few amendments.

The House voted for the Second Reading, and decided to proceed with it at once.

The various articles were voted, for the most part, as amended by the Committee, and the Third Reading was passed at once.

Mr. Shigeoka Kungoro, on behalf of the Special Committee, reported in favour of the next Bill, and carried it through all its Readings as amended by the Committee.

The last Bill was entrusted to a Special Committee, and

The House rose at 4.25 p.m.

MONDAY, JANUARY 28TH.

HOUSE OF PEERS.

The House met at 10.45 a.m., the Order of the Day being :—

1.—Report of the Petitions Committee.
2.—Bill for amending Law No. 84.
3.—Bill for abolishing the Special System of City Government in the Three Cities.
4.—Supplementary City Government Bill.
5.—Bill containing a Project of Press Law.
6.—Bill relating to Inspection of Silk-worm's Eggs.
7.—Petitions.

Prince Tokugawa, on behalf of the Petitions Committee, reported that the Committee recommended the adoption of four petitions for presentation to the Government, namely a petition relating to restoration of ranks and incomes ; a petition relating to a charity hospital ; a petition relating to the tobacco tax in Okinawa Prefecture, and a petition relating to lighthouses.

Viscount Soga, on behalf of the Special Committee, reported that the Committee unanimously recommended the rejection of the first Bill, namely, that for reducing the penalty imposable for violations of administrative regulations. The Lower House had passed this Bill on the ground that such penalties were unconstitutional. But if a fine of 200 *yen* was unconstitutional, so also was a fine of 50 *yen*. The Lower House's amendments, while based on the constitutional question, did not touch that question at all. Further, the Committee had been assured by the Government Delegate that the proposed reduction of penalties would impair the efficient enforcement of administrative regulations.

Viscount Tani was astonished at the Committee's report. There were limits to the degrees of punishment that might properly be connected with the enforcement of administrative measures, and he failed to discover any precedent in any country for penalties so severe as those enacted by the Law to which the Bill took exception.

The House voted against carrying the Bill to a Second Reading.

Viscount Tani, on behalf of the Special Committee, reported in favour of the proposed Press Law, with various minor amendments. As to the Article depriving the Minister of State for Home Affairs of power to suspend or prohibit a journal should its writings appear calculated to injure public peace or good morals, the majority of the Committee were in favour of preserving the article, with the added provision that the reason of the suspension must be declared.

After some questions, Viscount Tani, on behalf of the minority of the Special Committee, reported in favour of the Bill as sent up from the Lower House, in so far as regarded abolishing the power of the Executive to suspend or prohibit a journal. He spoke at great length, contending that the time was long past for such legislation, and that the opinion of the nation was opposed to it. The supporters of the Law as it stood contended that suspension was rather a preventive than a punitive measure, but such a contention carried its own refutation, for how could it be called civilized or constitutional to give an official power to stop a man's legitimate business because in his (the official's) judgment the method of conducting it might prove improper, or to punish for an offence not yet committed? It was impossible to justify the measure on any ground, and the fact that it led to all kinds of injustices and abuses was universally acknowledged.

Viscount Okabe supported the report of the majority of the Committee. The House ought to abide by the press law that it had passed in the 4th session. He contended that, in the present stage of Japanese journalistic development, the power of suspension was essential to the proper control of newspapers.

Mr. Kato Hiroyuki argued that neither the Lower House's Bill nor the present Law was proper : both were extreme measures. A middle course must be adopted, and it would doubtless be found in a consultation of Managers appointed by the two Houses.

Mr. Hirata Tosuke denied that the principles of constitutionalism were violated by investing an executive official with the power of suspension. It was equally true that the exercise of every right must be limited by the principle of non-interference with the rights of others. Newspapers could not be suffered to write anything they pleased without consideration for the interests of public peace. That was an extravagant notion. The power of the press was immense, and its employment must be surrounded by proper safeguards in the interests of society. As for the contention that the use of suspension as a preventive measure was, in effect, coercion with reference to an offence supposed to be in contemplation by the person coerced, it was a mere playing with terms. Human judgment was not infallible, but human judgment could generally tell with tolerable accuracy how far any particular kind of inflammatory writing tended to become mischievous. He maintained that the power of suspension should be preserved, but that it ought to be exercised under two provisions ; first, that the reason of the suspension must be clearly announced, and secondly, that the period must be fixed.

Viscount Soga supported the Minority of the Committee, his principal arguments being that the Japanese people were essentially loyal and law-abiding, and that they should be suffered to freely express opinions always dictated by patriotism and public spirit.

Mr. Matsuoka Koki supported the existing Law.

The closure was put and carried, and the House voted for the Second Reading of the Bill, and proceeded with it at once.

With reference to the Suspension Article, a closed ballot was taken, when 102 voted with the Majority of the Committee and 87 against, the power of suspension being thus retained, as amended by the Committee. The other articles were passed as recommended by the Committee, and the Bill was carried through its Third Reading at once.

Count Kiyosu, on behalf of the Special Committee, reported, with reference to the next Bill, that the Government having indicated, last session, its intention of introducing a Bill to improve the system of City Government, the Committee had inquired why the Bill was not forthcoming, and had been informed that owing to the Treaty Revision negotiations now in progress, it was considered better to defer the question for the moment. The Committee did not approve of the present special system for the Three Cities, but could not recommend its abolition until there was something to replace it. Hence it advised the rejection of the Bill.

The House voted against the Second Reading of the Bill, and also against that of the next Bill being correlated.

The House rose at 4.40 p.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.15 p.m. the Order of the Day being :—

1.—Bill relating to the Disposal of the National Banks on the Termination of their Charters.
2.—Bill relating to the Note Issues of the National Banks.
3.—Bill for Supplementing Law No. 25 of the 23rd year of *Meiji*.
4.—Bill for amending the National Bank Regulations.

The President announced that in view of the importance of the National Bank problem he had eliminated all other business from the Order of the Day. The Chairman of the Special Committee would report the view taken by the majority of the Committee, after which a minority report would be submitted, and the Government Delegate had announced his intention of subsequently addressing the House. A great many members also had sent in their names as desiring to speak, and it was to be hoped that wide limits of discussion would be allowed before the closure was moved.

Mr. Kawashima Jun, on behalf of the Special Committee, reported that the Committee had examined the three Government correlated Bills and the Bill sent in by members of the House. The labours of the Committee had been delayed by the fact that the Budget Committee was in session at the same time, and neither the attendance of the Government Delegates nor the services of the stenographers could be secured. Finally, however, after an exhaustive discussion, the Committee, by a narrow majority of 9 votes to 8, had decided to recommend the adoption of the Government Bills providing for the continuance of the Banks as private institutions, and the rejection of the Bill presented by certain members providing for the continuance of the Banks on their present footing.

BILL RELATING TO THE DISPOSAL OF NATIONAL BANKS WHOSE CHARTERS HAVE EXPIRED.

Art. I.—A National Bank which, after the expiration of its charter, intends to continue business in the capacity of a private bank, in accordance with Art. XII. of the National Banks Regulations, must prepare a resolution as to the continuation of its business and the amendment of its bye laws, six months in advance, counted from the day on which the charter is to expire, and must apply to the Minister of State for Finance for permission to continue its business, submitting at the same time a copy of its amended bye-laws.

Art. II.—A National Bank of the kind mentioned above that intends to continue business on a reduced capital, must apply, in accordance with the process mentioned in the preceding article, for permission to continue its business, after having complied with the procedure specified in Arts. XLII., XLIII., and XLIV. of the National Banks Regulations. Provided that the restrictions mentioned in Art. XVII. of the same Regulations need not be adhered to.

Art. III.—Resolutions in connexion with the continuation of business and the amendment of bye-laws should be of the form specified in Art. LXIX. of the National Banks Regulations.

Art. IV.—As to the process of winding up the business of a National Bank that does not intend to continue its business on the expiration of its term, the provisions of the Commercial Code relating to the dissolution of a joint stock company and to the settlement of its accounts must be adhered to.

BILL RELATING TO THE NOTE ISSUES OF THE NATIONAL BANK NOTES AND THE PERIOD OF THEIR REDEMPTION.

Art. I.—The period of circulation of National Bank Notes shall end on the 9th of December of the 32nd year of *Meiji* (1899).

Art. II.—Any person possessing a National Bank Note must apply to the Government for its exchange within the period of full five years, computed from the next day after that mentioned in the preceding Article.

Art. III.—The present Law shall not be applicable to notes issued by a National Bank that has been closed by harmonious arrangement, or that is under special control by the Government.

Mr. Motoda Hajime, on behalf of the minority of the Special Committee, reported in favour of the Bill presented by certain members, providing that, at the expiration of the terms of their charters, any Banks desiring to continue on their present basis should be allowed to do so for seven years, and any Banks desiring to reorganise as private institutions, should be free to do so. He spoke at great length, the gist of his argument being that, in the first place, to give the Banks the option of taking whichever course suited their business convenience was only proper and fair ; in the second, the Government was virtually pledged by its own laws not to dictate any hard and fast terms on the expiration of the charters ; in the third, to compel the Banks either to close their doors or become private institutions was contrary to the economical ex-

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

pediency of the time; and in the fourth, the occasion was ill chosen for a measure of the nature introduced by the Government. It must be obvious to everyone that the vested interests of the Banks' shareholders were entitled to consideration, and that to dictate to them a course leaving no option was unjustifiable and contrary to the theory of tradal liberty. As to the laws, the Regulations of the 6th of *Meiji*, under which the Banks were established, did not contain any provision relating to their fate on the expiration of the twenty years' charter, and the absence of such provision was in itself a constructive indication that there was then no idea of not renewing the charters. Farther, in the amended Regulations of the 9th year of *Meiji*, it was distinctly provided that the charters might be renewed at the end of twenty years, and although, in the 16th year of *Meiji*, another amendment was made, virtually interdicting the renewal of the charters, there existed no manner of doubt as to the reason of the amendment. It was dictated by the disordered state of the fiat currency. The Government believed that its measures for redemption would be completed by the end of the twenty years, and that the note-issuing power of the Banks might then terminate. But the redemption of the Banks' notes was not yet complete, and consequently the spirit of the amendment not being satisfied, its provisions should become inoperative. The economical aspect of the question would be better explained by Mr. Nakano Buyei than he, the speaker, could hope to explain it, but as to the third point, namely, the suitability of the time, he need only remind them of the great struggle in which the country was now engaged, and of the consequent fact that all possible financial facilities might be needed. He did not mean to suggest that the floating of a war loan of 150 million *yen* was in any sense embarrassing. The country could carry twice or even three times that amount of indebtedness with ease, and was fully prepared to carry it if the national prestige demanded such an effort. But they were none the less bound not to deprive themselves of any mechanism that might be serviceable at this crisis, and the minority consequently recommended that a Bill be passed authorizing the Banks to determine their own future for themselves.

Mr. Tajiri, Vice-Minister of Finance, said that the Government's objects in introducing its Bills were to unify the note issues of the country and to dispose of the Banks problem. For many years the distinctly declared policy of the Treasury had been to introduce uniformity in the paper currency of the empire. With that purpose, the Regulations of the 16th year of *Meiji* had been enacted, and convertible notes had been issued in the following year. It was unnecessary to dwell upon the fact that political economists everywhere were agreed as to the necessity of such uniformity. The Government could not consent now suddenly to abandon a policy pursued steadily for so many years and admittedly beneficial from an economical point of view. To allow the Banks, or such of them as pleased, to renew their charters at the expiration of the twenty years period, would be to abandon that policy, since all arrangements had been fully completed for achieving uniformity in the paper currency by that time, one of the essential conditions of achievement being that the Banks' charters should not be renewed. The National Banks of Japan had been established on the basis of the corresponding institutions in the United States of America, and the system having proved unsuited to Japan, a Central Bank—the Bank of Japan—had been created, with the design of gradually abolishing the numerous special privileges enjoyed by the National Banks. It had long been fully understood by the National Banks that their future was to be controlled by that theory, and they had, each on its account, entered into various arrangements with the Bank of Japan, looking to their re-organization at the expiration of their charters. Those arrangements would all be dislocated were the Bill proposed by the minority to become law. It had been contended that the plan contemplated by the Government involved a sudden change, and that all sudden changes should be carefully avoided in dealing with large financial problems. But from what he had said, the House would readily perceive that the really sudden change would be the abandonment, at this eleventh hour, of a policy openly pursued by the Government for many years and accepted by the Banks as a basis for the reorganization of their affairs.

The President said that 15 members had given notice of their intention to speak against the Government Bill, and 28 members of their intention to speak in favour. He should summon the opponents and supporters to the rostrum in turn.

Mr. Shigeno Kenjiro spoke at some length in favour of the Bill for prolonging the charters, but adduced no argument of importance. He contended that the unification of the paper currency had already been accomplished, and that it was only just to allow time for the Banks' securities to recover their normal value.

Mr. Suzuki Jubi supported the Government Bill. The last speaker's contention that the uniformity of the paper currency had already been achieved was an obvious misapprehension. A programme tending to that end had been put into practice, but was not yet fully carried out, and would be seriously dislocated by extending the Banks' charters. With respect to the plea for time in order that the Banks' securities might recover their normal value, it involved the introduction of an interminable element. What was the normal value, and at what era could they predict its restoration? The House must consider the interests of the country at large not those of special companies or individuals. He then dwelt at length on the obvious inconvenience of granting complete liberty of action to an immense number of Banks, and thus abandoning suddenly and signally the policy of unification wisely pursued by the Government for so many years.

Mr. Nakano Buyei spoke at length in opposition to the Government Bills, his arguments chiefly turning upon the disturbance caused in the market value of public securities by the recent issue of War Loan Bonds, and the consequent inexpediency of augmenting the disturbance by any change of the Banking system now in force.

Mr. Taguchi Ukichi traversed Mr. Nakano's arguments, and showed that the financial operations undertaken and successfully carried through in the past were of far greater magnitude than those involved in the project embodied in the Governments' Bills. He adduced figures in support of his contention, and showed a remarkable grasp of the details of the question.

The closure was put and carried.

A closed ballot was taken, when 117 voted for and 131 against the Government Bills—*i.e.* the First and Second on the Order.

The House voted, without debate, for the Second Reading of the Third Bill on the Order.

BILL FOR SUPPLEMENTING LAW NO. XXV. ISSUED IN THE 25TH YEAR OF MEIJI (1891).

The following Article shall be supplemented after Art. IV. of the Law of Special Account, concerning Funds for the Redemption of Notes of National Banks that have been closed:—Art. V. The present Law shall be applicable to the final Accounts of Redemption Funds of a National Bank that has been closed under ordinary circumstances, or the term of whose charter has expired.

After a brief debate on the last Bill, a closed ballot was taken, when 132 voted for, and 104 against, the Second Reading.

The Second Reading was proceeded with at once, and the Bill was passed through all its Readings in the following form:—

BILL FOR AMENDING THE NATIONAL BANK REGULATIONS.

The 12th Article to read:—A Bank established under these Regulations, shall be entitled to continue its business for a period of twenty years, except in the event of closure or some other circumstance.

A Bank desiring to continue its business at the end of the period mentioned in the preceding clause, shall be entitled to have its charter renewed for a term of 7 years.

Provided that such Bank shall be entitled to change to a private institution, even within the period mentioned in the preceding clause.

The House rose at 5.50 p.m.

THURSDAY, JANUARY 31ST.

HOUSE OF PEERS.

The House met at 10.45 a.m., the Order of the Day being:—

1.—Bill (Government) relating to the Capture of Sea Otters and Seals.
2.—Bill for amending the Regulations relating to Dealers in Second Hand Goods; sent up from the Lower House.
3.—Bill for amending the Code of Criminal Procedure; sent up from the Lower House.
4.—Bill for amending Law No. 70, of the 23rd year of *Meiji*, relating to the Banking Regulations; sent up from the Lower House.
5.—Bill relating to the Inspection of Silk-worm Eggs.
6.—Petitions.

Viscount Enomoto, Minister of State for Agriculture and Commerce, briefly explained that the object of the first Bill was to extend the operation of the Regulations already existing for the control of Sea-otter and Seal fishing, and to supplement them for the better protection of those valuable animals. The areas to which the operation of the present Regulations was limited did not include the real fishing and breeding grounds for either sea otters or seals, neither were their provisions sufficiently explicit.

Mr. Fujita, Government Delegate, in answer to questions, said that the number of sea otters taken had been 51 in 1889, 47 in 1890, 3 in 1892, and 27 in 1893; and the number of seals, 380 in 1890, and 600 last year. In recent years a monopoly of the fishing had been enjoyed by the Imperial Marine Products Company, but the privilege was now more extended. As to the so-called poaching by foreign ships it was to be noted that such vessels did not trespass in Japanese territorial waters but fished outside their limits. Twenty-four of such ships had visited the seas in the neighbourhood of the Kuriles between February and June of 1892.

The Bill was entrusted to a Special Committee nominated by the President, as was also the next Bill, without debate.

The Third Bill on the Order, namely, that relating to payments made to witnesses in criminal cases, was also entrusted to a Special Committee, the Government Delegate having explained that the Government approved the proposed changes, and that, if necessary, corresponding changes could be made in the Code of Civil Procedure.

Count Mataura, on behalf of the Special Committee, reported in favour of the Bill for amending the Banking Regulations as sent up from the Lower House (*i.e.* providing for a change of banking hours and modification of other provisions), with the exception of the 5th Article, which the Committee had expunged, considering that its provisions were calculated to impede commercial development.

The House dispensed with the Third Reading of the Bill and passed it at once.

Mr. Fujimura Shiro, introducing the Bill for the Inspection of Silk Worm's Eggs, explained the great rapidity with which silk-worms multiplied, and the consequent necessity of providing against diseased eggs being allowed to propagate poison. He dwelt also on the immense importance of the silk trade to Japan, and condemned the existing regulations as inefficient and defective. A sum of about 150,000 *yen* would be required. At present it might be difficult to appropriate the necessary funds, and as he did not contemplate charging any inspection fees, he feared that the contemplated change could not be introduced at once.

Mr. Fujita, Government Delegate, said that the Government was not satisfied with the existing Regulations, but did not altogether agree with the proposed method of amending them.

Count Sakai have propounded some questions, the Bill was entrusted to a Special Committee nominated by the President.

The President said that as many of the members were engaged upon committee work, the session had better be concluded at this point.

The House rose at 12.35 p.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.10 p.m., the Order of the Day being :—

1.—Bill relating to a project of Game Laws; Second Reading.
2.—Second Reading of the Bill for the Control of Pawnbrokers.
3.—Bill for amending the Medical Diplom Regulations.
4.—Bill for granting State aid to Agricultural Experiment Stations.
5.—Bill relating to Open Ports.
6.—Petitions.
7.—Representation relating to Repairs to the Kiso River.
8.—Representation relating to the Control of Government Forests.
9.—Representation relating to a Grant in Aid of the Kobe Waterworks.

Mr. Miyama Takatsura presented a Question with reference to the Government's method of dealing with the Kiso River.

Mr. Otake Kwanichi presented a Question with reference to sanitary measures at Hiroshima. The death of His Imperial Highness Prince Arisugawa from typhoid fever, and the death of a Red Cross Hospital nurse from the same disease, showed that the hygienic conditions of the place were faulty, and in consideration of the great number of important officials, civil and military, now residing there, as well as of the large bodies of troops quartered at or passing through the place, it was obviously of prime importance that every possible precaution should be adopted to ensure a healthy environment. What steps had the Government taken with that object?

The Game Law was then taken. Some amendments were proposed by members but voted against by the House.

The Government Delegate, in answer to Mr. Inouye Kakugoro, said that when foreigners came to be subject to the income tax, the fees levied from them for shooting licenses would be the same as those levied from Japanese.

The Bill was passed as amended by the Committee, the Third Reading being dispensed with.

The Bill for the Control of Pawnbrokers was passed through its Second and Third Readings, with trifling amendments.

Mr. Yamada Taizo, on behalf of the Special Committee, reported against the Bill for amending the Medical Diploma Regulations.

Mr. Otsu Junichiro, on behalf of the minority of the Committee, reported in favour of the Bill, on the ground that the Chinese system of medicine had been in practice for over 3,000 years and had now more than 27,000 practitioners in Japan. To refuse recognition to such a system was illiberal and unjust.

Mr. Awaya Shinazo spoke at some length in support of the Bill, reminding the members opposing it that they had all benefited by the Chinese system of medicine before the introduction of the Occidental.

After a brief debate, the House voted for the Second Reading of the Bill, and decided to proceed with it at once.

The Second Reading led to a warm discussion. Amendments in the sense of expunging article after article were proposed. The first of these amendments resulted in a vote of 94 against and 93 for. The House gradually seemed to treat the whole affair as a joke, but the Second Reading was ultimately passed.

Mr. Awaya Shinazo proposed that the Third Reading be taken at once, but, on a proposition by Mr. Hoshi Toru,

The House rose at 5.30 p.m.

WAR NEWS.

MONDAY, JANUARY 28TH.

Katsura's position in Haicheng is well understood by the Chinese. They are making every possible effort to dislodge him, but the character of their attempts does not suggest the least probability of success. Sung's fight at Kangwasai was the most creditable among these enterprises, yet it can scarcely be described as a resolute essay to drive the Japanese from Haicheng, since Sung halted his forces at a distance of 12 miles from that place and there received the onset of the Japanese. It is more than probable, however, that if Katsura had not moved out of Haicheng to attack Sung, the latter would have pushed on to attack Katsura. But that is mere conjecture. The fact is that Sung's punishment at Kangwasai on the 18th of December was sufficiently severe to deter any renewal of his attempt against Haicheng. Since that time he has remained in the neighbourhood of Yinkow (modern Newchwang), showing no sign of moving northward. We may note here that the operations against Haicheng on December 12th and 13th have evidently been confounded with the battle of Kangwasai five days later. The Newchang correspondent of the *North China Daily News* writes that the sound of heavy guns was heard on the 12th December to the north-east, and that, on the following day, news was obtained of Sung's having retreated to Newchwang (proper). To a certain extent that intelligence was correct. Sung, or a portion of Sung's forces, had indeed retreated to Newchwang proper, but Haicheng, not Kangwasai, had been the point of departure.

Katsura, when he found himself in possession of Haicheng, had doubtless a thorough perception of the value of the situation. Long before he set out on his westward march from Suiyen, on December 9th, we explained that the keys of southern Shinking were Haicheng and Kaiping, since the former commands all the inland roads, the latter the coastwise routes, from China proper to the Yalu as well as to the Liaotung peninsula. Moreover, troops holding Haicheng and Kaiping can, at any moment, converge upon Yingkow, becoming masters of the mouth of the Liaoyang river, which is the great waterway of Shinking and the chief source of supplies for Mukden. Marshal Yamagata saw all these things, we must presume, when he planned the westward elongation of his line of operations that involved his Left Wing's movement, *viâ* Takushan and Suiyen, to Haicheng. But, it is scarcely possible to doubt that when Yamagata conceived that project, he had an overland march against Shanhaikwan, and thence to Pekin, in his mind; a march involving the cöoperation of the Second Army from the Liaotung peninsula. For the purposes of such a programme the advance against Haicheng was an essential preliminary, to say nothing of its palpable influence on the fate of the campaign in northern Shinking. But the cöoperation of the Second Army being an indispensable element of the strategical conception, the interval that separated the taking of Haicheng and the northward movement of Major-General Nogi's Brigade from Chinchow against Kaiping, was unquestionably a time of peril for Katsura. Sung's troops in Tomucheng and Haicheng were probably unprepared for Katsura's sudden and rapid advance from Suiyen. Hence their exceptionally spiritless effort to hold their ground. But from the moment that Katsura planted himself in Haicheng, it was in Sung's power to hurl against him, from the north and south simultaneously, two armies aggregating fifty or sixty thousand men, and if that had been done without allowing Katsura leisure to intrench himself, a heavy disaster might have been inflicted upon the Japanese arms. For it must be noted that Katsura's numerical ability to fight was comparatively small. His whole command consisted of a Division, aggregating, at the most, 20,000 of all arms. From that force considerable detachments were needed to guard his line of communications from Tatung, Takushan, and Suiyen. Further, when he set out from Suiyen, he had to protect himself against the palpable danger of a flank attack from the Chinese on his left front (in Kaiping). Our readers may remember that his order of march from Suiyen was in three columns, the routes of the central and the northern columns converging at Tomucheng, the first point of attack, whereas the route of the southern column led it away in the direction of Kaiping, thus virtually eliminating it from the field of immediate operations. This last column, in truth, was intended solely to guarantee the Japanese line of communications with Suiyen against a cutting stroke from Kaiping. It was commanded by Colonel Sato, and it consisted of one Battalion of infantry and a troop of cavalry. We may note, here, that Sato pushed to within a few miles of Kaiping on the east, and that his proximity to that town gave rise to a rumour that he had actually occupied it in the middle of December. But the story was a mere journalistic canard, never so much as hinted at in official despatches. All these deductions being made from Katsura's Division, we may conclude that his fighting strength when he occupied Haicheng did not exceed nine thousand men, and probably fell short of that total. Under the circumstances, the most he was entitled to anticipate was the successful holding of his position, and with that object he set about fortifying it as strongly as possible. Hills on the east, north, and west offered excellent sites for batteries, but on the south the only obstacle was a river of no great size. It was from the south that Sung marched up almost immediately Katsura's scouts had already reported signs of a southward movement on the part of the Laoyang Army, and it must have been evident to Katsura that to wait inactive in Haicheng would be to expose himself to a combined assault by overwhelming numbers from the north and south simultaneously. In fact, Sung's procedure —stopping short of Haicheng and intrenching himself—strongly suggested the design of waiting until he could act in concert with the Laoyang Army. It is easy to understand, therefore, why Katsura, lost no time in moving out to dislodge Sung: he could not lie quiet while his enemies concerted their plans. The battle of Kangwasai resulted; a sharp fight, with, however, most valuable results, since it not only beat back the Chinese forces on the south, but also compelled the Laoyang Army to rely on its own strength alone, and thus probably deterred its attack upon Haicheng for an interval which Katsura turned to vigorous account in fortifying his ground.

It would seem that up to this time there had been no definite intention of immediate cöoperation on the part of the Second Army. The Kumamoto Brigade was in garrison at Port Arthur and the First Division was quietly resting with its head-quarters at Chinchow, and its outposts at Pitszwo and Pulantien (Port Adams). But although the strategical defects of Katsura's march upon Haicheng were probably fair risks in the face of such foes as the Chinese, it was evident that the situation created for the latter by his presence at Haicheng could not be tolerated, and that he must inevitably be prepared to encounter resolute assaults, unless, indeed, the enemy contemplated abandoining Shinking altogether. Hence a movement by the Second Army to protect his left flank became necessary, and on December 30th Marshal Oyama issued orders to the Brigade to move north with all celerity and attack Kaiping. The general outline of these operations has already been traced in our columns, but we refer to the story again in order to fill in the details. The Brigade designated for the movement against Kaiping was composed of 12 Battalions of Infantry, 2 Battalions of Artillery, a company of Engineers, and sanitary and field-hospital corps. Its combatant strength represented about 8,000 of all arms. With the prospect of a rapid march through snow and frost, the thermometer ranging below zero, many special arrangements had to be made, but these must have been already completed, for within 48 hours of receiving the order the Brigade was in motion. For every soldier a fur-lined over-coat had been provided, but as these could not be carried by the men themselves or with them on the march, they were sent forward to each halting place. At Pulantien (25 miles from Chinchow), whither a portion of the troops had marched across from Pitszwo, a general muster took place, and Major-General Nogi, having divided his force into two columns, marched out on January 3rd. To cover the road as quickly as possible was evidently desirable for climatic reasons. It was accordingly arranged that 82 miles should be traversed in 7 days, an exceptionally rapid rate of progress. The columns advanced by two roads converging at a point 18 miles south of Kaiping, the right wing commanded by Colonel Oki, the main body by Nogi himself. On the 9th instant the two columns came together, and bivouacked for the night at

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

a place 8 miles from Kaiping. The commissariat arrangements seem to have worked without hitch. Originally the number of stations contemplated was 14, their average distance apart being about 8 miles. But it being afterwards judged expedient to increase this organization, 256 Chinese ox-carts were hired, representing some 800 hand-carts. A brief interval of rest to recruit the strength of the troops after 9 days hard marching under climatic conditions of the most rigorous nature would doubtless have been very desirable on the eve of the attack. But when troops have to bivouac in snow, a commander's object is to reach his objective as quickly as possible. Accordingly, at 5.30 a.m. on the 11th of January, the columns were again in motion, and a march of 8 miles brought them to the Kaiping river, on the opposite bank of which the Chinese had taken up a position. The battle has been already sufficiently described.

Katsura's position was now secured, the pressure on his left flank being relieved. The Chinese had lost their opportunity. But it was impossible for them tamely to accept a situation involving such contingencies as those described above. On the 17th of January, as our readers know, they moved down from Laoyang, 14,000 strong, and attempted to recover Haicheng. As to that operation, probably unprecedented in the annals of warfare, so paltry was the tale of casualties, a word of explanation may be given. The rule laid down by the Japanese commanders and carefully observed by the troops, is that rifle fire must never be employed at a greater range than 600 metres. From 600 to 200 metres the soldiers use their rifles. Within the latter distance they resort to the bayonet. We have seen that when Sung marched up to attack or menace Haicheng on December 18th, Katsura at once, moved out and assumed the offensive at Kangwasai, and we have examined the reason of such tactics from the Japanese point of view. But when the Laoyang army deployed on the north and west of Haicheng a month later, it faced a position that Katsura had intrenched strongly in the interval. Hence the Japanese forces waited quietly behind their intrenchments, and inasmuch as the Chinese never ventured closer than 1,500 metres, they had the firing all to themselves throughout the whole forenoon. It was not until 1 p.m. that the Japanese artillery came into action, and not until two hours later did the Japanese infantry move out to hasten the already-commenced retreat of the enemy. Fighting, in the generally accepted sense of the term, scarcely took place at all. Another point worth notice is the singular disparity between the numbers of killed and wounded on the Japanese side. At Kaiping the killed were 46, the wounded, 263; which means that out of every seven men hit only one was killed on the spot. At Haicheng there were 40 wounded and only one killed. In either case the ratio is contrary to the results expected from arms of precision, and is markedly contrary to the records of Japanese rifle-fire, for on the Chinese side the wounded, or, at any rate, those disabled by wounds, appear to constitute only a small per-centage of the casualties. At Phyŏngyang, for example, not more than 600 Chinese were left wounded upon the field against some 2,000 killed, and at Kaiping only about 100 wounded fell into Japanese hands, whereas some 300 were killed. The explanation seems to be that Chinese fire is effective at long ranges only. So soon as he gets near enough to the Japanese to become himself a mark, the Chinaman loses his nerve, and if he shoots at all, does so from his hip or with closed eyes. The Japanese soldier, on the contrary, does not open fire until he is within 600 metres of the enemy, and his hits are proportionately more fatal.

The repulse experienced by the Laoyang Army on the 17th instant was not sufficiently severe to deter a fresh attempt. Besides, the Army was strengthened about that time by the advent of General I, the ablest and most resolute commander that has yet appeared on the Chinese side. It was I that led the Amur Tartars against Tatsumi and the Japanese positions at Fenghwah and Tanhokow. He fairly [illegible] it is true, but he nevertheless displayed qualities worthy of his German education. With I at Laoyang, it was not likely that an army of from thirty to forty thousand men would tamely remain cut off from its chief base of supplies and threatened with complete elimination from the field of final operations. On the 22nd of January, that is to say, five days after the previous repulse, Generals Chang and I, having reorganised their forces and brought up reserves that raised their strength to over 20,000, moved again to the attack of Haicheng. They chose almost the same routes of approach as before, thus advancing against the hilly faces of the position. But on this occasion they ultimately moved up to within 600 metres of the entrenchments, and the Japanese thereupon assumed the offensive. Seven battalions of infantry and three batteries of artillery attacked the enemy's right wing and rolled it back without difficulty. Meanwhile, another force of infantry had been marched to a position whence it threatened the Chinese line of retreat. That manœuvre seems to have completed the discomfiture of the Laoyang troops. The whole army retreated precipitately, the greater part moving in a north-easterly direction, but a few following the westward road toward Newchwang (proper). The Japanese casualties in this affair were even smaller than they had been on the 17th instant—one killed and 26 wounded. The Chinese left over 100 dead upon the field, and the following motley list of articles:—1 breach-loading gun of ancient type; 1 modern cannon; 70 rifles; 4,500 rounds of small-arm ammunition; 1 sword; 4 flags; 1 drum; 1 trumpet; and 15 fur-lined over-coats. They also lost 5 prisoners. It seems probable that a portion of the troops hitherto stationed at Tienchwangtai under Sung took part in the above encounter. Lieut-General Katsura, telegraphing on the 23rd instant, reports that Su Pangtao marched up to Newchwang (proper) with 10 regiments (5,000 men), and moved out on the 22nd to points on the roads leading toward Haicheng and Laoyang. He adds that, the same morning, the enemy received a further accession of 5 regiments. It is always possible for Sung to cōoperate with the Laoyang forces *via* Newchwang (proper), but if he employs any large portion of his troops for that purpose, he uncovers Yingkow and the coastwise route to China. As for the main body of the Laoyang Army, though beaten back from Haicheng, it has not retreated far, but has halted at positions on the northwest and west, from 8 to 10 miles distant. Katsura may look for a repetition of these desultory and spiritless attacks, until he feels strong enough to assume the offensive in earnest, or until Nogi moves forward to Yingkow and Tienchangtai.

Nogi, telegraphing from Kaiping on the 24th at 11 p.m., says that, according to seemingly trustworthy information furnished by the people of the locality, the Chinese forces in the neighbourhood of Yingkow are 4,000 under Sung, 5,000 under Chang, 1,000 under Ma, and 3,000 under Tsiang. These troops were posted in the immediate neighbourhood of Yingkow, on the roads leading eastward (*i.e.* toward Kaiping). Nogi's advance guard was within 3,000 metres of the enemy's outposts, and his cavalry videttes pushed, on the 18th instant, to a place 9 miles north of Yingkow and attempted to cut the Chinese telegraph, but whether they succeeded or failed, the report does not say. On the 24th, the Chinese seem to have contemplated an advance, for they moved their artillery to a point some 2,000 metres from the Japanese position and fired a few rounds. A force of their infantry also advanced to within five or six hundred metres of the two companies forming the Japanese advance guard, but retired in about a quarter of an hour, even before the guard had been reinforced.

The long tranquillity enjoyed by the Japanese forces holding the positions at Fenghwan and in its vicinity was broken on the 24th instant by the appearance of a detachment of Chinese, numbering about 100, at Suehlichan, a place 15 miles north of Fenghwan. They were easily dispersed, but whence they came, or with what object, the telegram does not inform us. It adds, however, that all is quiet at Saimatsui, Kwantien, and Haicheng. This telegram is from the Staff of the First Army, and is dated 8.55 p.m. on the 24th.

The 3 Japanese ships that bombarded Tungchow on the 18th and 19th instant in order to diverd the enemy's attention while the third expeditionary force was carried to Yungcheng Bay, were the *Yoshino*, the *Akitsushima*, and the *Takachiho*. They joined the ships that on the 20th covered the landing at Yungcheng. We learn from Admiral Ito's report that it was snowing when the first batch of troops disembarked, and that the whole force, together with its impedimenta, would probably be on shore by the 25th instant. The Admiral adds that the Chinese fleet is in Weihaiwei. The natives pray that the troops will advance quickly to Laoyang, where the inhabitants are longing for the advent of the Japanese to deliver them from the lawlessness and brutality of the Chinese braves.

Tuesday January 29th.

We are without any news of the further movements of the Japanese expeditionary force in Shantung. That was to be expected. An interval without special incident was certain to separate the landing from any decisive encounter with the enemy.

There is a rumour that, on the 20th instant, two small Chinese men-of-war were captured by the Japanese ships in the neighbourhood of Weihaiwei. We can not discover any grounds for the story.

The *Kokkai* says that the *Akitsushima*, when reconnoitering Weihaiwei on the 19th instant, saw 16 vessels there. Our contemporary conjectures that a portion of the Southern Squadron had entered the harbour. But that seems scarcely credible.

The same journal says that the people of Shantung fled at the first appearance of the Japanese troops, but are now reassured, and lend their services readily for transport and commissariat purposes.

According to the *Yomiuri*, investigations reported to the Head-quarters in Hiroshima indicate that the garrison of Weihaiwei numbers only 8,000, but reinforcements bringing it up to fourteen or fifteen thousand are expected to reach it from Chefoo and elsewhere before the assault.

In the *Nippon* we read that further reinforcements have been sent from Tientsin to Mukden, and that the arrival of Hunan troops at Tientsin brings the forces in the vicinity of that place to 60 regiments (30,000).

Admiral Ito reports that the forts at Weihaiwei fired at his vessels as they passed on the 22nd and on his torpedo-boats the same night, but did no damage. That, doubtless, was the firing heard at Yungcheng, as described in our last issue. Admiral Ito says nothing about the Chinese vessels attempting to escape. The *Yomiuri*, however, asserts that they made an attempt at dawn on the 22nd, and were frustrated by the Japanese ships on guard off the port. Simultaneously with the Squadron's movement the forts opened a furious fire on the Japanese guard-ships, but failed to touch them.

A telegram from Shanghai reports that all the foreigners have left Weihaiwei, that the greatest confusion prevails there, that the inhabitants are all preparing to fly, and that some of the troops are contemplating a similar step. The *Jiji Shimpo* attaches credence to this intelligence.

According to the *Yomiuri*, the Chinese forces are preparing to resist the advance of the Japanese toward Weihaiwei at a place called Paichiltsuisu, 20 miles from Yungcheng on the direct road to Weihaiwei.

The 29th instant is now spoken of as the day on which the assault of Weihaiwei will probably take place, but of course that is not an official prediction: it is mere conjecture.

The *Nichi Nichi* says that when the *Akitsushima* was reconnoitering Weihaiwai on the 25th instant, 21 shots were fired at her by the Chinese ships, and one shell fell in her vicin

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

Lieut.-General Nodzu telegraphs that an influential Manchurian, enraged by the pillage and rapine practised by the Chinese troops, has offered to assemble 60,000 men and take Mukden, for the purpose of handing it over to the Japanese. He asked for a loan of 30,000 Tls. to equip his army, but of course the Japanese told him that they were quite strong enough to carry on the campaign without assistance, and that he had better not attempt anything rash, contenting himself rather with furnishing useful information to their Staff. Credence seems to have been placed, however, in the offer. General Nodzu adds that numbers of persons in Haicheng come to beg that the Japanese will advance with all speed against Laoyang, where the inhabitants are longing for the advent of the Japanese to deliver them from the lawlessness and brutality of the Chinese braves.

WEDNESDAY, JANUARY 30TH.

Marshal Oyama's telegraphic report, despatched at 9 a.m. on the 26th instant, indicates that the operations prior to the assault on Weihaiwei are likely to be much more protracted than the general public seem to anticipate. The Marshal's message sets out by confirming the statements previously received, to the effect that only 300 Chinese troops were stationed at the Yungcheng earthworks when the Japanese flotilla arrived, and that the enemy's forces in Yungcheng itself, too few to offer any resistance, retired at once. We are then told that large forces of Chinese appear to be massed at Kieshan and Chiaoteutsi. Our readers will probably fail to find these places on any ordinary map. We may explain, therefore, that two roads lead from Yungcheng to Weihaiwei. One goes straight along the coast; the other trends inland as far as Chiaoteutsi, whence it bends northward toward the coast. Chiaoteutsi is 15 miles from Yungcheng. Kieshan, which lies on the coast road, is 17 miles from the same place. Both of these positions are therefore within easy striking distance of Yungcheng, so far as mere mileage goes. But the difficulty is to get at them. The mountains have to be crossed by way of preliminary, and it seems that the operation of moving artillery over the mountains is likely to prove very troublesome. The engineers' report says that the coastwise road, in its present condition, is fit for the passage of field-guns through a distance of 4 miles only. Westward of that point—*i.e.*, going in the direction of Kieshan—repairs must be effected, and they can not be completed without considerable expenditure of time —" can not be completed in a few days," is the exact language of the report as telegraphed by Marshal Oyama. As for the inland road, it is fairly good as far as Pulintsun, 5 miles from Yungcheng, but beyond that place troublesome works of repair must be undertaken in order to enable the artillery to get to Chiaotsutsi. From all this it will be evident that the mere operation of making roads for the march of the troops may be a matter of a week or more. Moreover, that calculation refers to field artillery only. If seige guns have to be taken, as is more than probable, a still longer delay must be anticipated. Another fact indicated by the Marshal's despatch is that the operation of debarkation was not completed so quickly as previous statements led us to expect. Admiral Ito's telegram, despatched on the 22nd, said that the landing would probably be finished by the 25th. But Marshal Oyama, telegraphing on the morning of the 26th, reports, not that the entire force, but only that the van of the Army and the greater part of the baggage train had already landed. Of course there would be no object in hurrying the men ashore before roads to march on were available, but whether that consideration delayed the landing, or whether other reasons operated, it appears certain, at all events, that instead of the disembarking operations being finished by the 25th, they were likely to occupy until the 29th or 30th. In view of these circumstances it would evidently be idle to attempt any definite estimate of the number of days that must elapse before the expeditionary force is actually before Weihaiwei. All that we can say at present is that the Chinese seem disposed to make a stand at positions on the other side of the hills lying between Yungcheng and Weihaiwei, and that the Japanese troops will not able to reach those positions for several days. We learn incidentally from the Marshal's report that his force consists of the Sendai Division, and a Brigade of the Kumamoto Division. The advance guards of these two bodies, at the time of the despatch of the Marshal's telegram, were posted five or six miles westward of Yungcheng, the Sendai Division being on the inland road and the Kumamoto Brigade on the coast road. To the former, therefore, will presently fall the duty of attacking Chiaoteutsi, and to the latter that of attacking Kieshan. We believe that within certain limits Marshal Oyama was left to exercise his own discretion as to the size of the expeditionary force. It was to consist of the Sendai Division, at any rate, but the Kumamoto Brigade might be taken or left. Naturally, the Marshal would prefer to have as large a force as the circumstances reasonably warranted.

It appears certain, though very incredible, that the ships of the Peiyang Squadron are still lying in Weihaiwei. A telegram from Marshal Oyama, despatched at 9.30 a.m. on the 28th instant, says that a Chinaman who had escaped from Liukung island—the island at the entrance to Weihaiwei—reported that there were anchored in the harbour the *Chen-yuen*, the *Ting-yuen*, the *Chi-yuen*, the *Lai-yuen*, the *Ping-yuen*, the *Kwang-ping*, the *Wei-yuen*, and the *Kwang-sai*, together with 6 coast-defence ships, 7 large torpedo-boats and 4 small, the total number being 25. The man added that the *Chen-yuen's* bottom having been repaired with cement only, she could not fire her guns, that the *Lai-yuen* still needed repairs, and that the *Kwang-sai* had no armament on board. We are driven to the conclusion that the Squadron has abandoned its natural idle, and will devote itself to assisting in the defence of the forts. That hypothesis is borne out by the statements collected from Chinese sources by the *North-China Daily News*. We read there that the Weihaiwei batteries have been manned by trained blue-jackets from the fleet, and are commanded by naval officers, so that the land forces are entirely free to fight at the outposts. But even with that programme, it is inexplicable that the fate of the ships should be made to depend on that of the forts. The Chinese are putting too many eggs into one basket, if that be their plan.

The *Nichi Nichi Shimbun* writes that the latest reconnaissance showed a force of about 5,000 men garrisoning Liukung island, and 13 ships, besides a number of torpedo-boats in Weihaiwei.

In the same journal we read that when the Japanese landed on the Shantung Promontory, the Chinese telegraph officials ran away, leaving their apparatus *in statu quo*. The Japanese thought it worth while to try and open communication with Weihaiwei. They accordingly asked across the wire whether any Japanese men-of-war were in sight, and received a negative reply. They then asked about the Peiyang Squadron, and were answered that it had left for the south the preceding day, but the Chinese seem to have suspected something, for they declined to take notice of any further messages.

It was reported at Hiroshima on the 27th, says the *Nichi Nichi*, that the assault on Weihaiwei was then in progress. But the rumour was obviously incredible. The *Chuo Shimbun* also publishes a telegram from Shanghai, dated on the forenoon of the 28th instant, saying that a land and sea assault was then being made on Weihaiwei, that the sound of a heavy cannonade could be heard, and that the place was probably in Japanese possession at the time of the despatch of the message.

THURSDAY JANUARY 31ST.

Two telegrams from Kaiping indicate that the Chinese forces at Yingkow (modern Newchwang) and in its neighbourhood are growing in numbers and confidence. The first message is dated 10 a.m. on the 29th instant, and is despatched by Colonel Isechi, Chief of Staff of the First Division. It says:—A telegram from Major-General Nogi, dated 8 p.m. on the 28th instant, reports that the enemy in the neighbourhood of Yingkow have apparently been reinforced. Our cavalry videttes, sent out in the direction of Kaokan, bring intelligence that a general advance of the Chinese line has taken place, and that they are now massed near Laopieu. Our videttes were unable to push their reconnoissance farther." The second message is also from Colonel Isechi, covering a telegram from the chief of Staff of Major-General Nogi's Brigade under date 11.9 p.m. on the 29th instant. The telegram runs thus:—"The enemy in our front seem to have received reinforcements. Their strength is not exactly known, but according to statements made by people of the neighbourhood, there are 20,000 troops in Newchwang under Li, or Liu, of Nanyang. Another report is to the effect that Li Kokin has come to Newchwang at the head of 5 regiments from Laoshang-ying. His troops are Hunan braves, men of Nankin. They passed through Tienchwangtai *en route* for Newchwang on the 23rd of December, and they have not been in any fight yet. Their number is 2,500. The enemy's lines are being gradually and slowly advanced.

We are without any further intelligence of an official character from Shantung. The *Yomiuri Shimbun* alleges that the advance guard of the Second Division has passed Puyecheng, and that the advance guard of the Sixth Brigade, advancing by the coast road, is already within 8 or 9 miles of Weihaiwei. But we venture to doubt the correctness of that intelligence, or, in any rate of the latter part of it. The same journal adds that the Chinese Government, being unable to send re-inforcements to Weihaiwei, is in much perplexity, and the Peiyang Squadron lies quietly awaiting the Japanese attack.

The *Shogyo Shimpo* says that the troops assembled for the defence of Weihaiwei aggregate over 70,000 of all arms, but that of these two-thirds are old men, and only one-third in the prime of life. In the same journal we read that the Viceroy Li is at Lutai, and that he contemplates sending an embassy of some 30 persons to the Commander-in-chief of the Japanese forces, urging that an armstice be agreed to pending the conclusion of the peace negotiations now in progress. But that is a very incredible story.

By the *Nippon* we are informed that a Chinese officer and two soldiers were taken prisoners in Yung-cheng. Another paragraph says that the *Wei-yuen* and several other ships are in the Yangtsze, protecting the movements of troops.

It appears from an account published in a Moji journal and copied into the *Jiji Shimpo*, that the whole of the transports carrying the third expeditionary force were assembled in Talien Bay on the 16th, and that they left in three batches, the first arriving at Yung-cheng on the 20th, and the 2nd and 3rd on the 21st. We also hear from the same authority that two small coast-defence vessels were in Yung-cheng Bay, and that the *Fayeyama Kan* took possession of them.

FRIDAY, FEBRUARY 2ND.

Two interesting telegrams are published by the *Nichi Nichi Shimbun*. We give them in their order:—

Hiroshima, 30th January, 9.45 a.m.

The business of reconnoitering Weihaiwei was concluded on the 28th instant. Steps were immediately taken for a general attack, and it was probably delivered on the 29th, or is going on to-day.

Hiroshima, 30th January, 1.20 p.m.

The advance guard of the * * * that marched against Weihaiwei by the inland road has already reached Changchia-Kowtsz; and the * * * that advanced by the coast-wise road has passed Kushanken. The main body has passed Puyecheng and is now from 10 to 12 miles from Weihaiwei. The above is a rumour.

Our readers will remember that Kushanken was indicated in previous telegrams as one of the places where the Chinese forces were believed

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

to be massed, with the intention of opposing the Japanese advance.

The *Jiji's* telegram, published in our issue of yesterday, that on the 27th ultimo the Chinese ships in Weihaiwei came to the two exits of the harbour, indicates an intention to escape if possible. But it also constitutes additional evidence that the Peiyang Squadron is still there.

A telegram from Shanghai, dated 10.32 a.m. on the 30th ultimo, says that, according to a report received from the officer commanding the Chinese forces at Weihaiwei, 19 Japanese ships appeared off the place on the morning of the 26th, whereupon the Chinese cruisers and torpedo-boats sallied out, and drove them off, inflicting serious damage. At the same time an attack made from the land side was also repulsed, with a loss of 250 men to the assailants. It is plainly out of the question that the Japanese forces could have been within striking distance of Weihaiwei on the 27th ultimo.

The *Hochi Shimbun* has a paragraph to the effect that, great as is the number of the troops guarding Weihaiwei, they are, for the most part recruits that have joined merely for the purpose of earning money. According to our contemporary, the Chinese officials, in their proclamations inviting volunteers, never state the pay to be given. Hence it becomes a question of bargaining to determine what each recruit shall get, and some are clever enough to exact a promise of 3 taels per month, while others are content with 2½. Men enlisted under such conditions are not likely to fight well, adds the *Hochi*.

In the *Yomiuri* we find a paragraph purporting to contain the opinions of a Japanese officer of Engineers with regard to the fortifications of Port Arthur. He says that the position is well suited for defence but that the plan of fortification is faulty in many respects. In the first place, a prime object in constructing forts is to choose for them sites where they shall be as little as possible exposed to the enemy's fire. But the forts at Port Arthur are placed on the tops of hills, being thus visible from a long distance and offering excellent marks for hostile artillery. In the second place, the guns are mounted in such a manner as to be unable, for the most part, to concentrate their fire, a serious defect. In the third place, the magazines are not sufficiently protected. A shell from a big gun striking than would inevitably produce an explosion. In the fourth place, the magazines are not properly drained. In the fifth place, there are no bomb-proof casemates. In the sixth place, the men's quarters are behind the forts, a most perilous position. In the sixth place, the guns are, for the most part, of inferior make and old —many dating from 1871—and their carriages are bad. In one fort—that on Manten Hill —the 24-inch gun-carriages have suffered so much from the discharge of a few rounds that they are now under repair. It would seem that the Chinese were cheated by the persons from whom they purchased the guns. As for the forts on the land side, they are not capable of flanking fire, they have no magazines and no casemates, so that their competence to resist attack for any length of time is small. It will interest General von Hanneken to read these criticisms.

Telegrams from Shanghai received yesterday say :—

FIRST TELEGRAM.

The attack on Weihaiwei began to-day. Three forts have been captured by the troops and one has been silenced by the fleet.

SECOND TELEGRAM.

The Weihaiwei land forts are taken. The island fortifications are offering strong resistance.

The island referred to in the second of the above telegrams is evidently Liukung, at the entrance to Weihaiwei harbour. The telegrams seem worthy of credence. At all events, we can not look for either confirmation or contradiction from Japanese official sources before the 2nd instant.

THE NATIONAL BANKS PROBLEM.

The Committee on the Bill relating to the Renewal of Charters has come to a decision in favour of the Government, or Re-organization, Bill, though only be a majority of one. There are 17 commissioners, exclusive of the Chairman, Mr. Kawashima. Of these Messrs. Motoda, Wada, Furusho, Kudo, Sudo, Nakano, Shigeno, and Kono voted for the Renewal, while Messrs. Mayekawa, Abe, Suzuki, Misaki, Taguchi, Ishida, Konishi, Higashio, and Ono favoured the Re-organization scheme. Mr. Motoda introduced a Bill compromising the two, but this failed to secure a majority. The rumour that Mr. Kono Hironaka had seceded from the Renewal Party was, as we see, unfounded. Mr. Ono's position was not clear at first, but his support of the Re-organization Bill settled the affair so far as the Committee is concerned. Though generally counted as an upholder of the Renewal Bill, Mr. Kawashima's real views do not seem to have been known. But having supporting the Government Bill, as he did last session, his objection to it this year amounts to withdrawal. Being Chairman, he did not take actual part in the voting, but he declared his intention of supporting Mr. Motoda's Compromise Bill. Though the latter was defeated in the Committee by a minority of one vote, it was to be laid before the House and discussed there. The Banks Problem has wrought considerable havoc among the Tokyo papers. The *Mesamashi, Choho, Kaika,* and *Yeiri Nippo* have been suspended for having published articles in connection with it injurious to public peace. They all gave sensational paragraphs about the alleged bribery of Government Officials, Members of the Lower House, and of others by the rival parties.

CHINA'S PERFIDY.

Now that the Chinese Embassy to sue for peace is reported to be coming to Japan, accompanied by the American ex-Secretary of State, it is most important, says the *Mainichi*, that Japan should decide how much faith to put in it. We think, continues that paper, that the Embassy does not deserve to be trusted in the least, and that any confidence placed in it would be most disastrous to the Japanese Army occupying the enemy's territory. All that has been so brilliantly accomplished by them would be entirely undone. Our contemporary then goes on to recount instances of China's having played false, giving the cases of the *Arrow*, the subsequent united expedition of England and France against Pekin, and the frontier trouble between China and Russia. There are also other examples of more recent date which are quite sufficient to convince Japan of her neighbour's faithlessness. About eleven years ago an abortive reform was undertaken in Sōul by the late Kim, resulting in the massacre of many Japanese by the Chinese troops in that place. The following year Count Ito was despatched to China by the Emperor for the purpose of negotiating with the Viceroy Li at Tientsin in connection with the trouble. It was arranged between the two that the Chinese Government should seek out and punish the offenders, that Yuan, the instigator of the massacre, should be recalled, and that thenceforward neither Japan nor China should despatch troops to Korea without informing the other country of the contemplated action. All those points were systematically violated by China. Yuan retained his post till last June; nothing was heard of the punishment of the other offenders, and last year the Chinese Government sent thousands of troops to Korea without informing Japan of her intention to do so. It is an international usage, when any two countries have declared war against each other, to take steps for the safe withdrawal of the Representative of the belligerents and his suite. Now when the Japanese *Chargé d'Affaires* and the other members of the Legation were on their way home from Pekin last June with their families, the Chinese troops seized the latter and subjected the women to the most shameful treatment. And yet the Viceroy Li had the face to declare that he had guaranteed their security. The Chinese are, in short, an extraordinary people that do not seem to include perfidy under the category of wrongful actions. They are now going to despatch on Embassy to sue for peace, and are again going to try and palm off a faithless stipulation upon Japan like the Tientsin Convention, but Japan is not likely to fall a victim to their snares a second time. She must positively reject any attempt of the kind. The only way to force perfidious China to strictly observe a treaty, is by means of blood and iron, and the time to contract a treaty with her will be when the Japanese troops have planted their guns against the walls of Pekin and the Chinese Emperor has come out in an unadorned carriage to receive the Japanese Army. Any number of Embassies of the kind that now proposes to come to Japan will simply end in smoke, as did the Detring mission.

RAILWAY ACCIDENTS.

Some time ago, writes the *Nichi Nichi*, a vernacular paper called the attention of the Railway Authorities to the alleged fact that railway accidents have been growing more numerous since the 22nd year of *Meiji* (1889). That statement, however, was entirely misleading, as it did not take into consideration the extended mileage of railways. Only by proportioning the rate of accidents to the extent of mileage is it possible to arrive at a correct result. The following tables give such data :—

Date.	Total mileage traversed by trains in the year.	Engineers and conductors. Killed.	Wounded.	Passengers. Killed.	Wounded.
1889	5,304,000	19	24	2	2
1890	5,918,000	28	59	4	6
1891	9,039,000	36	72	2	14
1892	9,392,000	30	88	3	9
1893	9,904,000	32	122	1	13

Date.	Others. Killed.	Wounded.	Total. Killed.	Wounded.
1889	124	33	145	59
1890	100	48	232	113
1891	202	62	243	148
1892	238	68	271	165
1893	215	98	318	233

Rate of casualities per 1,000,000 miles.

	Engineers and Passengers, Killed.	Wounded.	Others (Suicide). Killed.	Wounded.	Total. Killed.	Wounded.
1889	3.9	4.9	23.4	6.2	27.3	11.1
1890	5.4	11.0	33.8	8.1	37.2	19.1
1891	4.2	9.5	22.7	6.7	26.9	16.4
1892	3.5	10.3	23.5	7.2	28.8	17.5
1893	3.3	13.7	28.8	9.9	32.1	23.5

The above figures include the cases of those voluntarily or accidentally killed by trains. If the ratio be taken for passengers alone, the result is very trifling. In 1890 the mortality was 1 for 117 million miles approximately, and in 1893 the ratio of wounded about 1 for every 637 million miles.

THE FUNERAL OF H.I.H. PRINCE ARISUGAWA.

Nothing could have been more impressive than the funeral of H.I.H. Prince Arisugawa Taruhito, which took place on Tuesday in Tokyo, amid demonstrations of grief from all classes, a fitting tribute to the memory of the wisest, kindest, noblest, and purest of the Imperial Princes. Business was at a standstill in the metropolis all day long; the schools, both public and private, were closed; and tens of thousands of sincere mourners, young and old, rich and poor, helped to swell the funeral pageant that wound through the city out beyond Koishikawa to the ancestral temple of the House of Arisugawa. The streets through which the funeral train passed were crowded, but special constables lined both sides of the route of march and did their utmost to preserve the necessary decorum. For two days before the appointed time the trains had been bringing hosts of sympathisers and sightseers to the capital, and it is estimated that fully three hundred thousand people had gathered to witness the memorable scene. At some of the turnin

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

on the route to the cemetery the crowd was enormous, particularly at the Tora-no-mon, Funakawara Bridge, the base of Kudan-zaka, and the long narrow street that leads to Iida-bashi. Despite every precaution, several scores of people are said to have been wounded in the crowd, while one man is reported to have been killed outright.

The route followed by the funeral procession —which took nearly two hours to pass a given point—had been carefully mapped out and published beforehand. It led from the Prince's residence at Kasumigaseki past the Tora-no-mon towards the Rokumeikwan; turning the the corner there, it went by the residence of the Home Minister and then to the left through the Hibiya Gate. Thence it proceeded along the moat through the Kiji-bashi Gate, skirting Kudan-zaka, through Iida-machi, across the Iida Bridge. There it turned to the right, crossed the Funagawara-bashi—where the pressure of the crowd was enormous—along the left bank of the little rapid Yedo River, branching off to the left on reaching Ishikiri-bashi. Passing to the right of Kobinata Suido-machi, it went through Otowa-cho, and finally, wheeling leftwards, reached the Gokoku Shrine and the adjoining cemetery. The cortége was arranged in the following manner, slightly different from the order to which it was originally proposed to adhere :—

Constables on Foot.	Constables on Foot.
Mounted Police Inspectors.	Mounted Police Inspector.
Stands of Flowers.	Stands of Flowers.

There seemed to be countless hundreds of these stands, some of them being of exceptional beauty. Particularly noticeable were the magnificent stands presented by Their Majesties the Emperor and Empress, the Empress Dowager, the Prince Imperial, and Their Imperial Highnesses Komatsu, Yamashina, Fushimi, Kita-shirakawa, Kan-in, Kwacho, and Hashimoto. The palm for beauty of arrangement and elegance of flowers was popularly given to two wonderful flower-stands presented by the High Priest Otani Koei. After these came stands of *sakaki* trees, with roots intact, the trees to be planted within the cemetery, in accordance with both Buddhist and Shinto observances. There was a similarly vast number of these trees, after which came countless other stands of artificial flowers. Then came

Heralds (Forerunners).

Mounted Police Inspectors.	Mounted Police Inspectors.

Chief of Police on Horseback.

Mounted Police Inspectors.	Mounted Police Inspectors.

Guard of Honour, composed of two Regiments of the Imperial Guard, with arms reversed.

Swords of the deceased Prince, borne by stewards.

Wooden clogs of the Prince, carried by a steward.

Horses belonging to the deceased Prince, each led by a steward in uniform.

The Master of the Mourning Ceremonies.

The Chief Mourner, H.I.H. Arisugawa Takehito, on foot in mourning garb, with coarse straw sandals on his feet and a [illegible] in his hand, and moved many (This was a most [illegible], and moved many of the onlookers to tears, the grief of the princely mourner being so plainly evident).

Stewards in uniform, on foot.

Members of the deceased Prince's household, on foot.

Chief Steward of the Household, on foot.

Members of the Family, in coaches.

(This was again a profoundly pathetic sight, the deep grief of the bereaved family making no attempt at concealment).

Princes of the Blood, in coaches.

Relatives of the Arisugawa House, in coaches.

Officials in charge of the funeral ceremonies, in coaches.

Mounted Stewards.	Mounted Stewards.

Ministers of State, in coaches.

(Particularly conspicious were Count Kuroda, Viscounts Enomoto Nomura, and Mr. Yoshikawa)

Officials of *Shinnin* rank, among whom were Mr. Miyoshi, Chief Judge of the Supreme Court, Mr. Haruki, Chief Public Procurator, and a host of other notables of the highest rank.

Princes, other than of the Blood.

Members of the 2nd Class of the First Rank.

Holders of decorations of the First Class. Nobles.

Government Officials above *Sōnin* rank.

Holders of Decorations of the Third Class.

Members of the Upper House.

Members of the Lower House.

All of the above, unless otherwise specified, were either in coaches or on horseback.

Guard of Honour, composed of one Regiment of the Imperial Guard, with arms reversed.

General Mourners.

Rear guard and Escort.

Mounted Chief of Police.

Mounted Police Inspectors.	Mounted Police Inspectors.

The whole train is stated to have included upwards of twelve thousand people, and even from this necessarily brief description it will be seen that the cortége was of a very imposing nature. On arriving at the cemetery, the bier was carried into the shrine, followed at first by only the chief mourners and nearest relatives of the deceased Prince. The members of the *corps diplomatique* were escorted to the Sanshu-jo, at one side of the shrine, while the Consular Body and other foreigners had had places assigned to them in the school-building within the temple-grounds. Thousands of people had preceded the funeral cortége and they were awaiting it at the cemetery gates, where a number of tents had been erected for their shelter and convenience. On nearing the cemetery, Prince Takehito acknowledged, for the first time, the reverent salutations of the people who lined both sides of the road. Nearly all of the leading foreign residents of the metropolis were present and were treated with the utmost courtesy, everything being done to ensure them a good view of the proceedings. As soon as the bier was deposited within the shrine a luncheon was served to all those present: a simple luncheon in approved Japanese style.

Within the shrine the ceremony began at a little after one o'clock, the arrangements being as follows :—

THE BIER.

ON THE LEFT.	ON THE RIGHT.
Musicians.	Offerings of food to the gods.
Nearest relatives of the deceased Prince.	Shinto Priests.
Space reserved for the representatives of Their Imperial Majesties, the Empress-Dowager, and Prince Imperial.	A receptacle filled with water, for rinsing the hands.
Military and Naval officers.	Princes of the Blood.
Members of the two Houses of Parliament.	Ministers of State.
Officials of lower rank.	Foreign Corps Diplomatique.
The public.	Officials of Shinnin Rank.
	Nobles of Highest Rank.
	Other Nobles.
	Foreign guests.

The ceremony itself was of the simplest possible description, in strict accordance with the Shinto ritual, the Chief Ritualist officiating. It may be divided into four parts, which were :

1. Offering of silk and *hei* to the deceased, now deified;

2. Offering of food to the deceased;

(Music, performed by the priests and the regimental bands.)

3. Reading of the Shinto litany and the prayers relevant to the occasion;

4. Bowing of all those present before the coffin, in accordance with their rank.

This whole programme was finished shortly before two o'clock. There was no special order observed after the ceremony was over. The coffin was left in the shrine, to be interred privately later on. The whole ceremony, from the time of leaving Kasumiga-seki, lasted just five hours.

THE LATE PRINCE ARISUGAWA.

At 1 p.m. on the 28th instant Marquis Nabeshima, the Grand Chamberlain, proceeded in the capacity of Imperial Messenger to the residence of the late Prince Arisugawa where he presented the following Imperial message of condolence:—"Connected by blood with the Imperial Court, you earnestly upheld the cause of the Restoration which was successfully consummated by your rare ability. Your virtue inspired respect both at home and abroad and very few men have rendered greater services to the State than you. You were to the Court what a wing is to a bird, and you were indeed a pillar of the State. The Empire is now engaged in a foreign warfare and expeditionary armies invade the enemy's territory. You took an active part in the central strategical deliberations in connection with this war, thus contributing toward its success. We regret extremely, therefore, that while the affair is still far from being ended and before entire victory has been won, you have fallen ill and died. In order to manifest Our sincere sorrow, We despatch Marquis Nabeshima, Our Grand Chamberlain, and order him to convey Our condolence and to present Our Gifts."

* * *

The *Nippon* considers that the Japanese ought to be extremely thankful for the goodness and strict impartiality of the Emperor. When the case of H.I.H. Prince Arisugawa grew serious and apparently hopeless, the question arose among the Councillors of the Board of Decorations as to what decorations should be conferred upon the Prince. They decided in favour of the Grand Cross and Grand Collar of the Chrysanthemum Order and the First Class of the Distinguished Service Order. The matter was duly submitted to the Emperor who sanctioned the giving of the Cross and Collar, but not of the third Order suggested. He observed that though sincerely desirous to grant the First Class Medal to the Prince, he felt that it would not be quite fair. The Prince had, it is true, so far rendered great service in the war, but the latter was far from its conclusion and if the First Class Medal be bestowed on the Prince who, to the extreme regret of the nation had been taken away in the midst of the war, what should be granted to those who took part in it to the end and distinguished themselves most conspicuously. Partiality must be avoided above all things in rewarding military services, especially as this is the first occasion of the bestowal of the new military Order. It was on that account, observes our Tokyo contemporary, that the Second and not the First Class of the Order of the Gold Kite was granted to the late Prince.

THE KAISER'S BIRTHDAY.

The German community of Tokyo celebrated the 36th birthday of the German Emperor by a thanks-giving service in the chapel of the German Theological Seminary at Koishikawa. By special permission, the band of the Imperial Household, conducted by Prof. Eckert, gave a fine selection of sacred music, winding up with variations of some national tunes. In the evening about 24 gentlemen sat down at dinner in the splendidly decorated rooms of the German Asiatic Society in Kanda. The bust of the Emperor, a large picture of Bismarck, the coat-of-arms and mottoes of the four Kingdoms of Prussia, Bavaria, Württemberg, and Saxony, and an enormous German Eagle formed the centre of an elaborate decoration enlivened by the colours of the Fatherland and of those four Kingdoms. The committee is to be congratulated on the great success of the evening, especially Dr. Grasmann, to whose design and skilful hand the good artistic effect was due. Count Quadt, secretary of the German Legation, proposed, in a few well chosen words, the toast of the Emperor, which was enthusiastically responded to. Again the Imperial band was in attendance. Prof. Eckert had a special treat prepared for the party. A chronological ar-

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

rangement of military music was executed most magnificently. It comprehended not less than 33 pieces, ranging from the year 1292 to as late a date as 1888. An old English tune of Edward I's. times, some marches of the 17th century and the march composed for Bonaparte's Guard at Marengo, were, besides the old favourites, most applauded. A number of patriotic and cheerful songs and the Emperor's own "Song to Aegir" were rendered at short intervals during a long and thoroughly enjoyable evening.

The following is the programme of music:—

FESTESSEN.

Zur feier des geburtstages seiner majestät des Deutschen Kaisers, Tokio, den 27. Januar 1895.

MUSIK-PROGRAMM.

1. Ouverture 2. Op. "Der Wildschütz." A. Lortzing.
2. Phantasie a. d. Op. "Der lustige Krieg" ..... Z. Strauss.
3. "Das Erwachen des Löwen" Caprice ..... K. Konsky.
4. "Am schönen Rhein gedenk ich dein." Walzer. ..... Keler-Bela.

CHRONOLOGISCHE ENTWICKLUNG DER MILITÄRMUSIK VON 1292—1888.

(Nach authentischen Quellen zusammengestellt von L. Kott.)

XIII—XVI. JAHRHUNDERT.

1. Fanfare der Feldtrompeter und Heerpauker aus dem Mittelalter (1292.) Allen Denen, die dies gegenwärtige Musikstuck hören, den tun wir an diesen stucke kund, was man spielte von Gottes geburte tusene jar, zwey hundert jar, zwey onde neunzig jar, da reisiges Kriegsvulk anmarschirte.
2. Alt-englischer Kriegsmarsch aus Wales (Ende des 13. Jahrh).
3. Marsch der Stadt Worms, geblasen beim Pfeiffergericht (14. Jahrhundert)
4. Fanfare der Reiterei aus dem 16. Jahrh.
5. Alt-niederländischer Siegesmarsch und Kriegslied: "Wilhelmus van Nassauen" v. Marnik van Aldegonde (1572).

XVII. JAHRHUNDERT.

6. Fanfare der Pappenheimer Reiter (1631).
7. Der alte Pappenheimer-Marsch (1631).
8. Stralsunder Fanfaren-Hohnblasen von Stralsunds Thürmen auf Wallensteins Abzug (am 24. Juni 1628).
9. Marsch der Finnländischen Kürassiere aus dem 30jähr. Kriege (1618—1648).
10. Alt-brandenburgischer Marsch, wohl noch aus der Zeit des Grossen Kurfürsten (Ende des 17. Jahrh.) Original a. d. Haag.

XVIII. JAHRHUNDERT.

A. Vorfridericianische Zeit.

11. Der alte Dessauer-Marsch mit Fanfaren (1705).
12. Prinz Eugen (nach der ältesten Aufzeichnung 1706).
13. Marsch der Butowsky'schen Grenadiere, gespielt in der Schlacht bei Kesselsdorf (1742).

B. Fridericianische Zeit.

14. Der Hohenfriedeberger Marsch (1745).
15. General-Laudon-Marsch aus dem 7jährigen Kriege mit dem Laudon-Lied (1756).
16. Maria Theresia-Hymne, Schweige, Fama, still von andern Ruhmesthaten" (Original)."
17. Marsch von Friedrich dem Grossen (1780).
18. Der Torgauer Marsch (comp. vom Leher Scholz in Torgau) um die Wende des 18. Jahrhunderts.

XIX.—JAHRHUNDERT.

A. Das Zeitalter Napoleons I.

19. Marsch der Consular-Garde Bonapartes bei Marengo (1800).
20. Marsch des I. Bataillons der preuss. Leibgarde, von Roetscher Armee-Marsch No. 7 (1805).
21. Schwedischer Björneborganes-Marsch aus Finnland (Orig.) (1808).
22. Marsch des Preobrajensky'schen Regiments der russischen Garde (1812).
23. Marsch des York'schen Corps (1813), von Beethoven.
24. Einzugsmarsch der verbündeten Armeen in Paris (1814).
25. Sturmmarsch der alten napoleonischen Kaisergarde bei Waterloo (1815), „Die Garde stirbt, aber sié ergiebt sich nicht."

B. Bis zur Gegenwart.

26. Radetzky-Marsch von J. Strauss (1848).
27. Marcia Reale, Italienischer Krönungsmarsch von Gabethi (1862).
28. Düppelerschanzen-Marsch von Gottfried Piefke (1864)
29. Der Königgrätzer March (1866).
30. Die Wacht am Rhein (1870).
31. Der Sedan-Marsch (1871).
32. Kaiser-Friedrich-Märsch (1888), von Friedemann.
33. Zapfenstreich und Gebet.

LETTER FROM TALIEN-WAN.

[FROM OUR OWN CORRESPONDENT.]

Talien-wan, January 16, 1895.

After a tiresome voyage of twelve days, we at last arrived here this morning at 10 o'clock. The reasons why the voyage has proved so unusually long will be apparent as I proceed with a brief account of it.

On the 5th instant at 2 p.m., the transport *Fujikawa Maru*, on board of which I took my passage, left the port of Ujina. The *Fujikawa* is a tight little steamer of 354 tons carrying capacity, commanded by Capt. Harada, formerly plying between Osaka and the principal ports in Kyushu. It belongs to the Osaka Shosen Kaisha. Among the first class passengers, 13 in all, were Captain Yoshida, Imperial Artillery, who was going to Inchhön to take up his post as a commissariat officer in that port; Mr. Yoshiyasu, of the Japan Red Cross Society, going to Wiju with a staff of surgeons, pharmaceutists, and nurses, numbering in all 38; Mr. S. Shirai of the Tôhô Kyokai (Oriental Association), whose object is to study the state of things in the territory occupied by the Japanese Armies; and a few Army surgeons charged with the duty of tending the sick and wounded on ships carrying them back to Japan. The second class saloon contained the Red Cross Society's nurses and a few sub-officers and privates assigned to Port Arthur. About 110 coolies bound to Talien-wan occupied the steerage.

The ship was to come here via Fusan, Inchhön, and Gyointo (漁隱洞) on the Tadong-gang. I had applied for a passage on board some transport going direct to this port, but the commissariat authorities at Ujina told me that for the present there would be no such vessel, and advised me to go by the *Fujikawa*. Staying several hours on the 6th at Moji—where I noticed a dozen steamers, among them the *Kiu-shu*, *Shinshu*, *Kaga*, *Sesshu*, *Fukuoka*, *Higo*, *To-ei*, *Ujina*, *Contest*, *Clara*, *Marquis Bacquehem*, *Glenfruin*, *Blorg*, *Romney*, and *Chusan*,—the ship entered the well known port of Fusan on the morning of the 7th instant. There were in port the *Tsukuba Kan* and a small gunboat, which, on approaching nearer, was found to be the *Sôkô* (操江) captured from the Chinese at the battle off Phung-do. There was no mercant steamship in the harbour; but a large number of Japanese and Korean junks lay at anchor. As we approached the shore, the settlement, snugly nestled at the base of a lofty range of mountains completely shutting it in on three sides, appeared in all respects a purely Japanese seaport town of a progressive type; and a Japanese approaching it from the sea would be unable to realise that he was entering a foreign port, save for the crowds of white robed Koreans smoking on the wharf and the complete absence of trees on the mountains. The colony, several centuries old, now contains about 5,000 inhabitants, mostly from Tsushima. It was exceptionally warm, the thermometer registering 60° F. at noon. The residents told us that such weather in midwinter had never before been experienced. To the right of the town, as you enter the port, are visible the remains of an old Japanese castle constructed by the renowned warrior Konishi Yukinaga at the time of the invasion by Hideyoshi. That this castle has been suffered to stand till to-day, is a significant fact, illustrating in an unmistakable manner how hopelessly wanting the Koreans are in the spirit of patriotism and independance. A nation in the least degree patriotic would not have tolerated such a relic of national disgrace for a single day.

We left the port at half-past noon for In-chhon, which we reached on the morning of the 9th. The voyage between the two ports was extremely smooth and uneventful, except that the evening before the ship entered In-chhön, one of the coolies—a young man of about five-and-twenty, who has belonged to the fraternity of story-tellers in Tokyo—enlivened the first and second class passengers with stories of the forty-eight *ronins* and some other *kataki-uchi*. The entertainment was repeated on two succeeding evenings, to the intense delight of the whole party. It was bitterly cold at In-chhön, the deck being frozen over the whole day. Landing in company of Captain Yoshida and several Red Cross Society men, we dined at the Daibutsu Hotel, and afterwards called on the Acting Consul, Mr. Nagataki. From Mr. Nagataki I learned that about a hundred Chinese are staying in the settlement, and that the attitude of the Japanese toward them is one of moderation and magnanimity. He also told me that on the 9th and following days the Korean King was to take, at the mausolea of his ancestors, a solemn vow for the regeneration of the Kingdom. The foreign staff of the Customs are now in the employ of the Korean Government and have no official connection with China. The Japanese settlement, occupying the centre of the place and surrounded on all sides by the settlements of other nationalities, is already too small to accommodate the ever increasing residents, and negotiations have for some years been going on with the Korean Cabinet for its extension on the sea side by reclaiming land now under water. Like all negotiations with the statesmen in Sôul, this discussion has thus far produced little result, and the object of the Japanese Government now is to obtain a fresh concession in the vicinity of the town. The present population of the place consists of 3,200 Japanese, 44 foreigners, and 120 Chinese. *A propos* Korean reforms, walking through the native town (a collection of small, low, and dirty straw-thatched huts) we encountered one or two Korean police constables clothed in a tight-fitting double-buttoned jacket, a felt hat of a peculiar shape, and a pair of Korean shoes. They carry neither sword nor baton. Afterwards we paid a visit to the local *Amun* (Chinese *Yamên*), and found there about thirty constables under Mr. Pak Seihan. Most of these constables speak Japanese. They go by turns to the Japanese police office in the settlement to be taught the duties of police. They are the first visible fruits of the reforms that the Japanese Minister in Sôul is so assiduously encouraging the Korean Cabinet to introduce. This new police system is in its infancy, but it is a step in the right direction, and will by degrees develop into a beneficial piece of machinery under the able guidance of Inspector Takehisa, one of the unsalaried advisers of the Korean Government.

We left In-chhön on the 10th at 10 a.m. The weather was still excessively cold, and the sea rather high. After steaming for a few hours, the wind became so strong that the ship had to take refuge behind an island not far from the mouth of the bay of In-chön, where we lay at anchor until 11 p.m. the following evening, when the voyage was resumed under a clear moonlit sky, and in tolerably smooth water. Early on the morning of the 12th, it began to snow, and the weather grew colder and colder. In the afternoon it became quite stormy and the sky was still overcast with dark and theatening clouds. Moreover, fog and snow almost completely concealed from sight the mountains on the mainland and other marks by which the course of the ship could be steered. Under the circumstances, it was deemed necessary to seek shelter behind a headland, which the Japanese navigators call Chippiri-zaki, about 40 or 50 miles south-west of the mouth of the Tadong-gang. That evening, the regular story-teller being indisposed, the passengers in the second class saloon amused themselves by an exhibition of the so called *kakushi-gei* (hidden accomplishments). The noise being very great, I went into the saloon and for some time enjoyed the feats. Among the amateur performers, two young men distinguished themselves. One of them, a Red Cross Society's nurse, was uncommonly skilful in imitating the cries of dogs under various circumstances, and the peculiar sounds of of the national Japanese weaving machinery. The other youth was still more worthy of notice. He was an old school acquaintance of

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

mine; named T. Yasuda, handsome, only three or four-and-twenty, and already learned in various kinds of experience. After spending a few years in Australia, Singapore, and Hongkong, he returned home and chose literature as a career. He has published a novel under the *nom de plume* of *Royu*, which attracted some attention at the time as the virgin product of a rising author, and he is now acting as military nurse on board hospital ships, for the purpose of getting material for a new romance. Having served for some months a kind of apprenticeship at the Kabuki Theatre in Tokyo, he contributed to the enjoyment of the present occasion by mimicking the peculiarities of speech of the various distinguished actors in the capital. These performances were subsequently repeated almost every evening.

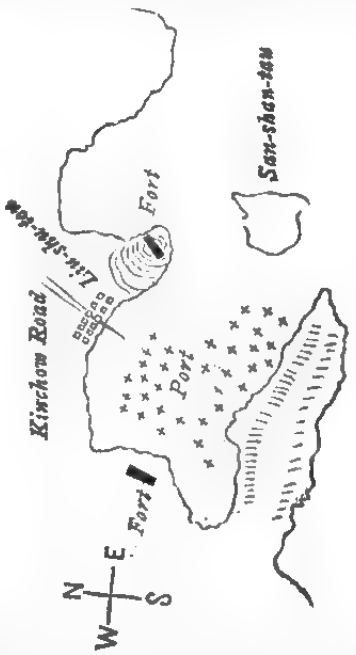
After lying idle for nearly 40 hours, the ship resumed its course on the morning of the 14th. About 1 p.m. she suddenly slowed down, and, going on deck, I observed ■ a little distance ahead something white extending far to the right and left on the sea. On approaching nearer, it was found to be a mass of melting ice poured down from the Tai-tong-gang. There were three ships lying to at the spot, the *Taiyo*, the *Daini Taiko*, and the *Ajikawa*. From the *Taiyo*, which had come from Talien-wan, it was soon learned that the mass of ice spread six miles on all sides from the mouth of the Tai-tong, and that the *Ajikawa*, trying to cut a passage through it, had destroyed her steering apparatus, and had been obliged on the evening of the 14th to be towed back to In-chhŏn by the *Daini Taiko*. The other vessel, the *Taiyo*, left for Talien-wan soon after our arrival. All these ships had been unable to enter the river, except the *Daini Taiko*, which had just been in time to come out before the ice began to move down. Our vessel lay at anchor for the night near an island in the vicinity. The next morning, the ice being still formidable, the ship turned its course in the direction of Talien-wan, which we reached at 10 a.m. to-day.

The harbour is splendid, spacious and deep. To the right, as one enters, is the famous Hoshan-tan (和尚島), which, though its name indicates an island (on most maps it appears as such), is really a promontory, crowned with a strong fort in which the guns are worked by hydraulic gear. At the back of the port at some distance and a little to the right looking from the sea, is a lofty range of mountains. The rest of the ground enclosing the harbour is a low ridge of hills. On the south the harbour is shut in by the island of Sanshan. A large number of ships were in port when we entered.

It may be interesting to add here some figures supplied me by the above mentioned Mr. Yoshiyasu about the work that the Red Cross Society of Japan is doing in the present war. The Society's staff is now distributed as follows :—

Locality.	Physi-cians.	Phar-macutists.	Clerks.	Nurses.	Total.
Hiroshima	9	2	—	—	136
Pingyang	5	2	2	20	29
Wiju	5	2	1	49	57
Talienwan	5	2	2	40	49

The figures for Wiju in the above table include the party now proceeding thither under Mr. Yoshiyasu. If must also be noted that, with the exception of those at Hiroshima, the nurses are all men. The Society has long since completed its preparations, and is now in a position to send out a large staff of surgeons and nurses, but at present the regular medical staff of the Army being sufficient for the purpose, there is little necessity for the cŏoperation of the Red Cross. Nevertheless, what the medical staff of the Society has thus far done for the poor wounded and sick of the Japanese and Chinese Armies reflects great credit upon its organization and resources.



THE total amount of money collected towards the expenses of the great war rejoicing at Uyeno, Tokyo, was *yen* 14,427.850, of which *yen* 12,466.854 only was spent. Of the remainder *yen* 1,200.000 is to be carried forward to a second rejoicing, and the remainder will pay the cost of issuing a report of the pre-celebration.

LETTER FROM KINCHOW.

(FROM OUR OWN CORRESPONDENT.)

Kinchow, January 18th.

In my last letter I concluded with a brief description of the harbour of Talien. I stated that the South of the port is shut in by an island called San Shan. I have since discovered that I was not accurate. What I mistook for the island of that name is really a mountainous promontory extending from the left of the village of Liu-shu-ton. The connecting neck being low land, it was at the time completely hidden from view—as seen from the transport in which I had come—by a dense mass of ships then in port. The form of the port is something like this :—

The asterisks in the above sketch indicate ships in port. So many vessels being in the harbour and great military activity prevailing there, the Commissariat authorities could not find time to attend to our ship until the morning of the 18th (the ship had entered on the 10th) when the landing of passengers and cargo commenced. The Red Cross Society staff, who, unable on account of the ice to land at the Tai-tong-gang, had come to Talienwan, were not permitted to go on shore; they were instructed to return to In-chhŏn and from thence to proceed to Wiju by land. The boats and small junks used for ferrying purposes had been brought, boatmen and all, from Japan. At first they suffered from cold on account of incomplete clothing, but having been afterwards sufficiently provided in that respect, they are now doing very well. Few Chinamen are used in there boats, but a number of Chinamen ply in small boats (containing usually two men) between the steamers, offering fish and other articles of food for sale. It is apparent that they feel complete security though living among and dealing with their conquerers. The Chinese in the region speak the Shantung dialect.

On the morning of my landing, it was exceptionally fair and calm, but the port was covered with a thin layer of ice which at times constituted a considerable obstacle to the progress of the ferry boat. Fortunately, however, the distance to be rowed was not great, only some 400 metres, and we were soon at the end of a splendid iron pier, about 350 ft. long and 15 wide, with a powerful crane at the outer extremity and two flights of stairs one on each side. The height of the pier at the outer extremity above the water at low tide is about 20 ft. Liushuton is a little place containing about a hundred small and mean looking huts constructed of stone and mud, the roofs thatched with straw. The only buildings of any size are public offices, the best being the Torpedo Office, which is now occupied by the Japanese Commissariat Staff. It is close to where the pier stands. After leaving our luggage in the Commissariat Office, I started for Kinchow in company with Mr. Shirai of the *Toho Kyokai* (Oriental Association). The shabby streets of the place were filled with a motley crowd of Japanese soldiers, coolies, and Chinese labourers. We were soon out of the town, and found ourselves on a highway winding over a bleak and undulating space between cultivated fields. The road was almost one long line of waggons carts, pack-horses, drivers, officers, and soldiers on horse-back and on foot. I also noticed several *jinrikisha* pulled by two men. I afterwards learned that about twenty of those vehicles, together with coolies, had recently been brought from Tokyo by the head-quarters of the Second Imperial Army at Kinchow. The waggons were drawn by a mixed team of oxen and donkeys under the charge of Chinese coolies, the lighter carts by Japanese coolies. The soil is clayey on a rock foundation, so that the road, though upon the whole in good order, was at places so broken up and rocky that even the quick-footed *jinrikisha* men from Tokyo had difficulty in dragging their vehicles. At some places the fields were planted with wheat whose young shoots, 2 to 3 inches long, were lying flat on the ground, nipped by the cold and frost. Millet, corn, and beans are, however, the principal agricultural products in the peninsula, as indeed in other parts of Manchuria. The soil looks barren and unproductive. What most strikes people coming from Japan is the utter absence of trees on all sides, except a few straggling specimens—a kind of willow—about farm houses scattered here and there. I could not help reflecting how completely changed would be the aspect of the country after ten years of Japanese possession. There would then be evergreens (pines of course) on all sides, and flourishing towns and villages. With railways and other improved methods of transportation into the interior, it is not an idle dream that in the course of years the port of Talien, which, unlike its rival Newchwang, is open the whole year, will become the principal mart for the whole of the country north and east of Shanhaikwan.

It was a little past 1 p.m. when we arrived at Kinchow. The town is situated in a sort of hollow, surrounded by mountains on the north and west, and by low ranges of hills on the south and east. The south-west is open and faces the sea, the indentation being called the Bay of Kinchow. The town is completely surrounded by brick walls, 30ft. high, with four gates, called the Eastern, Northern, Western, and Southern. It is rectangular in shape, about 600 yards from north to east and 430 from east to west. Coming from Talienwan, one enters through the Southern gate. Passing through, one finds oneself on a thoroughfare running straight from the Southern to the Northern gate. More than half of the Chinese shops along the street were open, stocked with various kinds of necessaries. Both sides of the street were lined with Chinamen loudly crying out in broken Japanese the names of things they were offering for sale to the Japanese soldiers and coolies, such as sugar, matches, cakes, fowls, beef, pork, eggs, oysters, and so forth. Walking about 250 yards, we came to a shrine dedicated to the warrior Kwan-u. Thence, turning to the right and entering a street running from east to west, we arrived at the Taotai's office, now the head quarters of the Second Imperial Army. Important movements being near at hand, there was a great deal of bustle about the place. I saw a number of high officers, but I was unable to have an interview with Field-Marshal Oyama, as he was busily engaged in consultation with his generals. After obtaining a room in the compound for a night's lodging, I started for the Civil Admistration Office. It occupies a suite of buildings formerly appropriated by a branch office of the Coast Defence. A few days previously to my arrival, Major-General Ibaraki had been appointed Governor of Kinchow, the formerly Governor, Mr. Arakawa, having been

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

ordered to accompany the Army on its intended expedition. The Major-General was not in when I called, but the ex-Governor received me very courteously, and supplied me with all available information about the method of his administration, the condition of the people, and so forth. He had directed his attention throughout the term of his administration to securing the confidence of the local inhabitants as to the safety of their lives and property under Japanese rule, and in that object he was justly proud to be able to claim no small degree of success. He made it his principal care that the Chinese should thoroughly understand that Kinchow, the head-quarters of the Second Army, was perfectly safe and even profitable for purposes of residence. He divided the city into four administrative districts, the conduct of affairs within each district being placed in charge of a Commissioner-in-Chief and three General Commissioners. The Commissioners, it is scarcely necessary to add, are all Chinamen of local standing and influence. The police of the place are under the control of a body of gendarmes, who discharge their duties so impartially that the native population hold them in great respect and esteem. All the local customs and practices are respected, and offences are punished according to the enlightened laws of Japan with certain modifications unavoidable under the circumstances. In order to make himself understood by the Chinese population correctly, Mr. Arakawa succeeded in procuring the services of a very capable Chinese literatus, who has ever since remained his adviser in matters relating to Chinese customs and laws. Mr. Arakawa avoided all formality and very often heard and decided cases in the streets of Kinchow while taking a walk. His wise administration so far won the hearts of the frightened Chinese, that the population of Kinchow, originally about 15,000 but reduced to less than 2,000 at the time of the capture of the place, had increased to more than 7,000 by the time he handed over the Government to his successor, Major-General Ibaraki. There is a branch office at Port Arthur and a few more are to be established to the northward of Kinchow. Among other things told me by Mr. Arakawa, I may mention that the military medical staff is getting up a charity hospital in Kinchow for the benefit of the Chinese population. He also permitted me to read an official paper relating to the history of Kinchow and vicinity. The peninsula of Kinchow in ancient times formed part of Korean territory. Exactly when it was conquered by the Chinese there is difficulty in ascertaining, but good reasons exist for the belief that the country passed into Chinese hands in the early years of the Han Dynasty. Kinchow castle was reconstructed in the 24th year of the Chien-lung era (1760). The ex-Governor also caused inquiries to be made into the system of taxation, but the subject being still in course of investigation, it would be premature to speak of it in detail in the present letter. Considering the shortness of his term of office and the exceptional circumstances under which he had to work, one cannot admire too much the excellent results accomplished by Mr. Arakawa.

While talking with him, there came into the room the new Governor and new Vice-Governor. In the latter I found Mr. Mitsuhashi, formerly Secretary of the Kanagawa Prefecture. He had arrived on the 16th and at once took up the duties of his post. He was very busy, so much so that he had not yet found time to write his friends in Japan. He looked strong and healthy. I afterwards accompanied him to his private room, hitherto occupied by Mr. Ariga, legal adviser to the Second Army. Mr. Mitsuhashi told me that the scope of the Administration Office was to be extended considerably. Among other things learned from him, I may mention an interesting fact. A few days ago small-pox made its appearance in the vicinity of Port Arthur, and some Japanese coolies were infected by the disease. The medical staff proposed to vaccinate the Chinese as well as the Japanese. As to the former, however, it was feared that the attempt might create a misunderstanding and lead to disagreeable results. But on inquiry the Authorities learned that vaccination was not new to the Chinese; and when it was announced that the process would be performed free of charge for any and all Chinese, the latter were delighted and largely availed themselves of the opportunity. Departing from the regular order of my narrative, I shall here refer to an interesting point, forcibly illustrating how highly Mr. Arakawa is esteemed by the Chinese people. On his departure from Chinchow, they presented the following memorial to him through their own officials:—

"We, Ki Saisei and Kyu Teisho, General Commissioners in Chief; Sou Hoten, Cho Shoson, and Sai Denshon, General Commissioners; and Wu Hailin, Liu Saishun, Zai Shunyo, and Jo Kaohyo, District Commissioners, respectfully present to Your Excellency this memorial and beg to express our feelings of regret on bidding you farewell. Since your arrival at Kinchow, your Excellency has been benevolent to the people, like a parent to his children, and has taken every means to protect them. Your Excellency has spared no pains to carry out whatever measure was deemed beneficial to the people, and has suffered to go unsuppressed nothing in the least injurious to them. Deeply impressed with gratitude to Your Excellency, the people congratulated each other at their good fortune, and wished to remain for ever under Your Excellency's benign administration. But your Excellency is now about to leave us, and our people, feeling like children suddenly deprived of their parent, sincerely pray to the Imperial Court that Your Excellency may be long allowed to remain in the present post. Would that by good fortune our poor people may have the great happiness once more to welcome Your Excellency as their Governor. For our own part, we, the signatories of the present memorial, consider it an especial favour and honour that we have been allowed daily to be near Your Excellency and to bask in Your Excellency's favour. We respectfully hope that that Your Excellency may enjoy a safe and pleasant journey. Should our imperfect language fail to convey our meaning correctly, we trust that Your Excellency will nevertheless appreciate our good intentions."

LETTER FROM YUNGCHENG.

(FROM OUR OWN CORRESPONDENT.)

Yungcheng, January 23rd.

For reasons that I am not permitted to mention at present, but which, when fully explained, will, I believe, justify my action, I have taken the liberty of departing from the plan upon which I was instructed to proceed, and have decided to accompany the Second Army in its expedition to the Shan-tung peninsula. Accordingly, I applied for and obtained passage on board the transport *Yokohama Maru*, Captain Haswell, which was to carry Field-Marshal Oyama and his Staff, as well the foreign military attachés. The Field-Marshal was to leave Kinchow on the 21st, but I bade farewell to that place on the 19th and went on board a little after dusk. The trip back from Kinchow to Talien-wan presented much the same features as those encountered on the route up—the same chain of waggons, carts, coolies, horses, officers, men, and so forth along the whole length of the road. One or two facts that I omitted to mention in my preceding letter, may be described here. I observed that since the advent of the Japanese, all the Chinese in this locality have given up the national practice of shaving the portion of the head in front of the queue. The latter, however, they still retain. Another point worth reference that came to my notice while in Kin-chow is the willingness of the local native population to receive payment in Japanese currency of any kind, whether paper, silver, nicked, or copper. In this respect the Chinese are far easier to deal with than the Koreans, whose utter ignorance makes them still reluctant to receive Japanese money even in localities very near to open ports or Japanese encampments. It is an interesting and often very comic sight to see the Japanese soldiers and coolies making bargains with the Chinese. The latter have learned a few Japanese words, and similiarly, the former know some of the commonest terms in the local vernacular. Thus, through the medium of a compound jargon of the two languages, largely assisted by gesture, purchasers and sellers manage to convey their meaning to each other.

When I called at the Commissariat Office at the Head-quarters to take leave of the officer who had been very kind to me, I saw in the ante-room an exceptionally handsome young Chinese, attired in silk clothes—obviously a gentleman. It was apparent that he must be a sort of a privileged person in the employ of the Army. On enquiry, I found that he was the Chinaman so frequently mentioned in the Japanese press, who welcomed the Second Army on its arrival in the neighbourhood of Pitzu-wo when it landed in October last. He has made valuable presents to the Japanese army on several occasions. His name is 劉翊田 (Liu Woo-ten). He belongs to an illustrious family in Kinchow. His ancestors, devoted adherents of the Ming dynasty, fled to the Liaotung peninsula on the downfall of that dynasty. The family has always been strongly opposed to the Manchu usurpers, and the present representative was glad to welcome the enemies of the reigning dynasty as his friends. I made his acquaintance and exchanged cards.

Having left Kinchow late in the afternoon, it was already dark when I reached Talien-wan, where I at once went on board the *Yokohama Maru*. Some officers and coolies had already preceded me. There were also on board the foreign Military Attachés, Captain du Boulay, Colonel Taylor, Captain O'Brien, and Colonel Woogack.

The next morning, the 20th, was very cold, the water in the harbour being covered with a a thin layer of ice. About 6 a.m., I landed and called at the Commissariat Office, where I was agreeably surprised to meet Dr. Paul and Mr. Cowen. They had arrived at the port the preceding day, and were going up to Kinchow. The 22nd was very cold, 32° F.

At 1 p.m. exactly on the 22nd, the ship started on its voyage, followed by nearly twenty transports. The Field-Marshal and the Staff had come on board the preceding day. As the steamer left her moorings, nearly all the passengers came on deck where the band was playing. It was a grand and exhilirating sight to witness the fleet of transports going out in line. I noticed with much surprise that the transports proceeded the greater part of the distance without the escort of a single man-of-war. Early on the morning of the 23rd, we rounded the extreme point of the Shantung peninsula, and about 8 a.m. entered the port of Yungcheng, and dropped anchor about half a mile off the village of Siao-pia-chwang. The harbour is surrounded by high mountains on all sides, except on the south-east, which is open to the sea. According to a naval officer who came on board that morning, the port is well sheltered from strong gales. All around the mountains are bare, but close to the village there is a handsome grove of pretty large pine trees, which gives the place a certain likeness to some spots on the Tokaido in Japan. A landing can be effected anywhere along the beach for a distance of more than a mile. The shore, as I write, is covered with troops, coolies, and horses, most of whom were landed in the course of the morning. Coolies are already moving briskly along the shore toward the west, and bands of them are visible for a distance of about a mile and a half, where they are lost to view in a valley between two mountains. Presumably the road to Yungcheng lies in that direction, at which town the van of the troops is now quartered.

Since writing the above, I have met a man who has just returned from Yungcheng. He witnessed the landing and went as far as Yungcheng. I obtained the following facts from him. The twenty transports conveying the troops, leaving Talien-wan on the 19th, escorted by four men-of-war, came in sight of the lighthouse at the headland of the Shan-tung Promontory a little before dawn. Shortly afterwards, at about 6 a.m., my informant heard reports of guns. These reports, as he subsequently learned, proceeded from Yungcheng Bay, where an exciting scene on a small scale was being enacted between a

Chinese battery on shore and a Japanese squadron that had come there to prepare the way for the landing of the troops. A small party consisting of 18 marines and 13 soldiers, tried to land, but was repulsed by the fire from the Chinese battery. Then a smaller party of 7 picked marines from the war-ship *Yayeyama* effected a landing, cut the telegraph line, and afterwards, assisted by a few engineers, succeeded in storming and capturing the Chinese battery with four guns. Everything was now ready for the landing of the troops, which operation was commenced at 8 a.m., and finished before dusk. The landing was effected by boats (*hashike-pune*), a large number of which, with *sendo*, had been brought by the transports. Imagine what a tremendous task it must be to get on shore, say, 30,000 men and several thousands of coolies, together with ammunition, horses, stores, and all other accessories of an Army Division. That the work was accomplished in so short a space of time must be ascribed in part to the experience that the military officers have obtained in this war, and partly to the excellent manner in which the warship *Yayeyama* had arranged matters relating to the landing. The officers from that ship had previously divided the beach into a large number of sections, apportioning them for the use of different battalions and regiments. In this way, and by other devices on the part of the Naval officers, confusion was avoided, and the operation of landing proceeded with perfect smoothness, though heavy snow was falling at the time. About 2 in the afternoon, a battalion (the 4th) was sent forward in the direction of Yung-cheng some 7 or 8 miles west. Like other prefectural towns, it is walled, and the walls are said by some to be much better built than those of Kinchow. Chinese troops stationed there made some slight resistance but were soon put to flight. The Eastern Gate, which was the one attacked by the advanced guard of the Japanese, was scaled by six soldiers and thrown open by them from inside. The Chinese force in the place was estimated at 500. As soon as the town had been entered and occupied, a company was at once sent to pursue the enemy. The battalion passed the night about a mile from Siao-pia-chwang, where it had landed. My informant tells me that various proclamations had been posted in Yungcheng warning the people of the probable descent of a Japanese army and enjoining them in such a case to resist the progress of the invaders. These proclamations, as may well be imagined, did more to frighten the people than to reassure them, and must have caused many a wealthy family to prepare for immediate flight. Nevertheless, the majority of the citizens, I am told, remained in the town. Indeed, the people in these regions are reported to be even better disposed toward the Japanese than those in the Kinchow peninsula. From the very morning of the landing, men came down in large numbers offering for sale various articles of food. A large number, I am informed, have already been engaged as coolies. About 15 or 16 prisoners were taken in Yungcheng, besides a large quantity of ammunition and stores.

The above facts I give on the authority of a person whom I have no reason to doubt. As there on no quarters on shore, the landing of the party in this ship has been delayed, but perhaps to-morrow (24th) we may go ashore.

To-day the British fleet came into port, and Admiral Fremantle paid a visit to Field Marshal Count Oyama.

Among some "wonder working plants" mentioned the other day by Mr. D. Morris, in a London Institution lecture, was the coco-nut palm the most beautiful plant of the tropics, which always leans toward the wind, and whose fruit sometimes produces pearls. These pearls differ from those of the oyster only in being slightly duller. A taste-spoiling plant has leaves that, when chewed, cause sugar to become tasteless and sour things to lose their sourness; and a remarkable—but undoubted and unexplained—effect of the wild tamarind is that of causing horses that eat its leaves to lose the hair of their manes and tails.

CHINESE ARTILLERY.

An officer in command of the Artillery Corps of the First Division, who took part in the battles of Sŏng-hwan, Phyŏng-yang, and Chiulien, made, according to the *Mainichi*, the following remarks on Chinese artillery. Whatever may be said about other points, China, it must be admitted, was well prepared as regards the number of cannon available by her. Not a few of these have fallen into the hands of the Japanese, indeed, she must have lost about half of her artillery. According to the acknowledged tactical rule of modern times, a Division composed of about 1,000 fighting men must have at least 3 cannon. The Chinese conformed to this rule at first, but latterly that has not been the case. Both the troops led by Sung and those of I in the battles of Feng-hwan and Haicheng were several thousand strong, yet they only had 3 or 4 guns. It is evident, therefore, that the Chinese Army in Manchuria is suffering from scarcity of ordnance. Want of uniformity in arms and ammunition is a well-known fault of the Chinese. In rifles, Mausers are used side by side with old breechloaders, and a similar irregularity prevails among the cannon. Krupps predominate, but with them are used home-made guns fashioned after the Krupps, but thicker and not scientifically cast. The Chinese are also careless in their use of cartridges. These are not coated with copper, but with lead which sticks to the side of the barrel when the ball is ejected, thus materially injuring the piece which wears out much more quickly than would a cannon used by the Japanese. The Chinese artillery fire is a miserable performance, but what strikes the Japanese with admiration is the way in which the Chinese soldiers manipulate their cannon. Generally only three soldiers are attached to a heavy piece, which, however, seems to give them no difficulty. The Japanese cannot vie with them in this respect, but that is only owing to their inferior physical strength. There is no regularity in the firing of the Chinese. Each battery works independently, and as the mouth of a gun is directed solely by the gunners, shots come toward the Japanese in a very hap-hazard manner. The *Mainichi's* informant frequently looked to see whether any artillery officer was in the vicinity of a battery, but could never see one. He is of opinion that the officers must always be posted at a distance from the batteries, leaving the soldiers to manage the guns at their own will. The Amoor troops led by General I were rather above the average in respect of fighting strength, but that was because they had not yet been defeated by the Japanese. Henceforth they will be as pusillanimous as the other troops. The informant is said to have boasted that in precision and discipline Japanese Artillery can only be equalled by that of France or Germany.

THE FOURTH DOMESTIC INDUSTRIAL EXHIBITION.

A cluster of fine buildings in front of the Heian Shrine in Kyoto, by which runs the artificial canal, will be the scene of the Fourth Domestic Industrial Exhibition. The first enterprise of the kind in Japan was undertaken in the 10th year of *Meiji* (1877) at Uyeno Park in Tokyo. Two more were held in the same place, but when the prescribed time for holding the Fourth Exhibition drew near, the Chambers of Commerce of the Kwansei districts which are the provinces lying west of the Hakone Pass, tendered an application to the Government. This was to the effect that, as it was best for the furtherance of national industry, commerce, and agriculture to hold Exhibitions in different localities, which idea was moreover embodied in the Regulations for Domestic Exhibitions, the Fourth Domestic Exhibition should take place in some suitable locality in the Kwansei districts. Just at that time the Kyoto citizens conceived the idea of celebrating in the 28th year of *Meiji* (1895) the eleven hundredth anniversary of the removal of the Imperial seat to Kyoto, or Heian as it was formerly called, and they requested the Government to hold the next Exhibition in that city. The plan being approved both by the Government and Diet, Imperial Ordinance No. XVI. was issued on April 5th of the 26th year of *Meiji* (1893), fixing that the Fourth Exhibition should be held at Okazaki-cho in the Kamikyo division of Kyoto. H.I.H. Prince Kumatsu was nominated Superintendent, and Viscount Enomoto, Minister of State for Agriculture and Commerce, Vice-Superintendent of the Exhibition, while Mr. Kuki was appointed Head of the Committee, and Mr. Kaneko, Vice-Minister of State for Agriculture and Commerce, Chief Manager.

The Exhibition covers an area of 80,000 *tsubo*, donated for the purpose by the citizens of Kyoto. The buildings occupy about 9,600 *tsubo*. The principal are those devoted to general Industry (4,050 *tsubo*), Machinery (1,200 *tsubo*), Agriculture and Forestry (1,440 *tsubo*), Marine Industry (540 *tsubo*), Fine Arts (420 *tsubo*), and Live Stock (600 *tsubo*), besides which there are the Committee Rooms and Offices of various kinds. The front approach to the Exhibition faces a bridge laid over the canal, and midway stands a large fountain. In the wide space in front of the approach trees are planted, giving the place the look of a large garden. The exhibits are grouped in seven classes:—1, general industry; 2, fine arts and fine art industry; 3, agriculture, forestry and horticulture; 4, marine industry; 5, education and science; 6, mining and metallurgy; 7, machinery. In the General Industry Building the exhibits coming under classes 1, 5, and 6 are arranged. This building stands just within the front approach and is large and square with an inner yard. In it is the greatest number of exhibits. Crossing the rectangular yard, the visitor will find on the eastern side a place where pot plants are arranged for show, and a miniature garden laid out in purely Japanese style. The Machinery Building is on the right-hand side of the gallery leading from the Industry Building and faces the Agriculture and Forestry Building, while the Marine Industry Building is on the east of that for Machinery, attached to it being an aquarium showing live fish. The Fine Arts exhibits and others allied to them are arranged in a building north of that for Marine Industry. It is intended that the Fine Arts Building shall remain after the Exhibition is closed, and its construction is therefore somewhat different from that of the other edifices. A fountain stands in front of it. Two buildings at the extreme east of the premises are set apart for the exhibition of purely agricultural articles coming under class 3. In the General Industry, Marine Industry, and Agriculture and Forestry Buildings, the exhibits are arranged according to the order of the provinces sending them, while in the other three structures they are classified according to their kind. The Offices and Committee Rooms are on the west of the premises, being reached by the gate leading to the Nijo thoroughfare. The exhibitors' rooms, rooms for unpacking, and Post and Telegraph Office, are all on the premises. Sales rooms of various descriptions are to be found beyond the Canal. The Exhibition is to open on the 1st of next April and to close on the 31st of July. The Buildings for Live Stock will only be opened twice for short periods, namely, from the 1st to the 15th of May, and from, the 26th of May to the 9th of June. The Exhibition will remain open every day from 8 a.m. to 5 p.m., but this may be altered according to circumstances. All persons over 5 years of age must provide themselves with tickets. The latter are of three kinds, the Sunday ticket (red, price 10 *sen*); the Saturday ticket (white, 3 *sen*), and the ordinary day ticket (blue, 5 *sen*). Visitors will not be allowed to touch the exhibits except by special consent, nor will they be permitted to copy or take photographs of any exhibit without having previously secured the consent of the Exhibitor or Exhibition Office. A ceremony for the purpose of awarding prizes will be held on July 11th.

The Heian Shrine dedicated to the Emperor Kwammu may be seen from the back gate of the Exhibition grounds.

ADMIRAL COUNT KAWAMURA AND THE CORRESPONDENT OF THE NEW YORK "WORLD."

HAD the correspondent of the New York *World* been a eulogist instead of a detractor of Japan, it is safe to say that he would have been smothered long ago in a torrent of local abuse. That, in truth, is one of the most interesting and suggestive phases of the miserable Port Arthur affair. The *World's* correspondent has been convicted of palpable falsehoods, yet not one word of censure has he received from the local foreign press of Yokohama, the *Japan Mail* excepted. The correspondent of the *New York Herald*, on the contrary, having untruly asserted that he arrived at Phyöng-yang in time to see the end of the first day's battle, has been pilloried until his name is a by-word. But then, he was pro-Japanese. There is the difference. The *World's* correspondent, in an account of the fight at Phyöng-yang, extending over several columns, constructed sentence after sentence in such a manner as to convey the impression that he had been an eye-witness of the events he described. Further, in his telegraphic story of the Port Arthur excesses, he committed himself to several serious exaggerations, and concluded by a deliberate falsehood, that the foreign correspondents, "horrified by the spectacle, had left the Army in a body." Yet he has been covered with applause by Yokohama journals, has been publicly thanked as a benefactor of the community, and has been quoted as a witness of unimpeachable veracity. It furnishes, we repeat, a curious contrast, does the treatment extended to him as compared with that extended to the New York *Herald's* representative. Not even the hacknied acusation of mercenary motives invariably preferred against every one that ventures to say a word in Japan's defence, has been wanting in this case. However, it is useless to dwell on these too familiar methods. We proceed at once to our purpose, namely, to expose another of the falsehoods told by Mr. JAMES CREELMAN. In his account of the Port Arthur affair, it did not content him to invoke public execration on the heads of Japan's soldiers; he extended his abuse to her sailors also. "During the battle," he writes, "Japanese torpedo-boats sunk ten junks laden with terror-stricken people. Torpedo-boats were going through the waves sinking junks loaded with men, women, and children endeavouring to escape. The water was filled with drowning inhabitants." Now it is quite plain that Mr. JAMES CREELMAN was not competent to make any such assertion. The Japanese men-of-war and torpedo-boats were outside the harbour, and at a long distance from the forts. In other words, they were miles away from any position that a correspondent on shore could have occupied at the time. The acts he attributes to them and their results must have been quite beyond the range of his observation. The impudence of his falsehood becomes even more palpable when he undertakes to identify as non-combatants people drowning in the sea so far away as to be scarcely discernible at all. But in addition to this intrinsic evidence of falsehood, we have now the positive evidence of Admiral Count KAWAMURA, who was with the fleet all the while. Here is the Admiral's statement as published by the *Fiji Shimpo* :—

> On the day of the battle, our fleet came round from the left of Port Arthur and was nearing Chin Bay, when we suddenly observed a small steamer approaching the place from the west. It flew no flag, and its behaviour on sighting our ships being evidently suspicious, the Flag-ship signalled to intercept it. Then, for the first time, it ran up the British flag. Having been conducted by a torpedo boat to the neighbourhood of the Flag-ship, a boat was lowered from the latter, and the steamer, having been boarded, proved to be the *Kinriu*. Nothing questionable was found on board, and presently the British man-of-war *Archer*, which happened to be in the vicinity, sent an officer to explain that the steamer was in truth an English trading vessel. She was accordingly released. Our ships now steamed round outside Chin Bay. At about 4 p.m., as we were heading to the east of Port Arthur, we observed two small steamers leave the port and steer westward. Our immediate impression was that the Chinese commanding officers were escaping in these steamers. One of the two presently turned back to Port Arthur, apparently apprehensive of being struck by the missiles that the forts were firing, but the other held her course, and was pursued by one of our torpedo-boats. Unable to escape by sea, she was run ashore at the base of Laotieshan by her crew, and every one on board landed and escaped, the steamer falling into our hands. That night the wind grew so boisterous and the sea so rough that the Flag-ship signalled the Squadrons to return to Talien Bay. The above is an exact statement of the doings of the ships on the day of the battle. No cruelty or excess of any kind was perpetrated. The correspondent of the American newspaper was with the Army on shore: he was not with the fleet, and it is evident that he could not see what the fleet did. For what reason has he invented the story that Chinese junks were sunk and men and women, old and young, barbarously killed? Did he expect to enhance the fame of his own newspaper by defaming other people? Or did he look to achieve some other object of ambition by such fabrications? I am at a loss to conceive.

It thus appears that Mr. JAMES CREELMAN'S tale about "ten junks laden with terror-stricken people" being sunk by Japanese torpedo-boats, and about "the water being filled with drowning inhabitants," is a total falsehood. Not a syllable of it is true. The Japanese torpedo-boats did not sink or fire on a single junk, and not a solitary person lost his life through their agency. It does not follow, of course, that everything related by Mr. CREELMAN is untrue because the man himself has been proved to have no regard for truth. Some of the excesses laid by him to the charge of the Japanese troops are substantiated by collateral testimony. But it does follow that the columns of the New York *World* are the last authority to be consulted by any one desiring to learn the exact facts of the Port Arthur affair.

WALKING DOWN THE RANKS.

THE *coup d'œil* that enables an observer to analyse and synthesise the qualities of a nation after half a dozen days' observation, is not given to one in a million. But probably one in every ten thinks that he possesses it. It is pleasant to meet these believers in their own perspicacity: their moral swagger is so fine; the courage of their phraseology is so inspiriting. Colonel HENRY KNOLLYS is one of them. What he does not know about the Chinese and the Japanese is not worth knowing. A few years ago, probably about 1885—we forget the exact date, though it ought to be impressed on our recollection—the gallant Colonel, then a Major, visited Japan, and spent about three weeks "doing" the country. During that time he invented a phrase, "imitative, but not initiative." It delighted its inventor and imposed on many of his less self-assertive friends. "Imitative, but not initiative"! Suppose that a man, having just acquired ability to read, were placed in an immense library stocked with books embodying the pith and marrow of the world's scientific and philosophical research during the past ten centuries. After what lapse of time would it be just to call him "assimilative, not original" because he had devoted himself entirely to exploiting these immense stores of novel knowledge instead of venturing into the path of authorship on his own account? Major KNOLLYS had found that the limber-boxes in a Japanese field-battery were packed as English artillerists pack the same receptacles. Had he discovered any variation from the "sealed pattern," it is probable that he would have dubbed the Japanese "docile, but defective." Finding identity, however, he invented his formula "imitative, but not initiative," and went away happy. A phrase has often accomplished formidable results, but Major KNOLLYS' phrase proved very ephemeral. It had long been forgotten, when the words and their deviser were recalled by an article in *Blackwood's* for November. There we have the Major—now a Colonel—discoursing in the "cocksure" accents of other days. Lapse of years has not impaired his colossal self-confidence. He is still the same deliverer of omniscient judgments in epigrammatic language. No fragment of observation is too small in his eyes to support a pinnacle of deduction; no "yarn" too ornate to embellish a page of solemn history. His contempt for the Chinese is splendid in its thoroughness. There is not one redeeming feature in the whole nation. It is true that the Colonel brings no fresh pigments to paint the revolting picture he limns. His palette is confined to colours prepared by others. But he lays them on with his own brush, and what a brush it is to be sure! "A Chinese officer," he says, "provided he be rich and quiet, is content

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

to be infamous. He has not the faintest idea of that sense of honour which feels a stain like a wound. To imply to him that he is a thief, a liar, and a coward would scarcely convey greater offence than to charge an English gentleman with being an inveterate punster." Is not that fine? How conspicuous is the "sense of honour," how marked the respect for truth, inspiring such a magnificently damning verdict! None but a punctiliously honourable, a scrupulously honest, man would venture to call the military officers of a whole nation "thieves, liars, and cowards." Besides, Colonel KNOLLYS has a merit seldom associated with volubility and omniscience. He always adduces the testimony on which his conclusions are founded, and it is always conclusive testimony. Here, for instance, is one of his proofs that Chinese officers lack "the faintest sense of honour," and are "thieves, liars and cowards:"—

I was on board a ship of the China Merchants Company, conveying a Chinese general and some hundreds of his men to Foochow. The general, in support of his own dignity, claimed to dine with the five or six Europeans present, and we all exerted ourselves to treat him with the utmost civility and consideration. But the poor fish-out-of-water crawled cringingly to his meals, replied tremblingly to the conversation I addressed to him in French—he knew little English—and shrank servilely into a corner at the conclusion of the repasts. He had little general education, less professional knowledge, and no dignity of address whatever, whether European or Oriental. On disembarking at Pagoda Anchorage, he suddenly blossomed into a high official, and was received with great pomp by his garrison. But on closer examination I realised that the latter consisted of a disorderly mob, and that the blaze of colour was chiefly due to a conglomeration of standards, amounting to about 50 per cent. of the fighting strength.

Could any one fail to be impressed by this picture? Some of us may have formed a different impression of the individual Chinaman; may have learned to regard him as a person of high intelligence, fine physique, often handsome face, and nearly always dignified demeanour. But that blundering estimate is merely because we have not climbed to Colonel KNOLLYS' pinnacle of observation. Could we get there, we should at once recognise "the poor fish-out-of-water, crawling cringingly to his meals, replying tremblingly to conversation, and shrinking servilely into a corner at the conclusion of a repast." Perhaps, after all, our illusions are pleasanter than the Colonel's horrible realities. Still we are bound to worship such a divinity of intelligence and acuteness. He does not even suffer us to entertain any fond fancies about the fighting qualities of the Japanese soldier. We have been accustomed to regard the latter as a brave fellow before everything; a man imbued with the instinct of battle; a man ready at all times to sacrifice life to military honour. But Colonel KNOLLYS knows better. He has taken the true measure of the Japanese. This is his verdict:—

No; the Jap. will remain a Jap., do what you will to dress him, and arm him, and drill him as a European soldier. You may discipline him into military semblance, but you will never manufacture him into a "vielle moustache." Relax the stringency of barrack life, and set him to campaigning work, and nature will insist on reasserting herself; the soldier will rapidly revert to coolie instincts—a thoroughly well-behaved coolie, but still a coolie.

As usual, the conscientious Colonel submits the evidence upon which this sweeping verdict is founded. He did not find in Japan any of the defects conspicuous in China. He did not discover there any of the cheating, lying, cowardice, and patent military ineptitude that he saw in China. On the contrary, he found "infantry precise and efficient in their movements;" "cavalry fair, though scanty in numbers;" and "artillery the aspect and efficiency of which so enamoured him that he could not resist the temptation of personally assisting in the manœuvres of the field batteries." But then, something ominous happened: he walked down the ranks. This man with the miraculous *coup d'œil* walked down the ranks. If the process of dining with a Chinese General showed him "a poor fish-out-of-water, crawling cringingly to his meals, replying tremblingly to conversation, and shrinking servilely into corners," was it not inevitable that stupendous discoveries should attend his perambulation up and down the ranks of a Japanese battalion? "The aspect and the turn-out of the three arms—infantry, cavalry, and artillery—left little to be desired," but then came the walk down the ranks, with this result:—

And yet—as we walk down the ranks a sensation of illusion creeps over us, for the spirit of the soldier is not here. Here are not men with an innate love of fighting, who would take the initiative of danger, and who, out of hand in their eagerness, would storm a position with a cheer. That they have fought fiercely against the Chinese does not confute my suggestion, because in this case national hatred has been roused to fury, and has assumed the phase of personal animosity rather than that of the courage of a soldier.

Such are the discoveries made by "walking down the ranks," when one is endowed with a divine *coup d'œil*.

THE TWO HOUSES OF THE DIET.

THE experience of all bicameral systems of parliamentary government is apparently not destined to be upset in Japan's case. Already the House of Peers and the House of Representatives stand in marked opposition to each other, the former adopting a conservative attitude, the latter, a radical. Five reforms receive in every session the early and earnest attention of the House of Representatives, and, having been embodied in Bills, are sent to the House of Peers, there to be either rejected *in toto*, or so materially amended that a *via media* between the two branches of the Legislature cannot be easily found. Those five measures are, the abolition of the Peace Preservation Regulations, the abolition of the Law of Premonition, the abolition of the Special System of Local Government in the Three Cities, the amendment of the Press Law, and the amendment of Law No. 84 of the 23rd year of *Meiji*. The Diet has not yet been in actual session for more than three weeks, yet the Lower House has passed the whole of the above five measures and the Upper House has already rejected three of them and radically altered one. The abolition of the Special System of Local Government in Tokyo, Osaka, and Kyoto cannot properly be called a political question, but seems undoubtedly to be desired by the great majority of the citizens of those places. The Government, on its side, does not claim that the Special System as it now exists is entirely satisfactory. It merely asserts that there must be some special system in view of the exceptional conditions that distinguish the "Three Capitals," as they are called, from all other administrative districts in the empire. Last session when this problem came up for discussion, the Minister for Home Affairs announced that an official Bill amending the present system was in course of preparation, and urged the expediency of taking no decisive step in the sense of abolishing the present system until the projected substitute was ready to take its place. To this view the Lower House paid no attention, but abolished the Special System off hand, repeating the operation this session. The Peers, on the contrary, finding that the Government's revised Bill was not forthcoming as promised, asked the reason why, and having been informed that the measure could not be satisfactorily drafted, pending the issue of negotiations now in progress for opening the country to foreigners, voted to keep the Special System in force for the present. That does not constitute a very marked divergence of opinion between the two Houses, but the question has become more accentuated than the above bald statement indicates. The Peace Preservation Regulations, however, are a very distinct bone of contention. Session after session the Lower House has rescinded them, and session after session the Upper House has voted in the opposite sense, the Commons claiming that the Regulations are an unconstitutional outrage, and the Peers asserting that they are a necessity. The same story covers the case of the Law of Premonition, except that the Upper House has not yet been called upon to vote about it this session. Law No. 84 belongs to a similar category. It is a statute providing that persons violating Administrative Ordinances shall be liable to a fine not exceeding 200 *yen* and to Minor Imprisonment for not more than one year. The Opposition in the Lower House cannot reconcile themselves to the idea of enforcing any purely official order by punitive processes so drastic. They denounce the thing as unconstitutional, and insist on cutting down the maximum fine to 50 *yen*, and changing the Minor Imprisonment to Police Detention, overlooking the obvious fact that, if a fine of 200 *yen* and a term of imprisonment be unconstitutional, so

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

also are a fine of 50 *yen* and a term of detention. The Upper House, appreciating that principle and crediting the Government's declaration that Administrative Ordinances could not be properly enforced by milder means, votes uniformly for preserving the impugned Law. Finally, we have the greatly vexed question of the Press Laws, which virtually reduces itself to the one problem of Suspension. The Commons insist that the power of Suspension and Suppression must be removed altogether from the hands of the Minister of State for Home Affairs. The Peers contend that the power is essential to the proper control of newspapers such as Japan has at present, but at the same time consider that its exercise ought to be modified by two provisions, namely, that the reason for suspension or suppression should be distinctly stated, and that the term should be limited to one day in the case of a diurnal newspaper, and to three issues in the case of a periodical. A compromise between the two views would evidently mean a material addition to the privilege of free speech now enjoyed in Japan, but it is to be feared that the temper of the Lower House precludes any chance of compromise.

From the above brief statement our readers will be able to form a tolerably clear conception of the lines along which the forces of parliamentary Conservatism and Radicalism range themselves at present in Japan.

MR. JAMES CREELMAN.

THE methods of Mr. JAMES CREELMAN'S eulogists constitute an interesting psychological study. The man has been convicted of the grossest exaggerations and the most palpable falsehoods, yet he is still held up as a mirror of truth and accuracy. The latest exposure of his romancing was made by Admiral Count KAWAMURA. Mr. JAMES CREELMAN appears to have thought that unless he managed to include the Japanese Navy in his story of the Port Arthur atrocities the indictment would not be complete. Accordingly, he included the Fleet in a most thorough manner. He declared that during the assault on Port Arthur Japanese torpedo-boats "were going through the waves sinking junks loaded with men, women and children endeavouring to escape;" that "ten junks laden with terror-stricken people were thus sunk and that "the water was filled with drowning inhabitants." Admiral Count KAWAMURA, on the other hand, avers that not a single junk was sunk by the torpedo-boats, that not a single junk was even seen by them, and that the only Chinese vessel they pursued was run ashore and abandoned by its crew. No two statements could be in more complete opposition. Admiral Count KAWAMURA'S testimony is not negative, but positive. He describes every operation of the topedo-boats in the sense referred to, and says that no such operation as that spoken of by Mr. JAMES CREELMAN ever took place. What is the defence now attempted of Mr. CREELMAN? It is this:—"Count KAWAMURA, being at sea in command of a squadron, can hardly be expected to have seen every movement of all his torpedo-boats, and it may well be that certain things occurred which did not come under his observation." Count KAWAMURA, by the way, was not in command of a squadron at all. He was with the Fleet by the EMPEROR'S orders for the express purpose of observing and reporting upon its operations. But that is a detail. The main point is the extreme comicality of the defence. Count KAWAMURA was with the Fleet; therefore his statement of its doings is probably defective. Mr. JAMES CREELMAN was not with the Fleet, but miles away from it; therefore his statement of its doings is probably more comprehensive than Count KAWAMURA'S Could any attempt to impose upon public intelligence be more naïve? There is another defence also. "Mr. VILLIERS," we are informed, "told the Editor of the *Japan Gazette* that he saw two junks fired into, so that, so far, Mr. CREELMAN'S testimony is corroborated." How is it corroborated, we should like to know. The whole question now under discussion relates to the conduct of the Navy. It has nothing whatever to do with the behaviour of the Army. Did Mr. VILLIERS say that he saw torpedo-boats fire into two junks? It is curious that no hint of anything of the kind is contained in his published interview with a representative of the *Japan Gazette*. If he said, as Mr. CREELMAN himself says elsewhere in his account, that junks attempting to leave the harbour were fired into by the soldiers, that has no manner of connection with his independent assertion that ten junks were sunk by the torpedo-boats outside the harbour. Finally, it is urged in behalf of Mr. Mr. CREELMAN'S veracity that "all his other assertions in connection with Port Arthur have been found accurate." Have they indeed? Was he accurate when he penned the wretched falsehood that the correspondents, "horrified by the spectacle, left the Army in a body?" That one lie should have been enough to prevent any honest reader from attaching full credence to the tales published in the columns of the *New York World*. We do not wish it to be thought that we seek to defend the Japanese troops. We believe that they committed disgraceful excesses and that they greatly impaired the prestige that their country was rapidly winning. But let us have the truth about what they did. Let us not be betrayed into the injustice of accepting as gospel the sensational romances of Mr. JAMES CREELMAN.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sence responsible for the sentients or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

THE IROKWAI.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Since the military Head-quarters were removed to Hiroshima and the Sendai garrison also temporarily quartered there, a society composed of local Christian workers has been for days and weeks doing what it could for the large body of men now in the city. The long name of the society is *Kirisuto Kyoto Domei Senji Gunjin Irokwai*. It is briefly called the *Irokwai*. Its efforts have been true to the full name, united efforts to comfort soldiers at this time of war. A few ministers and others, both Japanese and foreign, from outside of Hiroshima, have gone for longer or shorter visits as the time of each would allow, to render such assistance as they might to the well-nigh overwhelmed members of the local society. Books, pictures, papers, and Bibles, or portions of the Bible, have been distributed in the hospitals and among the soldiers and men quartered in the city. Preaching places have been opened in different parts of the city, where daily preaching has been fairly well attended, and many earnest, intelligent inquirers have been met in private conversation. The men expecting to start for the front at any moment and realizing that they are offering their lives for their country's cause, were many of them most serious. And it is believed that substantial comfort has been afforded these men at a crucial point in their lives. Two or three large social gatherings were held in the spacious buildings and grounds of the Methodist Girls School for the strengthening of ties already formed, the giving of mutual comfort, and the strengthening of every good purpose. These gatherings, it is said, were well attended and eminently successful.

Your correspondent reached Hiroshima on the evening of the 9th inst., and it so happened that the following three days were occupied by the embarking at Ujina of some 25,000 fighting men, together with all the *attachés*, including a large number of coolies for service of various sorts. As the last bit of cheer the *Irokwai* could give these departing men, a house well out on the line of march from Hiroshima to Ujina was secured, and modestly decorated for the occasion. "Long live the Imperial arms," and such sentiments written in large characters were conspicuously placed in front of the house. The Okayama Orphanage band, twenty strong, were there in bright uniforms, with bugle, fife, and drum. And for three days, as each company of men passed by, the Christian workers gave them a cheer (*banzai*) and the band discoursed its best music. All alike were greeted as they passed by, from the returned heroes, General Yamagata and Prince Fushimi, to the warmly coated bearers of burdens. And the responses of all were alike hearty.

These forces gone, the streets of the city were less crowded; houses hitherto packed full with strangers were once again left to quiet and to their own native members, and one stage of *Irokwai* work was finished. There is still much that may be done in the hospitals, but the minds of all involuntarily follow the troops just departed. Among them are many personal acquaintances, a goodly company of believers in the same Father and in his Son, the Saviour of the world, and a much larger number who in the strange land to which they go will greatly need the friendly word and act of sympathy and help we should all be glad to give. What can be done? Can any one be sent? These are questions of deep interest to those who saw the troops pass out to Ujina. On the evening of the 14th inst. a free consultation among all those interested who could be called together confirmed the opinion that it is both desirable and practicable to send messengers of ministration—chaplains shall we call them, for lack of a fitter term?—to be with the armies. The unanimous thought was:

(1.) That not Hiroshima alone but every Christian in Japan should be appealed to for sympathy and such support as he or she could render.

(2.) That central authority and reponsibility be vested in a committee of some half score of men who can meet in Hiroshima for consultation as occasion may demand. These men were tentatively named.

(3.) That for the sake of interesting a large constituency in all parts of the country, co-operating committees be chosen in several central localities to work with the central

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

committee in raising funds in such other ways as may be practicable.

(4.) That for the present two chaplains be sent, to the *dai ni shidan* that has just left Hiroshima. Other chaplains may be sent later to the other armies as the experience of the first two may make it seem wise and as the men and means may be available.

This, of course, is all conditional upon permission being granted by the Authorities, but of such permission being granted those nearest the centre have little doubt.

These plans are likely to be considerably modified by the central committee when it meets. But whatever be the plans in detail, the movement seems worthy of the cordial co-operation of every benevolent European in Japan, as well as that of the Japanese themselves. The central committee were very likely organizing and holding their first meetings last night and to-day. I write now to bespeak in advance the interest of your readers and their readiness to help on the enterprise. I write too with the thought that this same issue of the *Mail* may have a later word on the subject from some member of the central committee now in Hiroshima.

Yours truly, GEORGE M. ROWLAND.

Tottori, January 22nd, 1895.

INFORMATION WANTED.

To the Editor of the "Japan Mail."

Sir,—Your issue of the 21st inst. states that the maximum horizontal motion during the earthquake of the 18th January was 41 m/m. in 9". As this only equals 16·4 metres an *hour*, a motion so slow as to appear incompatible with the violence of the vibrations, I feel sure there is some special interpretation put upon these figures by the initiated, and shall be obliged if one of them will kindly explain it for the benefit of an

IGNORAMUS.

January 29th, 1895.

MISSING HEIRS AND KINDRED, 1894.

To the Editor of the "Japan Mail."

Sir,—In the course of a year many thousands of notices appear in the "Agony" columns of the Press enquiring for missing heirs, legatees, and others. Many of these advertisements, apart from their monetary value, possess a curious air of romance, which renders them of great general interest. A short summary of the more important cases for the year may, therefore, be worthy of record.

Among many persons whose next-of-kin are enquired for may be mentioned John Ismay French, who died intestate, without child, parent, brother, sister, uncle, aunt, nephew or niece, and whose estate is valued at £147,734; H. T. H. Thompson, late Swedish Vice-Consul at Morocco; George Dean, of Northumberland, who died 40 years ago; Catherine Gardner, for many years lady's maid to a Countess, deceased about 1820; the daughter of an artist who emigrated to Australia; John Henderson, of Berwick-on-Tweed in 1842; Samuel Kerslake, a brewer, who died in 1827, and whose parents were married in 1736; John O'Connor, deceased at Panama in 1845; Robert J. W., storekeeper, who died in Auckland; Joseph Jacques, who left for Australia in 1853; a Band Master, late of the Bengal Infantry; Rose M'Ardle, who died in Queensland in 1870; a watch-case maker; and Mary A. Clayton, of St. Petersburg.

Numerous enquiries for missing persons are made by the Court of Chancery. The absentees include the grandchildren of the Rev. Daniel D., who died in 1820; the next-of-kin of William Rowley, who emigrated to North America in 1784; the heir-at-law of Joseph Hall, of Coventry, who died in 1837; Francis Lupton, who left York in 1872 to attend race meetings; Robert B., supposed to have been drowned in California whilst attempting to cross a river; Ann Hill, of Baltimore in 1855; Eleanor H. Tomlins, last heard of in America in 1820; the brothers and sisters of Robert Parratt, who died at Tooting Common in 1875; David Wotton, of Melbourne, who died in 1883; and Betsey Savage, who emigrated 50 years ago, and who is entitled to share in five houses in Cambridgeshire.

Many lucky individuals are wanted for "something to their advantage." These include the children of George Hansum, who is believed to have been killed by a fall from a waggon 40 years ago; the son of the late Sir Jacob Preston; W. Purchase, who emigrated in 1848; the sisters of James Scott, of Fifeshire, afterwards of South Africa; J. W. Kirton, known as "the Wanderer"; D. A. N., who was sentenced to seven years transportation at the Bradford Assizes in 1838; the son of Thomas Peachey, of Calcutta; Mrs. Muir, who left Scotland for New Zealand in 1873; Sarah Gover, of Salt Lake City in 1869; and the relatives of Q. Carswell, late inmate of a Mariner's Asylum; while Martha P., London, who was thrown out of a cab and taken to a hospital eleven years ago; Stephen Peacock, of Australia in 1877, and John Colston, late of Manchester, are wanted for something "greatly" to their benefit.

Persons claiming to be interested in twenty houses, bequeated by the will of James Thompson, an innkeeper, who died in 1867, are sought; and a considerable sum of money awaits the next-of-kin of David Cowan, of Dublin. The heirs of Stephen Denison and James Douglas, who were engaged in the Texas Revolution in 1836, and of Daniel Cotter, who went to America thirty years ago, are missing; while persons entitled to £2,075, arising from the estate of Henry Atkinson, who died in 1743, are only now sought. Hugh Strath, of Manchester, is interested in the estate of J. M. Strath, of Cape Town; the heir-at-law of Thomas Lewis, of Ludlow, who died in 1811, is wanted; and the residuary estate of Abraham Murcott of Leamington Priors, deceased in 1863, is about to be distributed, as is also that of Peter L., formerly of Hamburg, who mysteriously disappeared many years ago. The widow of James Marsden, brush manufacturer, of Liverpool, or her heirs, are sought; also the heirs of E. Middlemass, of Edinburgh, who died in 1842. Claimants are wanted to a freehold plot of land near Manchester, part of the estate of James Weeks, who died in 1875; nothing is known of the heirs of L. Hirschfield, of independent means, who died in Berlin, and the division of a Chancery fund only awaits tidings of J. W. Evans, last heard of at Queensland.

Over £2,000, arising from the estate of Michael Mahon, of Dublin, bankrupt in 1797, is now divisible; funds await Richard Carr, formerly of Sandhurst, Australia; and Georgina Davis, of Ohio in 1880, is informed that her cousin is dead, and that she is greatly interested in the event. William C., a hawker of tea, who in 1844 was convicted of arson and transported for life, is entitled to funds; and the heirs of Ann Wilcox, who died in an Asylum, are entitled to estates. Among other missing beneficiaries may be mentioned George Chalmers, who left Scotland for Australia in 1852; J. G. Stephenson, who sailed from Dundee to London in 1858 in search of employment; Thomas Hull, who emigrated thirty years ago; and John Ross, of Armagh, who left for Australia many years since. In pursuance of the law of Prussia, notice is given that 6,000 marks await the son of M. E. Schnabel, who is supposed to have gone to America; and funds also await the representatives of John Woodmass, of Dumfries, born in 1774, and Agnes Gifford, deceased prior to 1821.

The representatives of Hannah Jordan, widow, who died in 1754; Nathaniel Gifford, deceased in 1716; Elizabeth Harrison, widow, who died in 1759, and Rebecca Dixon, supposed to have died in 1833, are only now sought; funds await the residuary legatees of shareholders in the Edinburgh Academy; and Daniel Prust, last heard of in America, is entitled to lands in Devonshire. The heirs of William Peacock, of King's Lynn in 1873, and the relatives of Anthony Crosby, believed to have died in 1855, are wanted; also the representatives of Sydney Norton, who was drowned at Malta in 1869. The son of Captain C. W. S., who formerly served in Zululand, is enquired for; also the son of a surgeon in the army, said to have died prior to 1824.

The next-of kin of William Pollock, formerly of Blantyre, a noted stonebreaker, are wanted, and the heirs of Henry Ward, deceased abroad, who was twenty-six years in the employ of a London Hospital, are missing. A very liberal reward is offered for a clue to a "million inheritance," said to have been left by a German gentleman who died in London under an assumed name; and information is wanted as to the parentage of of Helen Blake, deceased intestate in 1876, and whose estate, valued at £140,000, became the property of the Crown in the absence of heirs.

In addition to the foregoing, notification is made that large sums are due to representatives of share holders in the West New Jersey Society, on whose stock no dividends have been paid since 1692; the Colonial Governments have issued long lists of intestates who have left money for their unknown heirs; the Treasury Solicitor has advertised for next-of-kin in some forty cases in which estates have fallen to the Crown in the absence of heirs and by reason of intestacy; notices are published respecting unclaimed dividends on Government Stocks; the War Office notify that many sums are due to soldiers' kin; and large rewards are offered for Missing, Wills, Birth, Marriage, and Death Certificates.

I am, Sir, your obedient Servant,

SIDNEY H. PRESTON.

Lonsdale Chambers, 27, Chancery Lane, London, W.C., 26th December, 1894.

JAPANESE TROOPS AND FROST.

To the Editor of the "Japan Mail."

Sir,—The *Mail* of January 25th contains a report of an interview between Count Okuma and a representative of the *Kokumin*, in which my name is mentioned repeatedly. The remarks attributed to me there can not be allowed to pass uncontradicted, as they convey to a great extent almost exactly the contrary of what I really said. For instance, I am credited with the monstrous statement that about one-third of the whole German army then in France (which numbered over 600,000 men) was incapacitated by frost!!

The fact is, that about a month ago Count Okuma asked my opinion about the probable resistance to cold of the Japanese soldiers in the north of China.

I said we knew now that, with suitable clothing and sufficient warm food, an army could stand a surprising amount of cold and go on fighting at the same time. As a proof I adduced the German army in the war of 1870-71; when the actual losses from cold were *exceedingly small*, although fighting often went on in the snow for several consecutive days or even nights, and although the cold during the terrible struggle near Belfort in January, 1871, was about the same as the lowest temperature reported so far from the First Japanese Army.

As to the Japanese, I said they astonished every foreigner coming to this country by the way they could stand or walk in the snow or cold weather, bare legged or thinly clad without apparent damage to their health. Besides, I had read it reported by Mantegazza, that the Italians and Spaniards stood the cold during the Russian campaign of 1812 as well or even better than the soldiers from middle or northern Europe. So in my opinion the Japanese ought not to be too much afraid of the effect of the winter in China.

Then it was Count Okuma who said that, according to the latest reports (second half of December) the soldiers in Manchuria suffered nevertheless much from frost-bites, and he gave some number, which struck me as indeed very high, until I heard a satisfactory explanation from Surgeon-General Ishiguro some weeks afterwards.

These few remarks will make it sufficiently clear, that either Count Okuma has been deceived by his memory or that his interviewer has blundered sadly.

I am, Sir, yours faithfully, E. BAELZ.

12, Kagayashiki, Tokyo, Jan. 27th, 1895.

THE JAPANESE NEW TESTAMENT TRANSLATION.

To the Editor of the "Japan Mail."

Sir,—I wish to thank my worthy critics for the interest they have taken in the late question under the above heading, and for the able way they have discussed it. It is not my present purpose to add anything especially to what has already been said. In passing, I may say, however, that as "Epsilon" well observes, my remarks are intended to be purely critical, not doctrinal, hence have to do with the points in question as *translations* not as comments. As such it seems to me the words used are without due authority. Both the primary and derived meaning of *Keiosu* and *Sabaki* seem to me to very closely resemble each other, and there is no more reason for adding "righteous" to the one than the other. *Keiosu:—a separating, power of distinguishing, decision, judgment. Sabaki:—The unravelling of anything perplexing or intricate, as a lawsuit; the selling of goods, judgment, sentence.* A parallel case to "*tadashiki sabaki*" is found in the older edition (明治十九年) of the translation in Acts, 12:15, where it says:—*mamoru ten no tsukai—guardian angel*; but in the later editions I notice *mamoru*—guardian, has been dropped, leaving the reader to make his own comment as to whether it was Peter's guardian angel or some other kind. It seems to me by the same authority (rather for the lack of it) *tadashiki* in Acts, 8:33 can have no place in the text as a translation. If anyone writing a commentary on Acts should see fit to say it was Jesus' *righteous* judgment that was taken away, I am sure I shall not feel disposed to call it in question. *Yoshitsuji* in 1 Tim., 3:11, seems to me to have crept into the text precisely on the same ground as *tadashiki*, namely, as a comment in the translator's mind. As to the [illegible] worthy critic "A.," that

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

there is no adequate word in the Japanese language to express *γυνή* (pl. ac. *γυναῖκας* as found in the text) it seems to me that for as common and important beings as women, found in all countries, and that Japan has never been without, there ought not to be any difficult in finding an adequate term to express the idea without being put to the necessity of taking a general view of the whole "context" and thus deducing a word entirely unknown as a definition of *γυνή*. Moreover, I find in the eleventh verse of the previous chapter, the translators seemed to think *onna* the proper word for *γυνή*, and so translated it.

There are some other points I hope to present for criticism as opportunity may afford. For the present I only mention one other. In Luke 1:77 we have the expression "*fukaki awaremi*"—*deep* mercy. I can find no such definition as *deep* given to *σπλάγχνα*. Literally it means the bowels, intestines (the supposed seat of the affection,) and the "our *heart*," "tender mercies, affections." So far as the dictionary goes, *fukaki* means, "Deep, profound; intimate; hard to understand," none of which seem to be considered by the Lexicon as proper definitions of *σπλάγχνα*. Can there be no better word found in the Japanese language than *fukaki* to express tenderness or affection?

Let no one conclude from what has been said by way of criticism, that it is intended as a disparagement to the translations. It would have been almost an impossibility I presume to have given a perfect translation against the difficulties with which they had to contend. The Revised Text is no disparagement of the King James' Translation. It is to be hoped, however, that the errors of our present Japanese translation will not be maintained as long as those of the King's Translation.

Most respectfully and sincerely,

J. M. McCALEB.

Tokyo, January 27th, 1895.

ASIATIC SOCIETY OF JAPAN.

A general meeting of the Asiatic Society was held at No. 17, Tsukiji, on Wednesday, January 23rd, at 4 p.m. The President, the Rev. Dr. D. C. Greene, was in the chair.

The minutes of the preceding meeting having been read and approved, the RECORDING SECRETARY read the following resolution coming from the Council:—"The President, Council, and members of this Society greatly regret the departure from Tokyo of Dr. J. N. Seymour, and the consequent discontinuance of his active share in the management of the business of the Society; and the Corresponding Secretary is requested to transmit a copy of this resolution to Dr. Seymour, to convey to that gentlemen the cordial expression of the Society's most sincere thanks for his valuable, efficient, and hearty services as Treasurer during his long period of service."

This resolution was unanimously approved.

Mr. MASON then read a paper written by W. G. Aston, Esq., on the "Onmun,—when invented." The author, after criticising various theories propounded by different scholars on this subject, briefly developed his own. On the evidence of some contemporary Japanese and Korean documents, he showed that this system of writing was invented by command of a Korean King, Sye-chong, in the winter of 1443, and was derived from the Sanscrit. This kind of writing was then introduced into Japan by means of the various embassies that passed between Korea and Japan in the 15th century.

Following this paper, a long and scholarly investigation of the different systems of writing prevailing in Korea was given to the Society by M. Maurice Courant. The purpose of his paper was to show how Korea acquired her written language. Anciently, Chinese characters were used in Kokuryé (the north-west part of Korea and part of Manchuria), and also by the Chinese officials established at various places by the Han dynasty. But they were not introduced until the end of the 4th century into the Paikkyei (the south-west of Korea), and not until the 6th century into the Synra (the south-east of Korea). They were carried and spread by the Buddhist priests, and in a short time Chinese became the official and literary language, and it has kept this prëeminence ever since. In order to read Chinese, the Koreans inserted particles to mark the case and verbal terminations of their own language. These terminations, which form the grammatical skeleton of the phrase, were transcribed by the learned C. L. Chong in A.D. 692 in the Chinese characters. This form was called *nido* or *ni mounn*, and is still used, especially for petitions and law procedure, but it has never had any place in the literary language. In the first of the 15th century, King Sye-chong formed the Korean Alphabet, by means of the Sanscrit letters and the Chinese *tsu mon*. This alphabet was employed only for the purpose of giving the pronunciation of the Chinese characters and for writing the songs and romances used by women and by the lower classes. Different authorities concerning the exact date of this invention assign it to 1434, 1443, and 1447.

The PRESIDENT, on behalf of the Society, thanked M. Courant for his interesting and scholarly paper; after which the meeting adjourned.

THE PHOTOGRAPHIC SOCIETY OF JAPAN.

A regular meeting of the above-mentioned Society was held at the rooms of the Geographical Society (Chigaku-kiokai) Nishikonya-cho, Kiobashi-ku, Tokyo, on Tuesday, January 29th, at 8 p.m., Mr. K. Ogawa in the chair.

The business part of the minutes of the last meeting were read and approved, the part referring to technical matters, being long, and having been read by all members present either in the *Shashin Shimpo*, or the *Japan Mail*, was taken as read.

Mr. H. C. Pigott, and Mr. Rokujo were duly proposed, seconded, and elected members of the Society.

Mr. K. Nakahara showed a cyanotype print, much superior to anything of the kind generally seen. It was from a mechanical drawing, line sectioned, and showed deep black clear lines on a perfectly white ground. Mr. Nakahara described the precautions necessary to get this effect, and the difficulties that were likely to be met with. Briefly put, the process is as follows:—

A paper highly sized should be used. Small sheets can easily be worked, but the difficulty increases greatly with dimensions, a sheet about 20 × 18 being the largest that he had, so far, been able successfully to manipulate. Want of equality in the depth of the lines, and staining in the whites are the defects that it is difficult to overcome. All manipulations are with a view to avoid these.

The sensitizing solution is as follows:—

Gum Arabic	15 grams.
Water	110 c.c.
Tartaric acid	2 grams.
Chloride of sodium (common salt)	9 grams.
Sulphate of iron	10 grams.
Iron perchloride	15 grams.

In mixing the solution, the gum Arabic is first dissolved in the water by the aid of heat, and the other salts are added whilst the solution is still warm.

The solution is spread over the surface of the paper with a sponge, and after allowing a little time for it to penetrate the surface all superfluous moisture is removed, using the sponge again, well wrung out. If this precaution is not attended to, the depth of the lines is not equal. The paper is then dried as quickly as possible. If the drying is not rapid, the whites stain.

Exposure is somewhat longer than would be needed with sensitized albuminized paper. The colour of the sensitised paper is yellow. During exposure, all but the lines turns to white.

A development is by a plain aqueous solution of gallic acid, the strength of which is not important. Care must be taken not to leave the print too long in the developer, otherwise staining will result. After development the print is rapidly washed, when superfluous moisture is carefully sponged off the surface. If this precaution be not observed inequality in the depth of the lines will result.

The success of the process would appear greatly to depend on the sponging of superfluous sensitizing solution and water from the surface of the paper, and on quick drying after sensitizing.

Mr. R. Konishi showed a "Moderate Power Tele photographic lens," consisting of a Dallmeyer Rapid Rectilinear of 8¼ inches focus, with a negative element of 4 inches focus by the same maker. The Rapid Rectilinear was fitted with a pair of the new Burchett colour screens, one green, the other yellow. These are used for getting orthochromatic effects which it is claimed can be got with their aid, even on ordinary plates.

Mr. Konishi presented to the Society samples of Marion's "Academy" and "Special Portrait Plate," as well as of Ilford's Orthochromatic plate. These were handed over to Mr. W. K. Burton, who was instructed to test them, and to report to the Society at his earliest convenience.

The proceedings ended with a vote of thanks to the Chairman.

GRAND HOTEL, LIMITED.

The half-yearly general meeting of shareholders in the Grand Hotel, Limited, was held on Wednesday afternoon. There were present, Mr. J. F. Lowder, in the Chair, Messrs. Rickett, Jas. Walter, E. A. Sargent, R. Howie, C. K. M. Martin, W. B. Walter, and J. Tornae, Secretary.

The CHAIRMAN said that, with the permission of the meeting, he would take the report and accounts as read. It was perhaps a subject for regret that the dividend which the Directors had to offer shareholders that half-year was a smaller one than they had ever offered before. At the same time he did not think that the shareholders should come to the conclusion that the earning capacity of the hotel—of the company—was worse than in previous years. In comparing the accounts for the same period in 1893 with the last half-year they would find that their earning capacity was a little better this year, certainly it was no worse. In December, 1893, their working account totalled $36,971, and for the same period ending December, 1894, it was $36,236, so their earning capacity was about the same. Their expenses account for December, 1893, was $17,627 against $19,144 for December, 1894, a difference of $2,000. This amount was almost exclusively owing to the increased price of coal: they had to pay twice as much for coal this year than they did in the previous year. The gross profits for the corresponding period in 1893, was $21,845: this year they had been $24,845—$3,000 in excess. Notwithstanding this, they had a balance for distribution as dividend in 1893 of $15,000, against, in 1894, $7,500. The reason why they had been unable to declare a larger dividend this year was owing to the increase in their expenses. They had spent, in the last half of 1894, $4,088 upon repairs; $837 upon the steam launch; $3,709 upon furniture; and $966 upon the electric light; a total of $9,600. It would therefore readily be seen that as they had $7,500 to distribute as dividend now, they would have had $7,500 plus $9,600, which sum, as he had explained, had been spent upon repairs and improvements. He had the various items of these expenditures before him if any shareholder wished to see them, but he thought it was scarcely necessary to read them out. He might mention, however, that a lot of money had been spent on repairing the big chimney, while by the conversion of the old banqueting hall into sleeping-rooms they had obtained six extra bed rooms, which, of course, they had had to furnish. He thought that the accounts showed that the Company was in a most satisfactory position, and that instead of its earning capacity being less, it was even better than last year. The accounts were now before them.

Mr. JAS. WALTER asked whether it was not a fact that a good deal of money had been spent in repairs to the roof.

The CHAIRMAN—Yes, that is so.

Mr. WALTER—The amount is large, I believe.

The CHAIRMAN—It is over $700.

Mr. HOWIE moved the adoption of the accounts.

Mr. W. B. WALTER in seconding the resolution observed that the position of the Company must be a source of satisfaction to shareholders in this exceptional year. The war had kept away a good many tourists. The extensive repairs recently effected, had, he hoped, put the hotel in such a good state of repair as to considerably lessen the amount to be spent under that head for some years. Then again a part of these repairs were necessitated by the heavy earthquake, and they might hope that that would occur not again.

The CHAIRMAN said he took it that the accounts were approved. That concluded their business that afternoon.

REPORT.

The Profit and Loss Account, and Statement of Assets and Liabilities for the half year ended the 31st December, 1894, accompany this Report.

The net profit for the half year, including balance brought forward from the 30th June, 1894, and after providing for general expenses, Directors' and Auditor's fees, interest, and depreciation, and after writing off bad debts, amounts to $9,818.14, which it is proposed to apply as follows:—

In payment of a dividend of 3 per cent. for the half year	$7,500.00
Balance to new Account	$2,318.14
	$9,818.14

The reduction of Liabilities by payment of $5,000 mortgage debt, having again necessitated a corresponding deduction from Assets, the whole sum has been written off Buildings.

It is proposed that the dividend shall be payable on the 31st day of January, when the warrants will be issued.

J. F. LOWDER, JAMES WALTER. } Directors.

Yokohama, January 11th, 1895.

YOKOHAMA AMATEUR ROWING CLUB.

The annual general meeting of the Yokohama Amateur Rowing Club was held in Kiel's Building on Wednesday afternoon. There were present Mr. J. Rickett, in the Chair, Messrs. F. J. Hall, D. McNeill, M. Schellenberg, G. Philip, A. L. Bouffier, H. C. Litchfield, F. J. Lias, E. W. Tilden, H. V. Henson, T. McWilliams, R. N. St. John, Rev. E. C. Irwine, Messrs. P. Bent, A. L. Mottu, G. H. Scidmore, G. Hood, G. Brooke Smith, H. L. Tanner, K. Kingdon, B. Hyde Pearson, W. Goddard H. S. Goddard, H. Goddard, R. W. Boothwick, W. W. Campbell, E. T. Nicholas, J. B. Coulson, V. Blad, C. K. M. Martin, G. Macondray, N. P. Kingdon, F. H. Hooper, J. Tounoe, L. Salabelle, J. T. Boag, J. McLean, T. Browne, A. Wingman, W. Tucker, W. R. Bennett, E. O. Kenyon, C. Gibbens, H. Allcock, H. R. Mair, H. R. Campbell, and W. S. Drummond.

The CHAIRMAN said that he had to congratulate the Club not only upon its financial position, but also upon the interest which the members had displayed throughout the season in the rowing and the sports, which had conduced so much to the great success attending all their regattas and aquatic sports. He would propose that the minutes of the last meeting be taken as read.

Mr. TILDEN seconded.—Carried.

The CHAIRMAN—The report and accounts are now before the meeting. They have been circulated for some days, and I think that members have had an ample opportunity of reading and digesting them.

Mr. N. P. KINGDON proposed and Mr. BOAG seconded the adoption of the accounts.—Carried.

REPORT.

ACCOUNTS.—These show a balance in favour of the Club of $1,161.56 or an increase of $401.84 on that brought forward from 1893, in spite of the large expenditure on the extension of the buildings. This is due to the increase in the membership and the greatly enhanced earnings of the Bar.

ROWING.—The interest shown in rowing during the past few years has been well maintained. The entries for the Spring and Autumn Regattas were numerous, and the events, for the most part, well contested. The Committee trust that the success of the Gen... International Race at the Autumn Regatta will lead to another contest, during the coming year, for the Cup subscribed for by members of the German Club and the Y. U. C.

SWIMMING RACES AND AQUATIC SPORTS were successfully held and brought out a fair number of entries. The chief feature of the latter was an interesting game of water polo: a game which the Committee hope will not be allowed to drop.

BOATS.—These are all in good order, with the exception of the Blue Boat which will require replanking. A single sculling boat was built on the lines of the Black single sculling boat, but it has not been altogether a success; the wood obtainable in this country not being suitable for shell built boats. The committee obtained, from England, three new sets of oars (for Canton fours) at a cost of $150.18.

PROPERTY AND HOUSE.—The Eastern wall has been refaced, with a guarantee for three years, at a cost of $33.79. The recommendation of the members expressed at the last General meeting that the incandescent light be installed has been carried out at a cost of $137.30, with the result that the Boat House is better lighted than formerly, but the saving anticipated in the consumption of gas has not been effected. The new shed and slip built during the year supplied a much felt want for extra accommodation for storing and handling the boats: while the extension of the verandah has much improved the Boat House. These additions and extension cost altogether $1,038. The Boat House requires scraping and painting, but is otherwise in good order.

BATHING BARGE.—The Barge has been supplied with some new matting and two new spring boards. As the Barge has now been in use for a good many years, the Committee have thought it advisable to have it surveyed by Mr. Clausen who reports as follows:—"The Barge can be repaired, and by putting in four extra cross beams for strengthening, two underneath and two on top of the deck, extending the whole width of the Barge, and fastened with eight 1" or 1¼" bolts., will be good for another two or three years." The Landing stage is in good condition.

RULES.—The proposed alterations in and additions to the Rules are already in the hands of the members, so do not call for mention.

Your Committee tender their resignations with best wishes for the future prosperity of the Club. J. Rickett, Captain, F. J. Hall, Hon. Sec., P. S. Bent, Hon. Treas., F. H. Hooper, Marshall Martin, Duncan McNeill, George Philip.

Yokohama, January 28th, 1895.

E. & O. E.

Yokohama, January 25th, 1895.

P. S. BENT, Hon. Treasurer.

Examined with the vouchers and found correct.

(Signed) S. WARNING.

The CHAIRMAN—We will now to proceed to the election of officers. I shall be pleased if Mr. Boag and the Rev. E. C. Irwine will act as scrutineers.

Both gentlemen accepted the position.

The CHAIRMAN, during the taking of the ballot, observed that the report of the Committee stated that the boats were all in good condition, with the exception of the Blue-boat, which required fresh planking. It has been suggested, as the Club was in such a good financial position, that the purchase some new four-oared boats and get rid of some of the older ones. The Boathouse will require some painting, both in the interior and outside. It is proposed to whitewash inside and put in a ceiling. The outside boathouse also required painting, as owing to recent alterations it had rather a patch-work appearance. The outgoing Committee, as they were doubtless all aware, had issued a notice to members regarding some alteration in the wording of the rules and bye-laws: they proposed principally to convert some bye-laws into rules. They were governed just at present more bye-laws than by rules, and he thought that the Committee's suggestion that some of these bye-laws be made rules would meet with their approval. The report also spoke of the condition of the bathing-barge. Mr. Clausen, at the Committee's request, had examined it, and his report had been printed. It must be borne in mind that the bathing-barge was an old structure. One other thing he had to bring before the members. It was in reference to a subject which it was proposed to bring before the notice of members of the Cricket Club at their next meetings. It was the intention of the C.C. Committee to move—and he dare say the project would meet with the approval of the members of the Y.A.R.C.—that an alteration should be made in the Yokohama time. As he had just remarked, it was the intention of the C.C. Committee to bring the matter before their own Club members at their next meeting, and he had been asked to bring the matter before the members of the Y.A.R.C., so that they might act in coöperation with the Cricket Club with a view to the accomplishment of the object. It would merely be going back to the old time that prevailed before railway time was adopted, but it would give nearly half-an-hour more to the afternoon. Of course it was not in the power of the Club, nor in the power of any Club, to alter the *town's* time, but if co-operation was secured among the Athletic Clubs then steps could be taken to approach the Community in the matter. As Chairman of that meeting he would be pleased to hear some expression of opinion on the subject: an expression of opinion would be very useful. It was not a new question. If they went to India, to Bombay, Calcutta, and elsewhere in that country, they would find a sun-time and a railway-time existing. There was no difficulty in the matter of adjusting one to the other. The *extra* half hour in the *afternoon* would be very useful to members of the club during practise, and when they were preparing for their regattas. In America, he believed, a similiar thing existed. There was a railway time and a sun time. He brought the matter up by request, as the committee of the Cricket Club would bring the matter up at their meeting.

Mr. SCIDMORE—Would not this alteration necessitate our carrying about two watches?

The CHAIRMAN—I don't think so.—(A Voice—Have extra hands put on.)—What do they do in America?

Mr. Scidmore—Yes, they have railway-time, and other time in the States: they alter the time every 15 degrees of longitude. There is, I believe, a difference of 20 minutes here between sun-time and Kobe time. All our clocks and watches are now set by Kobe time. The object therefore of the C.C. Committee could be achieved by fixing the time of athletic meetings, etc., twenty minutes earlier.

The CHAIRMAN—If the alteration is made, people will simply start work twenty minutes earlier and leave off twenty minutes earlier.

Mr. SCIDMORE—Then if the times here are fixed by sun-time, we shall have to translate that as being twenty minutes earlier than railway time.

The CHAIRMAN—Watches would be set to sun-time and it would be easy to calculate railway time.

Mr. SCIDMORE—I think that all arrangements of our life in Yokohama are now set to railway time. If we alter the time we shall only create confusion.

The subject then dropped.

The CHAIRMAN—The ballot for officers has resulted as follows:—Captain, myself (Mr. J. Rickett) —(Loud applause); Hon. Sec., Mr. F. J. Hall—(Hear, hear); Hon. Treas., Mr. E. T. Nicholas—(Loud applause). I think Mr. Hall and Mr. Nicholas will accept the positions. On behalf of myself, I thank you heartily for the honour you have done me.—(Applause.)

The ballot for the Committee then took place. Messrs. Philip and Hooper, through the Chairman, signifying their desire not be re-elected.

The CHAIRMAN announced the result of the ballot as follows:—Messrs. J. T. Boag, P. S. Bent, R. Boyes, and C. K. M. Marshall.

The proposed alterations and additions to the Rules were then taken seriatim.

Rule II.—To insert after the word "exclude" the words "Voting by proxy is not allowed." This was carried unanimously, as was also Rule XI.—To add after the word "number" the words "and fill vacancies."

Digitized by Google UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

The next, Rule XIX., was carried after an amendment in the final wording had been approved. It now reads:—

Rule XIX.—To cut out the sentence "Payment of such bills to be subject to Rule VII." and substitute the following:—"Payment of all chits is due on the 1st day of the month following that in which they are signed. In the event of any member failing to make payment of his chits within one month after the same shall have become due, the Secretary shall, by notice, sent through the post, request such member to remit him the amount of same, and shall, unless his request be complied with two weeks thereafter, place conspicuously in the Boat House, the name or a list of the names of the members, to whom he has sent such notice. Any Member whose chits are not paid within one month after the date on which such name or list was first exhibited in the Boat House, shall cease to be a member and his name shall be struck off the list of members."

Bye Laws II. and III. were made rules.

Some discussion arose on the next alteration. It was proposed from the Chair, and seconded, that Bye Law VI. be altered to read:—"The Boat House closes at 8 p.m. by which hour all boats must be returned to the Boat House, except when authority has been obtained from the Committee;" and as amended made Rule.

Mr. CAMPBELL proposed that the time of closing should be fixed at 8.30 p.m., and found a seconder.

Mr. MCWILLIAMS proposed, as a further amendment, that the time of closing be fixed at 9 p.m. This was seconded.

Mr. BOAG proposed as a third amendment, that the upper part of the Club-house be kept open till 11 o'clock, but that the bar be closed and the boats all returned to the Boat-house by 8.30 p.m. This was seconded.

The CHAIRMAN thought that the making of such a rule as that suggested by the last amendment would be contrary to the agreement under which the Japanese authorities lent them the ground on which the Boat-house stood. It was leased to them for the purposes of a Rowing Club.

Mr. BOAG thought that it was also used as a gymnasium, a yatching club, and a swimming club.

The CHAIRMAN—Yes, but that is all in connection with the object of rowing, I take it.

Mr. BOAG—I don't think the Japanese authorities would take exception to a rule of this description.

Mr. MCWILLIAMS—We might try it, anyway.

Mr. CAMPBELL thought that the proposed rule had been misunderstood. It simply related to the returning of boats by a certain time in the evening. At the same time he was strongly against making the Club a social club: it was a rowing club, and this should be remembered.

Mr. BOAG—But it is also an athletic club, and of an evening some of the members may prefer to go in for gymnastics: if the place is closed they would be debarred from so doing.

Mr. CAMPBELL—You would propose to keep the Club open all the year round. I differ from you, I think in this cold weather that the members prefer to remain at home to kicking about the boat club of an evening.—(Laughter.)

Mr. LITCHFIELD thought it as well that the members should remember that the authorities had given given them permission to use the ground and foreshore at the Boat Club for the purposes of a rowing and athletic club. He deprecated any attempt at making a rule which might conflict with the conditions of their lease. It was not advisable to give rise to any question of that kind.

Mr. BOAG—If I correctly remember we have broken the conditions several times by giving dances in the Boat-house.

The CHAIRMAN—But then they were exceptional cases, and no rule was broken.

Mr. BOAG did not see that the Japanese would object to the rule if it were made.

The CHAIRMAN—It appears to me to be a mistake to keep the Club open so long.

Mr. LIAS moved an amendment to Mr. Boag's amendment, that the bar be kept open till 11 o'clock also.

Mr. BENNETT seconded.

Mr. LIAS' amendment was put first and lost. Then Mr. Boag's was put and declared lost—27 voted for him and 14 against—a two-thirds majority being required to carry such an alteration of the rules. The original motion was also lost on being put to the vote.

Bye Law XV. was made a Rule, omitting the words "or Captain."

Bye Law XVI. was also made a Rule, inserting the word "Honmoku" before the word "Lightship."

The next alteration was carried after some discussion, "That Bye Law XVII. read—Bathing from or beaching the Club Boats is strictly prohibited," and it was made a rule; as were also Bye Laws XX., XXI., XXII., and XXV.

Mr. BLAD asked some questions relative to members of the Club, and also members of the Sailing Club, being allowed to land at the landing stage.

The CHAIRMAN said the matter could easily be arranged.

Mr. T. BROWNE threw out a suggestion that the Committee should make some Bye Law in regard to entrance fees for races.

Mr. CAMPBELL suggested that as the Club had such a large balance in hand, the Bar tariff be reduced by 10 per cent., and the price of jerseys, caps, sweaters, and mufflers to cost price.

Mr. BOAG asked for suggestions as to the disposal of the balance. He thought it a good opportunity to purchase some half dozen single sculling boats in England, as sculling was becoming so popular among members.

The CHAIRMAN thought that no objection would be taken to such a course.

The meeting concluded with a vote of thanks to the Chair.

YOKOHAMA ENGINE AND IRON-WORKS, LIMITED.

The semi-annual meeting of shareholders in the Yokohama Engine and Iron-works, Limited, was held on Thursday afternoon in Kiel's Building. There were present Mr. J. F. Lowder, in the Chair, Messrs. Jas. Walter, J. Rickett, J. Johnstone, H. M. Arnould, F. H. Bull, C. Giussani, J. H. Curtis, C. W. Ure, W. R. Bennett, R. Kuby, S. D. Hepburn, and C. Charlesworth, Secretary.

The CHAIRMAN announced, upon twelve shareholders being present, that the meeting was open, there being sufficient for a quorum. As most present doubtless knew, it was not the custom of their company to issue a report for the first half-year, the Directors' report always appearing but once a year. According to their rules, however, a meeting of shareholders was held every half year, and the Directors had thought it advisable on the present occasion to have the profit and loss account set out and printed. The lane that had no turning was proverbially a long one, and he thought shareholders had matter for congratulation that after striving had for three years they were at last out of the wood. As a witness of this he invited a comparison of the figures presented for the half year ending the 31st May, 1894. At that time they were indebted to the New Oriental Bank to an amount of $43,000. Upon referring to the figures now presented, they would observe that this had been reduced to $3,786.11. In other words, the Directors had paid off $40,000 since they last met shareholders in general meeting. They were in a position that day to pay off the remaining indebtedness to the Bank if it was necessary, but the Board thought that has they had paid the Bank since its failure some $78,000 in cash, including $10,000 for interest, making altogether $88,000, the Directors should open communication with the liquidator of the Bank with a view to getting the balance of the account remitted—it was the balance of interest only. This they had done, but no reply had yet been received from the liquidator. The profits during the last half year had shown considerable improvement. For the whole year ending 31st May, 1894, the profits were $41,000: for the half year ended November last, the profits amounted to $51,000, thus showing an increase of $10,000 on the half year over the whole of the previous year. He mentioned these figures solely in the interest of shareholders who might not have the previous accounts before them to enable them to make the comparison. What the practical result of their three years work had been, was this: they were now the actual owners of the Kobe property. They could now do what they pleased with it. The Board were still negotiating for its sale. When the property was sold then the shareholders would be entitled to receive as dividend whatever amount they received for it. The last dividend which the Directors had offered to shareholders was a small one of 3 per cent. This was for the half-year ending November, 1891. The company found itself in a much better position that day, and had some money in hand. They had the sum of $8,000, odd, in cash in the Bank. He had explained already that there was an amount of about $4,000 outstanding: it was a dependency, but they did not know yet whether they would have to pay it or not. The Directors thought, however, that it would be prudent as well as advisable to hold that amount in reserve. This left them with the sum of $4,000 in cash. After consultation amongst themselves before they met shareholders that day, the Directors had come to the conclusion that it would be best to divide this sum among shareholders and declare an interim dividend of three per cent.—(Hear, hear.)

Mr. JAMES WALTER thought that the thanks of the shareholders were due to the Directors. They had had to go through very hard times, and encounter a great deal of trouble and annoyance during the last three years. They had now placed the company on a very sound basis, and for these reasons he moved that the meeting give its hearty thanks to the Directors, to show how it appreciated the work they had done.—(Hear, hear.)

Mr. KIRBY—I would add the employés in that vote of thanks.—(Hear, hear.)

Mr. WALTER—I add the employés, the manager, and all our servants with pleasure. The present success of the company is due to the way in which they have worked together.

The CHAIRMAN—I thank you on behalf of my colleagues and our employés for the kind expressions which have fallen from you. The Directors recognise as clearly as you do, what we owe to our servants, and at Christmas time we presented them with a reward such as our financial position allowed. But we were all quite assured that it was not commensurate with the services rendered. They have worked hard and worked well. Without their assistance we, as Directors, could have done nothing. We can but supervise their work. But among our body, as on all Boards of similar companies, there is one man who has a practical knowledge of the business, and is the working man amongst us; to whom we look, and who really does all the active work of supervision. To him our thanks are greatly due—I refer to Mr. Johnstone.—(Applause.)

THE "ERNEST SIMONS."

This vessel arrived here on Wednesday, and the following is an interesting account of the ship's dimensions, construction, accommodation, etc. :—

The *Ernest Simons* is the latest addition to the Messageries Maritimes, and this is her first visit to Japan. She is intended to run regularly on the China line, for which service she is been specially designed. She is built of steel, with five decks, and has a curved stem and an elliptical stern. Her dimensions are :—length over all 457 feet, breadth 45 feet, and depth moulded to upper-deck 35 feet. Her displacement at the load-line is 8,500 tons at 25 feet, and gross register 5,707 tons. The subdivision of the *Ernest Simons*, throughout by water-tight bulk-heads, has received very careful attention, the aim having been to make these capable of resisting any pressure that can come on them from either side, and to place them in such positions that if any two adjacent water-tight compartments were by collision or other cause thrown open to the sea the ship would have a sufficient surplus buoyancy to enable her to float with safety. She carries 10 boats and one steam launch. These are stowed on the promenade deck and are fitted with special patents which allow them to be swung out quickly into a position of readiness for lowering.

Of the five decks, the shade-deck is at a height of 33 feet above the water line, and acts as an awning over the forepart of the promenade deck. At the forward end of this deck is the navigating bridge with the steam steering-gear, chart-room, and captain's cabin. The promenade-deck is 275 feet long by 40 feet wide, and at the forward end is the reading room, a large apartment, the walls of which are hung with a casing of cork embossed in imitation of Cordvan leather, and adorned with pictures by Ph. Rousseau. This room is entered from the stairway, which leads down to the upper-deck, and thence to the first-class accommodation on the main deck. About the middle of the promenade deck is the music hall, on each side of which doors open on the grand stairway, which leads down to the dining saloon. At the after end of the balcony is the drawing-room, a large apartment, richly decorated, the walls and ceiling being adorned with landscapes and allegorical subjects. Connecting with the saloon and cabins on the main-deck, the music-hall can be reached without going outside in bad weather. Further aft is the first-class smoking-room, a spacious apartment, lighted with large square windows, the sides being decorated with ceramic panels representing female figures of different provinces of France. The first-class dining-room is on the upper deck, right in the middle of the ship. It is richly panelled in maple, acacia, ash, and beech woods, and decorated with Aubusson's tapestries. It is well lighted, and is ventilated from the sides by large square windows and from above by an arch-shaped dome 20 feet in height. This room is 26 feet long by 20 feet wide. The first-class cabins are mostly on the main-deck, some forward of the stairway leading to the saloon, and some abaft of it in the middle of the ship, where there is least motion. There are also two large cabins forward of the dining-room on the starboard side, and 12 excellent deck cabins on the upper-deck abaft the main-mast. These are of various sizes, most of them fitted for 2 passengers, but some for one only. There are also a number of family cabins. Further aft are the second-class cabins, four of them being on the upper-deck. All the apartments are fitted with electric bells, and have each an independent electric light under the cont-

Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

tol of the passengers. The lavatory and bath-rooms are all fitted with cold and hot water throughout, and are of the most commodious and modern description.

The *Ernest Simons* is lighted throughout by electricity, both on deck and below, on the latest and best system hitherto applied to marine installations. The installation consists of three dynamos, coupled direct to special engines capable of supplying currents for all the lights in the ship, of which there are 800, besides side and mast-head lights and a projector for use in the Suez Canal. Steam machines are provided for steering the ship, and a special system for working cargo by steam. The system employed in this class of vessel combines the advantages of the power and silence of hydraulic machines, the unpleasant noise of the old winches being done away with. Powerful hand steering gear is also fitted as an alternative, and every possible arrangement has been made for natural ventilation. The engine-room skylight as well as the boiler casings have been carried above the shade deck, and the store-room being placed at the forward end of the ship and independently ventilated, all smells, dust, steam, and smoke are carried off clear of the passengers. The refrigerating chamber is one of the most elaborate that has ever been fitted to a ship, so that fresh meat, fish, vegetables, butter, fruit, milk, etc., and an ample supply of ice is always available.

The *Ernest Simons* has been built to fulfil the requirements of the Government as to subdivision into watertight compartments so as to be eligible for employment as an armed cruiser. Her engines are of the triple expansion type, the cylinders being respectively 38½, 57½, and 95 inches in diameter, with a stroke of 48 inches, the engines being capable of working up to 85 revolutions per minute, and giving a speed of 19 knots an hour. Steam developing 7,200 horse-power is supplied by 16 patent Belleville generators working up to a pressure of 227lbs.

The ship is furnished with two life buoys of special construction. These are placed at the stern of the ship and fitted with a light which ignites as the buoy reaches the water. The special feature connected with these buoys is the method of lowering them when required. They can be released from the chart room by a special arrangement as well as by hand from the deck.

It may be mentioned that the *Ernest Simons* was not only built, but was also engined at the private establishment of the Messageries Maritimes at La Ciotat, near Marseilles. The vessel is commanded by Captain Vimont, well known in the East and late of the *Melbourne*.

LETTER FROM AUSTRALIA.

(FROM OUR OWN CORRESPONDENT.)

Healesville, Victoria, Dec. 13th, 1894.

At last Victoria is awakening to the fact that she has interests in Japan. In foreign affairs the leading papers here take their tone from the great London journals. Now that the British government had made an important move and signed a new treaty with Japan, leading colonials are beginning to take an interest in the successes and aspirations of the Japanese. The writer of the *Argus* Monetary and Commercial articles has evidently received a new impression. Some of his remarks, published in a recent issue of the paper, are worth quoting. On the bearing of the new Anglo-Japanese treaty he discourses as follows:—

One of the articles of the treaty concluded between Great Britain and Japan is of vital importance to the Australian colonies, and should lead to immediate action being taken. For it is not only the present but the future of the commerce of the Pacific Ocean—and a Commonwealth of Australia will be a Pacific power—that has to be taken into account. In the twentieth century the Pacific will probably be dominated by four powers principally, viz. Federated Australia, Japan, Chili, and California (as representative of the United States). Between Australia and Japan a large trade will have sprung up, and the preservation of amity between the two countries will have become a question of supreme importance. But the nineteenth article of the treaty just concluded provisionally shuts out the Australian colonies from participation in its benefits. We assumed some days ago that the treaty provisions would extend to the colonies as integral portions of the British Empire. This is not necessarily the case, for the colonies have to move the Foreign Office to arrange for their inclusion in the treaty arrangements. It therefore behoves the colonial Governments to take action without delay; and to present the position as clearly as possible we quote the nineteenth article in full, as follows:—

"Article XIX.—The stipulations of the present treaty shall be applicable, so far as the laws permit, to all the colonies and foreign possessions of Her Britannic Majesty, excepting to those hereinafter named, that is to say, except to—

India	The Dominion of Canada
Newfoundland	The Cape
Natal	New South Wales
Victoria	Queensland
Tasmania	South Australia
Western Australia	New Zealand.

Provided always that the stipulations of the present treaty shall be made applicable to any of the above mentioned colonies or foreign possessions on whose behalf notice to that effect shall have been given to the Japanese Government by Her Britannic Majesty's representative at Tokyo within two years from the date of the exchange of ratifications of the present treaty."

It will be observed that the colonies having constitutions of their own are the exception, the Crown colonies going without stipulation with Great Britain. No doubt Her Majesty's Government will officially bring the treaty under the notice of the various Australian Governments, who will be only too willing to apply for admission. The tariff of import *ad valorem* duties under the treaty contains some articles of interest to Australia, as follows:—

	Per Cent.
Lead	5
Leather, sole	15
Leather, other kinds	10
Milk, condensed and desiccated	5
Refined sugar	10
Tin	5

The *ad valorem* duties are, however, to be converted into specific duties, as far as is practicable, within six months from the date of the protocol to the treaty. With regard to refined sugar, it has been considered of sufficient importance (owing possibly to the development of the sugar-refining industry in Japan) to justify a separate clause in the protocol. The text of this clause is as follows:—

"4. It is understood between the two High Contracting Parties that if Japan think it necessary at any time to levy an additional duty on the production or manufacture of refined sugar in Japan an increased Customs duty equivalent in amount may be levied on British refined sugar when imported into Japan, so long as such additional excise tax or inland duty continues to be raised.

"Provided always that British refined sugar shall in this respect be entitled to the treatment accorded to refined sugar being the produce or manufacture of the most-favoured nation."

It is as well that attention should be drawn to the provision regarding sugar, for, as a matter of fact, Japan means to make a big bid for the supply of refined sugar in the Pacific, and the interests of Queensland and New South Wales, as well as of the great Australian Refining Company (the largest in the world outside the United States Sugar Trust), have to be watched.

As we have before suggested, this new Anglo-Japanese treaty constitutes a totally fresh departure, one calculated to have far reaching results. Owing to the want of nationality in Australia—the result of having a cluster of merely parochial "roads-and-bridges" colonies—her high destinies are apt to be overlooked. But no treaty development in the Pacific should be allowed to take place without our claim to participation in it being advanced.

There are, however, serious difficulties in the way of Australia's participating in the benefits to be derived from the stipulations of the new treaty. Is Australia prepared to rescind the regulations dictated by the labour party bearing on immigration? In the present Victorian parliament, the labour party, like the Irish party in England, is master of the situation, as upon its vote the fate of the ministry depends. The members of this party would scout the idea of allowing Japanese to enjoy equal rights with Victorians. To the stipulations of Article I. of the new treaty the men now in power here never could be induced to agree. To me it seems that nothing but federation can deal a death blow to that policy of selfish isolation and exclusiveness which has for so long a period been followed to a greater or less extent by each of the Australian Colonies and by New Zealand in a most marked manner, as I will show later on. Undoubtedly the more advanced and intelligent members of the Australian communities are in favour of greater liberty being granted to Japanese subjects residing in these parts, but hitherto every legislative Act has been of an opposite tendency. That the merchants, manufacturers, and producers of Victoria are anxious to establish markets for their produce in Japan, is shown by the fact that another mission has been despatched to Japan, Hongkong, Manila, Java, and other countries of the East. Mr. Dyer, to whom the organisation of the mission has been entrusted, is taking with him a large assortment of products for public exhibition in those countries and for presentation to the Emperor of Japan, the Governors of Java, Manila, and Hongkong. The articles to be presented to the Emperor of Japan are valued at over £250. Notwithstanding all these efforts, however, as long as existing laws remain in force, Australia's commercial dealings with Japan must be very limited compared with the trade of countries that are prepared to follow England's new departure.

For gruesome details and cold bloodedness the annals of Victoria crime contain nothing that equals the following confession made by a little girl of thirteen summers a few weeks ago:—

"I was thirteen years old last January, 14th. My sister Janet came home from Cranbourne on Monday the 5th inst., and she and I and Margaret slept in the same bed. On Wednesday morning early Margaret became very ill, and at seven o'clock a child was born. We had all known of Margaret's condition for some months, and when father or mother mentioned it Margaret only laughed. She had blamed Hugh Taylor, who lived in the house with us, and father turned him out. Father usually went away on a Monday. He was away when the child was born, but mother and Janet were in the room with Margaret, and I was outside in the kitchen. I heard a baby crying several times, and I then went into the room. Margaret was in bed covered up, and mother was sitting on the bed with the baby in her arms. It was naked and crying. Janet was standing looking on. Mother said to me, 'Take it away and kill it,' and at the same she handed the baby to me. I took it out into the garden and laid it down on the ground. It was then alive, and crying. I got the spade and hit the baby on the head with it twice. I chopped it straight down and killed it. Some of the brains fell out, and the fowls gathered round and ate them. Having killed the child I went back to Margaret's bedroom and said to mother, 'I have killed it with the spade.' She told me to dig a hole and bury the body, and I did so. Later she said, 'Have you buried it deep enough?' I answered yes. Mother and Janet went away to my sister's place. I think Janet went there because she wanted to get away from our place, and had no other place but Taylor's to go to. It was arranged amongst us that we should kill the baby as soon as it was born, so that no one should know anything about it. That was about a month before it was born. It was I who suggested that we should kill it. Mother and Margaret were present, and agreed to it. When father came home on Saturday, the 10th inst., Margaret was in bed sick. He asked me what had been done with the child. I told him I had buried it. He did not ask whether it had been born alive, and I did not tell him." A brother 13 years of age and a sister eight confessed that they saw the dreadful deed. "I saw," admitted the latter, "Jane hit it with the spade. She hit it twice and killed it, and then buried it. I saw the brains fall out of the head and the fowls picked them up and ate them." The wholesale murder of infants by poison and other means reported in the daily newspapers, and the numerous cases of indecent assaults on children whose ages range between 3 and 12 are attracting the attention of the authorities here. I think there is little doubt that the morals of the lower orders in Victoria are about as bad as they well could be. In numerous families all sense of decency and propriety seems lost. Subjects which children should never be allowed to hear discussed are talked over by the parents in their presence with the most astonishing carelessness. Among a small population such as that of Victoria, it would be difficult to find crimes of more malignant types than those perpetrated here within the last few years.

What claims to be a most remarkable invention has been designed by Mr. C. Seymour Allan, of Sydney. Mr. Allan has constructed a model submarine torpedo boat, which not only moves as rapidly under water as on the surface, but can be sunk on an even keel to the bottom and raised at pleasure. The passage of the boat beneath the water is not indicated by even a single ripple on the surface. A trial of the working model took place at the City Baths, Melbourne, a few weeks ago, in the presence of the Governor and a number of naval and military experts, and is thus described by an eye-witness:—

Placed in the water the little 3ft. model—which for the purposes of the trial had to be connected with a pliant electric cable to a shore battery—was the perfection of a craft built for speed, and the inventor claims 60 knots an hour as one of the possibilities from a full-sized boat. Only a slight fin appeared above water, and on one touch of an electric key the little boat sank out of sight, and being lit up with electricity on the instant she sank the onlookers were able to see her going down and resting on the bottom of the baths in 8ft. of water. Another turn of the key, and just as promptly she rose evenly and steadily to the surface again. "She will do anything you tell her," said the inventor; and in response to requests by His Excellency, by Captain White (who was much interested in the trial), and by Colonel Dean Pitt, the model sank and rose by the head or stern as required, was submerged to depths of 2ft., 3ft., or 4ft. as required, and their either remained stationary or was driven about, reversed, and manœuvred while keeping her depth. Captain White's opinion was very much that of Admiral Bowden Smith, who on seeing the trial in Sydney said "If you can build a full-sized boat to do the same work as the model, you not only have a huge fortune at command, but you will revolutionise naval warfare." His Excellency the Governor was also much pleased with the invention, which he was satisfied fully realised the inventor's claims.

Mr. Allan has spent 13 years in bringing the model to its present state of perfection, and has spent no less than £7,000 on improvements and experiments. He does not intend to take his invention abroad. He will construct a full-sized vessel here, and go down in her and torpedo a hulk as an experiment. Unlike most inventors, Mr. Allan has no intention of selling his designs. They have been publicly exhibited on several occasions and hence, if the new torpedo boat proves a success, will doubtless be in the possession

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

of the foes as well as the friends of the inventor's fellow-countrymen. A full-sized vessel would be about 80 feet long, with a displacement of 127 tons and would cost about £10,000.

The diligence with which New Zealand has been making laws is perfectly astounding. The last parliament in a single session put nearly 100 measures on the statute book. It goes without saying that the quality of the legislation that proceeds at such a rapid pace is most inferior. The aim of the New Zealand legislator is to control and regulate every industry, occupation, and pastime. Even the toils of the washtub are not to be exempted; for not long ago a Bill entitled, "The Washers and Manglers Bill," was solemnly introduced to the Assembly. The latest piece of legislative wisdom has taken the form of a measure entitled the "Undesirable Immigrants Exclusion Bill." Among the classes henceforth to be prohibited from defiling New Zealand with their presence are the following:—"Every contract workman, imbecile, pauper, *cripple*, habitual drunkard ..... every person suffering from tuberculosis or leprosy." Hence if a tourist is unfortunate enough while *en route* to New Zealand to fall down and injure his leg he will not be allowed to land. A tourist on arrival is to be medically examined. If sound he will receive a permit to reside in the colony for 6 months; after that period, though he may be as virtuous as Socrates, he is to be reckoned a "prohibited" person, and unless the clarity of the immigration office grant him an extension of time, he must leave the country like an outlaw. When the new bill becomes law the captains of ships entering New Zealand harbours will have to furnish the immigration officer with a biography of every passenger, including some 20 particulars, such as the occupation, means, antecedents, mental and physical health of the immigrants. One clause of the bill provides that if any immigrant shall within a year of his arrival apply for aid to any public institution, "the owner of the ship from which such person landed shall forthwith take him to the port whence he came and shall pay to the immigration office the cost of his maintenance which has been borne by any public institution and any expenses incurred by the General Government." Under certain provisions of this act the vessel itself is liable to be seized and condemned as a forfeit to the State. Talk about the exclusiveness of China and Japan! It is nowhere when compared with the "Dog in the Manger" policy of the modern New Zealander. By the folly of benighted legislators a group of islands with an area nearly equal to that of the United Kingdom, and with resources and a climate such as few countries can boast of, has no larger population than that of a London suburb. Population is what New Zealand needs, and yet by some strange infatuation her rulers do all in their power to drive would-be settlers from her shores.

In addition to all the other burdens under which the colony groans, Victoria is now to be saddled with a land and income tax. The land is unremunerative enough as it is, and in the case of numerous farmers this tax will prove the last straw that breaks the camel's back. But money must be found to pay Ministers of State their £14,000 a year, and other public officers on a similar scale. The land tax policy is dictated by the labour members, who have no land to be taxed. Socialists to the backbone, these men publicly advocate the wresting of the land from its present owners by imposing taxation that will render it no longer to their interest to remain land owners. There has been a great outcry against the new tax, but Turner and his colleagues are sure of their majority and hence can afford to ignore public clamour. One thing is certain, the political blunders of Victoria are doing her no small amount of harm in London, for Victoria stocks during the past few weeks have been steadily declining. The tyranny of a somewhat despotic but sable government is of a far milder type than the oppression of a government that has no fixed principles and is perpetually engaged in making legislative experiments at the cost of its subjects. The Australian has many strong points, but government is certainly one of his weakest. To a very large extent the troubles through which this colony is now passing are the result of bad legislation. Australia has in the past imported from Europe and America the finest and best of animals, machines, and commodities. Her statesmen, however, are home made and lack the mental calibre and education of European political leaders.

THE PEACE MISSION AT KOBE.

A HOSTILE RECEPTION.

It cannot be said, writes the *Kobe Chronicle*, that the reception accorded the Chinese Embassy on Wednesday is a very favourable augury of peace. On the part of the Japanese officials it was marked by decided coldness, the necessary courtesies being, it seemed, only perfunctorily gone through, while on the part of the populace assembled to witness the plenipotentiaries land there was such decided hostility that it appeared to bystanders as if it needed but a spark to cause an explosion. Both in coming ashore from the *Empress of China* and in proceeding to the *Owari Maru*, the Embassy preferred to use the Canadian Pacific chartered steam launch *Benvenue* instead of the somewhat inadequate accommodation offered by the Government launch. Mr. Foster proceeded on board shortly after eight o'clock to meet his clients, and Mr. Inouye, the Secretary of the Foreign Department, accompanied only by Mr. Tei and two Kencho officials, went on board between eight and nine to receive the plenipotentiaries. Mr. Inouye and the Japanese officials returned direct to the Tokiwa hotel, after making certain arrangements, and Mr. Foster and the plenipotentiaries with their *suites* left the Canadian Pacific steamer shortly before ten o'clock, being escorted to the hatoba by police launches and boats.

On shore a very large force of police was drawn up at the American hatoba, and another force lined the Bund and the road leading to the Oriental Hotel. That their presence was very necessary was seen immediately the party landed, for the demeanour of the crowd was unmistakably hostile. Their Excellencies Chang Ying-huan and Shao at once got into the carriage which was waiting, and with their secretaries and the members of their *suite*, who were accommodated with jinrikisha, proceeded to the Oriental Hotel, escorted by police and accompanied by the American adviser Mr. Foster. As they left the hatoba the large crowd assembled uttered a prolonged yell, and for a few moments matters looked critical, but fortunately the crowd did not proceed to translate their unmistakable hostile feelings into action, or it might have gone ill with the Chinese Envoys, as the force of police, though large, would scarcely have been sufficient to cope with a mob determined on violence. With regard to this incident it is only right to say that the crowd was composed mainly of coolies, every few members of the better classes being present or taking part in a demonstration—that reflects but little credit on the Japanese reputation for politeness to guests.

Arrived at the Oriental Hotel, the first half-hour was devoted to the reception of the foreign Consuls, every one of whom, we believe, paid a formal visit to their Excellencies. Mr. Chang, the only one of the plenipotentiaries who can speak English, and who naturally attracted most attention, has all the appearance and ways of a diplomat. It need scarcely be said that he did not show his hand or give the slightest hint of the attitude which would be taken by the plenipotentiaries in the negotiations,—in fact, beyond the most formal of greetings he said nothing whatever of importance. The same attitude of reserve was taken up by the interpreters and secretaries, who were necessarily so engaged during the two or three hours the Embassy remained on shore that it was almost impossible to get speech of them.

As soon as the Consuls' visit came to an end, their Excellencies entered upon a close consultation with Mr. Foster. No visit was made to the Kencho as had been anticipated, but after the conference with Mr. Foster was concluded, and some refreshment had been obtained, the plenipotentiaries prepared to go on board the *Owari Maru*, which had been appointed by the Japanese Government to convey them to Ujina. During all the time the Embassy remained at the Oriental Hotel, the building was guarded by a considerable force of police, and it was an unusual sight to see such a number of the Japanese police in the Foreign Settlement. The very strictest precautions were taken against any unauthorised Japanese entering the Hotel, the police having apparently been placed on their guard by the hostility shown by the crowd at the hatoba. The hostile demonstration was not repeated as the Embassy retraced its course to the landing-place about 1.30 p.m., and this was especially fortunate, as on arrival at the American hatoba some difficulty was experienced in embarking owing to one of Jack Young's lighters engaged in loading coal having gone aground, and it was impossible for some time to move her and leave a clear way for the steam launch. Meanwhile the Embassy had to stand in the midst of coal buckets and coolies until matters could be rectified. How the lighter came to be allowed upon any pretext to load coal at a wharf reserved for the landing of passengers we do not know,—the attention of the authorities will, we understand, be called to this matter,—but the police or whoever were responsible for keeping the landing-place clear are certainly to blame for taking no steps to see that the hatoba was clear upon this occasion if only out of respect to the Envoys. The incident was on a par with the rest of the proceedings, and may be regarded as a proof of the almost studied indifference with which the Embassy was received by the Japanese authorities, the coldness of the reception being further marked by the absence of the Governor, Mr. Sufu, who is at present in Tokyo.

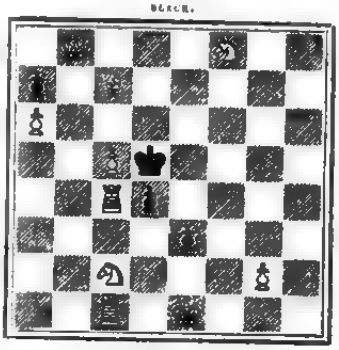
The plenipotentiaries arrived on board the *Owari Maru* about two o'clock, and preparations were immediately made to leave. The vessel left her moorings shortly afterwards and had disappeared round Wada Point before three o'clock.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets at the Club Hotel, No. 5, Bund, on Monday and Thursday in each week from 5 to 11 p.m.

The Tokyo Chess Club meets at the Tokyo Hotel every Friday from 1 to 11 p.m.



SOLUTION TO PROBLEM No. 161.

WHITE.	BLACK.
1—K to Kt 2	1—K to K 7
2—Q to Q 3 ch.	2—K × Q
3—Kt to K B 4, mate	
	1—K to K Kt 5
2—Q to K B 5 ch.	2—K × Q

	1—K to K Kt 7
2—Q × Kt ch.	2—K × either Kt
3—B mates accordingly.	

Correct solutions received from Omega, Kr., Shogi.

PROBLEM No. 163.
By A. G. FELLOWS.

BLACK.

WHITE.

White to play and mate in two moves.

TOKYO VERSUS YOKOHAMA.

We are sorry to learn that there seems to be no chance of a match between these two clubs at present, the Junior Club holding back. This is a pity. We should like to have seen a repetition of last year's contests; with it possible a reversal of the result. As it is the Yokohama men are going round seeking new worlds to conquer.

GAME No. 213.

CORRESPONDENCE BRILLIANT.

The following, from the *Montreal Weekly Gazette*, is the game that won the prize for brilliancy in the second correspondence tourney of the *St. John Globe*:—

THE CENTRE GAMBIT.

WHITE. J. B. Stebbins (New York).	BLACK. J. S. Narraway (Ottawa).
1—P to K 4	1—P to K 4
2—P to Q 4	2—P takes P
3—Q takes P	3—Kt to Q B 3
4—Q to K 3	4—P to K Kt 3
5—B to Q 2	5—B to K Kt 2
6—Kt to Q B 3	6—P to Q 3
7—P to K B 4	7—Kt to K B 3
8—Q to Q 3	8—B to Q 2
9—Kt to K B 3	9—Kt to Q Kt 5
10—P to Q R 3	10—Kt takes B ch.
11—Q takes Kt	11—Q to K 2

Digitized by Google UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

12—Castles Q R	12—Castles Q R
13—Q to Q B 4	13—B to Q B 3
14—K R to K sq.	14—K R to K sq.
15—Kt to Q 5	15—Q to Q 2
16—Kt to Q 4 (b)	16—R takes P
17—Kt takes Kt	17—B takes Kt
18—R takes R	18—B takes R
19—Kt to Q Kt 5	19—P to Q 4 (c)
20—Q to K B sq.	20—P to Q R 3
21—Kt to Q B 3	21—B to K B 4
22—Q to K Kt sq.	22—P to Q 5 (d)
23—B to K 3	23—P takes Kt
24—R takes Q	24—P takes P ch.
25—K to Kt sq.	25—R takes R
26—P to K Kt 4 (e)	26—R to Q 6 (f)
27—B to Q B sq. (g)	27—P takes B (Q) ch.
28—K takes Q	28—B to Q 5
29—Q to K sq.	29—R to K 6

And Mr. Stebbins resigns.

NOTES.

(a) When Black plays 7..... Kt to B 3, as in the text, White's best continuation is 8—K Ii to K e.
(b) This move loses a Pawn, and gives the attack into the hands of Black.
(c) It is probable that when White made his 16th move he did not anticipate this resource.
(d) The initial move of a beautiful combination.
(e) White had to prevent ..... B to K Kt 5.
(f) Another beautiful stroke to which White has no satisfactory reply.
(g) If 27—P takes R, then 28..... B takes B ch.; 28—K to R 2, B Queens ch., and after exchanging pieces, Black would remain with two Pawns to the good. If 27—P takes B, then 28..... R takes P, followed by ..... R to Q R 8 ch., &c. Lastly, if 27—B to Q B 5, then 28..... B to K 5; 28—Q to K sq., B to Q B 6, followed by ..... R to Q 7, it being evident that White could not capture the Bishop.

TOKIO CLUB TOURNAMENT.

The open Tourney begun three months ago has resulted as follows:—

I.—Walz..... with 12 wins.
II.—Mason ..... with 10 wins.
III.—Pownall ..... with 9 wins.

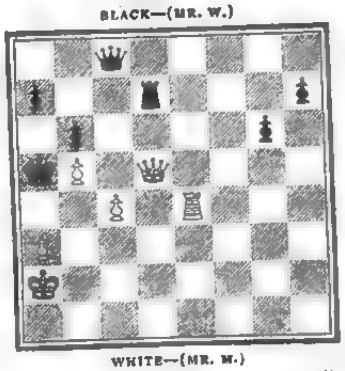
GAME No. 214.

Played by correspondence between W. H. K. Pollock of Baltimore and J. L. McCutcheon of Pittsburg.

MUZIO GAMBIT.

WHITE. Pollock.	BLACK. McCutcheon.
1—P to K 4	1—P to K 4
2—P to K B 4	2—P takes P
3—Kt to K B 3	3—P to K Kt 4
4—B to B 4	4—P to Kt 5
5—Castles	5—P takes Kt
6—Q takes P	6—Q to B 3
7—P to K 5	7—Q takes P
8—B takes P ch.	8—K takes B
9—P to Q 4	9—Q to K B 4 (a)
10—B takes ■	10—Kt to K B 3
11—Kt to B 3	11—P to Q 3
12—Q R to K sq.	12—R to Kt sq.
13—Q to K 2	13—Q to Kt 3
14—Kt to Q 5	14—Q Kt to Q 2 (b)
15—Kt takes P	15—R to Kt sq.
16—Kt to K 8	16—Q takes P ch (c)
17—Q takes Q.	17—R takes Q ch
18—K takes R	18—Kt takes Kt
19—B takes P ch.	19—K Kt to B 3 (d)
20—B takes R	20—Kt takes B
21—R takes Kt ch.	21—K takes R
22—R to K 8	22—B to Q 3
23—R takes B	23—Kt to B 3
24—P ■ B 3	24—P ■ K R 4
25—P to K R 3	25—P to R 5
26—K to B 3	26—K to K 3
27—K to K 4	27—K to Q 2
28—R to K R 8	28—B to Kt 6
29—R to B 7 ch	29—Kt to K 2
30—P to B 4	30—Resigns

Notes, by Mr. Pollock. From the *Baltimore News*.



(a) Considered better than Q takes P ch.
(b) If Kt takes Kt, 25—B to R 6 ch., Q to B 4, 26—R takes ■ ch., and must win.
(c) Again Kt takes Kt loses through 27—B to R 6 ch.
(d) He cannot prevent the recovery of material whereby White remains with just enough superiority to win.

CHESS BY ELECTRICITY.—Mr. Gunsberg, in the April number of the *New Review*, says:—"I have played a game of chess with an opponent who was neither sitting opposite to me at my board, nor at the same table, nor was he even in the same room with myself. I could neither see his game nor hear his voice. In fact, if he had been at the Antipodes, the means which enabled us to play together would, theoretically, still have held good. The moment a move was played on one table it was registered on the other, no matter whatever the distance between the two boards. There was no signalling, no action of any kind whatever. The registration of the moves was automatic and self-acting. Of course, the players had moved each other's pieces on their respective boards, according to the indications received of each other's.

CHESS IN TOKYO.

END-GAME No. 22.

BLACK—(MR. W.)

WHITE—(MR. M.)

White won as follows,—a problem-like termination.

WHITE.	BLACK.
1—R to K 7	1—R × Q
2—R × P mating next move	if 1—R × R

2—Q to Q 2 ch. mating next move.

If Black make any other move he must lose a piece, or the game, in two moves.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, January 29.

The Emperor of Russia, in receiving delegates from all parts of the empire, has declared that he will firmly uphold the autocracy.

London, January 31.

The United States Senate has ratified the Treaty with Japan.

The French Chamber has approved of a vote of credit for a funeral at the expense of the State for Marshal Canrobert, but only after a long debate of an uproarious character, in which the Radicals and Socialists vehemently denounced the deceased soldier as an accomplice of the *coup d'état*.

["SPECIAL" TELEGRAMS TO "JAPAN MAIL."]

REPORTS.

The German steamer *Nürnberg*, Captain Hugo Walter, reports:—Left Hongkong the 20th January; had very strong N.E. monsoon with high head sea up to Van Diemen Strait; thence to port strong N.W. winds and rough sea.

LATEST COMMERCIAL.

IMPORTS.

The expected improvement has not arrived and everything looks gloomy! Yarn—No business; holders would like to raise prices as a compensation for the low exchange, but it cannot be done just now. Shirtings—Some little enquiry but not much business done. T.-Cloths have moved to a small extent. Fancy Cottons dull and lifeless. Woollens dead.

COTTON PIECE GOODS.

	PER PIECE.
Grey Shirtings—8½lb, 38½ yds. 39 inches	$2.25 to 2.90
Grey Shirtings—9lb, 38½ yds. 45 inches	2.50 to 3.25
T. Cloth—7lb, 24 yards, 32 inches	1.60 to 1.90
Indigo Shirtings—12 yards, 44 inches..	1.70 to 2.35
Prints—Assorted, 24 yards, 30 inches..	2.00 to 3.75
Cotton—Italians and Sateens Black, 32 inches	PER YARD. 0.16 to 0.21
	PER PIECE.
Velvets—Black, 35 yards, 22 inches ...	7.25 to 9.50
Victoria Lawns, 12 yards, 12-3 inches..	0.85 to 1.00
Turkey Reds—2.0 to 2.4lb, 24/25 yards, 30 inches	1.65 to 1.75
Turkey Reds—2.8 to 3lb, 24/25 yards, 30 inches	1.85 to 2.05
Turkey Reds—3.8 to 4lb, 24/25 yards, 32 inches	2.30 to 2.60
Turkey Reds—4.8 to 5lb, 24/25 yards, 32 inches	2.80 to 3.10

WOOLLENS.

	PER BALE.
No. 20s, Bombay	—
No. 16s, Bombay	—

METALS.

Quiet market, dealers generally holding off as exchange is against them. Bars and Pig have sold to some extent at quotations; and Wire Nails have improved slightly in value, while Tin Plates and Galvanized Iron sheets are lower.

	PER PICUL.
Flat Bars, ½ inch	$3.60 to 3.70
Flat Bars, ¾ inch	3.70 to 3.80
Round and square up to ¾ inch	3.60 to 3.80
Iron Plates, assorted	3.70 to 3.85
Sheet Iron	4.90 to 5.10
Galvanized Iron sheets	8.50 to 9.00
Wire Nails, assorted	6.00 to 6.25
Tin Plates, per box	6.00 to 6.25
Pig Iron, No. 3	1.70 to 1.72½

KEROSENE.

Small business, but holders are very strong and prices up once more. In fact, Russian (which is in small supply just now) is held above the American brands. Deliveries are good, but dealers hesitate to replace at what they consider high figures.

Chester	$1.82½ to 1.85
Comet	1.80 to 1.82½
Devoe	—
Russian Anchor	1.85 to 1.87½
Russian Moon	

SUGAR.

Browns—Market dull and all quotations lower. Small sales, with fair arrivals, have increased the stock, and there seems little or no demand for Formosa kinds, either "spot" or "to arrive." White—Very quiet, with large supplies. Prices are called steady at about 10 cents reduction on last quotations.

	PER PICUL.
Brown Takao	$4.05 to 4.10
Brown Manila	4.70 to 4.80
Brown Daitong (New)	3.50 to 3.55
Brown Canton	3.70 to 4.00
White Java and Penang	6.50 to 6.60
White Refined	6.40 to 8.90

EXPORTS.

RAW SILK.

Market quiet and prices more or less nominal. The rush is over for the present; but with a reduced stock, but holders do not seem inclined to lower quotations, especially for the better kinds.

WASTE SILK.

This market has now had its turn of activity, and a large business has been done at quotations. Best Oshu Noshi and Best Selected Filature Kibiso have been most in demand, and for these kinds holders are now very strong. The general stock is down to 16,000 piculs, and the dealers feel more cheerful than for some time past.

QUOTATIONS.—(NEW WASTE.)

"MONEY,"

A JOURNAL OF BUSINESS AND FINANCE.

PUBLISHED EVERY WEDNESDAY MORNING.

Annual Subscription, post free, 15s., in the United Kingdom. Ditto, 17s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

Cable Address: Dinero, London.

MONEY is a fearless critic and exposer of all shams, frauds, and swindles.

"MONEY" is the Journal for Investors, Speculators and Business men.

"MONEY" is a thoroughly up-to-date Weekly Record of all Financial and Business Matters.

"MONEY" is not subsidised by any financial association, clique, or syndicate, but is absolutely free, independent, and honest.

BALANCE SHEETS of Assurance, Banking, Manufacturing Shipping, Trading, and Trust Companies, are fearlessly and impartially criticised in **"MONEY."**

THE MONTHLY FOREIGN AND COLONIAL EDITION, called "MONEY AND TRADE," is published on the last Wednesday in each month, and is forwarded direct to the Foreign Agents and Correspondents of all the leading English Merchants, and to all the large Wholesale Buyers and Storekeepers in the Colonies, India, China, Japan, South America, and other countries.

"MONEY AND TRADE" enjoys a very large circulation in all Foreign Markets where English goods are sold; and, as it goes DIRECT INTO THE HANDS OF THE WHOLESALE AND RETAIL BUYERS, it offers unique advantages to advertisers.

SPECIMEN COPIES POST FREE.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In I short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a tea, spoonful of Ointment was worth a fowl and any quantity of peas and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World. May 1st, 1894.

YOKOHAMA: SATURDAY, FEB. 9TH 1895.

BIRTH.

At No. 6, Bluff, on 29th January, the wife of S. ISAACS, of a son.

SUMMARY OF NEWS.

SIX houses were destroyed by fire at Senju, Tokyo, on the 4th inst.

RUMOUR has it that Count Yamagata will be appointed Minister of War.

THE death is announced of Major-General Otera, who fell during the advance on Weihaiwei.

AN agricultural association is being organized for Kanagawa Prefecture under the auspices of the Govenor.

ARRANGEMENTS are being made by various public organizations in Tokyo to celebrate the fall of Weihaiwei.

THE members of the Nobles' Club propose to dispatch three nobles to convey comforts to the Japanese soldiers afield.

SOME relics of five Yokohama soldiers who were killed during the fight at Kaiping, reached this port on the 4th inst.

THE Lower House of the Diet has rejected a Bill providing for official recognition of practitioners of the old Chinese school of medicine in Japan.

THE Interport football match between Kobe and Yokohama will be played on Monday afternoon on the latter's ground.

THE Judge of H.B.M. Court has directed that the *W. P. Hall*, a sealing schooner, be sold to provide funds to pay off the crew.

THE total number of dysentery cases throughout the Empire during last year was 154,718; the deaths therefrom reached 38,388.

BARON TAKASAKI has contributed *yen* 225 towards the relief of sufferers in the earthquake districts of Yamagata Prefecture.

THE Japanese population of Yokohama at the end of last year was 160,439; the number of houses actually occupied being 29,774.

HEAVY snow-falls in Shimane, Niigata, and Nagano have occasioned several deaths, through the collapsing of houses and snow-slides.

THE Kiushu main railway line now extends from Moji to Matsubashi, a distance of 131 miles. The Saga branch line is 16 miles in length.

J. A. Frame, who shot a man in a liquor saloon in Honmura Road, has been sentenced to one year's imprisonment by the Yokohama Chiho Saibansho.

THE Chinese Embassy of Peace is returning home, its credentials being of too vague and elementary a nature for recognition by the Japanese Authorities.

THE marriage of Li Shun-yo, the newly appointed Korean Minister to Japan, took place on the 19th ult. The Minister will leave for Japan in the middle of February.

MR. MIYAZAKI, of the War Department, who was engaged at Talien upon the erection of cold-proof barracks, died there on the 30th ult. from typhoid fever.

THE House of Peers have passed a Bill providing for the more efficient control of seal and sea-otter hunting along the coasts of Hondo, Hokkaido, and the Kuriles.

MR. ASANO, who was dispatched by the Communications Department to investigate matters connected with electric railways in America, returned home on the 3rd instant.

THE loss sustained by the Osaka Muslin Manufacturing Co. through the recent fire at the factory is estimated at *yen* 156,516 for various machinery, a total of *yen* 171,357.

A FAREWELL entertainment, promoted by Marquises Nabeshima and Tokugawa, was given to the Italian Minister, Cav. R. de Martino, on the 3rd. at the Koyokan, Shiba, Tokyo.

THE proposed removal of the Noble's School for Boys to Kamakura has been abandoned, it is said, in favour of a scheme of building new school premises on the site of the late Senate in Tokyo.

THE steamer *Allonower*, lately purchased by the Nippon Yusen Kaisha, has been renamed the *Eijo Maru* (or *Yung-cheng*), the name of the landing place of the Third Japanese Army in Shantung.

DURING last year the amount of rice exported from Japan was 1,469,071 piculs, valued at *yen* 9,631,059 17. Some 3,304,831 piculs of foreign rice, valued at *yen* 8,413,913 50, were imported into Japan during the period, an increase of 1,905,591 piculs, valued at *yen* 5,158,525.74, against the previous year.

W. GRUNER, the alleged Austrian Baron, who was arrested in Yokohama on charges of robbery and forgery, was sent home on the 31st ult. A police-constable of Yokohama Settlement accompanied him to Kobe.

TWO hundred military surveyors enlisted at the close of last year, left the capital for Hiroshima on the 3rd inst. They are in charge of Lieutenant-Colonel Seki, and are to be dispatched to survey the district occupied by the Japanese armies in China.

A BLINDING snow-storm greatly hindered the Japanese forces in their attack on the forts at Weihaiwei, but the Chinese took advantage of the meterological conditions to effect their escape from the land forts. Liukung Island offered a more stubborn resistance.

SOME 1,050 casks of *mochi* (rice bread) and 50 casks of sugar contributed by Yokohama residents for the Japanese soldiers afield, were taken to the Yokohama Branch of the Nippon Yusen Kaisha on the 5th inst., and are to be conveyed to the seat of war by the Company's steamers.

REUTER telegraphs:—It is reported from Rome that the Cabinet has decided to establish a border tutelage over the tribes in Erythrea, and to send fresh troops there. The new Greek Ministry is comprised mostly of officers, and probably many more officers will be appointed prefects, replacing the civilians. M. Tricoupis' organs bitterly attack the King of Greece. General Ferrero has been appointed Italian Ambassador to London, and Signor Tornielli to Paris. M. Rochefort has been included in the recent amnesty granted to political offenders. There are daily parades in Rio de Janeiro of the partisans of Marshal Peixoto, the Vice-President of Brazil. The troops have been called out, and the situation is looked upon as serious. The steamship *Elbe* collided with a collier in the North Sea, and three hundred persons were drowned. The Queen's Speech announces that England's relations with foreign Powers are friendly, and, while regretting the state of war in the East, says that Her Majesty's Government has maintained the *entente cordiale* with the Powers interested in those parts and will lose no favourable opportunity if the occasion occurs to promote peace. The Speech also refers to the atrocities in Armenia and to the agreement with France in respect to the Sierra Leone boundary. The House of Lords voted an Address in reply to the Queen's Speech.

THERE is no improvement in the Import trade, and the continuous stringency in the money market keeps buyers from dealing, though stocks in the interior are known in the case of many commodities to be very low. Yarns and Cotton Piecegoods are dull and Woollens are particularly depressed. Very little has been done in Metals, though offers are made at low figures. Holders of Kerosene are firm and buyers hold off, but stocks are so low in the interior that dealers will shortly be compelled to come to terms in order to replenish. There has not been a great deal of Sugar bought, thought deliveries of late contracts are well taken. Prices are unaltered for all kinds, and there is a fair amount of both Brown and White sorts in stock. The Silk trade is exceedingly quiet, and holders are apparently strong. There has been next to nothing done in Waste during the week but the packing and shipping of the recent large purchases, and at present the outlook for another similar movement is not bright. There is nothing be to said about Tea. Exchange rose a point early in the week, since which rates have been fairly steady.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

Strange as it may seem, our vernacular contemporaries say little about the Chinese Peace Mission. That little, however, is worth reproducing in view of the undoubted importance of the event. Not one paper touching upon the subject omits to state, in terms at once explicit and emphatic, that the failure of the mission is not a matter for surprise; that Japan should never again undertake to negotiate with China for peace unless the latter, by way of guaranteeing her earnestness and sincerity, agrees to a Japanese occupation of Taku, Tientsin, Shanhaikwan, and some other important places in the Middle Kingdom; and that China having shown herself so neglectful of diplomatic etiquette as well as of the courtesies of international intercourse, nothing short of the seizure of Pekin can suffice to chastise her into a consciousness of her inability to resist Japan and to convince her of the consequent unpleasant necessity of suing for peace in real earnest. We need scarcely add that our contemporaries do not fail to accord high enlogiums to the Japanese expeditionary forces. The *Choya Shimbun* has a leader entitled "China's real motive in sending the Peace Embassy" runs as follows:—"A friend of ours, writing from Hiroshima, gives this analysis, as the result of close investigations made by an official there into the secret motives of the Chinese Authorities in sending the Peace Mission:—Li Hung-chang has long endeavoured to lay upon Japan the blame of having disturbed the peace of the East, so as to induce Europe, particularly the States that have large interests in the Orient, to sympathize with the helpless Celestial Government, and to curb the ambition of intrepid Japan. With that view, from an early stage in the war he essayed device after device. But all in vain. There can be no doubt that the sending of the late Mission was another step in the Viceroy's diplomatic intrigue. There was not the least intention of making any final adjustment of the trouble. The idea was merely to betray the Japanese Court into a declaration of its terms, which the old Chinese Statesman probably pictured to himself as something extravagant in the shape of territorial concession and an immense indemnity into the bargain. Once in possession of Japan's conditions, it is easy to conceive that he meant to place them before Western Governments in such a magnified light as to create the impression that Japan's ambition is to wield the control of all interests, commercial and political, in the Far East. The great Viceroy doubtless counted on producing a feeling of exasperation throughout the whole of Europe at the supposed dangerous aims of Japan. That accomplished, he probably expected that China would be able virtually to assume the rôle of a spectator during the progress of a great diplomatic, if not sanguinary, struggle, in which the chief actors would be Japanese on one side and the European States having large interests in Asia, on the other. Thus China, thought the old schemer, might come out of the war little damaged and less humiliated." That, comments the *Choya*, seems a rather far-reaching device, yet it is not unlikely to have been conceived by Li Hung-chang, grown old as he is in crooked maxims and policies of state. As regards a third Peace Embassy, the *Nichi Nichi* declares that no less a personage that the Emperor of China himself should be welcomed by Japan.

* * *

The *Nippon* praises the present Government for having placed the affairs of the Chinese Mission before the Houses of Parliament, and calls upon the Ministry to make public all that it has done and is doing concerning Treaty Revision. The nation is more interested in treaties of commerce and friendship with Western Powers, than in the question of an abortive Chinese mission for peace. The Government's procedure in connection with the Chinese mission is praised from beginning to end by not only pro Government and Independent, but also by Opposition journals.

* * *

The Government, says the *Mainichi*, has shown itself well-advised about the prevailing temper of the Japanese people, in issuing the Territorial Army Regulations. The people, high as well as low, young as well as old, are all ready to fight, their hatred of the brutality of the Chinese Government and people being deadly. Our contemporary takes occasion to say once more all that it has often said before about the probable benefits that Japan will be able to reap from the present war and about the humiliation of China.

* * *

Referring to the successful attack upon Weihaiwei, the *Niroku* says that China, having lost her left arm by the fall of Port Arthur, has now lost her right at Weihaiwei. Though deprived of both arms, she may yet have some vitality left, and the Japanese expeditionary forces must make all haste to cut off her legs too. Her legs are the two islands of Formosa and Chusan. The same journal is well pleased that a petition for the promotion of corporals and sergeants to the rank of officers has been presented to the Diet, and calls upon the Houses warmly to take measures to have it made a law at the earliest possible movement. The inferior officers constitute the main strength of an army. No troops can be expected to achieve anything great without able sergeants and corporals. Nothing, therefore, can be more important in strengthening an army than to provide an easy gate to promotion for non-commissioned officers.

* * *

A correspondent of the *San Francisco Chronicle*, says the *Kokumin*, writes to the effect that there has arisen in Japan a strong anti-British feeling. This is no mare's nest. The Japanese cannot but be displeased with the conduct of the British Oriental Squadron. It may be that Admiral Fremantle's doings in the China Sea do not reflect the policy of the Government he serves. If that be the case, the British Authorities ought to address a strong warning to its Squadron in the Far East. The same journal, referring to some Japanese commercial enterprises started on the Coast of Talien Bay and northward, protests against them, saying that the natural course of commercial growth tends towards the south and not towards the north. Japanese business men are warmly urged to turn their attention to the southward. What our contemporary means by that is somewhat obscure to us, but may be intelligible to those whom it addresses. Such an engimatical style is often affected by Japanese journalists.

* * *

The National Bank problem continues to torment Tokyo journalists. They all tell the members of the Upper House not to listen to any one approaching them with selfish complaints from either party, or to respect the dictates of their own personal interests as shareholders of the 15th National Bank. A question of constitutional bearing is advanced by the *Choya* and some other Tokyo journals with reference to the course that the Government may adopt in case both Houses vote against its wishes in this matter.

* * *

The *Jiji* has a long leader headed "The Foreign War," the gist of which we here reproduce. It is divided into the six following heads:—

1.—China's capacity for revenge must be nullified.

2.—Japan has no difficulty in raising fighting men.

3.—Japan need not entertain any profound anxiety as regards war expenditures.

4.—How the war fund is raised and expended must be well considered.

5.—The state of affairs that would have arisen under present circumstances had the feudal system been in existence.

6.—A *Daimyo*, under the old régime, had to make an expensive military journey every year.

Under the first heading, the *Jiji* says that it is necessary to exact from China an indemnity and a territorial concession of such proportions as will incapacitate her from taking up arms again against Japan. In concluding peace let Japan be wide awake to the teaching of the proverb:—"Never leave a snake half-killed; it may regain vigour and strength enough to bite you." Under the second heading, our contemporary tells us that Japan, which, under the old feudal system, had 25,000 able fighting men or *samurai*, has now more than 300,000, who are now, or have been at some time, in the ranks of the Army. In addition to these regular troops, she has able warriors in the younger of the former *samurai* and their sons, and in other public-spirited men, who may be numbered by tens of thousands. Hence she may rest assured of her ability to send into the field any required number of combatants having stout hearts and robust constitutions.

Under the third heading, the *Jiji* says that the wealth-producing elements in Japan are not at all impaired by the war. Her foreign trade has even increased since the breaking out of hostilities.

Under the sixth and last heading, the Tokyo journal gives a list of the retainers that a *Daimiyo* of 100,000 *koku* had to take with him in his yearly journey to Edo (now Tokyo) for paying homage to the Shogun. As our readers may be interested in a *Daimyo's* procession in the good old feudal times, we give the *Jiji's* list without greatly abridging it:—That list is as follows:—

	No. of head, loads, etc.	No. of men.
Horse	1	3
White Bear Lances	2	4
White Bird Lance	1	2
Weight Lance	1	2
Boxes on poles	2	4
A coat-of-mail box	1	5
Bows	1	2
A halberd	1	1
Sword boxes	2	10
Foot-soldiers	—	
Sedan-chair	—	11
Head-followers	—	5
Pages	—	5
Private Secretaries	—	7
Bed-side lance	1	2
Umbrella	1	1
Umbrella and Stick	—	1
Sandal-bearer	—	1
Tea-making master	—	1
Tea-makers	—	3
Tea and lunch-box	1	2
Straw rain coat box	—	2
Long box for weapons	1	4
Treasure box	—	2
Grooms for horse	—	2
Veterinary surgeon	—	1
Stable head-official	—	1
Stable official	—	1
Shoe-basket	1	1
Ladle for watering horse	—	1
Rain apparel	—	1
Fodder	—	3
Butlers	—	2
Doctors	—	2
Horse in reserve	1	2
Boxes on poles	10	13 or 14
Rear-guard	—	5 or 6
Special servant	—	1
Bearers of articles in daily use	—	2
Butlers and Accountants	—	2
Cooks	—	2
Fish-cooks	—	2
Kitchen servants	—	2
Tea-makers' servants	—	2
Forerunners	—	6
Hotel managers	—	17
Lance-bearers	—	30

Other men used to carry the *Daimyo's* bed-clothes, etc., so that the followers amounted in all to as many as 240 or 250. The Japanese, who could support hundreds of such *Daimyos*, the *Jiji* concludes, ought to find the present war by no means hard to bear.

At a recent school examination in Germany the pupils were asked the value of the widow's mite in the New Testament. One boy answered; "Twelve mark and forty-two pfennigs," and on being asked for his authority, showed in his book the reference, "Widow's mite, Mark xii., 42."

EDITORIAL NOTES.

THE NATIONAL BANKS PROBLEM.

THE vernacular papers say that according to the information of the Foreign and Domestic News Agency, the Government is not united in its views about the National Banks Problem. The Ministry is in fact divided into two parties, the moderates and extremists. The Department of Finance, it is needless to say, is composed entirely of the latter; indeed all of its influential officials, headed by the Minister and the Vice-Minister, are soearnestly opposed to the Renewal of the Charters that they are resolved to resign in a body should the Cabinet be irresolute in dealing with the question. Those views are also prevalent in the Department of Agriculture and Commerce, but so far direct opposition to the Renewal measure appears to be confined to the above two Departments, the rest being all more or lesss inclined to be less extreme. The Premier and the Minister of Communications, Foreign Affairs and Justice, it is true, uphold the Re-organisation scheme, but at this important juncture they are desirous of avoiding collision with the Diet and of terminating the present session as smoothly as possible, even though such a course obliges them to concede more or less. The rumour that the successful passage of the Renewal Bill through both Houses would be followed by the dissolution of the Diet is not likely to be justified, but as the Minister of Finance will not swerve from his original declaration, it is very probable that some difficulties will arise in the Cabinet. A pro-Renewal Bill newspaper is confident that the measure will pass the House of Peers where, it says, about 80 members will support it on account of their interest in the Peers' Bank and some 20 more will give their votes to the Bill for other reasons. It is very seldom that the quorum of the Upper House reaches 200 members, almost all Bills of importance being decided on an attendance of about 170 or 180, so that as there are already 100 supporters of the National Banks scheme, its successful passage in the House is certain. So at any rate, says the newspaper in question.

A FRENCH TRANS PACIFIC LINE.

CHARLES N. TUTTLE, Portland, agent of a French steamship line, has received a cablegram from the home office relative to the establishment of a steamship line between Portland, Astoria, and Oriental ports. The Portland *Sun* says:—"The cable states that an agent of the Compagnie des Messageries Maritimes is now on his way to Portland direct from the home office of the company in Paris and that immediately on his arrival, should the situation prove as Mr. Tuttle has represented it, arrangements will be immediately made and the necessary papers signed looking to a semi-monthly passenger and freight service between Portland and China, via Yokohama and Kobe. If substantiation of the figures as to freight procurable, already furnished by the local agent of the French company, is all that is necessary to secure the immediate installation of the steamship line, then the service is assured, for with every day of delay the amount of flour and other merchandise awaiting transportion to the East has increased, until to-day the warehouses of Portland are over-flowing with goods bought and paid for months ago, but which are forced to lay here through the inability of the consignees to secure space on the outgoing steamers of the Empress, Northern Pacific, and Pacific Mail steamship lines."

AN INSECTIVORE.

WE find in the columns of the vernacular press a strange story about an elderly resident of a village in Hiroshima, the like of which it would be difficult to produce. The man in question, now over fifty years of age, has a curious predilection for everything that comes under the Japanese heading of *mushi*, which includes both reptiles and insects. He eats, and ravenously at that, snakes, toads, grasshoppers, caterpillars, all sorts of grubs and larvæ, cicada, and by a devious route back to the Parade earth-worms, in short "such small deer" as are to be found in and around the village, where his remarkable diet has caused him to be regarded with detestation. Although in comparatively easy circumstances, he has never found a woman willing to become his wife—and small blame to the sex for that. He lives apart, and his house is shunned, it is said, by the inhabitants, who hold him more than half a ghoul. Mark Twain has elsewhere conclusively shown that the Digger Indians are very fond of grasshopper-soup; indeed he derives the name of that beautiful lake, Tahoe, from the Indian word for this *pâte*. And in Japan there are a good many people who think that the peculiar species of grasshopper which may be found in every field of young rice, is particularly appetizing. These insects are sold and eaten under the style of *inago*,—a misleading term according to the opinion of foreigners who have ventured to partake of them either broiled or roasted, as the antepennult ought properly to read *out* instead of *in*, to judge by results.

A JAPANESE IN THE PRISON OF YUNGCHENG.

THE correspondents of the Tokyo papers write of a curious incident that occurred at Yungcheng. When the van of the Second Division entered that town and liberated the prisoners detained there, one young man thanked the soldiers in Japanese colloquial. The latter, thinking this very curious as the fellow was entirely Chinese in appearance, put several questions to him through the interpreter accompanying the van. They learned that the prisoner was named Imai Tetsunosuke and that he was a native of a Kobe. When 6 years of age he had been sold to a Chinaman who took him to Shanghai. He was there for a number of years, but being subsequently employed by a certain man-of-war, he went afterwards to Weihaiwei. One of the officers of the ship was kind enough to accommodate him with the sum of 110 Tls. with which to purchase a junk for the purpose of engaging in the lading and unlading of cargo. In return for this service, the officer was to be conveyed in the junk free of charge whenever he had occasion to require it. The young Japanese became owner of a small ship and plied his trade so assiduously that he had at last laid by enough to repay the money advanced to him by his benefactor. One day a package belonging to one of the passengers in the junk disappeared in a mysterious manner, and suspicion falling on the owner of the vessel, he was thrown into the prison of Yungcheng. He had not yet undergone examination when the Japanese Army landed on the Shantung promontory, and he was unexpectedly set free by his own countrymen. He told his deliverers that he had only once been suspected to be a Japanese, but that he had been able to remove the suspicion. The young man is now employed by the Japanese as a guide.

A FATAL WAGER.

A MOST foolish bet, attended with fatal results, is recorded in the columns of a metropolitan paper. There were two rival jinrikisha-pullers in the city, one living in Yotsuya and the other in Akasaka. Both were about twenty-four years old and fleet of foot, keeping to a rapid, tireless trot up hill and down. The Yotsuya man was proud of his fleetness and used to boast that he had not his peer in Japan. This was contested by the Akasaka *kurumaya*, so the two agreed to run for an hour over a large portion of Tokyo, to test their several abilities, the winner to hold the title of champion. They started in the evening, after their day's work was over, from the Aoyama Parade Ground, each pulling a *kuruma* in which rode one of their own comrades, likewise *jinrikisha*-men. From the Parade Ground they ran, at full speed, and urged on by the shouts of their "fares," past the Detached Palace, on to Azabu, thence to Iigura, Shiba Park, Atagoshita-machi, through the Sakurada gate and past the Imperial Palace, where the Yotsuya man fell some twenty-five yards behind. The road then led through Nigata-cho to Kojimachi; then on to Yotsuya Ground—a prodigious and unparalleled distance to cover inside of an hour, a stretch indeed that few rapid horses could pass over in that time. The Yotsuya man, after making superhuman exertions, managed to reach the goal about seven yards ahead of his rival. Both were greatly exhausted. The "Champion" went home but not to sleep, and lay in great pain till midnight, when cerebral hæmorrhage set in and death resulted. It is a thousand pities that such magnificent limbs and sinews should not have been employed to a better purpose.

CHINESE PRISONERS AT NAGOYA.

THERE are sixty-seven Chinese prisoners at Nagoya, says a vernacular contemporary. All are well and rapidly putting on flesh—quite different from the gaunt, haggard beings brought thither a couple of months or so ago. News of a Chinese defeat does not affect them unpleasantly; they laugh and joke as if there were no reason for uneasiness and declare that they consider themselves exceptionally fortunate in having been taken prisoners so early, for here they are well-housed and warmly-clad, while food is in plenty and there is no need to forage in the empty granaries of a starveling peasantry. Of the whole number only ten can write their own names; the rest are absolutely illiterate. Some acknowledge, without the least sense of shame, that they joined the army simply with the hope of unlimited loot. That being impossible, the best thing that could happen to them was to have to stop fighting, or rather its pretence. A few of the men appear to be incurably idle, spending all their time in chatting with their fellows and taking long siestas; the majority, however, are busy enough. Some split wood for matches; others sew and are adept at the needle. Two or three are making rather ludicrous attempts to acquire a knowledge of Japanese, stating that they intend settling in this country when the international unpleasantness becomes a thing of the past. A good deal of license is given them, which they do not abuse.

EVIDENCE OF JAPANESE UNPUNCTUALITY.

A WRITER on the staff of the *Keisai Zasshi* gives an interesting table showing how unpunctual the Japanese are in their habits. He says, however, that as the table is entirely based on what he himself has experienced, it cannot of course be regarded as altogether reliable especially as he himself is not a punctual man by any means:—

Cases.	Out of 100.	Remarks.
Those that failed to call though under engagement to do so.	Called within 5 days, 4. Called within a days, 7.	
Those called on behind time.	Behind by 1 hour—50; behind by 2 hours, 27.	Those behind by less than half an hour omitted.
Answer (letter) delayed.	Delayed by above 3 days, 19; above 10 days, 7; above 1 month, 3.	
Answered after pressed twice	4	
Non-performance at appointed times	28	
Things ordered brought behind time	45	
Ditto repeated twice,	8	
New Year's cards or visit not repaid	27	Those in higher ranks excluded.
Calls not received	20	
Calls not promptly received.	After waiting 10', 8; 30', 5.	Offices or those really busy excluded.
Obliged to wait in Offices.	Above 40', 42; 30', 40.	
Coming to assemblies, ceremonies, &c., behind time	90	
Jinrikisha men asking for extra	58	

THE "SHIBATA MARU."

A SPECIAL correspondent of the *Kobe Chronicle* writing from Hiroshima, on February 1st, says:—The *Shibata Maru*, Captain Tipple, while trying to make Ujina on Tuesday night, ran on a rock about ten miles off the port and knocked a hole in her bottom. The hole was a very large one and water rushed in with great force. The captain at once determined to beach the vessel, and it was fortunate he did so, as the water was almost putting out her fires when she was run ashore. It was a dark night, and I understand the rock in question was not marked down on the chart. The *Shibata Maru* was one of the finest boats recently purchased by the Nippon Yusen Kaisha, being formerly known as the famous tea-ship *Mayune*.

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

The transport has now been brought into Ujina, her cargo having been discharged into lighters by military coolies. She is full of water, and at the time of writing the extent of her damage has not been ascertained.

PROBABLY A SURPRISE.

THE Yasukuni Shrine, better known as the Shokonsha, at Kudan, Tokyo, is still a great centre of attraction owing to the various kinds of Chinese plunder there exhibited—articles of clothing, weapons of all sorts, banners and standards, in short a miscellaneous collection of representative war-spoils. By reason of the daily crowds of sightseers this locality is the happy hunting-ground of the metropolitan pick-pockets, who, despite vigilant and argus-eyed constables, manage each day to reap quite a nice little harvest of spoils more their peculiar fancy. One of these thievish prestidigitateurs, however, made a sad slip the other day, and his confidence in the human race must be well-nigh obliterated in consequence. A well-dressed Japanese lady was carrying an unusually bulky and curious-looking bundle across the grounds, when she stopped for a moment to look at the trophies displayed and had, on the instant, the bundle whisked out of her grasp by some unseen hand. She gave a little cry and the police were at once at hand, but without being able to trace the offender. The bundle was gone; would the lady tell them what was in it? If she did so they might be able to restore the contents later on. On this the lady crimsoned, and after much hesitation replied that the parcel, contained nothing more or less than the corpse of *uchi no neko*, or her favourite cat, which had suddenly died that day and which she was taking to bury in the family cemetery out of respect for the many virtues of the departed feline. A crowd had collected to hear what the parcel had contained, and at this announcement there was a loud guffaw of merriment, as the painful disappointment of the thief dawned on their lively imaginations. Lady and police chimed in, and the episode ended in great good humour.

CARTOONS AND CARTOONISTS.

IT is only quite recently that the vernacular newspapers have taken to publishing rough sketches of a generally humourously sarcastic nature, but now and then downright libellous. Be it however said to the credit of the Japanese press that comparatively very few papers so far forget their dignity as to caricature anything or anybody but public laughing-stocks. The drawings, mostly coarsely executed, are not calculated to find favour in European eyes: the execution is not only rough but the point lies oftenest in some verbal catch quite unintelligible even to those who have a fair knowledge of Japanese. It was, if we remember correctly, the *Kokumin Shimbun* which first gave an impetus to sketches of this description; not, however, jocose, but bits of scenery and details of events of interest. Now from one end of the Empire to the other the daily papers are in the habit of frequently publishing wood-cuts of a similar nature, though the subject is nearly always with the avowed intent of holding up something or some one to derision. It goes without saying that China comes in for the worst of these pictorial stabs, her nationals and great men being depicted in all manner of trying and unenviable situations. Yet many of these cartoons are not without a spice of wit of a pungency all their own, and characteristically Japanese. In the *Yorozu Choho* the other day, shortly after the arrival of the abortive Peace Embassy, there was a sketch of the kind worthy of notice. One of the most frequently met with peripatetic hawkers is the seller of *amé*: that not-unpalatable species of wheat-gluten so affected by the *jeunesse dorée* of this country. The cry of this hawker, pitched in a high, melancholy minor key, is *Ameya, kobashii ame!* or "*Amé*, sweet-savoured *amé*." The *Yorozu Choho's* artist, for reasons of his own, dressed his puppet in Chinese clothing, gave him a most hang-dog expression, and put into his mouth the words, *Dame ya, ko-wa shi dame!* or "Futile! the Peace Mission is futile!" the jest lying in the similarity of the pronounciation. Again, the *Yushin Nippo*, of Nagasaki, regaled its readers with another significant cartoon, not long ago. A Chinaman sprawling on his back was being unmercifully drubbed by a Japanese soldier, while from the Celestial's mouth proceeded the wail: "England! Russia! France! Help! What's the use of your big fleets in Eastern Asia if you don't help me in my trouble?" The 3rd inst. was the date of the *toshi-koshi* ceremony, being the last of the observances connected with the New Year festivities. It is customary on the evening of this day to strew parched beans about the rooms while reciting the formula *Fuku wa uchi! Oni wa soto!* "Happiness in the house; oh demons! (go) outside!" This is done in the belief that evil spirits are thus definitely exorcised, good luck remaining in their stead. Of course the educated classes no longer credit the efficacy of the exorcism; yet the old custom is kept up as an excuse for merriment and innocent frolicking. The *Yomiuri Shimbun* of the 3rd instant took due advantage of the occasion and published an excellent cartoon. It represented the world in miniature, with hordes of Chinese fleeing over its confines into outer space, and energetically pursued by Japanese bean throwers who were echoing *Fuku wa uchi! Oni wa soto!* The sketch was very *à propos* of the abrupt termination of the peace negotiations.

EXPORTS OF PETROLEUM FOR 1894.

THE following are the figures of the export of petroleum from New York to the undermentioned ports from January 1st to December 31st, 1894, as compared with the preceding year:—

	Gals. 1894.		Gals. 1893.
Shanghai	28,564,796	...	37,996,360
Hongkong	11,328,680	...	15,029,510
Yokohama and Tokyo	18,236,653	..	10,790,600
Amoy, Tamsui and Tientsin	2,245,240	...	1,023,340
Saigon and Swatow	1,092,890	...	5,236,420
Haiphong	12,000	...	721,900
Nagasaki, Kobe and Hiogo	461,260	...	1,567,020
Total gallons	61,941,519	...	72,365,150

MR FOSTER

IT is impossible not to sympathise with Mr. Foster. He was brought to the east on a fool's errand, and as every one recognises that, in undertaking the journey, he was actuated chiefly by a humane desire to assist in restoring peace to the Orient in general, and in particular to two empires among whose statesmen he counts many friends, the farce in which he has been made an unwilling actor seems doubly inexcusable. It is to be hoped that he may be induced to remain in the East until either the credentials of the discredited envoys are rectified, or a new and less trivial a mission be organized. His continued presence here would materially strengthen the prospects of early peace.

BRITISH BOARD OF TRADE NOTIFICATION.

THE *Kobe Chronicle* learns from a Shanghai contemporary that the Board of Trade has issued a notification "that the red ensign usually worn by merchant ships without defacement or modification whatsoever is hereby declared to be the proper national colours of all ships and boats belonging to any British subject." In the case of any ship flying a modification of this flag without warrant from the Admiralty, the master of such vessel will be liable to a fine not exceeding £500, and any commissioned naval or military officer can order the flag to be hauled down and have it confiscated. On being signalled to by a British man-of-war, or while entering or leaving a port the red ensign must be hoisted, in default of which the master is liable to a fine of £100.

THE ACCIDENT TO THE "VICTORIA."

THE breach in the plates of the *Victoria* (as seen from the inside by a representative of the *Kobe Chronicle*) certainly forms a very ugly gash. It is located at the foremost end of the first-class saloon, commencing from about three feet from the water-line, and extending upwards (including a scuttle in the fracture) for about three or four feet. The plates are completely torn asunder, and it is fortunate that the fracture was upwards, as had it been otherwise and extended below the water-line, the inrush of water might have compelled the beaching of the vessel. Workmen are now engaged upon the repairs, which will occupy at least a fortnight. The accident, as already reported, occurred in Moji, and was caused by the Japanese transport *Ariake Maru* swinging round stem on to the *Victoria* as she lay at anchor, the blow striking the Northern Pacific steamer just abaft amidships.

KEROSENE ACCIDENT.

A FEW days ago a Japanese woman, living at Sakai, near Osaka, dropped some kerosene oil on her clothes, and then very foolishly endeavoured to dry them over a *hibachi*. The heat of the charcoal suddenly ignited the kerosene, and her clothes caught fire, the result being that the woman is so seriously burned that she is not expected to live.

THE KING'S DAUGHTERS.

WE call attention to the entertainment of the King's Daughters' Circle this evening at 9 o'clock in aid of the Yokohama General Hospital.

MAJOR-GENERAL OTERA.

The death of Major-General Otera in the battle at Weihaiwei is now beyond doubt. On the 3rd inst. a telegram reached the family of the General at Yotsuya, from Colonel Mayeda of the 4th Division, to the following effect—"The Major-General has died a glorious death: do not give way to grief." It was Mrs. Otera who broke open and read the brief message, but as she was prepared for such a contingency she was not surprised at receiving the news. His old mother, now advanced to the venerable age of 87, received the news with equal composure. She is said to have observed, according to the *Yomiuri*, that her son had fallen in the discharge of his duty, and she regretted that he was not permitted to live longer and be of more service to his Sovereign. Major-General Kawamura, of the Imperial bodyguard, hearing that his friend had been seriously wounded at the assault on the Eastern forts at Weihaiwei, called on the family to express his sympathy, and was surprised to see the message sent the family by Colonel Mayeda. He hastened to the War Department to ascertain the truth, but learned that no official news had yet been received, but that it must be authentic. Major-General Otera was a most distinguished officer, and of Satsuma origin. His military career dates from the troublous times of the Restoration, and he took a conspicuous part both in the expedition to Formosa and the Civil War in Satsuma. When the question of the invasion of Korea was mooted by the elder Saigo and his distinguished compatriots more than two decades ago, it failed to secure the approval of the Ministry of the time, and a number of officers, both in the Army and Navy, resigned their commissions and accompanied Saigo in his retirement. Major-General Otera, at that time a Captain, strongly opposed the plan of his superior, and remonstrated with him regarding his intention, but without avail. He was travelling in Europe, on a military tour of inspection, when the war broke out, and was, with others, recalled. On his return he was sent to the seat of war as Chief of Staff of the Tokyo Division. The plan of attack of Port Arthur was drafted by him, and for his services he was promoted to Major-General and appointed Commander of the 11th Brigade. His comparatively slow promotion is ascribed by the vernacular press to his unyielding nature and dislike to currying favour with his superiors. He leaves behind him his mother, his wife, aged 39, and four children, the eldest of whom, a daughter, is married to Lieut. Wada of the Osaka Division. Major-General Otera was only a little over 50 years of age.

IMPERIAL DIET.

FRIDAY, FEBRUARY 1ST.

HOUSE OF PEERS.

The House met at 11 a.m., the Order of the Day being :—

1.—Bill for amending the National Bank Regulations, sent up from the Lower House.
2.—Petitions.

Mr. Tajiri, Government Delegate, explained in detail the Government's objections to the first Bill on the Order as sent up from the Lower House, his arguments being mainly on the same lines as those submitted by him to the Lower House.

Viscount Tani inquired whether it was found possible in practice to discharge satisfactorily the functions of supervision delegated to the Government by the existing Regulations.

Mr. Tajiri could not undertake to say that the inspection was everything desirable, but no efforts were spared to make it so. In answer to another question, he said that, the Government Bill having been rejected in the Lower House and the Bill now under consideration having been adopted in its place, the Government, in the event of the rejection of the latter by the Peers, would re-submit its Bill next session.

After various questions, the Bill was handed to a Special Committee nominated by the President, but the House refused to give any instruction to the Committee with regard to the time of presenting its report.

On the recommendation of Prince Tokugawa, Chairman of the Petitions Committee, the House then adopted the following four petitions for presentation to the Government :—

Petition relating to Restoration of Ranks and Incomes.
Petition for the Establishment of a Charity Hospital.
Petition relating to the Tobacco Tax in Okinawa Prefecture.
Petition relating to Lighthouses.

The House rose at 12.05 p.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.25 p.m., the Order of the Day being :—

1.—Bill relating to Pensions and Gratuities; sent down from the Upper House.
2.—Bill for granting State Aid to Agricultural Experiment Stations.
3.—Bill relating to Open Ports.
4.—Petition.
5.—Representation relating to the Repair of the Kiso River.
6.—Representation relating to the Control of State Forests.
7.—Representation relating to State Aid for the Kobe Waterworks.

The President announced the receipt of a Government Bill relating to the establishment of a Naval Council, and said that it should be taken as an urgency measure.

Mr. Suzuki Shigeto asked leave to have the Order of the Day changed for the purpose of introducing a Resolution.

The House having given the necessary permission, Mr. Suzuki, in a few words, urged the passing of the Resolution.

Mr. Inouye Kakugoro supported the Resolution in a speech which the House seemed to consider unnecessary. He urged that the country's banners must be carried to the walls of Pekin and that all party differences must be merged in this great question.

The House unanimously voted the Resolution as follows :—

Whereas, in the opinion of this House, the time is still distant when the objects on account of which war was proclaimed by His Majesty will be accomplished and the country's prestige established, therefore this House is prepared to grant whatever amount of appropriations may be necessary for the purposes of military expenditure, and adopts this Resolution with the express intention of making known its sentiment on the subject.

Mr. Sasaki Shohyo, on behalf of the Special Committee, reported in favour of the first Bill on the Order. After some opposition on the ground that means to carry out such a measure were not available under the circumstances of the time, the House voted against the Second Reading of the Bill.

Mr. Tada Sakubei, on behalf of the Special Committee, reported in favour of the second Bill, as amended by the Committee. This Bill also was opposed on the same grounds as the last, and also on the ground that if agricultural experimental stations were needed, they should be supported by the localities without aid from the Treasury.

The House voted against the Second Reading.

Mr. Taguchi Ukichi, on behalf of the Special Committee, reported in favour of the Bill for opening additional ports to foreign trade. The Government Delegate had opposed the project on the ground that preparations were not complete, but the same objection might have been urged with equal force in the case of Yokohama or Kobe at the time of their opening. In China there were 23 open ports, and the customs duties aggregated over 30 million *yen*. In Japan there were only 5 ports and the customs revenue was but 5 millions. The measure contemplated by the Bill was a means of enriching the country.

Mr. Megata, Government Delegate, briefly opposed the Bill for the reasons already advanced by him.

Mr. Kawashima Jun regretted to be obliged to oppose the Bill, but felt that while negotiations for Treaty Revision were in progress, with the prospect of the whole country being thrown open to foreign trade, it was not only premature but even mischievous to fix upon certain places for additional open ports. Besides, they had been told that there were to be no foreign settlements at the new ports, but if a place were opened to foreign trade, the persons engaged in that trade must necessarily be allowed to live there.

Vice-Admiral Ito, Government Delegate, said that while every one would rejoice to see the country's foreign trade prosper and to have as many ports as possible thrown open, there were connected with this question considerations of naval strategy that made the Bill unadvisable at the present juncture.

Mr. Suzuki Jubi failed to see why the development of trade should be checked on account of strategical conditions. He did not consider that a civilized country could keep ships out of its ports, or confine them to certain ports, when they came as the carrying agents of peaceful and wealth-bringing commerce.

The closure was put and carried, and the House rejected the Second Reading.

Mr. Hamana Shimpei, on behalf of the Petitions Committee, reported in favour of adopting a Petition relating to the pensions of certain Satsuma *Shisoku*.

On the motion of Mr. Moriya Konosuke, the House voted to postpone the consideration of the Petition until the Government Delegates were present to answer questions.

After a long speech by Mr. Kudo Kokan, the House rejected the Representation with regard to the Kiso River.

SATURDAY, FEBRUARY 2ND.

HOUSE OF PEERS.

The House met at 10.50 a.m., the Order of the Day being :—

1.—Game Law Bill, as amended by the Lower House
2.—Petition.

The President asked the House to consider the amendments made by the Lower House in the project of Game Law, and to decide whether they should be accepted, or whether any Conference of the Houses would be necessary.

Baron Date desired to know the Government Delegate's views as to the amendments. The Lower House had divided the fees payable for licenses into three classes, taking the taxes paid by an applicant as the basis of the fee to be charged to him, and had further decided that all foreigners must pay the highest rate of fee. An explanation of the Government's views as to these changes was desirable.

Mr. Fujita, Government Delegate, said that the Government did not approve of the proposed changes, and preferred the system hitherto in vogue. As to the differentiation made against foreigners, by placing them in the first class, the Government could not endorse it, seeing that foreigners did not pay any of the taxes constituting the basis of classification.

Mr. Murata Tamotsu strongly disapproved of the amendments. He deemed it a totally wrong principle to take a shifting standard like the payment of income tax and land tax as a basis, and he denounced the idea of levying a larger fee from foreigners merely on the hypothesis that they were better able to pay it. He moved that the Bill be re-entrusted to a Special Committee for the purpose of having a report made on the Lower House's amendments.

Marquis Daigo approved of the amendments, their spirit being to distinguish between persons who pursued game for sport and those who pursued it as a profession.

The House voted to re-commit the Bill to a Special Committee.

Mr. Ando Sokumei asked the House to favourably consider a Petition for restoring to the people of Kagoshima Prefecture the expenses incurred in surveying State lands for the purpose of reassessing their taxable value. Such expenses ought to be defrayed out of the Treasury, since the lands were public property.

Prince Tokugawa, on behalf of the Petitions Committee, explained that the Committee did not recommend the Petition, for though the principle involved might be just, it was plain that were such a concession made to the people of Kagoshima, it must be extended to the people of all the other Prefectures, with serious financial consequences.

After some debate, several members contending that if the principle involved was just, the question of expense should not be suffered to stand in the way, the House adopted the Petition for presentation to the Government.

Prince Konoye moved that as the session was nearly half over the Joint Stock Railway Companies Bill should be taken at once, but the House voted against the proposal and rose at 11.30 a.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.10 p.m., the Order of the Day being :—

1.—Bill relating to a Special Naval Court.
2.—Bill embodying a project of Press Law, as amended by the Upper House.
3.—Representation relating to the Control of Government Forests.
4.—Representation relating to State aid to the Kobe Waterworks.
5.—Bill relating to the National Banks.
6.—Bill for amending the 20th Article of the Land Tax Regulations.
7.—Representation relating to the Rectification of Pensions and Gratuities.
8.—Representation relating to the Establishment of an Iron Foundry.

Vice-Admiral Ito, Government Delegate, explained that the object of the Bill relating to a Special Naval Court, was to invest the Central Naval Court, established in connection with the war, with competence to enforce the various regulations. Such Courts already existed at the five Admiralty Stations, but another was needed at the base of operations.

The Bill was entrusted to a Special Committee.

Mr. Komuro Shigehiro exhorted the House to reject the Peers' amendments in the Press Law. Public opinion had emphatically declared in favour of abolishing the suspension of newspapers by arbitrary decree of the Executive, and in favour of dispensing with security money. He was entirely at a loss to understand why a Chamber containing men of erudition and experience as the Upper House did, should assume an attitude directly opposed to the will of the nation. To accept the changes proposed by the Peers would be yielding an ell to gain an inch. The House must assert itself, and guard its resolutions against such disrespectful treatment.

On the question being put whether the House would accept the amendments, not one member voted in the affirmative.

The President was empowered to choose 10 Managers for the purpose of opening a consultation with the Upper House.

Mr. Fuji Kinsaku, in a long speech, introduced the Representation relating to the control of State Forests. He declared that owing to official mismanagement and partiality the country's forests were gradually becoming unproductive, and that it was necessary to import from abroad timber easily producible at home.

Digitized by Google Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

He charged the Authorities with selling at nominal prices to favoured individuals, especially in Satsuma, large tracts of valuable forest land, and alleged that, under the present system, the public forests were perverted into a means of impoverishing the country, instead of being one of its most wealth-earning assets.

Mr. Saito Ryosuke moved that the Representation be entrusted to the Special Committee already charged with the duty of reporting on the Representation relating to the Sale of Public Forest Lands, and on correlated measures.

On the motion of Mr. Yoshimoto, the House agreed that the previous Committee of 9 be increased to 18, by nomination of the President, and that the Representation be handed to them.

Mr. Koizuka Ryo introduced the Representation relating to Kobe Water Works:—

REPRESENTATION.

Whereas, the construction of Water Works at Kobe is an affair of great urgency, alike from economical and hygienic points of view, therefore, this House trusts that an estimate for granting State aid to the said Water Works will be compiled and presented for discussion by the Imperial Diet.

He said that the principle of granting such aid had been endorsed by the Government already, but the work had been postponed in view of the warlike necessities of the time. Yet the Government had spent over forty thousand *yen* collecting materials for history. In Kobe's case the comfort and health of more than 170,000 persons were concerned, and not a day should be lost in taking measures to provide a supply of pure water.

After a few questions, the Representation was passed unanimously.

Mr. Motoda Hajime introduced the next Bill. He said that the House, having rejected the Government Bill for the disposal of the National Banks on the expiration of their charters, and having passed another Bill providing for a seven years' extension of the charters, it seemed advisable to supplement the latter measure by legislating in the sense that a Bank not desiring to renew its charter as of old, but wishing to carry on business as a private institution, should be at liberty to do so; and further, that a Bank wishing neither to renew its charter on the national basis nor to continue as a private concern, should be free to wind up its affairs.

MONDAY, FEBRUARY 4TH.

HOUSE OF PEERS.

The House met at 11.50 a.m., the Order of the Day being:—

1.—Leave of Absence.
2.—Bill relating to *Joint Stock Private* Railway Companies sent up from Lower House.
3.—Bill for the Control of Pawnbrokers; sent up from Lower House.

Mr. Hayashi, Vice-Minister of State for Foreign Affairs, made the following statement:—

Gentlemen:—I have the honour to inform you that I have received a telegram from Count Ito, Minister President of State, and Viscount Mutsu, Minister of State for Foreign Affairs, Imperial Japanese Plenipotentiaries for conducting the Peace Negotiations with China, directing me to report to you the following intelligence:—The Chinese Peace Plenipotentiaries arrived at Hiroshima on the 31st ultimo, and two meetings of the Plenipotentiaries of both countries were held at the Hiroshima Kencho. The credentials of full powers presented by the Chinese Plenipotentiaries having been examined, were found materially incomplete and improper. Being compelled to infer from the Chinese Government's failure to confer plenary powers on their Envoys that they are not yet sincere in their desire to amicably settle the important question at present pending between the two countries, the Imperial Japanese Plenipotentiaries were constrained to declare to the Chinese Envoys their inability to continue the negotiations.

The President announced that the House should proceed to elect managers to confer with the Lower House on the subject of the Press Laws.

On the motion of Prince Konoye, the House decided to elect the managers by Sections.

Prince Konoye, on behalf of the Special Committee, reported in favour of the Bill relating to Joint Stock Private Railway Companies.

A long discussion ensued, and the House finally voted for the Second Reading of the Bill by 67 to 50, and decided to proceed with the Bill at once, and passed it in the following form:—

PROJECT OF LAW RELATING TO THE PRIVATE JOINT STOCK RAILWAY COMPANIES.

(As passed by the Houses of Representatives and Peers.)

Art. I.—A Private Joint Stock Railway Company more than one tenth of the face value of whose shares has been paid up, shall be entitled to apply for registration.

Art. II.—Although registration, as provided in the preceding article, has been effected, any transfer of shares made before one-fourth of the whole capital has been paid up, shall be null and void.

Art. III.—A Private Joint Stock Railway Company must be dissolved in the event of its capital being reduced to less than one-tenth of the original amount. Provided that a Private Joint Stock Railway Company whose paid up capital amounts to more than one-fourth of the original sum, shall fall under clause 4 of Art. CCXXX. of the Commercial Code.

The Bill for the Control of Pawnbrokers was handed to the Special Committee already charged with the duty of reporting on the Bill relating to Dealers in Second-hand Goods.

The House rose at 2.50 p.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.15 p.m., the Order of the Day being:—

1.—Bill for amending the Chamber of Commerce Regulations.
2.—Petition relating to Pension Bonds.
3.—Representation for the Establishment of an Iron Foundry.
4.—Bill for amending the City Government Regulations.
5.—Bill for amending the Urban and Rural Divisions Government Regulations.
6.—Bill for establishing a Silk-conditioning Warehouse.
7.—Representation relating to State Forests.
8.—Representation relating to the re-establishment of the Ecclesiastical Bureau.
9.—Representation relating to the Preservation of ancient temples.

Mr. Hayashi, Vice-Minister of State for Foreign Affairs, made the same statement as that made by him in the forenoon to the House of Peers.

Mr. Nakano Buyei, on behalf of the Special Committee, reported in favour of the first Bill, with various amendments, to which the Government Delegate had agreed. The object of the Bill was to develop the system of Chambers of Commerce.

The House voted for the Second Reading, and proceeding with it at once, passed the Bill as amended by the Committee.

The Petition relating to Pensions was adopted for presentation to the Government, after some discussion.

Mr. Hayakawa Ryosuke, on behalf of the Special Committee, in a speech of considerable length, reported in favour of the Representation for establishing an iron foundry. He adduced no arguments other than those advanced by supporters of the Representation in previous debates.

After a few questions, the Representation was passed.

REPRESENTATION RELATING TO THE ESTABLISHMENT OF AN IRON FOUNDRY.

The essential character of the work done at an iron-foundry viewed from the standpoint either of national defences or of national economy, needs no exposition. The reason why, when the Government in a previous session of the Diet introduced a scheme for establishing a foundry, the House of Representatives withheld its consent, was that the Government declined to assume the responsibility of asserting the existence of raw material in sufficient quantities, and to guarantee the success of the operation. Since that time, however, the question of the sufficiency of raw material and the excellence of its quality having been, as we understand, settled beyond any doubt, and the success of the technical part of the business has also been assured after repeated experiments. Under the circumstances, to abstain from inaugurating the work of iron founding must be considered highly disadvantageous to the nation. The present condition of the country both in its domestic and in its foreign relations renders the initiation of the enterprise specially imperative. The House therefore submits this Representation, urging the Government to take prompt steps for preparing a draft scheme, and for obtaining the consent of the Imperial Diet.

Presented by Mr. KURIHARA RYOICHI and 6 others.

Supported by Mr. YAMADA KAKOKU and 29 others.

The Bills relating to amendments of Local Government Regulations were passed through all their readings with slight amendments.

Mr. Obata Iwajiro, on behalf of the Special Committee, reported in favour of the Bill for establishing a Silk-conditioning warehouse in Yokohama, but said that the Committee recommended the establishment of one in Kobe also, and were of opinion that the time for carrying the scheme into force should be deferred to a later date.

Mr. Konishi Jinnosuke opposed the Bill on the ground that such a subject should not be dealt with legislatively, but ought to be settled by Administrative Ordinance.

The Bill was carried to a Second Reading.

PROJECT OF LAW RELATING TO A SILK CONDITIONING WAREHOUSE.

(As Amended by the Special Committee.)

Art. I.—Silk Conditioning Warehouses shall be established in Yokohama and Kobe.

Art. II.—Any one, whether a Japanese subject or a foreigner, who carries on transactions in Japanese silk, shall be entitled to apply to the Conditioning Warehouse for the examination of his silk. No charge shall be levied for such examination.

Art. III.—The Silk Conditioning Warehouses shall be placed under the control of the Minister of State for Agriculture and Commerce; and detailed rules relating to the operation of the present Law shall be determined by the said Minister. The present Law shall go into force from April 1st of the 29th year of *Meiji* (1896.)

The Representation relating to State Forests was entrusted to a Special Committee.

The Representation for re-establishing the Ecclesiastical Bureau was rejected, after a brief debate, by a vote of 67 to 59.

Mr. Takemura Tobe, introducing the Representation for the preservation of ancient Temples and Shrines, said that, in pre-Restoration days, these establishments enjoyed considerable revenues, and had been well preserved as types of the country's architecture and receptacles of its art objects. But being now deprived of means of support, they were gradually falling to ruin, and the objects of art kept there were disappearing from Japan, to the irreparable loss of the country's artists and its people.

The Representation was entrusted to a Special Committee.

The House rose at 4.50 p.m.

TUESDAY, 5TH FEBRUARY.

HOUSE OF PEERS.

The House met at 10.50 a.m., the Order of the Day being:—

1.—Bill for rescinding Law No. 7 of the 23rd year of *Meiji*; sent up from the Lower House.
2.—Bill for rescinding Ordinance No. 2 of the 18th year of *Meiji*; sent up from the Lower House.
3.—Bill for amending the Code of Civil Procedure.
4.—Representation relating to Educational Councils.
5.—Representation relating to Telegraphs and Telephones.

Mr. Ando Sokumei presented a Question with reference to the debate that had occurred in the Lower House last session on the subject of the Fujita-gumi and the forgery of notes. He alleged that in a document produced by the Government as evidence and purporting to have been written by him, Mr. Ando, words occurred that he had never penned. He wished to know how they got there.

Prince Tokugawa, on behalf of the Special Committee, reported that the Committee were unanimously opposed to the first Bill on the Order; namely, that rescinding the provision of law by which a person appealing from a judgment in a case of major crime must lodge a sum of 20 *yen* in court.

The House, without debate, refused to carry the Bill to a Second Reading.

Prince Tokugawa, on behalf of the Special Committee, reported similarly against the Bill for dispensing with a deposit of 10 *yen* in the case of persons appealing from a judgment in a minor crime.

Digitized by Google UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

The House rejected the Bill.

The third Bill met with a similar fate, after brief debate.

Mr. Kato Hiroyuki introduced the Representation for establishing Educational Councils. There were already Councils for debating the affairs of railways, engineering, sanitation, and so forth, and it could not but be called a national defect that no such council existed in the educational sphere.

Viscount Tani strongly supported the proposal, as furnishing a means of guaranteeing education against repeated changes incidental to changes of Cabinet.

The Representation was adopted by the House.

Mr. Murata Tamotsu introduced the next Representation urging the Government to take immediate steps for extending the system of telegraphs and telephones. The State was obtaining an income of 2 million *yen* annually from these sources, yet the lines laid, though palpably insufficient, were not increased.

The Representation was adopted without debate.

The House rose at 2 p.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.20 p.m., the Order of the Day being :—

1.—Bill (Government) relating to Expenditures on account of the building of the Diet and the Repair of the Chikugo River.
2.—Bill for amending the Law of Election.
3.—Representation relating to Agricultural Districts.
4.—Representation for Experimental Sugar-growing stations.
5.—Representation for Experimental Sericultural stations.
6.—Representation relating to the Appointment of Headmen of Divisions.
7.—Bill for amending the Standing Orders of the House.

The President announced the death of Mr. Ito Keisuke, one of the members, and read a message of condolence, which the House adopted.

Mr. Naka Kujuro presented a Question relating to Fire Brigades and the Regulations applicable to them.

Mr. Terada Hikotaro, on behalf of the Budget Committee, reported in favour of the first Bill, which merely provided for extending over a longer terms of years appropriations already voted on account of various works which it had been found impossible to finish in the originally prescribed time.

The House voted for the Second Reading and passed the Bill at once.

Mr. Naohara Morijiro, on behalf of the Special Committee, reported that the Committee approved of amending the Law of Election, but recommended that the qualifications of an elector be first payment of national taxes to the annual amount of 10 *yen*, instead of 15 *yen* as at present; and secondly, that he have attained the full age of 20, instead of 25 as at present. Finally, the Committee recommended that one and the same person be not permitted to stand in more than two different election districts.

A number of questions were asked, and after a desultory debate the House voted to carry the Bill to a Second Reading.

The Special Committee reported against the Representation for increasing the number of Agricultural Experimental Stations, but the House adopted the Representation by a vote of 68 to 53.

The Representation relating to Sugar-growing stations was withdrawn, and that for the Establishment of experimental Sericultural Stations to improve the quality and eliminate the diseases of silk-worms, was entrusted to a Special Committee.

The next Representation on the Order was withdrawn for further examination by the Special Committee.

The last Bill, providing for an additional Standing Committee of 27 members to examine and report upon Settled Accounts, was passed without debate.

The House rose at 4.30 p.m.

WEDNESDAY, FEBRUARY 6TH.

HOUSE OF PEERS.

The House met at 10.50 a.m., the Order of the Day being :—

1.—Report of Petitions Committee.
2.—Bill (Government) for amending the Naval Penal Code.
3.—Bill (Government) relating to the capture of Seals and Sea Otters.
4.—Bill for amending the Penal Code; sent up from the Lower House.
5.—Bill for amending the Second-hand Articles Dealers Regulations; sent up from the Lower House.

The Chairman of the Petitions Committee informed the House that since the date of the Committee's last report 58 petitions had been received, of which the Committee had decided that 29 should be submitted to the House.

Vice-Admiral Ito, introducing the first Bill, said that the object was to change the method of dealing with deserters. Since the war broke out there had been virtually no deserters, but in times of peace they constituted the greater part of the defaulters in the Navy. The present mode of dealing with them was imprisonment, but that was a punishment rather affected by such persons, and it was therefore proposed to put them to hard labour. The reform had been made some time ago in the Army, but had not yet been introduced in the Navy.

The Bill was entrusted to a Special Committee nominated by the President.

Baron Ozawa Takeo, on behalf of the Special Committee, reported in favour of the Bill relating to the capture of seals and sea-otters.

Mr. Murata Tamotsu supported the Bill on the ground that it would serve to check foreign poachers. Scarcely any foreign schooners came to Japanese waters in search of sea-otters, but schooners to hunt seals were numerous—46 in 1893 and 57 in 1894, their annual take being worth 700,000 *yen*. The present law interdicted hunting in Hokkaido only, where no seals were to be found, and left out the Kuriles, where important rookeries existed. The Bill, by removing the restriction from Hokkaido and extending it to the Kuriles, was distinctly a wise measure.

Mr. Fujita, Government Delegate, said that the Government's first object in introducing the Bill was to facilitate the taking of seals; restrictive measures were a secondary consideration.

The Bill was read a Second time and passed at once.

PROJECT OF LAW RELATING TO THE HUNTING OF SEA-OTTERS AND SEALS.

(As passed by the House of Peers:)

Art. I.—Any one intending to pursue sea-otter or seals must obtain a licence from the Ministes of State for Agriculture and Commerce.

Art. II.—For the purpose of protecting sea-otters and seals the Government may establish, by Imperial Ordinances, hunting limits and hunting periods, may enforce restrictions with regard to ships and implements used in hunting, and modes of hunting, and may interdict the capture of the animals according to their ages.

Art. III.—The Commanders of men-of-war, police officials, custom house officials, and other officials, acting under special instructions from the Government and in accordance with the provisions of Imperial Ordinance, will carry out the inspection of ships and implements used in hunting sea otters and seals, and of the game captured, and may arrest any one that infringes the laws relating to hunting, seizing the ships, the gear, the hunting implements, the ship's papers, and the game caught.

Art. IV.—Any one that captures sea-otters or seals within hunting limits and hunting periods, shall be liable to major confinement for the period of not less than one month and not more than one year, or to a penalty of not less than 20 *yen* and not more than 200 *yen*, as well as to confiscation of the ship's gear and hunting implements employed, without respect of ownership, and the game captured.

Art. V.—Any one that infringes restrictions relating to ships used for hunting; to implements, or to modes of hunting; or that violates the interdiction relating to the capture of sea-otters and seals of certain ages; or that infringes the provisions relating to inspection of hunting ships, implements, and game captured, shall be liable to major confinement for a period of not less than 11 days and not more than one month; or to a fine of not less than 2 *yen* and not more than 50 *yen*.

Art. VI.—Any one that, without obtaining the license mentioned in Art. I., captures sea-otters or seals, shall be liable to a fine of not less than 2 *yen* and not more than 50 *yen*, together with confiscation of the game captured.

Art. VII.—In case the game to be confiscated in accordance with the provisions of Arts. IV. or VI. has been already sold, the price shall be collected.

Art. VIII.—The present Law shall be put into force on and after January 1st of the 29th year of *Meiji* (1896).

Notification No. XVI., issued in the 17th year of *Meiji* (1884), and Imperial Ordinance No. LXXX., issued in the 19th year of *Meiji* (1886), shall be amended from the day on which the present Law shall be put into operation.

Mr. Mitsukuri Rinsho, on behalf of the Special Committee, reported in favour of the Bill for reducing the allowances to witnesses in criminal cases, leaving those to experts and medical men untouched. The Committee considered the reform most proper, and had obtained an assurance from the Government Delegate that it should be extended to witnesses in civil cases also.

The House voted for the Second Reading, and passed the Bill through all its Readings.

Count Ogasawa, on behalf of the Special Committee, reported in favour of the Bill for amending the Second-hand Articles Dealers Regulations. The proposed changes were in the sense of removing needless restrictions and facilitating business, and were especially commendable on account of the provisions for preventing the spread of contagious diseases.

After some questions the House voted for the Second Reading of the Bill, and rose at 12.20 p.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.15 p.m., the Order of the Day being :—

1.—Bill for amending the Railway Construction Law.
2.—Bill for amending the Railway Construction Law.
3.—Bill relating to the Prevention of Contagious Diseases.
4.—Bill (Third Reading) relating to Medical Diplomas.
5.—Bill (Second Reading) for establishing Silk Conditioning Warehouses.
6.—Representation relating to the Collection of Materials for History.
7.—Bill for amending the Law Court Organization Law.
8.—Bill for preventing the importation of Diseased Foreign Cattle.

Mr. Koizuka Ryo presented a Question asking for full information as to the points in which the credentials of the Chinese Envoys were found defective. In the Special Session of the Diet convened in Hiroshima, it had been urged upon the Minister President that greater frankness should be shown toward the Diet in matters relating to foreign affairs, and since then the Government's system had sensibly improved, there being now a plain desire to consult with the House in respect of such affairs, as witness the statement submitted two days ago about the failure of the Peace Embassy. He trusted that the Government would go a step farther, and explain clearly in what respects the credentials of the Envoys had been insufficient.

The first two Bills, providing for changes in the routes of two lines of railway included in the First Construction Period, were passed without objection.

Mr. Tsunematsu Ryukei, on behalf of the Special Committee, reported in favour of the second Bill, which provided that, in the event of a serious epidemic the business of duly dealing with which exceeded the resources of the Prefecture where it prevailed, the Prefect should be competent to apply for a grant in aid from the Treasury, and the Minister of State for Home Affairs should be competent to make the grant. Last year the number of cases of dysentery throughout the empire had been 154,327, and that fact alone showed that preventive measures were not efficient.

Mr. Nakamura Kokusho considered that the Bill went too far in providing that whenever an epidemic occurred the locality should be entitled to receive one-third of the cost of preventive measures from the Treasury. He thought that such a system would defeat the end in view.

In answer to a question, Mr. Matsuoka, Government Delegate, declared that the Government neglected no resource of modern medical science to prevent the spread of epidemics, especially dysentery.

Mr. Horikoshi alleged that the marked spread of dysentery constituted a proof of the Government's defective methods. He should support the Bill.

Digitized by Google UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

The House refused to carry the Bill to a Second Reading.

Mr. Kokure Budayu trusted that the Bill relating to Medical Diplomas would be thrown out at its Third Reading. He thought that the House would bring itself in well merited ridicule did it, at this stage of the country's progress, vote to rehabilitate the obsolete system of Chinese medicine, and to place its practitioners on the same level as experts trained in the teaching of modern science.

Mr. Mori Baku thought that the country had recovered its *sangfroid*, and that a thing was no longer condemned merely because it was old. People ventured now-a-days to direct their selections by merit, not merely by the test of modern and ancient. The Chinese system of medicine had conferred great benefits on the nation for centuries past. In his own prefecture (Oita) there were many that preferred it to the Western system and found its remedies more beneficial.

An open ballot was taken, when 105 voted against, and 76 for, the Third Reading of the Bill.

The Bill for establishing Silk-conditioning Warehouses in Yokohama and Kobe was then passed through its Second and Third Reading without debate or dissent.

Mr. Hirose Sadabumi, on behalf of the Special Committee, reported in favour of the Representation relating to Historical Materials, but said that the Committee, while fully appreciating the importance of amassing good materials for a history of an era so eventful as the present, considered that an annual grant of 30,000 *yen*, instead of 40,000, would suffice.

The House voted for the Representation as amended.

Mr. Hayashi, Vice-Minister of State for Foreign Affairs, informed the House that he had been instructed by the Imperial Peace Plenipotentiaries, Count Ito and Viscount Mutsu, to lay before the House a statement with respect to the negotiations that took place at Hiroshima.

(Translation.)

Viscount Mutsu Munemitsu, Junii, First Class of the Imperial Order of the Sacred Treasure, His Imperial Majesty's Minister of State for Foreign Affairs, has the honour to announce to Their Excellencies the Plenipotentiaries of His Majesty the Emperor of China, that His Majesty the Emperor of Japan has appointed His Excellency Count Ito Hirobumi, Junii, Grand Cross of the Imperial Order of Paullownia, His Imperial Majesty's Minister President of State, and the undersigned as His Plenipotentiaries to conclude with the duly authorized Plenipotentiaries of China, Preliminaries of Peace, and has confided to them Full Powers for that purpose.

(L. S.) Viscount Mutsu Munemitsu.
H.I.M.'s Minister of State for Foreign Affairs.

Hiroshima, the 31st day of the 1st month of the 28th year of *Meiji*.

(Translation.)

The undersigned, His Imperial Majesty's Plenipotentiaries, have the honour to acquaint Their Excellencies the Plenipotentiaries of His Majesty the Emperor of China, that the meeting of the Plenipotentiaries of the two Powers is appointed to take place at the Hiroshima Kencho, on the 1st day of the 2nd month of the 28th year of Meiji, at 11 o'clock A.M.

The undersigned will on that occasion be prepared to make with the Chinese Plenipotentiaries a reciprocal exchange of Full Powers.

Count Ito Hirobumi,
Viscount Mutsu Munemitsu,
H.I.M.'s Plenipotentiaries.

Hiroshima, the 31st day of the 1st month of the 28th year of Meiji.

The 6th day of the 1st moon, the 21st year of Kwang-Su.

Their Excellencies, Count Ito and Viscount Mutsu, Plenipotentiaries of His Majesty the Emperor of Japan.

We have the honour to inform Your Excellencies that in obedience to the command of His Majesty the Emperor of China we proceeded to Japan with the Imperial letter and arrived at Hiroshima on the 6th day of the 1st moon of the 21st year of Kuang-Su.

We beg to acknowledge the receipt of Your Excellencies' note to the effect that you have been especially appointed by His Majesty the Emperor of Japan to be Plenipotentiaries for the purpose of concluding with us Preliminaries of Peace, and to express high appreciation of the fact that Japan has not forgotten her old friendship.

We were about to request Your Excellencies to meet us by by asking you to appoint the time of such meeting when we had again the honour to receive your note communicating to us that the meeting will be opened at the Hiroshima Kencho at 11 o'clock on the 1st day of the 2nd month.

We beg in reply to say that we will, in compliance with your desire, attend the meeting at the appointed day and hour.

We have the honour to convey to Your Excellencies the assurance of our highest consideration.

Chang In Hoon,
Holding the Rank of President of a Board, Minister of the Tsung-li Yamên, and Junior Vice-President of the Board of Revenue.

Shao Yu Lien,
An Officer of the Button of the 1st Rank and Acting Governor of Hunan,
Plenipotentiaries of His Majesty the Emperor of China.

(Translation.)

Mutsuhito, by the Grace of Heaven, Emperor of Japan and seated on the Throne occupied by the same Dynasty from time immemorial.

To all to whom these Presents shall come, Greeting!

With a view to the restoration of peace between Our Empire and that of China in order to maintain the peace of the Orient:

We, reposing special trust and confidence in Count Ito Hirobumi, Junii, Grand Cross of the Imperial Order of Paullownia, Our Minister President of State, and Viscount Mutsu Munemitsu, Junii, First Class of the Imperial Order of the Sacred Treasure, Our Minister of State for Foreign Affairs, and having full knowledge of their wisdom and ability, do hereby name them as Our Plenipotentiaries.

We have given to Our Plenipotentiaries Full Powers to meet and treat, either separately or conjointly, with the Plenipotentiaries of China, and to conclude and sign Preliminaries of Peace.

We shall examine all stipulations which Our said Plenipotentiaries may agree upon and, finding such stipulations proper and in good and due form, We shall ratify them.

In witness whereof, We have hereunto set Our signature and caused the Great Seal of the Empire to be affixed.

Done at Hiroshima, this thirty-first day of the month of the twenty eighth year of Meiji, corresponding to the two thousand five hundred and fifty-fifth year from the Coronation of the Emperor Jimmu.

(Seal of the Empire) (Sign Manual.)
(Countersigned) Count Ito Hirobumi,
Minister President of State.

(Translation.)

Memorandum.

His Imperial Majesty's Plenipotentiaries have the honour to announce that the Full Powers which they have just communicated to the Plenipotentiaries of His Majesty the Emperor of China, embody all the authority which His Majesty the Emperor of Japan has confided to them in connection with the negotiation and conclusion of peace.

In order to avoid as far as possible any future misunderstanding, the Japanese Plenipotentiaries desire reciprocally to be categorically informed in writing, whether the Full Powers which have been communicated to them by the Chinese Plenipotentiaries, but which they have not as yet examined, embody all the authority confided by His Majesty the Emperor of China to the Chinese Plenipotentiaries in connection with the negotiation and conclusion of peace.

Hiroshima, the 1st day of the 2nd month of the 28th year of Meiji.

(English translation accompanied by the Chinese original.)

To the Plenipotentiaries of His Majesty the Emperor of Japan.

We have the honour to state that you handed to us on the 7th day of the 1st moon of the 21st year of Kuang-su, your Commission from your Imperial Majesty, and at the same time a Memorandum in which you ask of us a written reply respecting our Full Powers.

We beg to state in reply that our Commissions, handed to you at the same time in exchange, embody Full Powers given by our Imperial Majesty for the negotiation and conclusion of peace, with authority to conclude articles to that end and to sign them. In order to insure the more prompt execution of the treaty we may agree upon, we shall submit the terms for Imperial sanction, and fix the date for signature; after which the same shall be taken to China for examination by His Imperial Chinese Majesty, and being found proper and in good and due form, will be ratified.

8th day of the 1st moon of the 21st year of Kuang su.

(As translated by the Japanese Government.)

By Decree We do appoint (Chang In Hoon, holding the Rank of President of a Board, Minister of the Tsung-li-Yamên and Junior Vice-President of the Board of Revenue, and Shao Yu Lien, an Officer of the Button of the First Rank, and Acting Governor of Hunan), as Our Plenipotentiaries to meet and negotiate the matter with the Plenipotentiaries appointed by Japan.

You will, however, telegraph to the Tsung-li Yamên for the purpose of obtaining Our commands by which you will abide.

The members of your mission are placed under your control.

You will carry out your mission in a faithful and diligent manner and will fulfil the trust We have reposed in you.

Respect this!

Seal of Imperial Command. (The date.)

Speech Addressed by His Excellency Count Ito, to Their Excellencies Chang In Hoon and Shao Yu Lien, at the Conference of the 2nd February, 1895.

The measure which my colleague and myself find it necessary at this moment to adopt, is the logical and inevitable result of a situation for which we are in no wise responsible.

China has hitherto held herself almost entirely aloof from other Powers, and while she has in some instances enjoyed the advantages accruing to her as a member of the family of nations, she has perhaps more frequently denied the responsibilities of that relation. She has pursued a policy of isolation and distrust and consequently her external relations have not been characterized by that frankness and good faith which are essential to good neighbourhood.

Instances are not wanting in which Chinese Commissioners, after having formally agreed to international compacts, have refused to affix their seals, and cases might be cited in which treaties solemnly concluded have been unceremoniously and without apparent reason, repudiated.

Those unfortunate occurrences find a sufficient explanation in the fact that China was not on those occasions seriously in earnest, but beyond that it might be said with truth that the officials who were designated to carry on negotiations had not been clothed with the necessary authority for the purpose.

It has from the first been the wish of Japan to avoid results which history teaches her are liable to be the outcome of negotiations with Chinese officials who are not clothed with full powers in the sense in which that term is usually understood. Consequently the Imperial Government made it a condition precedent to any peace negotiations, that the Chinese Plenipotentiaries should be furnished with full powers to conclude peace, and it was only upon receiving positive assurance from the Chinese Government that that condition precedent had been complied with and that the Chinese Plenipotentiaries were on their way to Japan, that His Majesty the Emperor of Japan conferred upon my colleague and myself full powers to conclude and sign Preliminaries of Peace with the Plenipotentiaries of China.

That Your Excellencies' powers are, notwithstanding that assurance, fatally defective is to me a sure indication that the Government of China is not yet really solicitous for peace.

Criticism is nearly exhausted by a simple comparison of the two Instruments which were reciprocally exchanged at this board yesterday, but it is not out of place to point out that one fulfils the definition which is usually given among civilized States to the term Full Powers, while the other is destitute of nearly all those qualities which are regarded as essential to such powers; it even fails to indicate the subject upon which Your Excellencies are to negotiate; it does not authorize Your Excellencies to conclude or sign anything; it is silent on the subject of the subsequent Imperial ratification of Your Excellencies' Acts. In short, it would seem that the authority which has been conferred upon Your Excellencies would be completely fulfilled by your reporting to your Government what my colleague and myself might have to say.

In this situation it would be impossible for us to continue negotiations.

It may be urged that usage has not been entirely ignored in this instance. I cannot admit the sufficiency of such an explanation. I disclaim any right to interfere with the purely domestic customs of China, but I deem it not only my right but my duty to insist that in international concerns affecting my own country, the peculiar methods of

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

China shall yield to the superior rules of international intercourse.

The restoration of peace is a matter of the greatest importance. To bring about a re-establishment of amicable relations it is not only necessary that Treaties with that object in view should be signed, but it is imperative that the engagements should be fulfilled in *good* faith.

While Japan has found no reason to approach China on the subject of peace, she nevertheless feels bound in deference to that civilization which she represents, to listen to any *bona fide* overtures which China may advance, but she will decline to take part in the future in any fruitless negotiations or to become a party to a paper peace. The terms which Japan agrees to will be scrupulously observed by her and she will at the same time insist upon a like observance of the terms by China.

Whenever, therefore, China finds herself seriously and sincerely desirous of peace and will confide actual full powers to Chinese officials whose names and positions will serve as an assurance that the terms which they may agree to will be confirmed and carried out in good faith, Japan will be prepared to enter upon new negotiations.

(Translation)

MEMORANDUM.

The Imperial Government repeatedly declared through the United States Representatives at Tokyo and Pekin, that the appointment of Plenipotentiaries with Full Powers to conclude peace was an indispensable pre-requisite to negotiations on the subject of peace.

His Imperial Majesty's Plenipotentiaries, however, find that the authorization which Their Excellencies the Plenipotentiaries of His Majesty the Emperor of China communicated to them on the 1st instant, is wholly inadequate for the purpose for which it is claimed it was issued. It lacks nearly all the essential attributes of Full Powers as usually understood.

The Imperial Government have not receded from the position which they announced to the Representatives of the United States that they had taken on the subject of Full Powers, and the Imperial Japanese Plenipotentiaries, having been entrusted by His Majesty the Emperor of Japan with actual, proper, and complete Full Powers, cannot consent to treat with Plenipotentiaries of His Majesty the Emperor of China who are only authorized to discuss matters, to report to the Tsungli Yamên, and to obtain subsequent commands of the Throne by which they are to be guided.

Under these circumstances, it only remains for Plenipotentiaries of His Majesty the Emperor of the Japan, to declare the present negotiation at an end.

Hiroshima, the 2nd day of the 2nd month of the 28th year *Meiji*.

The Bill for amending the Law Court Organization Law was introduced by Mr. Moriya Konosuke, and opposed by H.E. Mr. Yoshikawa, Minister of State for Justice, on the ground that its provisions encroached unduly on the competence of the Executive.

The House refused to hand the Bill to a Special Committee, and voted against its Second Reading.

Mr. Mori Baku introduced the Bill for preventing the Importation of Diseased Cattle from abroad. He alluded to the terrible ravages that had been caused among Japanese cattle by the plague brought from Korea. The Bill simply provided that, in case of necessity, the Executive should have power to interdict the landing of all beasts coming from infected regions.

The Bill was entrusted to a Special Committee.

The House rose at 4.50 p.m.

WAR NEWS.

SATURDAY, FEBRUARY 2ND.

There can no longer be any doubt that the attack on Weihaiwei commenced on the 30th ultimo. We are in receipt of two official Japanese telegrams relating to the events of that day. In order that our readers may understand them, it is necessary to premise that the bay forming Weihaiwei harbour has its sea-ward forts at three places, namely on the island of Liukung, at the mouth of the bay, at Weihaiwei, on the west (*i.e.* opposite the western entrance), and at Pohchihyaisu, on the east. The Japanese forces marched from the east against the place, and consequently had to assault the Pohchiyaisu forts first. The Chinese forces appear to have formed their line of outposts on the hills to the eastward and southward of Pohchihyaisu, their chief strength being massed on an eminence to the south-east of that place, so as to cover the inland road from Yungcheng, and at Kushanheu, so as to cover the coast road. We are not now speaking from certain knowledge, but merely from deductions based on the meagre details furnished by the telegraphic account.

We explained in a previous issue that the Kumamoto Brigade had been directed to march from Yungcheng by the coast road, and the Second Division by the inland road. At 2 a.m. on the 30th ultimo the Kumamoto Brigade moved to the attack, and by 9.30 it had driven back the enemy's line of defence and reached Kushanheu, being thus in a position to proceed to the assault of the Pohchihyaisu fort. Meanwhile, the fleet had been bombarding the latter from daylight. The Kumamoto men appear to have pushed on rapidly from Kushanheu, and stormed the Pohchihyaisu fort, for at 12.30 p.m. it was in their possession, and they signalled the fact to the fleet and the main body of the army. The enemy's ships, now lying inside the island of Liukung, kept up a vigorous commonade against the Japanese forces and vessels, in which they were aided by all the remaining forts. As for the Second Division, advancing by the inland road, it came into action at 6 a.m. against the enemy's positions on the hills to the south-west of Pohchihyaisu, and gradually forcing its way northward, gained possession, at nightfall, of the high lands immediately on the east and south of Fangliutsi, where it bivouacked for the night, the Kumamoto Brigade encamping at Pohchihyaisu.

The above facts represent the whole of the intelligence emanating from Japanese official sources. They are embodied in two telegrams sent by Colonel Harada to Major-General Terauchi, from Lungshui Bay. Shanghai telegrams, however, affirm that the whole of the forts were taken by the Japanese on the 31st, at 4 p.m., after a fierce fight, except the fort on the island of Liukung, and as it was then the object of a combined attack from the sea and the shore, its capture was momentarily expected. The same telegram says that the vessels of the Peiyang Squadron did not attempt to manœuvre as a fleet, but confined themselves to firing a few shots in aid of the batteries on shore.

We should add that, according to the Japanese telegrams, the Japanese ships, after the capture of the fort on the east of the bay, devoted themselves to blockading the two exits, so as to imprison the Chinese ships within.

The correspondent of the *Nichi Nichi Shimbun* sends to that journal the following account of the capture of Kaiping on January 10th :—

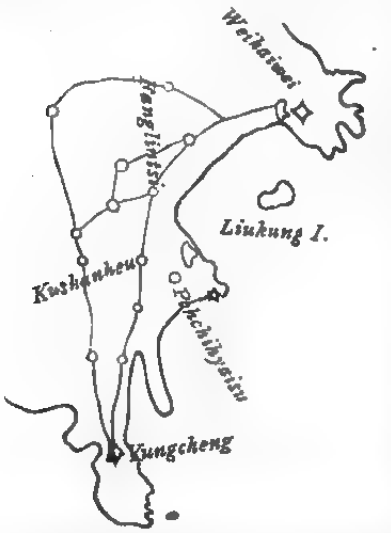
"At 5.30 a.m. on the 10th of January, the Mixed Brigade of the Second Army under the command of Major-General Nogi, advanced to the attack of Kaiping. The enemy, variously estimated at from 4,000 to 5,000 strong, under the leadership of General Chang Chantai and Su Pangtao, had taken up a position on the northern and southern banks of the Kaiping river, and our troops moved against them in three columns, a right wing, a centre, and a left wing. The Chinese opened fire first on the infantry forming our centre, the 3rd Battalion of the 1st Regiment, using rifles and artillery, our troops replying vigorously, under the direction of Major Iwamura, who was in command of the Battalion. The right wing, under Colonel Oki, came next into action. The Colonel, perceiving that some 2,000 of the enemy, infantry and cavalry, had occupied a strong position on Fenghwan Hill, thirteen or fourteen hundred mètres to the east of Kaiping, made up his mind at once that the place must be taken, and gave orders in that sense to Major Takenaka, who commanded the 1st Battalion. It was then 7.50 a.m. The engagement had become general, and the air was full of the din of cannon and small-arms, but our troops retained their intrepid bearing unchanged. Pushing on over the bodies of their comrades falling on all sides, the men of the 1st Battalion stormed Fenghwan Hill, and took possession of it. Seeing the key of their position in our hands, the enemy's right wing began to waver. Thereupon Colonel Oki ordered Major Kagawa, at the head of the 2nd Battalion, to cross the Kaiping river, at the same time placing himself at the head of two companies of the reserves, and charging the enemy's left wing, which retreated in a westerly direction. Just then the 1st Battalion, descending from Fenghwan Hill, which it had stormed, assumed a position close to the enemy's line of retreat, and opened such a hot fire that in a very brief interval more than a hundred Chinese corpses lay upon the snow. Colonel Oki's companies, following up their advantage, pushed on and finally reached the southern gate of Kaiping, where they cut right into the flying Chinese, and broke them in two, one body running westward, the other northward, outside the town. Ensign Ogawa, carrying the colours of the First Regiment, rushed through a hail of bullets, and though wounded in his left foot and seeing two of the colours' guard fall by his side, mounted the south-eastern corner of the walls, and planted the flag of the Rising Sun there. It was then 8.50 a.m. An accident that might have had very serious results occurred at this stage. Colonel Oki and his men had charged so rapidly on the heels of the flying Chinese, and had become so entangled with them at the gate, that the Japanese artillery, mistaking them for the enemy, opened fire on them. Happily the blunder was discovered before any casualties resulted. About this time, a strong force of the enemy advanced against the front of our left wing by the Yingkow high road, and forced our men back. But Major-General Nogi rode forward with his staff and encouraged the troops to resume the offensive, which they did with a rush that carried them to the bank of the river. It was covered with ice, the surface of which being full of inequalities—produced by the Chinese who from ancient times have adopted that method of utilizing rivers in winter as military obstacles—the men's progress was slow and painful, numbers of them stumbling and falling time after time. During this interval the Chinese, who placed great faith in the river, kept up a hot fire on their assailants. But our men were not to be checked. They charged on, carrying everything before them, and sweeping the enemy from their path, entered Kaiping, amid loud shouts of *Banzai*. The struggle had lasted a little over three hours, namely, from 6 a.m. until 9.40."

It seems beyond question that a considerable army is gradually being massed to oppose any advance of the Japanese along the coast road from Kaiping towards China. Major-General Nogi telegraphs from that town, *vid* Chinchow, under date of the 30th ultimo, that there are at least 20,000 men assembled in the neighbourhood of Yingkow. Nogi's scouts bring intelligence that the Chinese have pushed to Laoyemiao, and are gradually moving southward of that place. The people of the locality say that General Su Pangtao has arrived at Yingkow.

Laoyemiao, spoken of in the above telegram, is a hamlet 10 miles east of Yingkow. The movement of the Chinese forces in that direction seems designed to cut the communication between Nogi in Kaiping and Katsura in Haicheng.

On the other hand, the telegram says that up the 23rd ultimo no signs of the enemy's presence were observable to the east or west of Haicheng, as far as Yentai, Changhutai, and Pochipao, and that all was quiet at Fenghwan. We do not understand why a telegram sent from Chinchow on the 31st ultimo should give no later news of Haicheng and Fenghwan than the 24th, while speaking of the state of affairs at Kaiping on the 30th. There seems to be some error of dates.

Another telegram from the Head-quarters of the First Division (Chinchow), dated 10.30 a.m. on the 1st instant, says :—"According to a report from the Chief of the Staff in Kaiping, a trustworthy Chinaman states that the enemy have 8 field-guns at Kouchiayingfang, 2 at Changpingtien, and 18 at Pomiaotai." Inter-



Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

preted into simple language, that means that the Chinese forces massed on the north and east of Yingkow have 28 field-guns. The same telegram goes on to say:—"About 10,000 Shantung troops under the command of Sung, arrived at Yingkow on the 30th of December."

MONDAY, FEBRUARY 4TH.

The state of affairs at Weihaiwei ought to be fully known by this time, but owing to uncertainty resulting from a mixture of Japanese official intelligence and Shanghai telegrams, the public is probably perplexed. At this moment of writing (Sunday night) we have no news of later date than January 31st. Perhaps the simplest method of laying the facts before our readers will be to follow briefly the movements of the troops during the 30th and 31st, and to explain the dispositions for defence at Weihaiwei.

Here is a sketch that will help the explanation:—

It will be observed that two roads lead from Yungcheng to Weihaiwei, and that the chief defences of the harbour lie on the east and west. The island of Liukung and a smaller island on its east are also strongly fortified, but for the moment we confine ourselves to the defences on the mainland. To guard the approaches to the rear of the forts on the eastern side of the harbour, that is to say, the forts at Pohchihyaisu, the Chinese had posted strong forces at Kushanheu and Fanglintsi, and against these positions the Japanese troops moved on the morning of the 30th ultimo, the Kumamoto Division (Sixth) marching by the coast road, with Kushanheu for objective, and the Sendai Division (Second) marching by the inland road toward Fanglintsi. The common purpose of both Divisions was to sweep the enemy from the rear of Pohchihyaisu, and to attack the coast-defence forts there. We know nothing as to the strength of the Chinese massed at Fanglintsi and Kushanheu. We only know that they occupied elevated ground with excellent facilities for defence. Simultaneously with the attack by the Japanese troops on these two positions, the fleet bombarded the forts at Pohchihyaisu. These forts were four in number. Numbering them from east to west, their armaments were as follow:—No. 1 fort, one 24-cent. and three 15 cent. guns; No. 2 fort, four 24-cent. guns; No. 3 fort, two 28-cent. guns; No. 4 fort, two 13 cent. guns. We have no details as to how the engagement progressed, but it is certain that by 3 p.m. on the 30th these four forts, as well as the positions at Kushanheu and Fanglintsi were in Japanese possession. Apparently their guns were left uninjured by the Chinese, for a force of marines, landing from the Japanese ships, turned the guns on the vessels of the Peiyang Squadron, and on the island fortifications. With regard to the latter, the islands are Liukung, shown on the above sketch and Zhih, a little island between Liukung and the Pohchihyaisu headland. On the island of Zhih [illegible] mounting two 12-cent. quick-firing guns and two 26 centimeters, and on Liukung are three forts mounting, altogether, four 24-cent. guns and three 26-centimetres. As soon as the forts at Pohchihyaisu fell into Japanese possession, and their guns were trained on the ships lying behind Liukung Island, the vessels withdrew as far as possible out of range, placing themselves, doubtless, under the guns of the forts on the west side, where they would be comparatively safe from the Pohchihyaisu forts. It does not appear that the Peiyang Squadron attempted to manœuvre as a fleet. It confined itself to assisting in the defence of the forts. On the 31st a violent snow storm occurred, rendering operations at sea impossible, and doubtless the troops also were unable to continue the attack.

The above represents the sum of our knowledge up to midnight on the 3rd. Rumours, however, are numerous. One statement, not unlikely to be true, inasmuch as it accords with the previously arranged plan of attack, is that a force of blue-jackets and marines landed from the ships during the 1st instant on Liukung Island and stormed the forts there, after which the fort on Zhih Island also was taken. It then became possible to remove the obstructions at the eastern entrance to the harbour, so that the Japanese ships and torpedo-boats could steam in. Another statement, which we fear is true, says that Major-General Oera, of the Kumamoto Division, is very severely wounded. From Shanghai we have no intelligence as to the fate of the Peiyang Squadron or the remaining forts, but a story is circulated that two Japanese torpedo-boats have been sunk, and that one of the Japanese cruisers is badly injured. The *Nichi Nichi Shimbun* publishes a telegram from Hiroshima giving the purport of a statement made by the officers of a ship that arrived there on the night of the 2nd. They said that after the capture of the eastern forts the reduction of the rest would be an easy business. For the moment we have only to await the receipt of further official intelligence from Admiral Ito or Marshal Oyama.

The telegraph in Korea seems to be still interrupted, for all Japanese news from Weihaiwei is coming via Chemulpho.

It is stated that certain foreign merchants—Messrs. McClure, Schnell, and Hachmann—have proceeded to Chili commissioned to buy men-of-war for the Chinese Government. The six-per-cent. loan of 3 millions sterling, just put out on the London market by the Hongkong and Shanghai Bank for China (at 93¾) is supposed to be for the purchase of vessels.

In the *Nippon* we find a telegram to the effect that the Viceroy Li, determined to defend Weihaiwei at all cost, has despatched thither 15,000 troops, drilled in Western style, under the command of a German officer, and that they were to arrive there in the beginning of this month.

From Kaiping and Haicheng comes news that the Chinese troops in and about Newchwang were said to have received, from Shanhaikwan and Chinchow, reinforcements aggregating 25 regiments—some ten or twelve thousand—and that a general attack on the Japanese positions was to be made about the 4th instant.

The official report of the attack made upon Tangchow for the purpose of diverting the attention of the Chinese forces from the place where the expeditionary force was to land for the attack on Weihaiwei, is as follows:—"Commander Sameshima, under date of January 20th, reports:—Our squadron, together with the *Yoshino*, *Akitsushima*, and *Naniwa* of the First Flying Squadron, left Talien Bay on the 18th instant, as instructed. The wind was blowing fresh from the N.W., and snow began to fall, increasing in thickness from noon and obstructing our view so greatly that by 1 p.m. the ships could scarcely discover one another. At 1.30 p.m. the weather cleared slightly, and the signal was given to anchor off Changshan island, the snow being too thick to permit us to make out our objective point at Tangchow. By 2.40 p.m. it had entirely cleared up, and the order was given to steam for Tangchow without anchoring. At 3.20 p.m. we passed that place, going from East to West, and observed several barracks outside the eastern gate and 2 guns mounted in a fort on the promontory. Our ships being sighted, two red flags with white discs were hoisted at the barracks, and subsequently a red flag was run up at the promontory. Men and horses were seen busily moving on the east outside the eastern gate, and reports of small arms were heard. At 3.45 p.m. we turned east, and the signal to open fire was given. We fired at the fort for about 20 minutes, first using blank cartridge, and then shell. During that time the fort did not reply, but a battery of field-guns, about 8 in number, fired at us from the shore outside the eastern gate. Among them there seemed to be a piece of 12-centimetres, for its shells alone came near us, all the rest falling short. We replied, and our shells took effect. A fire was seen to have been started in the town. At 4.40 p.m. we steamed toward Shechi island and anchored there for the night, signs of snow being observed to windward. In the morning, Tangchow and its neighbourhood being obscured by snow, we remained at anchor until 10 a.m., when the weather having cleared slightly, we steamed toward Tangchow, arriving off the place at 1 p.m. We observed a much greater display of warlike preparations than on the preceding day. At 1.15 p.m. the signal to open fire was run up. We again bombarded the fort, first with blank ammunition and then with shell. A foreigner came out in a Chinese boat flying a white flag over American colours, and, approaching the squadron, watched the bombardment. The enemy replied from the batteries both on the promontory and at the eastern gate. The shells from the promontory fell close to us. There were now about 20 guns in the battery before the eastern gate. We steamed to and fro, firing until 3 p.m., when the signal "cease firing" was run up, and we steered for Shantung promontory, joining the main squadron there at 6 a.m. on the 20th.

TUESDAY, FEBRUARY 5TH.

We remain (1 a.m., 5th) without definite news as to the fate of the forts and ships of Weihaiwei, but it is now known that from the 31st ultimo until the afternoon of February 2nd the snow-storm was so violent that all military and naval operations had to be suspended. Admiral Ito's report, received in Hiroshima at 3 p.m. on the 4th instant, says:—"The three forts on the east of the Bay were taken on the forenoon of the 30th ultimo. Thereupon a force was landed from the Navy, and it being found that the guns and all the equipment of the captured forts were complete, the fortifications on Zhih island and the enemy's ships were bombarded from them. The enemy's forts and vessels replied, killing 3 of our men. We tried a few of the torpedoes laid in the harbour. They all failed to explode. We thus cut the connections of all the others, but our ships were still kept outside the port. A high wind was blowing, and from noon heavy snow began to fall. The cold was intense. The guns were covered with ice, their mouths frozen solid. This weather lasted throughout the 31st ultimo, and on the 1st instant the cold was still more intense, the shore also being completely obscured so that naval movements were impossible. The First Flying Squadron was, therefore, left to guard the Harbour, the other ships returning to Yungcheng Bay. The sea was still so high that it was impossible to communicate with the land. The ships were kept in readiness to move so soon as the weather should permit. British, French, German, and Italian ships were observing our movements."

To supplement the above we have only rumours. It appears trustworthy, however, that the weather cleared at noon on the 2nd and that operations were then resumed. It is stated that one of the transports leaving Yungcheng for Port Arthur, passed close to Weihaiwei on the morning of the 3rd, and saw the Japanese Squadron off the place near the eastern forts. She further observed that all the land forts

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

were firing at the Chinese fleet, and that the latter was returning the fire. If that statement may be taken literally, it would follow that by the morning of the 3rd instant, the Japanese had obtained complete possession of the land forts. We understand that from Shanghai news in that sense has been received: namely, that the western forts were captured on the 2nd instant. Another report from the same place says that the Peiyang Squadron attempted to retake the eastern forts but failed. It would appear, therefore, that the Chinese ships are behaving well, but we can not place any great reliance on accounts coming *vid* Shanghai.

Intelligence from Chefoo is to the effect that General Li of Shantung has collected a force of 18,000 foot, 3,000 horse, and 16 guns, and has set out from Fushan to relieve Weihaiwei. It is further alleged that the Viceroy Li's troops, under General Chiu, have crossed the Yellow River at Wuling, and are marching for Chefoo *vid* Tingchow to join the Shantung army, while a body of 6,000 men under General Chang, *en route* for Tientsin from Nanking, were stopped and ordered to proceed to Weihaiwei. Apart from unforeseen contingencies, it was expected that these three armies would join forces in the vicinity of Weihaiwei on the 9th instant. How far this news is credible we do not pretend to say, but our readers will remember a previous telegram attributing to the Viceroy Li the intention of defending Weihaiwei at all hazards.

Another budget of intelligence from Chefoo is to the effect that the *Cheng-yuen* showed herself none the worse for her accident, and that she fired 115 rounds from her big guns on the 1st instant without the slightest leakage ensuing. We should be more ready to believe that assertion were we told what the big ship fired at, for inasmuch as Admiral Ito's report shows that throughout the 1st everything at Weihaiwei was completely obscured by the snow-storm, it would appear that the iron-clad must have been discharging her ordnance at random. It is added, however, that when the proper moment arrived, the *Cheng-yuen* would be able to go out with her consorts and fight in the open.

According to Chinese reports, the loss on their side, both ashore and afloat, in the encounters up to the 3rd instant had been 69 wounded, the foreigners and officers of the Army and Navy being untouched. It would seem that either the veracity or the courage of the Chinese must be very defective.

The latest news is that the *North China Daily News* issued, on February 4th, an express saying:—"Chefoo, 3rd February 7 p.m. All the forts on the main land have been lost and the guns destroyed. The Japanese fleet bombarded Liukung Island to-day, and it is believed that the gale at the time wrecked some torpedo-boats."

Official news from Japanese sources must soon be forthcoming. Pending its receipt, we place credence in nothing.

The *Yomiuri Shimbun* quotes a rumour, said to prevail generally, that, at the attack on the eastern forts of Weihaiwei, Major-General Otera met the fate of General Wolfe.

The *Jiji Shimpo* says that, apart from the eastern forts captured on the 30th ultimo, there are 55 guns mounted at Weihaiwei, varying in size from 12-centimetres to 28-centimetres, the majority being 24-centimetres.

According to the same journal, the original estimate of the military authorities was that the operations against Weihaiwei would occupy 10 days from the beginning of the fight, but things having moved more quickly than was expected, the complete capture will be effected at an earlier date.

A telegram from the Staff of the Third Division (at Haicheng), dated the 2nd instant, and published by the *Nichi Nichi*, says that, according to intelligence obtained from Chinese sources, there are 4,000 or 5,000 fugitive troops from Port Arthur in Newchwang, over 300 of them having recently arrived there. The telegram adds that Liu Kun-yi, at the head of 50,000 men of Hunan and Hupeh is *en route* for Newchwang; that 20,000 of his braves had already passed Shanhaikwan, and that 30 steel guns had arrived at Newchwang.

Wednesday, February 6th.

Official news of the capture of the remaining forts at Weihaiwei was received in Tokyo yesterday evening. It appears that the snow storm lasted from the afternoon or evening of the 30th ultimo until the night of the 2nd, rendering all operations on sea and on shore impossible. At 2 a.m. on the 2nd instant two Battalions of the Second Division moved against the forts on the west of the Bay and found them deserted, their defenders having fled during the 31st ultimo and the 1st inst. The fortifications on the land side and on the shore were therefore occupied by the Japanese without opposition. To the Fourth and Seventh Regiments the duty of guarding these forts was assigned, those on the east being garrisoned by a smaller force. Marshal Oyama's telegram, despatched at 10 a.m. on the 2nd, adds that about 8 large ships of the enemy's were between Liukung Island and Weihaiwei, the remainder of his vessels being scattered throughout the harbour, and that the Chinese, before effecting their escape, had burned all the cargo boats near the shore. A second telegram from Colonel Harada, despatched apparently on the evening of the 2nd, confirms the above, and supplements it by saying that the Japanese Squadrons, manœuvering on the east and north of Liukung Island, engaged the Chinese Squadron until night-fall, and that the fight was then in progress.

It appears from the above that the defence of the land forts at Weihaiwei was an even greater fiasco than that at Port Arthur. The casualties among the troops on the first day were only 2 officers, 20 non-commissioned officers, and 128 rank and file, wounded. The number of killed is not given, but it is added that four of the wounded died afterwards. Seeing that the westward forts offered no resistance to capture, we shall be justified in concluding that the loss of life on the Japanese side was very small.

But what has become of the Chinese fleet? On the evening of the 2nd it was still fighting. Neither the Field Marshal nor Colonel Harada says anything of bombarding the ships from the shore batteries. In the case of the eastern forts that may probably be attributed to the distance. From the forts to Liukung Island the distance is eight thousand to ten thousand metres, and the ships were doubtless able to keep at very long range.

A telegram despatched from the head-quarters of the First Division at 11.40 p.m. on the 1st instant, says that the Chinese have 11 regiments in Newchwang, 70 at Shanhaikwan, 30 in Chinchow, 30 at Shwangtaitsz, 5 at Wanghaitien, 10 at Tienchwangtai, 12 between Shiitsz, Shwangtsing, and Paochiasatsz, and over 10,000 men at Yingkow. It was expected that the enemy would move to the attack about the 10th instant.

Thursday, February 7th.

Intelligence is now anxiously awaited of the naval operations on the 3rd instant in Weihaiwei Bay. We know that after the occupation of the forts on the mainland on the forenoon of the 2nd, the Japanese fleet set itself to capture or destroy the island fortifications and the Peiyang Squadron, which, after all the rumours circulated as to its goings and comings, seems to have been lying quietly in the Bay for many weeks. The Bay of Weihaiwei is a large place. The crescent forming it measures 18 miles of coast, and the diameter from east to west is something like 6 miles. Hence there is plenty of room for the Peiyang Squadron to lie there without being fatally exposed to the fire of the forts on shore. It is possible that the Chinese destroyed or disabled the guns in the four forts on the west of the Bay, as well as those in the two forts lying at the centre of the crescent. They had plenty of time to do so, since they effected their escape in a leisurely manner during the snow-storm of the 31st ultimo and the 1st instant. On that hypothesis the only guns available for bombarding the ships and islands from the mainland would be the 20 guns mounted in the four eastern forts, namely, six 24-centimetres, four 21-centimetres, six 15 centimetres, and four 12 centimetres. The range from these forts to the islands of Liukung and Zhih is from 8,000 to 10,000 metres, a distance at which effective fire is exceedingly difficult with ordinance of such calibres. If the ships of the Peiyang Squadron lay close to the island of Liukung, or, still better under its westerly shore, there would be little chance of damaging them much from the eastern forts. On Liukung Island there are forts mounting six 24 centimetre guns, as well as a masked fort, and on Zhih Island also there is a masked fort. These places are capable of strong defence if resolutely held, but what warrant have we for supposing that the Chinese will show more obstinacy in defending them than they have shown in all previous contests? If the island forts fell into Japanese hands with their guns in serviceable condition, the fate of the Peiyang Squadron would be sealed. Up to evening and instant, however, they had not been captured. It is not likely that any scheme for their immediate attack had been elaborated. Marshal Oyama can not have expected to march into the Western forts unopposed. He doubtless allotted the whole of the 2nd instant for their reduction. The Japanese ships, however, were not idle, but it can not be supposed that they ventured to push right into the Bay without removing the obstructions, and to do that under the fire of the guns on the two islands and in the vessels—some 25 in number, large and small—forming the Peiyang Squadron, would have been a terribly hazardous operation. We are disposed to think that the programme pursued would be to bombard the island forts vigorously, and then land a force from the Navy to take them by storm. Probably that was done on the 3rd. But, after all, being within a few hours of definite news, it seems useless to conjecture. There is this to be said about the island forts that no route of escape is open to their defenders. They are completely surrounded. As for the Peiyang Squadron, it may always attempt to make a run for it. Some of the ships would be pretty sure to escape.

After the occupation of the westerly forts, the Japanese troops, according to the *Nichi Nichi Shimbun*, pushed their outposts westward, as far as Chiumatsan, where some force of Chinese appears to be in position.

Major Sekiya has compiled a most interesting report, showing that the Chinese tactics at Kaiping differed materially from their tactics in any previous fight. Our readers will remember that although the actual fighting at Kaiping lasted only three hours, the Japanese had 46 killed and 263 wounded, which means that nearly one man was put *hors de combat* per minute. We were much perplexed to discover the reason of such a deadly resistance, and could only conclude that the crossing of the Kaiping river in the face of the foe had proved a costly operation. Major Sekiya's report elucidates the matter. In the first place, he says, the Chinese, instead of confining themselves to fighting behind walls, moved out into the open, and assumed an advantageous position on the northern bank of the Kaiping river, which, from 50 to 70 metres wide, was completely frozen over. According to the principles of military science, the true use of an obstacle is to delay troops under fire. Hence a skilled Commander posts his forces so that they can rain a shower of bullets on the position occupied by an obstacle that must be passed by the enemy. The Chinese obeyed that principle. They deployed their forces parallel to the river on either side of the main road, a thousand metres each way, so that their firing line extended over a length of 2,000 metres, and while the Japanese were slowly moving over the frozen river, whose surface had been purposely rendered difficult of passage, the Chinese kept up a hot fire, killing and wounding many of their assailants. The Japanese, on their side moved in three bodies; 2 battalions on the right of the road; 2 with the artillery and engineers on the road itself, and 2 on the left. The enemy showed no flags. For

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

the first time they dispensed with that most foolish fashion. They waited quietly for the Japanese to advance, and instead of wasting their ammunition at long ranges, reserved it until they could pour in an effective fire at four or five hundred metres. The Japanese, under these circumstances, had to deploy over a wide front, and the artillery, dividing into two parks, came into action on either side of the road. Another noteworthy point about the Chinese tactics was that they regulated their fire so as to synchronise it with the rushes of the Japanese. The latter, when advancing in the face of an enemy, move by a succession of rests and rushes, lying down when not pushing forward. Hitherto the Chinese had continued firing all the while, but at Kaiping they ceased firing when their assailants laid down, and commenced again simultaneously with the rushes. Between 7.30 and 1 o'clock the position looked bad for a moment, the enemy's right wing being unexpectedly long and compact, and their left showing a disposition to attempt a flanking movement, while, at the same time, the Japanese centre was found to be too weak. The reserves of the engineers had to be brought up, and the whole advanced, firing vigorously. At 9 30 o'clock, it was ascertained that a large force of the enemy was moving from the direction of Yingkow to re-inforce the garrison of Kaiping. It became necessary, therefore, to hasten the issue before these troops could arrive. The reserves were therefore pushed up, and the centre charged forward, followed by the two wings. The Chinese stood their ground with unusual resolution, allowing the Japanese to get within a hundred metres before they retreated, forming two columns for the purpose, one of which headed for Tashihchiao, the other for Yingkow. Major Sekiya, in conclusion, recapitulates the five points of marked difference in the tactics pursued on that occasion :—(1) that the Chinese fought in the open rather than behind walls; (2) that they used no banners; (3) that they did not waste their ammunition at long ranges; (4) that they fired when the Japanese were rushing, and not when they were resting; and (5), that they covered their retreat with a rear guard. The Chinese cavalry also behaved in an unusual manner. They halted and deployed when they saw the Japanese troopers coming in pursuit, and so soon as the latter were checked by that manœuvre, the Chinese closed in and resumed their march.

Friday, February 8th.

We are still without definite intelligence as to the fate of the island forts and the Peiyang Squadron at Weihaiwei. Yesterday evening the following telegram was received in Tokyo from Hiroshima :—

Lieut. Yamagata, telegraphing under date of the 3rd instant at 6 p.m., says :—"On the 31st ultimo the Third Torpedo Squadron attempted to attack the ships in the Bay, but was prevented by the tempestuous weather. No renewal of operations was possible until the 3rd, on the forenoon of which day the Third Flying Squadron bombarded Zhih island, the eastern forts of Liukung Island, two of the recently captured forts on the mainland joining in the attack. The enemy's forts, conjointly with the *Ting-yuen*, the *Lai yuen* and one or two gunboats obstinately resisted. The fighting was carried on until sundown by which time the fire from the Zhih forts had apparently slackened. The Japanese fleet remained outside the port prepared to meet the enemy's vessels should they come out, but they have not ventured to do so. The prisoners say that Admiral Ting issued orders to the effect that, even though the forts on the mainland were captured, Liukung Island must be held, and the ships must assist in its defence, remaining in port to the last for that purpose. To-night the torpedo fleet will attack and if possible take the forts on Zhih island.

"To-night" in the last sentence of the above telegram means, of course, the night of the 3rd instant. Up to this moment of writing (1 a.m. 8th instant) no official telegram has reached Tokyo announcing the result of the torpedo fleet's attack. But while the House of Representatives was in session, yesterday afternoon, Mr. Secretary Hayashida received a private telegram from Hiroshima saying that the *Ting-yuen* and *Chen-yuen* had been torpedoed and sunk. If such news had reached Hiroshima officially, we fail to understand why it was not at once telegraphed to the War Office and the Naval Department in Tokyo. Nevertheless, the statement appears to be generally credited, for all the Tokyo leading journals, with the very important exceptions of the *Nichi Nichi* and the *Jiji*, published extras giving the news.

In Shanghai it was yesterday reported that the island forts and the fleet were still holding out, and that General Tei, Commander-in-chief at Weihaiwei, and Mr. Schnell with two other foreigners had been killed. But as Weihaiwei is no longer in communication telegraphically with Chefoo we do not attach much credence to accounts transmitted *viâ* the latter place.

The battery on Zhih island is said be masked, that is to say, the guns are mounted on disappearing carriages. Hence the difficulty of bombarding it effectually is immense. Moreover, the water on the east side of the Bay—Zhih Island is situated between Liukung Island and the eastern promontory—is too shallow to permit the passage of large vessels. It will therefore be seen that the assailants have a tough job to get at the Chinese ships, which, for the rest, seem to be fighting with admirable pluck, though little chance of ultimate success.

The news from Manchuria retains its usual monotonous character. The Chinese forces in Yingkow, Newchwang proper and their vicinities, are increasing, and the Japanese remain quietly entrenched in Haicheng and Kaiping. A telegram from Head-quarters to the War Department, dated 7.55 p.m. on the 6th instant, transmits a message, dated 11.10 a.m. on the same day, from the General Staff of the First Division (at Chinchow), to the effect that Major-General Nogi, telegraphing from Kaiping (at 6.30 p.m. on the 5th instant), reports the arrival on the 2nd instant, of 40 new regiments of Chinese troops at Yingkow, under the command of Wu Tach'eng. These reinforcements, added to 18 regiments already there, bring the Yingkow Army to a nominal strength of 29,000 men. Major Uchiyama, of the staff, also reports that on the 3rd instant General Liu arrived at Yingkow with 20 regiments of re-inforcements. If these be additional to the above, Yingkow has now an army of 68 regiments, or nominally 34,000 men. An important engagement ought to take place in that district soon.

We read in the *Jiji Shimpo* that the Chinese have greatly strengthened the fortifications of Chiaochow Bay, and that there are now mounted in the forts there ten 24-cent. guns, nine 21 centimetres, nine 15-centimetres quick-firing, four 12-centimetres, and three 28 centimetres, making 35 in all. The garrison, however, mustered only 4 regiments until lately, but is now probably much larger. A transport has of late been engaged carrying thither munitions of war.

THE CREDENTIALS OF THE CHINESE ENVOYS.

Among the documents laid before the House of Representatives by the Vice-Minister of State for Foreign Affairs on the 6th instant, was a copy of the credentials brought by the Chinese Envoys. The following is a literal translation :—

We hereby appoint you (here follow the names and ranks of the Envoys) to be Our Plenipotentiaries, to meet and negotiate the matter with Plenipotentiaries appointed by Japan. You will, however, telegraph to the *Tsung-li Yamén* for the purpose of obtaining Our commands, by which you will abide. The Members of your mission are placed under your control. You will carry out your mission in a faithful and diligent manner, and will fulfil the trust We have reposed in you. Respect this."

It will be seen that no mention whatever is made of the purpose for which the Envoys were sent, and that they are not invested with power to conclude anything. They are simply to act as media for conveying messages from the Japanese Government to the *Tsung-li Yamén*. Such credentials do not confer even the most shadowy semblance of plenary power.

KOREAN NEWS.

The smallness of Korea's foreign debt is significant, but it does not reflect to her credit. It simply shows that her securities are too poor to allow of her floating a large foreign loan. Indeed, the Customs is the only source available for the purpose. According to inquiries made by some persons into the matter a few months ago, Korea's total foreign debt was 560,000 *taels*, but that amount must have been reduced since then as it was to be paid back in monthly installments. The whole of the above sum was obtained from China, but last fall a new debt amounting to 130,000 *yen* was contracted in Japan. The money was absolutely necessary to the Korean Government for preparations for the New Year, and was furnished by the First National Bank of Japan through the kind services of Count Inouye. The interest is 8 per cent. per annum, the security being the customs duties of Fusan, Ninsen, and Gensan. This magnanimous act on the part of the Bank deserves special commendation when we remember that it can easily procure at home a profit of 10 per cent. on its capital.

The inborn characteristics and time honoured customs of a nation are not easily rooted out, and Korea is not showing herself to be an exception to this rule. Some time ago a certain high personage in the Department of War was dismissed without the Japanese adviser's knowledge. When the latter heard of it, he protested strongly against the step and suggested the recall of the official. It was found, on enquiry, that the cashiered man had brought upon himself the displeasure of Boku Yeiko, the Home Minister, for some reason or other, and that the latter had induced the Minister of War to dismiss him. When the matter reached Count Inouye's ears he is said to have remonstrated strongly with the Home Minister for having taken such an undignified step. The Chief of the Police has been fined to the amount of one month's salary for having exceeded his competence. It appears that the old Police felt some umbrage on account of the preference shown to their new *confrères* and threatened to resign in a body, upon which the Chief ordered the seizure of two or three ring-leaders who were then imprisoned without trial. When Mr. Takehisa, the Police Adviser, remonstrated against the illegality of such an action and asked, at the same time, why the men had not been dismissed, the Chief of the Police is said to have replied that he had only followed an old usage in the country and that it was impossible for him to deprive them of their offices except for some more serious offence.

Four of the ring-leaders of the Tonghak insurgents have been arrested and executed, and the mobs that threatened to become formidable in Chol-la and Chun-Chhon have now been driven into remote districts. Even the spiritless Koreans have been turned into tolerable soldiers by force of discipline. It is said that model Korean soldiers trained under Captain Saiki have been despatched to the south to quell the Tonghaks and have proved good fighters. They obey orders well and are found specially useful for reconnoitring.

A contract has been made between the Nippon Yusen Kaisha and the Korean Treasury with regard to three small steamers owned by the latter. The Japanese Company is to take charge of those vessels for the space of five years, paying to Korea during that period a certain percentage of the profit accruing from the coasting-trade carried on by the ships. The Company made the proposal, it is said, owing to its desire to further maritime enterprise in Korea.

The new Korean Minister to Japan was married on the 19th ult. to the daughter of a certain wealthy couple in Chun-chhon-do. The *Jiji's* correspondent writes to the effect that the new Minister is expected to leave Sôul for his destination about the middle of this month.

Li Isshoku, the would-be assassin of Boku Yeiko, has been in prison in Sôul since last October. The *Nichi Nichi's* correspondent paid a visit to him in his cell and held a con-

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

versation of some length with him. The prisoner appears to have been as lively as ever. It is unlucky for him that he is now in prison for an action which would have secured him wealth and honour were the Ming faction still in power.

Of the many reform measures that the new Korean Government intends to carry into effect, one is specially deserving of notice on account of its peculiarity. It is that long pipes may not be smoked in the streets.

THAT HANDFUL OF FOREIGNERS.

The handful of foreign adventurers, ignorant of military matters and without any experience of discipline, that were to do and had already done such doughty deeds at Weihaiwei, have shared the fate of Humpty Dumpty. According to their historian of the 4th instant, their presence in Weihaiwei made all the difference between a tough resistance and a tame surrender. Led by them the Chinese would no longer show themselves despicable cravens, but would fight as brave men fight. Already the handful had succeeded in inflicting on Japanese arms "the first serious disaster" recorded in the present war, and their journalistic panegyrist shuddered to think what might be the fate of an unfortunate Japanese army condemned to assault a place garrisoned wholly by such desperadoes. It was a great occurrence; a turning point in the war. Picked up on the highways and byways, without any proved military capacity, without any training, without any qualifications whatever for the task of directing the defence of a fortress armed with weapons the like of which they had never even seen, that handful of foreigners were nevertheless able to keep at bay a whole army of brave, highly disciplined, and well-equipped Japanese troops. Was it not a fine, a pulse-quickening episode? Race, Sir, race did it. Racial superiority is bred in the bone. Any out-at-elbow loafer, provided only he has a white skin, becomes a being of divine qualities when placed among Chinese or Japanese. So in Greek mythology a god or goddess sometimes descended from heaven to lend puissant aid to the hosts of a pet warrior. But facts have a horribly inconvenient trick of thrusting themselves into the way of pretty heroics. It turned out that there never had been any disaster to the Japanese arms; that the Chinese had not attempted any resolute defence of the forts; that, in short, they had run away in a snow storm and left the forts to take care of themselves. What then became of the handful of foreigners? They could not, like the wayward Grecian divinities, take their flight heavenward, leaving the muddle they had created to mend itself. Nothing remained but to thrust them into an island. On the 4th instant a column and a half of leading type had been needed to extol their achievements in the past and predict their successes in the future as defenders of the extensive fortifications of Weihaiwei. On the 6th, the fortifications were all lost except one little island, and there the handful of foreigners were supposed to have taken refuge. But they were no longer the god-like invincible desperadoes, so great of heart that none could be pusillanimous in their neighbourhood. They had now become "foreign mercenaries, fighting with a rope round their neck, who ought to be relied on to do all that desperate men may do, to resist to the last." Poor Humpty never fell farther. "Foreign mercenaries," "fighting with a rope round their neck," might at least be trusted "to do all that desperate men may do." In 48 hours this cruel *culbute* was achieved. Where will they turn up next we wonder, this handful of foreigners. They were supposed to be at Port Arthur. They were supposed to be at Weihaiwei. They are now supposed to be in Liukung Island with ropes round their necks. Unfortunate nomads, where will they end their chequered career?

ARRIVAL OF THE CHINESE EMBASSY.

(From our own Correspondent.)

Hiroshima, January 31st.

The day was fine, warm, and bright, the glory of the morning sun seeming emblematic of the repeated triumphs won by the Japanese arms. The waters of Ujina Harbour were as smooth as glass, and the shores were crowded with people many of whom had travelled miles to satisfy their curiosity. Old and young, rustics and city-folk, all the types and specimens of Japanese were to be seen. A considerable force of troops completed the scene. The men wore thick overcoats specially made for the present expedition, and being heavily laden with accoutrements, they seemed to find the weather much too hot when they reached the shores of Ujina Harbour.

A little after eight o'clock, a cry of "Miyeta" was raised by a man with a spy glass, and everybody stood on tip-toe. Soon a black-looking steamer slowly moved in, but as she neared the shore she proved to be the *Kumamoto Maru*, to the intense disappointment of the crowd. About 9.30 another vessel was sighted, and as she slowly steamed in, it became clear that she was the *Owari Maru*, with the Chinese Embassy on board. The moment she dropped anchor, the police steam-launch was at her side to receive the Embassy and its suite. At 10.5 they landed, and were taken to the Kikkawa House, where they rested a few minutes preparatory to proceeding to Hiroshima. About fifty *jinrikishas* were needed to carry the party.

H.E. Chang is about 60 years of age. He is a portly type of humanity, rivalling in corpulency the historical monk of the 16th Century. Mr. Shao also is of imposing dimensions. Both of them were very simply dressed. They seemed to be in high spirits, and it was hoped that their happy air and healthy visages portended a successful termination of their mission. As they drove along the faces of the suite were an interesting study. A band of soldiers along the beach and a row of stores newly built for munitions of war, evidently attracted their eager attention. Some of them appeared unable to suppress feelings of fear and amazement, while not a few looked alternately to either side of the road, their eyes expressing mingled curiosity and embarrassment. Sightseers lined either side of the route through almost the whole distance from Ujina to Hiroshima. But they were very quiet. In Kobe the crowd had shouted at the Envoys and their suite, so much so that Mr. Foster's sympathy was moved, and he requested that when the Embassy embarked for Hiroshima, they should be taken in covered carriages. Thus they had gone to the ship unexposed to the scrutinizing gaze of curious observers. But at Ujina and Hiroshima they had no cause for complaint on that score.

A few minutes' drive in *jinrikisha* brought them to the Shun-wayeu Hotel in Hiroshima, from whence Mr. Shao proceeded to another house prepared for him, while Mr. Foster took possession of Mr. Asano's residence. After lunch, Mr. Shao and nine others left the Shunwayen at about 2 o'clock for their hotel, the Senshinto. On their way thither, they were again the objects of a large crowd's curious scrutiny, but the people behaved decorously and quietly as the Chinese magnates passed through.

When the Envoys arrived at Ujina, there was nobody officially appointed to meet them, except a few military officers sent from Head-Quarters. The Governor was not to be seen, nor were any other persons of prominence either civils or military. Mr. Sonoda, Superintendent of the Metropolitan Police Bureau, and the Chief of Police in the Prefecture were there, but their presence was for the sake of preserving order, not to welcome the Embassy.

While on board the *Owari Maru*, both Mr. Chang and Mr. Shao were seen mostly in the saloon, occasionally with Mr. Foster. But they showed no sign of conferring about the work of their mission. Their subjects of conversation were every-day topics, not at all of a business nature. Mr. Wū was seen reading an English book most of the voyage. Mr. Foster and Mr. Liao spent much of their time together. The latter gentleman had formed a close friendship with the Ex-Secretary of State while in Washington. What passed between them on board is said to have been nothing more than light chat about reminiscences of some years ago.

When the ship left Kobe, the Embassy expressed a wish to fly the Chinese flag, but Mr. Secretary Inouye objected on the ground that special permission had not been obtained from Head-quarters, and in its absence he could not comply with the Envoy's wish. Again, just before reaching Ujina, the Embassy desired to wear the regulation head-gear of their official standing and were informed that they could use their own discretion in this matter. But they did not wear the caps after all.

The first batch of Chinese that drove into Hiroshima consisted of 25, and Mr. Foster was with them. Mr. Chang and 14 others are in the Shunwa-yen hotel, while Mr. Shao is in the other house above mentioned. The rest of the suite are still on board as I write. They are supposed to be looking after the elaborate personal effects and belongings of the Envoys. Among them soldiers in civilian dress are to be seen. They are said to be mostly large, strong men.

The conference will be held in the second story of the *Kencho* where workmen are now busy, furnishing and so forth. The Japanese Plenipotentiaries have not yet been officially appointed, but it is said that the conference will open to-morrow. Viscount Mutsu has been observed very frequently visiting the office of the Foreign Department now opened in the *Kencho*. Count Ito, after a conversation with Viscount Mutsu, was seen going to the Castle on horseback about 3 o'clock.

Interviewers are not allowed access either to the Embassy or to Mr. Foster. Police officers keep very strict watch over the houses where the Chinese are stopping. All through the city the Police are unusually on the alert.

The following is a list of the Chinese Peace Embassy and suite with their official ranks and capacities:—

H.E. Chang Yin-tuan, Minister Plenipotentiary and Envoy Extraordinary.
Shao Yu-lien, Minister Plenipotentiary and Envoy Extraordinary.
Wū Ting-fang (Barrister-at-Law), 1st Secretary (Expectant Taotai).
Ku Cho-hsin, 2nd Secretary (Secretary, Judiciary Department).
Jui Liang, 2nd Secretary (Secretary to Tsung-li Yamên).
Liang Ching, 3rd Secretary (Expectant Taotai).
Kwang Shan-ih, 3rd Secretary.
Ching Fak, Translator (Expectant Governor).
Lo Kan-lei, Translator (Expectant Governor).
Lu Yow-ming, Translator (Expectant Governor).
Chien Sho-tai, Attaché (Secretary, Judiciary Office).
Chang Tao-hwao, Attaché (Expectant Vice-Governor).
Chang Yu-ping, Attaché (Expectant Governor).
Shang Nu-tsai, Translator (Ex-Governor Shantowshen).
Chao Shih-lien, Translator (Expectant Chief Salt Commissioner).
Ching Yin-chang, Translator (Expectant Educational Official).
Hsü Chan, Business Manager (Candidate for Office of Puli).
Hsü Pho-ming, Business Manager (Expectant Provincial Secretary).
Chang Hua-fang, Student.
I Ching-ki, Student.
Wang Yu-yen, Student.
Li Wang-to, Officially Appointed Merchant (Candidate for Office of Guaiyi).
Shih Hung-shing, Officially Appointed Merchant (5th rank of Ting-tai).
Shih Shang-chee, Officially Appointed Merchant (5th rank of Ting-tai).
Liu Sui-lin, Officially Appointed Merchant (6th rank of Ting-tai).

LETTER FROM YUNGCHENG.

(From our own Correspondent.)

Yung-cheng Town, January 24th.

The staff still remaining on board the *Yokohama Maru* on the 24th, I could spend only a few hours on shore. I landed about 9 a.m. in in company with one of the official interpreters. The shore presented a busy scene. Coolies, horses, provisions, fuel, cooking utensils, camping material, and other necessary articles were being carried thither from the transports in the harbour by hundreds of boats, each rowed by three men. Everywhere on shore one could see mountains of stores and other warlike material. That day I had an opportunity of witnessing the excellent fruits of the drill to which I saw the coolies of the Land Transport Corps subjected at Hiroshima. Company after company of cart-drawers set out for Yung-cheng, each under command of a private soldier. They obeyed orders as strictly as regular troops. Hundreds of carts moved away smoothly and without the slightest confusion. As we approached the village of Siao-pia-chwang, we saw Chinese coming and going as though they were completely indifferent to what was in progress around them. The village contained scarcely a hundred houses of the regular Chinese type, mud and stone huts. We entered a few, and found them disgustingly dirty. The pine grove to which I referred in my preceding letter, proved to be the burial ground of the villagers. Agriculture seems to be the principal occupation of the latter, all the available ground at the back of the village being under crops. In many cases we found wheat growing, though the young plants seemed to be suffering considerably from the cold. The soil is a kind of sandy loam, and though evidently not very productive, is richer than that in the Kinchow peninsula. The mountains are all rugged, bare, and rocky; so are the low grounds generally, but there are more trees here than in Kinchow, the commonest varieties being pines, willows, and a kind of *kiri* (Paullownia).

After inspecting the village, we directed our steps toward the light-house at Chenshan, about two miles to the south-west. Passing through to another and smaller village, we came to a hill at the side of which is a temple dedicated to the warrior Kwan-wu, the most popular deity in China. There is not a village of any consequence without a shrine to him. One would suppose the people to be a nation of fighters. Leaving the shrine behind and rounding a ridge, we came in sight of the light-house. It is an occulting light, showing red to the south and the north-west, and is 220 feet high above sea level. All the appliances are of the most advanced type. Three foreigners were found in charge— two British and one German. They are now Japanese employés receiving salaries from the Japanese army, under the superintendence of Lieutenant Hirabara of the Imperial Navy, who kindly supplied me with the facts relating to its occupation. He landed on the 20th instant at the head of a party of 12 marines from the *Amaki* and *Banjo*. The Chinese soldiers having all fled, the Japanese met with no resistance at the light-house, and found the foreigners willing to serve under the Japanese Army. The marines are now staying there, principally for the purpose of signalling. There is also a small Japanese telegraph party with them. At a little past noon we returned to the ship. The weather, which was calm and genial when we left in the morning, had become quite tempestuous, a strong gale blowing from the west. The boatmen had great difficulty in rowing.

Early on the morning of the 25th, the Field-Marshal and the staff, together with the foreign military *attachés* and other passengers on board the *Yokohama Maru*, landed and proceeded to Yung-cheng. I tried to get a horse, but failing to do so, had to make the journey on foot. The road is on the whole tolerably good. It lies along the sea-shore over undulating ground. In my preceding letter I stated that the route seemed to pass between two mountains. That I have found to be a mistake. The weather was calm and warm. Throughout the whole distance I did not care to wear gloves. Provision carts, soldiers, pack horses driven by commissariat troops, and other necessary accessories of an expeditionary army, made one long line between the shore and Yung-cheng. After travelling about six miles with, on the one (left) side, the bay of Yung-cheng, and, on the other, rocky mountains, I came to a flat and sandy expanse whence a fine view of one side of the walls of Yung-cheng could be obtained. From the road the sea to the north (right hand) is generally screened from view by a succession of sand-hills thrown up by the waves, but the spot of which I speak formed the narrow neck of the Liu-shi promontory, on which we had landed. About a mile further on, nearly at the extremity of the sandy ground, we reached Yung-cheng, and entered through the eastern gate. The gate is crowned by a small tower, and the walls are about 30 ft. high and 25 ft. thick at the base. In several places, as I afterwards found, they are crumbling down, from the effect of climate and neglect. The streets are narrow and dirty. Their normal condition was rendered worse at the time of our visit by melting snow. The Chinese inhabitants were in their houses, scarcely a dwelling having been deserted by its inmates, who were smoking at their doors, placidly regarding the bustling throng of Japanese coming and going. With some difficulty we discovered the newly appointed Head-quarters of the Army. It was small shabby house, such as an ordinary farmer would disdain to inhabit in Japan, a sorry abode for the Field-Marshal, who was doomed to occupy it until a more commodious and less unsightly building, the Prefectural Office, should be vacated by the Head-quarters of the Second Division. I had hitherto seen nothing of the Japanese correspondents, but proceeded to visit them at their newly appointed quarters near the Western gate, arriving that at about three in the afternoon. I found that eleven correspondents had just arrived. They were beginning to arrange the house and cook their food. The building was small with only three rooms, each about 15 ft. by 12. The central, being a sort of kitchen, was not fit for either sitting or sleeping purposes, the room to the left as one entered, was half occupied by tubs of beans. So all the correspondents had to sleep huddled together over a thick layer of straw in one apartment. It will be not uninteresting to introduce your readers to the life that Japanese journalists lead with the army. The party of correspondents whose story I proceed to transcribe consisted of 12 persons, representing various leading papers in Tokyo and Osaka, such as the *Jiji Shimpo*, the *Mainichi Shimbun*, the *Yomiuri Shimbun*, the *Asahi Shimbun*, and so forth. Among them were two artists, Mr. Yamamoto Hosui and Mr. Kuroda Kiyoteru, the latter a son of Viscount Kuroda Kiyotsuna. Among the correspondents, I may mention Mr. Amano of the *Asahi*, Mr. Hayashi of the *Mainichi*, and Mr. Harada of the *Yorozu Choho*. These men had been with the Second Army for about three months, from the time of its landing at Kwwyuenkow, in October last. They were like members of the same family. Mr. Amano of the *Asahi* was the spokesman of the party; Mr. Horii, its accountant; and Mr. Yamamoto, the artist, had charge of the commissariat and culinary affairs. When I visited them in their quarters, they were busily engaged putting the house in order. In one of the rooms I noticed an old Chinese woman weeping. The poor dame had been frightened nearly out of her wits by the appearance of so many Japanese. She and her son, a sickly looking youth, removed their few articles of furniture to the next house, an apartment of which they were going to occupy during the employment of their own home for Japanese purposes. These matters had of course been arranged by the officers charged with the billetting of the troops. Presently, Mr. Kuroda, the young noble, came in followed by a Chinese carrying half a dozen cabbages, extremely palatable vegetables. The commissariat officials at Head-quarters had sent two fowls. Some were for attacking the fowls at once, but the more prudent insisted on preserving them for dinner the following day, and the latter opinion prevailing, Mr. Yamamoto at once proceeded to prepare the evening meal by boiling canned beef with plenty of Chinese cabbages. In the hurry and confusion of the day the coolies attached to the party were not at hand, so some of the correspondents had to go and procure boiled rice from the cooking department at Head-quarters. After blundering into half-a-dozen wrong places, these purveyors at last found out the so-called cooking department. It was located in an open space in the vicinity of the northern gate. Several large ovens, formed of thin iron plates were set up, and over them were placed hug iron pots, 3 ft. in diameter, in each of which rice was boiling. The ovens had gratings, about 3 inches from the bottom, with large rectangular apertures for throwing in fuel. The smoke issued from three apertures in the sides near the top. To the great disappointment of the envoys, they were told that their rice would not be ready for two hours. The official in charge of the cooking explained that, there being a great scarcity of wells and water, it was with much difficulty that the rice had been washed and cleaned. So the correspondents had to go away empty-handed and to restrain their appetite, inordinately sharpened by the delicious smells emitted from the canned meat and cabages boiling over the fire. They then received orders to wait on Captain Yoda, the staff officer charged with the control of correspondents. So they had again to go out without food. Captain Yoda furnished them with the following information:— The disposition of the Chinese forces on the day of the landing of the Japanese army—the 20th—was as follows:—200 to 300 (from Weihaiwei) with 4 guns, at the place of landing; and five regiments each composed of about 350 men, in and around Yung-cheng. These five regiments had been despatched from Wutai, several miles west of Chefoo. Two of them were posted outside the Southern gate; two at Yentau, and one at Litao, south of the city. Captain Yoda's account of the landing and of the entry into Yung-cheng was substantially the same as that given in my previous letter. The only encounter worthy of note that has thus far taken place was on 25th instant at Yakochwang between a Japanese scouting party and a body of the enemy about 1,500 strong. Shots were exchanged for a considerable time. At last Japanese reinforcements arriving, the Chinese retired in the direction of Chiaoteutsi, from whence they had originally advanced. The enemy's casualities were not known; on the Japanese side, there had been one killed and a few wounded. From Yung-cheng there are two roads to Weihaiwei, one along the sea-shore, the other, parallel to it but a little inland. The above encounter took place on the inland road. The advance guard on the latter route reached Tungteushan on the 25th. On the coast road no resistance had thus far been encountered. When the correspondents returned to their den, their quantum of rice had already been brought by commissariat coolies, and they at once attacked it in grim earnest. It was now a little before nine, and the air of relish with which the half-famished correspondents consumed the badly boiled rice and the stew prepared by the artist, was a sight to see. After supper, they all sat down on the straw to pen their correspondence. By way of accompaniment to their literary labours, the booming of guns fired from the forts at Weihaiwei was audible. While still on board the *Yokohama Maru*, I had heard from a naval officer that the ports at Weihaiwei constantly fired at the Japanese torpedo-boats, which not only guarded the entrances, but occasionally advanced far into the port to take observations. This afternoon, I climbed upon the wall, and looking toward the west could indistinctly see the forts of Weihaiwei and the island of Liukung in the distance.

More than ten Chinese soldiers hiding in Yung-cheng were taken prisoners. Among them

Digitized by Google Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

was a military clerk from whom was obtained the information recorded above as to the disposition of Chinese troops on the day of the Japanese landing.

INDIVIDUAL HEROISM.

The *Nichi Nichi's* correspondent now in Fenghwan records several instances of individual heroism among the Japanese troops quartered in that part of Manchuria. One is connected with a small party led by Sergeant Suyenaga with orders to reconnoitre the district lying between Lieushankwan and Pauchihu. The sergeant with 5 troopers under him left the former place, where a detachment of Japanese troops was temporarily quartered, on the 19th of November. The road to be traversed was very narrow and bounded on both sides by precipitous cliffs. When the party had advanced about 4 miles, they espied Chinese watchmen on the summits of the elevations on both sides who made signals to the rear. The troopers rode on, but after they had proceeded another mile they saw smoke rising from a hamlet some distance off, and the next moment the sound of rifle shots echoed through the narrow gorge. The sergeant then told his party to fall back, himself bringing up the rear, upon which the enemy gave chase. The sergeant was in imminent danger, as he stayed some way behind in order to ascertain more precisely the condition of the enemy, thus allowing the latter to gain ground in their pursuit. He spurred his horse on, however, and reached a ford when some 50 Chinese who had lain in ambush suddenly appeared from both sides of the road and fired at him. It was a desperate situation, but as he was preparing to rush through the enemy he saw in the distance one of his troopers, Murakami by name, who, anxious for the sergeant's safety, was riding back toward him. As soon as the Chinese perceived the new-comer they turned their attention to him, their shots wounding his horse and hitting his saddle and shoe. The intrepid soldier was not in the least daunted, but kept up the unequal contest, at the same time calling to the sergeant in a loud voice. The latter cut through the enemy by a desperate effort and returned to Lieushankwan with his gallant friend.

Two troopers, Koishi Jyomei and Sasaki Tsunetaro, of the 5th Battalion of the Hiroshima Division, accomplished a mission even more difficult than the one above mentioned. It had been arranged that, on the morning following the battle of Tsaohokow, Major General Tatsumi was to leave Fenghwan for Saimatsui and to attack the enemy on the 28th of December both from the rear and the front with the help of the detachment at Tsaohokow. Lieut.-General Tomioka, commander of the detachment, entrusted to two troopers the difficult task of conveying the intelligence to Tatsumi's column. As he did not know the whereabouts of the column, the men were ordered to proceed first to Tungyuen-pao, and to obtain information as to the probable locality of the column from the commander of a small detchment quartered there for the defence of the place. The troopers reached that outpost at dusk, stayed there overnight, and prepared to start next morning for the place where Tatsumi's column was supposed to be. Learning that the provisions of the garrison were all gone, they opened their food bags, and swallowing a few morsels dry, as not even a drop of warm water was to be had, set out on their way. The road became worse and worse, till at last they found that the gorge along which they were proceeding contracted into a narrow path terminating in a steep cliff. The two troopers were at a loss how to proceed as they were unacquainted with the topography of the district. Presently, however, they espied at a distance three soldiers, whom they recognised to be Chinese from the colour of their horses, riding along the brow of the elevation. Far from being afraid of the enemy, they were in their hearts grateful for having had the road pointed out to them, and followed the Chinese who [illegible] at their audacity, quickened their pace and were soon lost to sight beyond the summit. When the Japanese troopers ascended the elevation, they saw the three Chinese entering a hamlet some way off in which were 40 or 50 of the enemy. The two messengers then tried a ruse, slowing down their pace in order to make the Chinese think that they were the van of a reconnoitring party. The enemy did not attempt to approach, and the Japanese were therefore enabled to pass them without meeting any opposition. When out of sight of the hamlet the troopers spurred their horses on for several miles when they espied another group of men and horses, but these they found, to their great joy, to be a body of Japanese coolies, who informed them that the column in search of which they had come, was quartered about a mile further on. On reaching the temporary head-quarters they were led before the Major-General, but so terribly cold were they that they were unable to articulate a word. It was not until they had warmed themselves for some hours at a fire that sensation was restored to their lips and jaws, and they were able to communicate to the General the message with which they had been charged.

NECESSARY CORRECTIONS.

We observe that preparations are in progress to saddle the Japanese military authorities with another of those falsehoods the responsibility of originating and circulating which rests, not infrequently, with foreign journals themselves. The *Japan Gazette* of the 6th instant writes:—"Conflicting are the reports from Weihaiwei. The Chinese told a wonderful story of repulsing the Japanese with heavy loss. The Japanese official account avers that no soldiers were killed in battle, though four subsequently died of their wounds.' The Japanese official report does nothing of the kind. Its words are:—*Waga fushosha* (here follow the numbers) *shisha wa kono hoka nari*, which words, being literally translated, run thus:—"Our wounded are (so many). These are independent of the killed." Experience having demonstrated the *Japan Gazette's* remarkable capacity for iterating and re-iterating its own inventions and exaggerations until it probably believes them itself, this gross blunder deserves to be exposed at once before it fairly commences to run the gamut of embroidered repetition. At this moment no return of the killed on the 30th ultimo has reached us. Neither has Marshal Oyama attempted to give any estimate of the Chinese losses. But so far from "averring that no soldiers were killed" on the Japanese side, he carefully guards against any hasty inference that might be drawn from his failure to give the number, by adding the words:—"These (*i.e.* the wounded) are independent of the killed." It seems scarcely possible for a journal to be more reckless and inaccurate than the *Japan Gazette* is.

The very idea of comparing the Chinese and Japanese accounts, as it done in the paragraph quoted above, must be described, under the circumstances, as extraordinary carelessness, to use a gentle term. The Chinese story was that the Japanese, landing at Ninghai, advanced in a body some 12,000 strong, on the morning of January 26th, against the western forts of Weihaiwei, and, after a sharp fight, were driven back leaving 479 dead on the field. Now it is perfectly well known that the Japanese did not land at Ninghai. The rumour of their having done so—a rumour emanating from Chinese sources—has since been publicly admitted to be false. It is perfectly well known that on January 26th the forces landed at Yung-cheng were not within striking distance of Weihaiwei. Finally, it is perfectly well known that the Japanese did not attack Weihaiwei on the west. They attacked it on the east, as was inevitable, in view of their place of landing. Thus the Chinese tale of an attempt on the part of 12,000 Japanese to "surprise the market town of Weihaiwei, which is the western point of the port," on January 26th, is evidently a misconception. There may have been an affair of outposts on the 26th somewhere to the east of the Bay, but it was at most a skirmish, if it occurred at all, and nothing could be more recklessly careless than to compare a Chinese anonymous account of such an incident—an account not attested by any responsible official—with Marshal Oyama's report of the general attack four days later.

TROUBLE IN THE OSAKA BUSINESS COMMUNITY.

The *Nippon's* Osaka correspondent reports a serious trouble that arose at the last general meeting of the Osaka Steamship Company held at Sakaye on the 17th ult. When the proceedings had nearly concluded, one of the shareholders, a certain Mr. Aoki, who entertained a grudge against a manager of the Company, Mr. Tanaka, stood up and declared that though the report on the settled accounts read by Mr. Tanaka was endorsed by the Auditors as correct, he considered it suspicious. The sum of 16,000 *yen* which, according to the report, ought to be in the company's strong-box, had, he was firmly persuaded, been disbursed through the manager for certain purposs, and he proposed therefore that proper research into the matter be instituted. The motion was at once seconded by two or three other shareholders. Every one looked at Mr. Tanaka expecting that he would protest strongly against a motion that reflected so seriously on his honour and credit, but strange to say, he remained perfectly silent. The friends of the manager then took up the affair and asked his accuser whether he was prepared to deposit a sum of 250 *yen* to be confiscated to the Company should his grave allegations against the manager prove unfounded. Mr. Aoki replied that he was ready to deposit double the amount asked for. His self-assurance alarmed other shareholders and the matter began to look more and more serious. At last the auditor, feeling that his honour was somewhat implicated, said that as it was his duty to deal with such questions, he begged the shareholders to leave the affair to him. It was decided that he should report the result of his inquiries the following day. He failed to do so till two days later, when he informed the shareholders that after thorough research he had found that the allegation was not substantiated. Mr. Tanaka's accuser was not satisfied with that method of inquiry, however, and is now trying to persuade other shareholders to demand the opening of an extraordinary session. The Manager and his party are endeavouring to agitate a counter movement so that the enmity of the two sides is waxing more and more bitter. The quarrel is deep-rooted, being in fact a collision between two rival parties, each of which is trying to gain supremacy over the other. The Fujita Firm of Osaka has during the last few years gradually reduced its scope of business, and various measures have been resorted to in order to find positions for its surplus officers in important Osaka companies. It was, for instance, intended to engross the shares of the Osaka Railway Company thus making it a possession of the firm. Influential men stood in the way, however, and the project failed. The majority of the officers of the Osaka Steamship Company were formerly employed in the Fujita Firm and are endeavouring in every conceivable way to extend their influence in the Company. The latter has, in short, been divided into two rival sections, the President's party and that led by the old officers of the Fujita Firm. Each is on the alert to take any advantage that would tell against the other and the alleged dishonest conduct of the manager gave therefore a good opportunity for an open dispute. The Fujita party owns a greater number of shares than the President's party, but as the Company is under the special protection of the Department of Communications, the President's adherents expect that an inspector will be despatched by the Department when an extraordinary meeting is held, and that through him they may be enabled to attain their desires.

THE REVOLUTION IN HAWAII.

(By our Special Correspondent.)

Honolulu, Jan. 22, 1895.

The *China* arrived at Honolulu early on the morning of the date given above, and did not leave till 5 o'clock in the afternoon; so that we had a good opportunity of "seeing the sights." We found a very interesting state of affairs, in view of the fact that the young Republic of Hawaii had just passed through a severe test of its strength, and had proved itself equal to a great emergency. A big conspiracy had been detected, and serious rebellion had been put down after some bloodshed. The unusual excitement had subsided, and comparative quiet prevailed: but martial law was still maintained, so that the passengers on the *China* were not allowed to go ashore without passes from the purser, and friends on shore were not permitted to come on board without passes from the proper authorities of the Republic. The condition of affairs, however, was so peaceful that President Dole was seen walking calmly down town from his home, and business seemed to be going on as usual. But the presence of numerous sentinels about the Government Building, and the sight of several prisoners escorted by the military from the jail to that building attested the fact that there had been some kind of a disturbance. Many of the *China's* passengers improved the opportunity by dropping in at the trial of these prisoners for treason before a Military Commission named by the President. One of the accused was Charles T. Gulick, evidently the "black sheep" of that noble family of Christian workers.

Your correspondent, having a brother resident in Honolulu, was enabled to see, not only the points of general interest, but also many of those connected with the events of the recent rebellion; to hear all about these stirring events; and to procure what is no longer purchasable,—a complete file of the *Pacific Commercial Advertiser*, containing an excellent account of the whole affair. From these sources and odd numbers of other Honolulu papers is derived the following story of "the 1895 rebellion":—

For some time the Hawaiian Government had known that there was a plot to overthrow the Republic and re-establish the monarchy. And yet all attempts to get at the leaders who were inciting the natives to rebellion were futile. On Saturday evening, January 5th, the evidences of an uprising increased, as bands of natives were seen coming into Honolulu from outlying districts. All day Sunday the police were active; and finally the Government became convinced that the rebels were intending to strike a blow soon, and that prompt action on their own account was necessary.

According, soon after dark, on Sunday, Jan. 6th, a party of police under Capt. Parker was sent to search the Bertelmann House, four miles out from Honolulu toward Diamond Head, for concealed arms. This party was afterwards joined by Deputy Marshal Brown, Representative Chas. L. Carter, Collector-General James B. Castle, and others living in the vicinity. This first episode of the uprising is best narrated in the language of the *Hawaiian Gazette*, the semi-weekly edition of the *Pacific Commercial Advertiser*:—

> When they reached the house it had been darkened, and Mr. Bertelmann was found in his sitting-room with a rifle lying by. He was informed that the party had a search-warrant, and told them to proceed with their work. Mr. Carter and Mr. Castle were standing by the steps, where the light from the sitting-room shown full upon them. Mr. Brown and the policemen went to the rear of the house to a canoe-house, where they found a party of natives. Mr. Brown was the first to discover them and jumped forward with the cry of "Here they are!" Firing was at once opened. Charles L. Carter sank to the ground, fatally wounded.
>
> Lieutenant Holi and Policeman Logan were also wounded. The natives in the canoe house fled up the beach, keeping up a running fire. Mr. Bertelmann, James Lane, and Andrew Brown were captured. Lane fired the shots that killed Mr. Carter, and only missed killing Captain Parker by the pistol being knocked from his hand. The house was darkened as soon as possible, and held by Mr. Alfred Carter. Captain Parker pursued the natives through the woods towards Diamond Head.
>
> Charles Carter and Lieutenant Holi were taken into the house, where those holding the premises immediately telephoned for more men and medical assistance from the city. They expected to be attacked by the natives at any time, and probably would have been had the natives known what a small force was in the house.
>
> Immediately the news reached the city an alarm was sent out, and volunteers and members of the Citizens' Guard rushed from the churches and houses to take the places assigned to them. Lieutenant King, with a detachment of regulars, were sent to occupy the Bertelmann House.
>
> Mr. Carter was taken to his Waikiki residence, where he died, in terrible agony, at 5 o'clock Monday morning.

From the men captured Sunday evening it was learned that the rebels were divided into two parties, one commanded by R. W. Wilcox and the other by Sam Nowlein; and that the plan was for the latter's forces to march on Honolulu early Monday morning from Waikiki, while the former's party would attack the city from the rear at the same time.

Early Monday morning the Government issued a proclamation of martial law; and sent out to Diamond Head reinforcements from the regulars, the Sharpshooters, and the Citizens' Guards as well as a tug with a squad of Sharpshooters to fire from the sea. That day there was sharp fighting, and when night fell, the rebels had been forced to the crater on Diamond Head, from which they decamped in the night. Tuesday morning the Government forces took possession of the mountain.

Tuesday evening a report was brought by a spy that Wilcox was planning to occupy Punchbowl, the hill just above the city of Honolulu, and to have Nowlein join him there. Consequently a company of troops was at once sent to get possession of Punchbowl: and a force was also sent up the Manoa Valley to obtain an advanced position. On Wednesday afternoon a lively battle was fought between the Government forces and Wilcox's men, who were finally compelled to retreat and go in hiding.

Meanwhile, the officials in the city had been able, through the testimony of prisoners, to discover the instigators of the rebellion; and even as early as Monday afternoon had begun to arrest prominent royalists. By Thursday, Jan. 10th, 160 men, including prisoners of war, were in confinement at Oahu Prison; and that same evening Minister King was enabled to say of the rebellion: "Its back-bone is broken."

The next night an attempt to start a conflagration in Honolulu was discovered just in time, and the incendiary was put under arrest.

On Monday, January 14, Wilcox, Nowlein, and their lieutenants, Carl Widemann (son of Judge Widemann), were all apprehended by the Government; and the next day important arrests (of Seward, Gulick, and others) were made in Honolulu. But the 16th was the greatest day of all; for, in the morning, ex-Queen Liliuokalani was arrested; and, in the evening, when her residence was searched, rifles, pistols, swords, ammunition, and bombs were dug up in the yard. Thus, on January 17, the second anniversary of the new Republic of Hawaii, the rebellion was completely "squelched," the leading conspirators were all in custody, and the court-martial began its sessions.

The Military Commission, appointed by President Dole to try the conspirators and rebels, consisted of Col. Whiting, President; Lieut.-Col. Fisher, Captains Ziegler, Camara, Pratt, Wilder, and Lieut. Jones, all of the National Guard of Hawaii. Captain Kinney, Aide-de-Camp on General Staff, was made Judge Advocate; and Paul Neumann and Antone Rosa were the attorneys for the defence.

The charge of treason and open rebellion was brought against R. W. Wilcox, Sam Nowlein, Henry Bertelmann, W. C. Lane, James Lane, Carl Widemann, William Greig, and Edgar Marshall. The first three pleaded guilty; the others, not guilty. Lawyer Neumann entered an objection that the Military Commission had not, but the regular courts had, the authority to try the accused; but the objection was overruled, and the trial proceeded.

It is scarcely necessary or profitable to follow out in detail the story of the trial. The testimony against the accused was very strong and could not be broken by cross-examination, however severe. Wilcox, Greig, Marshall, James Lane, and Widemann went on the stand in their own behalf. The two counsel for the defendants, in addressing the Commission, really attempted no defence, but made strong pleas for mercy; while the Judge Advocate insisted that justice must be meted out to all guilty ones, and that leniency was dangerous. According to the Hawaiian Constitution, the punishment for treason is death or imprisonment for a term not less than five years and a fine of five thousand dollars; but Paul Neumann suggested banishment as a proper penalty. The finding of the court had not been made public when the *China* left Honolulu.

On Monday, Jan. 21, the cases of Gulick, Rickard, Walker, and Seward were called, and were on the docket the day that the *China* was in port. The charge against these was also for treason and open rebellion; and the defence was conducted again by Paul Neumann. Damaging testimony was given, especially by John A. Cummins (who implicated the ex-Queen), Sam Nowlein, and others; and no testimony for the defence had been given when the *China* sailed, except that Walker had gone on the stand and made a clean breast of his share in the uprising.

There is no question that almost all the accused will be found guilty of treason; the only doubt is with regard to the punishment. The *Star* and the *Advertiser* are counselling strict justice; the *Bulletin* is advising mercy, especially to the native participants. There are more to be brought to trial:—Captain Davies, of the steamer *Waimanalo* that went out to meet the schooner that brought arms and ammunition to the rebels; several prominent royalists, who knew more or less about the conspiracy; and, last but least, the ex-Queen, in whose behalf it was all concocted. And, what to do with her, is really the most serious question of all. It is pretty certain, that some of the leaders of the rebellion will be put to death; others will be banished; and the rank and file will suffer various degrees of punishment: and it is not at all unlikely that the ex-Queen will be sent into exile. For, just so long as she remains in the country, she will be the inspiration and the centre of many similar insurrections.

The prompt quelling of this insurrection redounds greatly to the credit of the young Republic, which showed in this crisis its own strength. At the time of the rebellion there was not a single man-of-war in the harbour of Honolulu; so that great excitement was produced when the *Esmeralda* suddenly appeared. If there had been at Honolulu a U.S. man-of-war at the time, there would have been occasion, at least, for hinting at another case of interference on the part of our government. But not even the "moral influence" of a gunboat was on the side of the Hawaiian authorities, who, unaided, suppressed the rebellion. It is not at all likely that the new Republic will again be thrown into such a crisis. It has vindicated, and vindicated well, its right to existence. The death-knell of Hawaiian monarchy has been sounded: the only question is, "Will Hawaii continue an independent republic, or be annexed to the United States?"

For the benefit of those who may be interested in more of the details of Hawaiian affairs, I append a few clippings from Honolulu papers. The first is a sketch of the career of one of the leaders:—

> Robt. W. Wilcox has been a conspicuous figure in Hawaii many years. As a mere boy he came to the capital from Maui as a member of the legislature. He was a clever lad and caught the fancy of Kalakaua. At government expense Wilcox was sent to Italy and given a military education. He returned in seven years with a

Digitized by Google UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

bride, a member of a noble family. She soon left him.

There had been political changes during Wilcox's absence. He was unable to get a decent billet from his royal patron. Such men as P. C. Jones, J. B. Atherton, and C. M. Cooke wanted to set the young man up in business. He cared only for a political position.

In 1889, Wilcox led a revolution. He had a couple of hundred men in red shirts. They took possession of the palace early one morning. The declared purpose was to set up a Republic. The foreigners put down the insurrection, killing nine of the rebels. Wilcox was driven from the bungalow with dynamite. He was not punished for this.

Since 1889 Wilcox has dabbled in public affairs only to the extent of serving one term in the Legislature.

In 1893, Wilcox joined the annexation movement. He wanted the San Francisco consulate. Failing to get it he went into this thing."

The next is the story of the surrender of this rebel chief :—

Yesterday evening the word flew round town like wildfire that Robert W. Wilcox, the rebel chief and revolutionist, had been captured.

A *Bulletin* representative was at the station in less time than it takes to tell it, and interviewed C. A. Brown, leader of the squad that brought Wilcox in.

Besides Mr. Brown there were in the party Lincoln L. McCandless, R. L. Warson, Fred Leslie, John F. Scott, and John Onderkirk. The capture was a very tame affair. It was really the voluntary surrender of a sick and heart-broken warrior. Attorney-General W. O. Smith and Minister of the Interior J. A. King were in the Marshal's office with Marshal Hitchcock to receive the rebel chief and one lone follower who stayed with him to the last.

Mr. Brown said: "Wilcox was in a house between the Quarantine Station and Chas. L. Hopkins' fishing station. He was delivered up to us by Hopkins at about 5 o'clock."

Brown and McCandless brought Wilcox over in a carriage. Warson came in another carriage with his native follower whose name is Ioela.

Charles L. Hopkins on being questioned said: "I was sitting at my door at 41 o'clock last night, when Wilcox's companion came trudging along and said, 'There's a man in a canoe down there who wants to see you.'

"I put on my pants and went down to the canoe, and there I found Wilcox. He asked where my house was. I said, 'Right over here.'

"Then I said, 'Come on; let's go to the house and I'll give you something to eat.' We came over and I gave him something to eat.

"Then he wanted to know where he could put up for the night.

"I pointed him to a vacant house probably a few yards from my place, and after their supper they went over.

"This morning I went over again and took them some coffee. Then we had a talk together in regard to what should be done with himself (Wilcox).

"He asked me as a favour to let him remain there for the day on account of his legs, which were all given away.

"I said I would allow him to stay there, but told him if he saw a carriage coming along he might be sure it was coming to take him up. He had agreed before that to surrender to the authorities.

"This afternoon I notified the authorities, because I told him that I would probably be down after him at 3 o'clock.

"I got a hack and went down, and I told Wilcox that the Attorney-General said that I could bring them to the station. He said that was all right.

"The squad of the Citizens' Guard sent over to receive the prisoners was at the pork-packing shop, Iwilei, and met me, when Brown took charge.

"The name of the place where Wilcox was sheltered is Kahakaaulana and is beyond the Quarantine Station."

Mr. Hopkins further stated that Wilcox and his companion had crossed over into Kalihi on Thursday night, and they had gradually worked their way over to Iwilei and the spot where they surrendered.

All the remaining followers of Wilcox were left in Manoa Valley.

The following is some of the important testimony elicited the very day that the *China* lay in Honolulu :—

The Commission began business promptly at 9.15 with the reading of the record by Lieutenant Jones, Messrs. Seward and Gulick consulted anxiously with their attorney. The attendance was large and the interest deeper than on any previous day. It was known that such men as John A. Cummins and Sam Nowlein were to be placed on the witness stand.

The jaws of the prisoners fell when John A. Cummins was called. Cummins looked ill. He has been a big man in Hawaii for years.

I am here as a witness by my own motion. I have not been promised or threatened. I first knew of arms to be brought here on December 3rd, in the evening. Major Seward had returned that day from the States. Two weeks before that Nowlein came to my house and asked for guns. He said, when the time comes I want them. I said no, I want them here for my own protection. Nowlein then said, "The old man" (Seward) has gone for munitions of war.

When Seward returned I said to him, I hear you have been after war material. He said, "Yes." I asked if he had been successful. He said, "Yes," but he had not done the work. He had a scow tug place the material on a vessel and the vessel put to sea. Two or three days after he said, he left San Francisco for this place. I said to him I was very sorry he had gone into the thing. It would make trouble for our house. He said, "All the blame would attach to me." I said, "You live in my house. How can we escape being associated with it by outside parties. I asked him where the money came from. He said he had received a letter from "the Queen," and that Rudolph Spreckels had the money in San Francisco. I understood the letter was a request for assistance to the Major in his mission. I said Spreckels has just returned to San Francisco. He replied that Mr. F. F. Follis would help. He was here with Rudolph.

No one of my family knew of this affair except myself. One Tuesday John Lilii brought me a horse from Koolau. He said Major Seward had sent him and had engaged him to watch at Rabbit Island.

In a conversation with Seward I protested against his doings. I saw him give John Lilii twenty dollars in gold to buy food for use on Rabbit Island. A boat had been sent. Seward asked me to tell the boy to take two horses for two of Nowlein's men. Kauli came and told Seward and myself that they had met the vessel and taken off pistols and concealed them. The Major wanted them carefully hidden.

In a few days the Major told me Nowlein had sent a man for the pistols. The man came back without them.

On Sunday afternoon the Major and Sam Nowlein came into my room. They said the pistols could not be got over. At their request I wrote a letter and gave it to Seward. They sent again for the pistols. Another day Seward excitedly said that the pistols were withheld. I said, "I have nothing to do with that. You are doing something to get us all into trouble. We have been friendly, but I don't like this." He said, "No, only myself will suffer. He declared that his part of the work was finished when the pistols were landed. Others would do the rest. In a couple of days he said the *Waimanalo* had gone to look for the vessel. I explained the signals to a native for Seward. I heard by telephone that nothing had been seen. Kauli took a carriage lamp for signal use. Seward gave it to him and gave directions. In a few days a message came that the vessel had been seen. Kauli came to town and told the Major and myself all that had been done in Koolau.

Even Mr. Neumann looked a trifle embarrassed when Sam Nowlein came in and was sworn.

I took part in the rebellion. Was on the field. The uprising had been planned four or five months by myself, Gulick, Rickard, and Seward. We met at Gulick's residence on King-street. Seward did not always attend. We met two or three times a week. I laid two plans. First plan was to surround the Government building and fifty-seven posts around town. Natives and white men were to command. We used a map.

Another plan was to work from Queen-street, Punchbowl, Beretania, and Mannakea, and seize the station house, telephone office, and electric light station.

"The fifty-seven posts were to stop the Citizens' Reserve from getting to their rendezvous. Early in December the plans were submitted and the second adopted.

"Seward went over for the arms and ammunition. I don't know who furnished the money.

"I sent natives to enlist rebels in town and in Koolau. Nowhere else and on no other island. This was my part of the work by agreement with Gulick and Rickard.

"I told my agents to organize squads of thirty-seven each and wait for orders.

"I sent Townsend and Warren to Rabbit Island. Seward sent a shore boat.

"Rickard, Gulick, Seward and myself agreed to charter the *Waimanalo*.

"We tried to start the revolution on the Thursday night before the Sunday it happened. Half the arms were to be landed at Kakaako and half at the fish-market. I sent word to my men. I was to take charge of the fish-market party. Tom Walker was to take the station house. This fell through because the police broke up a gathering of natives in Kakaako. It was to begin at 2 o'clock that night.

"Rickard went on the boat to take her to sea for twenty-four hours, so our men could be called in. I had the steamer stopped to prevent her capture by the police.

I received the letter for Gulick from Rickard. It was to the effect that shore boats must be used to land arms. I sent boys to get a boat from Liliuokalani's boat house.

Henry Bertelmann remembered the landing of arms off the *Waimanalo*, January 3rd. The evening before the whaleboat went out from place. That time Rickard was there and John Raden, a hackman. The latter came an hour after Rickard. Rickard did some writing. I gave him the paper and ink. Raden brought a package to Rickard and said it was from "Gulick." Rickard wrote an answer to be handed to "Mr. Gulick." Pua brought me a letter from the *Waimanalo*. It was for Charles T. Gulick. Next day I delivered it. Rickard came to my house Thursday night and I told him Nowlein said not to land the arms. Rickard wrote to the Captain to land the arms some way.

Cross-examined—I have made a confession. Kinney told me if I made a clean breast he would try and save my life. I have not spoken to Mr. Gulick.

John Raden, hackman, aged 39, born in Australia, has been here ten years. Chas. T. Gulick sent me to Bertelmann's with a package for W. H. Rickard. Mr. Rickard gave me a letter for Mr. Gulick and I delivered it.

Thomas B. Walker confessed that he filled the shells with giant powder for Sam Nowlien; and that he and his party were to take the Police Station and hold it till Nowlien should arrive with his forces.

The next clippings tell of the assistance of the ex-Queen, and of the discovery of a good-sized arsenal on her premises :—

Liliuokalani Dominis is a prisoner.

She is confined in what has been the auditor-general's office, at the Executive Building.

A corporal's guard stands watch over the former Queen of Hawaii. The woman who has caused all the trouble of the past three years is wholly within the power of the Government.

The arrest was made very quietly at 10 o'clock this morning by Deputy Brown and Captain Parker. This movement was decided upon at the Cabinet meeting Tuesday evening.

An order was sent at 9.30 o'clock this day from the office of Adjutant-General Soper to Marshal Hitchcock. It was to arrest Liliuokalani Dominis "forthwith and deliver her to Lieut. Col. Fisher, commanding the military, at the Executive building, immediately."

Deputy Brown and Capt. Parker reported in a few minutes to a cabinet meeting then in progress to ask if there were any special instructions. None were given. They left at once for Washington-place with two hacks.

There were a number of native guards around the Dominis' house. These did not even challenge the police. The mistress of the house had no visitors inside.

Liliuokalani was lying down in her bed chamber. She came into a larger room to meet the officers.

Capt. Parker spoke to the ex-queen, saying that he had an order for her arrest.

Mrs. Dominis has always been rated a strong woman. It was more than half expected she would resist.

She did not faint, or cry, or start back, or give any evidence of weakness.

The woman who has made Hawaii politically what it is to-day, merely said:

"All right; I will go."

In a very few minutes Liliuokalani had made her toilet. She was dressed entirely in black. She was seated beside Deputy Brown with Captain Parker in front with the driver.

Mrs. Chas. Clark, who has been a lady in waiting all the time, took the second cab, occupying it alone. She had a hand satchel. Mrs. Dominis brought no baggage at all.

Only a very few people knew what was going on. The native guards were thoroughly frightened and in trembling silence looked on, dismayed.

When the party passed Central Union Church and the Hawaiian Hotel a few at either place caught a glimpse of the woman who has worn the

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

purple, but could scarcely believe that Lilinokalani was actually a prisoner charged with conspiracy.

Officers and the prisoner and Mrs. Clark were driven rapidly to the Richards-street entrance. The final stop was made at the mauka steps to the Executive building.

Mrs. Dominis, escorted by Deputy Brown and Captain Parker walked slowly up the iron stairway, along the hall, then up the carpeted koa staircase.

In the hall on the second floor there was a brief pause. Strangely enough, it was directly beneath a magnificent life size oil painting of the prisoner. Members of the Cabinet and others attending the meeting came to the doorways across the hall.

Mrs. Dominis had in one hand a white linen handkerchief. She was not weeping, but did wipe a few tears from her eyes.

There she disappeared in her prison. Everybody about the Executive building breathed a sigh of relief. They felt in the air the beginning of the end.

Lilinokalani must have felt what was coming. On Tuesday night she asked one of her advisors to say to the Government that she would do anything they asked. She was willing to sign any agreement, to relinquish all claims to the crown and crown lands, to give up her personal property if required.

A fragment of the case of one of the plaster of paris shells taken at Washington place, has been found upon the private desk of Lilinokalani. This seems to connect her directly with the dynamite plot.

Lilinokalani Dominis has been caught red-handed with a well equipped arsenal in her possession. Some of the material for destruction of life and property found upon her premises, Washington Place, links her with the plot.

At 9.30 o'clock Wednesday night Senior Captain Robert Parker left the Station house with two native policemen and a waggon. Volunteers for the venture pressed forward but their services were refused.

In a few minutes it became noised around police head-quarters that Parker had gone to Washington Place. It was also stated that a prisoner had disclosed the fact that arms had been hidden there. Parker and his men found over thirty natives at the house.

Identifying the parties they advanced to the garden in the rear of the premises and to a spot indicated by their prisoner. Here they dug down about four feet and unearthed the arsenal.

The munitions were taken to the Station house. Nearly all were in bags. The first bag contained bombs, twenty-one in number. They were spread out on the marshal's table. Sixteen of them were in cement, four in iron, and a very large one in a cocoanut shell. All had one minute fuses. They were evidently to be thrown into crowds of people by hand or slings. Doubtless the iron cased ones were intended for Central Union church.

The guns were then brought in. Some were a little rusty, but their locks worked all right.

Of the rifles there were thirteen Springfields, twenty Winchesters, and one old. All fine weapons.

Eleven large pistols in good order were in the lot. Five fine swords, for the officers, were carefully wrapped in gunny sacks.

Then came the cartridges. This was a revelation. There were thirty-eight belts for rifles and eight for pistols, all full. Several extra belts were empty. Bags and boxes contained about one thousand cartridges fitting the various weapons.

The bombs and guns were carefully examined by members of the Cabinet and officers of the army. General surprise was expressed at the extent of the collection and the evident purpose of the person hoarding the munitions. The bombs were carefully marked and put away. The guns and cartridges were put aside and will be brought into service if needed.

A notable arrest Tuesday evening was that of Chas. T. Gulick, who was at one time under the old régime Minister of the Interior. A month ago plotters were meeting at his house on King-street. It is charged that Gulick assisted in providing the arms. He has claimed to be sick ever since the war broke out.

As a reflex of public opinion in Hawaii, editorials are cited from the three English papers published in Honolulu. The first two are from the *Bulletin* of January 15th:—

In the midst of the excitement attendant upon the putting down of the insurrection our two daily contemporaries have seen fit to publish inflammatory articles, with the evident object of forcing the hands of the Government into taking extreme measures against the alleged conspirators and the leaders of the uprising captured in the field. Some of the articles in question were extremely ferocious in tone and calculated to inflame already sufficiently irritated public mind. It is no sign of either loyalty or friendship to the Government for anybody to dictate to it when it has such serious trouble on its hands as that which has existed for the past week. The administration that has piloted the country safely through many grave emergencies in the past two years, and made the Republic so worthy of respect in that time that more than a thousand volunteers in arms sprang to its defence when attacked, surely ought to be credited with judgment enough for dealing with its prisoners without dictation from newspapers inspired by naturally excited and enraged, but not by any means judicially-minded men taken in the mass. There is no doubt that the Government owes large obligations toward the loyal legions who have stood watch for its protection these two years and sustained it in this very serious crisis. It must see to it that, so far as any persons now in its custody are concerned, there will be no more plotting against its existence. This it can doubtless do without making a slaughter pen for human beings in the jail yard or capitol grounds. The Government has responsibilities both on its own account and on that of the brave and self-sacrificing men who have sustained it in its few days of peril. It will be held responsible by the civilized world for the way that it deals with the humiliated insurgents in its power, and in this as well as other respects its supporters have interests in common with it, otherwise they have stood back of the Government in vain. The Government will, in short, have to act according to the modern practice of civilized nations. It will be well to keep in mind at this juncture the wave of indignation that swept over the United States when the Queen was reported, officially, to have declared her desire, in the event of restoration, to take the most extreme measures against those who had deposed her. There should be confidence now that the Government will be able to take preventive measures against recurring insurrection which will be availing, and satisfy the claims of justice without allowing the element of revenge to influence its action to the damage of the good name of itself and the country. There are in the rebel leadership men who will not turn away from revolutionary folly if they are brayed in a mortar. These must be dealt with, not in vengeance, but in some way that will give the country peace from the machinations of themselves, as well as of their like who might arise, long enough to allow the process of unification of the various elements of the population, fit for a share in the government of the country, to go on to a successful conclusion. The responsibility rests with the Government, and confidence in the Government implies that its hands should be left free. Dictation to the Government in a crisis like the present would not only reveal a spirit of sedition, but it would be sedition in itself almost as flagrant as that of the insurrection now happily suppressed. All danger of any more uprisings of natives, it is certain, has been obliterated by the past eight days' events.

Elsewhere is discussed the matter of the disposal of the rebel leaders. What is to be done with the poor native dupes who followed them in the attempt to overthrow the Government? Here is a great opportunity for the Government to conciliate the native race and add its bulk to the mass of the loyal citizens of the Republic. The *Bulletin* would advocate a general amnesty for all these people. There is no better example can be followed by the Government in this matter than that of the United States after the Union army had crushed the four years' rebellion. Let the spirit in which the natives are treated be that of General Grant, when he gave orders to let the rebels take their horses home—they would need them to plough their fields. Let these poor natives go back in peace to their humble cottages and provide for their wives and children by their labor. "Let us have peace."

The following is from the *Star* of the same date:—

A military court martial consists of a board of thirteen officers. It may have fewer members, but not less than seven. An officer who is made the president sits as judge. The prosecutor is an officer called the judge advocate. According to law, attorneys *may* be in a case. The rules of ordinary legal proceedings are observed to a considerable extent.

The court in this case makes the findings and reaches a verdict. All this is sent to President Dole, the reviewing authority. Quite naturally the Executive will consult his Cabinet. They will in all probability ask the opinion of the Advisory Council, thus making that body the court of last resort.

It seems to the *Star* that by this arrangement the whole matter is in the hands of the people. The bodies in authority will dare to go [illegible] a tangent from the close and readily discernable circle of public opinion. They are the agents, the responsible agents of the rank and file of the good government forces. They have enormous responsibility, but they are fully advised and behind them is a power that will sustain as well as direct them.

While the situation has been clarified during the past twenty-four hours, there remain several pernicious elements. First and foremost is the sympathetic feeling which has so long pervaded, this soft hearted community. It is a small community and personal friendships and family connections too often sway men. These must be cast aside the same as prejudice. Let all extraneous considerations be removed clean cut. The march should be upon the clearly defined path of justice. Everybody knows what justice demands. It requires a course of action that will punish the present offenders and stamp out revolution. The day of namby-pambyism is done. If we permit its recurrence it is at our own peril.

In the trial the defence will fight for time. It will battle desperately for every minute. This explains why: Now nearly everybody wants the rebel leaders taken out and shot to death. In a few days some will be saying they should be hanged. Then imprisonment for life or deportation will be suggested. After that it will be "breaking stone on the reef." Next, "Oh, they have had a severe lesson and will behave better hereafter." And then, in 1897 we will have another revolution.

It was in its first editorial comment on the uprising that the *Star* said, "Don't Delay."

The following are two editorials of different dates from the *Hawaiian Gazette*:—

The all powerful hand of martial law has within its grasp every rebel leader. The rebellion is completely and thoroughly broken and the Government has before it the terrible responsibility of the disposition of the men who have been implicated in poisoning the native minds with the drugs of insurrection. In less than two weeks the true character of Robert Wilcox, Sam Nowlein, and the men who constitute the colony at Oahu Prison has been shown in its true light. They are cowards, root and branch. Had their plans not been interrupted they would have stooped to the lowest, most fiendish crimes known to the civilized world. They were not to stand up and fight like men. The dynamite bombs augured nothing but a slaughter of innocents. Defenceless women and children were to be numbered among the victims. The destruction of property and loss of fighting men in battle is as nothing compared with the barbarous, inhuman methods mapped out for the rebels to pursue.

These are facts which must not be forgotten. What though the plans were not executed? The spirit was there. The rebels are thoroughly cowed, willing to sell the souls of every man in their ranks to save their own skins. Let them cringe! Let them cower! Let them show what miserable wretches they are, and let each receive as never before the full extent of retribution which martial law allows. We have no time for sympathy. Two long years has the Government been lenient toward its enemies.

The welfare of the country demands prompt action against Wilcox, Nowlein, Davies, Rickard, and others against whom the officials have damaging testimony. The men in the field demand it. We do not advocate meeting slaughter with slaughter. We have our reputation abroad to sustain, but the country wants no short imprisonment, on tissue paper screen of punishment to cover a policy of weak leniency. The men in the field have stood by the Government and their loyalty must be reciprocated. The rebel leaders have shown themselves not only enemies of the Republic, but to humanity in general. They have forfeited all rights to life and liberty. The dignity of the Hawaiian Republic must be maintained. There are plenty of courageous men to stand at its back. Let justice, an unflinching, non-wavering justice reign.

The events of Wednesday night prove beyond all question that a different disposition must be made of Lilinokalani than has existed since January 17, 1893. Whatever the plans of the rebel leaders may have been as to the division of spoils had success attended their plot, Lilinokalani was the fountain head, the willing tool with which they worked upon the sympathetic and innocent mind of the ignorant class of natives. She has been a dangerous and disturbing element in all the two years in which she has lived in semi royal retirement. It is no longer possible to wink at the position occupied by Mr. J. O. Dominis. As the *Advertiser* has previously stated, to kill dissension that has resulted in one of the most murderous plots [illegible] The fountain

Digitized by Google UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

head. No query of "What will others say?" should hold the hand of justice.

The people of Hawaii, in justice to themselves have no right to listen to the gadding tongues of gossipy sentimentality in their own or any other country. There are well-founded principles of right and wrong; these alone have we to give attention. The people know, as no foreign nation can know, to what extent lives and property have been threatened.

Lilinokalani has no right to the liberties which she has enjoyed for the past two years. By allowing her to live unguarded in our midst we are jeopardizing the lives and property that the citizen soldiery has fought to preserve. If it is thought best to allow her to remain in the country, we believe she should at least be under the strict surveillance of the police authorities.

The following suggestive editorial is also from the *Hawaiian Gazette*; and will serve to close our account of the Hawaiian Rebellion of 1895:—

By to-day's steamer the Government of the United States will receive the news of the rebellion in Hawaii; the people will learn of bloodshed, of death, of men still in the field standing ready to mingle their blood with that of the slain in order that the Republic may be continued—of a country reaping the deadly reward of the inaction of the present American administration.

What are we fighting for if not to protect the property of United States citizens? The American people have $21,700,689 invested in this country—twice as much as any other two nationalities represented in the Islands, nine-tenths of the whole amount of money invested in plantations or corporations.

And what have we received in return?

Nothing, absolutely nothing. Even the semblance of protection has been removed from the country. And for what? Simply to satisfy the personal jealousies of a few party leaders in the present administration of the United States. This country would never have been called to mourn the death of Charles L. Carter, had the administration done its duty. Every wound, every drop of blood shed in the present rebellion, cries out in condemnation of the recent policy towards these Islands.

'Tis not a question of whether the Republic of Hawaii can stand on its own legs. That has been and is now being fully demonstrated. This Government is not dependent on the United States for its continuance. It is a question of right and wrong; the inalienable right which every American citizen has to expect—a fair amount of protection from his mother country. 'Tis not the expression of a faint-hearted people. Far from it. Americans are to-day facing bullets to uphold the dignity of this country.

What would John L. Stevens, Frank Sewall, and thousands of men in the United States say? They are fair-minded, unbiased, clear-headed Americans; never swayed by petty political jobbery. The facts brought out in the last few days are hard things for the American people to face, but they they are none the less facts. In this instance the mother that stamped the man from the United States as an American has been tried and found wanting. God grant that she may not continue in her wrong doing.

CHINA ITEMS.

The Rev. C. W. Mateer, writing from Tungchow (or Têngchow) to the *North China Daily News*, gives the following account of the Japanese bombardment on the 18th and 19th inst.:—

This afternoon about four o'clock (18th January) the quiet city of Têngchow was startled by the firing of heavy guns. They came, as it proved, from three Japanese men-of-war passing opposite the city through Hope Sound toward the east. Hope Sound separates Miaotao Island from the mainland, and is about four miles wide. The city of Têngchow lies just opposite the east end of this island, the north wall being about half a mile from the shore. Between the city proper and the sea lies the "water city," which has its own separate wall, a small stream flowing between the two. The ordinary garrison of the city is stationed in this "water city," and to the west of it on a high hill there is a small fort with one good sized modern cannon. There are three encampments on the south and west sides of the city, containing in all about 2,500 soldiers. There are no soldiers in the city. When the first few shots were fired I supposed it was the Chinese firing away powder as they are wont to do for practice, but the shots being very heavy I went up to the look-out on top of the house, from which the sea is in full view. I saw a large vessel passing by the city about half way from the mainland to the islands. Presently another came in view from behind the bluff, and finally a third. Both the forward vessels fired continuously on the city as they passed. The hindmost only fired one or two shots. The gun on the little fort on the hill fired several shots as also did some guns in the water city mounted on the wall facing the sea, but their balls fell far short in the water. From my post of observation I could see every flash from the vessels and hear the balls whizzing over my head or striking the wall near by. The Têngchow College, with Mr. Hayes' house and mine, are about 200 yards from the north wall of the city and directly opposite the water city. It saw one shot plough into the earth in a garden about 100 yards from Mr. Hayes' house, and also saw a shell strike the wall and burst with a deafening explosion about 200 yards distant. One shot came through the wall and, glancing, demolished a Chinese house about 120 yards to the east of us. Probably about twenty five shots fell in the city. One shot at least went clear over the city and struck nearly a half mile beyond it. We have already heard of seven or eight houses being struck, two of them being set fire. One shot struck Miss Moon's yard wall, but did no other damage. Miss Moon herself was not at home. A considerable number of persons were wounded, though we have only heard of one being killed, which is rather a remarkable thing considering the number of shells that fell in the city. None of the vessels stopped, but simply fired as they went, and when well past the city turned off and steamed north towards Port Arthur. It is surmised here that the Japanese came through Hope Sound looking for Chinese vessels, which have once or twice secreted themselves there for a short time, and being fired on by the fort on the north hill, opened not only on the fort but also on the city. The Chinese stoutly deny that they fired the first shot, and it is impossible to tell at this writing just how the affray did open. It was a breach of the laws of war for the Japanese to fire in this reckless way and without notice on a defenceless city. They would, of course, have been justified in dismantling the fort, which they could easily have done without touching the city. We have, of course, informed the authorities at Chefoo and hope we may receive a visit from some of them to-morrow. We propose to stand by our homes and only ask that the Japanese be required to treat us according to the laws of civilised warfare.

When the Japanese turned north on Friday evening we supposed we were done with them for the present, but the next day a little after noon they were discovered lying behind the islands and a little later they steamed out as if going east toward the city, and as soon as the foremost got within range she opened fire, the other vessels following in turn. They made a circle, keeping beyond the range of guns on the north hill, and as they turned away from us ceased firing. We hoped they were gone, but they went round the circle and returned firing as before and then steamed off about four o'clock towards Chefoo. As soon as they appeared Mr. Hayes went down to the water city and with the help of a military officer there managed to get a sampan, and taking a white flag and also an American flag, put off to try to board one of the vessels and, if possible, make such statement of the facts as would prevent them firing into the city. He was for a time in the direct range of the gun on the hill and shots fell both before and behind him. He finally got outside of the direct range, and keeping on got quite near one of the vessels, but no signs or hailing from him were heeded and as they did not stop, he of course could not get alongside. I stood on top of the house with an American flag waving in full view of them through the whole first round and part of the second. They seemed to aim most of their shots at the tower over the gate, and as our house lay in about the same range we got a larger number of shots than any spot in the city. One of the first shots fired landed a shell in the earth about 40 feet from our house. A few moments later another fell within five feet of the first. Half a dozen more went whizzing over my head and struck and burst beyond. * * * In all 8 shots struck quite close around our house, and 6 or 7 more within a couple of hundred yards. Most of the shots fell in open gardens. One shot went clean through the North Gate tower but did not seriously damage it. At least 40 shells fell in the city and several struck the wall. The gun on the north hill fired from time to time, and Mr. Hayes reports that one shot came within 3 or 4 rods of the foremost Japanese vessel. The people fled in crowds to our houses supposing that somehow or other we could protect them. The first day's bombardment created a regular stampede from the city and fabulous prices were paid for any kind of conveyance. The second day trebled the panic; men, women, and children were flying in all directions the men carrying bundles of clothing and the women hobbling along on their little feet dragging their children after them. All night the city was astir with preparations for the moving, and on Sabbath morning multitudes started on foot and others with any conveyance that it was possible to get. A blinding snow-storm came on about 9 o'clock, and continued until late in the afternoon. It is feared that many perished in the snow.

A very circumstantial account is given in Chinese official despatches *via* Chefoo of an attack said to have been made on Weihaiwei by the Japanese fleet on January 26th. The largest and fastest of the ships are said to have made a dash for the port at full speed, "accompanied by a swarm of smaller craft." But the Chinese "received this audacious attempt with such a sharp and well sustained fire from their quick-firing and machine guns, assisted by the 37-ton, 30-ton, and 25-ton guns of the fleet and battery, that the enemy was compelled almost immediately to make a circular sweep to the north-east and disappear into the outer darkness. But not before we had smashed three of the enemy's torpedo-boats and over ten (thirteen were counted) of our largest shells struck the larger ships." There is more in the same strain, but truly we can scarcely conceive that any Chinese officers concocted such a clumsy falsehood. How can it be imagined that the Japanese fleet would have attempted during the night to dash into a harbour supposed to be so thickly sowed with torpedoes and other marine obstructions that even the enemy's ships lying within had difficulty in moving. It is the old story. A Japanese reconnaissance is magnified into an attack in force.

Still more circumstantial is the following:—

On the same morning, New Year's Day, at a quarter past 4 o'clock, the land forces of the enemy, computed at 12,000, men were observed by our outposts and videttes stationed to watch the main road leading to Chefoo on the north and Yung-ching on the south. This body of troops had apparently come from Ninghai and were advancing quickly for the port. The idea seemed to be to surprise the market town of Weihai which is the western point of the port. The approaches to the town being almost entirely devoid of natural features of defence, it had consequently always been considered the weakest spot. But since the war commenced, and especially after the fall of Port Arthur the approaches to the town for a distance of three miles had been strengthened by batteries and entrenchments as far as the ingenuity of foreign experts could avail, so that the position is now as strong as, perhaps stronger than, those guarding the southern and eastern approaches on the landward side. Immediately our videttes discovered the enemy the beacons were at once fired to give warning of their approach, while the whole of the outposts at this spot, numbering 800 horse and four guns—the latter commanded by a foreigner—fell back on the wood which constituted the first line of our defence on the western land side. A discharge from field-pieces and carbines was immediately opened on the advance guard of the enemy, 4,000 strong, who replied with their artillery. Commodore Liu, commanding at the town of Weihaiwei, despatched twelve machine and eight quick-firing guns and a body of 600 blue-jackets to the front as soon as the news of the land attack was received, while another division of 4,000 regular troops, under foreign officers, with twelve guns or two batteries of horse artillery also arrived at the wood a quarter of an hour after the naval brigade reached there. Our fire kept the enemy from advancing, and by 10 o'clock they were reported to have retreated to a distance of five miles or so from the wood. Our loss on this occasion was twenty-seven bluejackets and about sixty regulars. The enemy being in the open lost three times as many. Our scouts brought in 479 rifles and bayonets and counted as many of the enemy's dead bodies here and there within a mile and half of our entrenchments. Our position at the wood has now been considerably strengthened by extra machine and quick firing guns and we have pushed our videttes farther northwards and westwards from this point.

Both land and sea attacks were intended as a surprise; the enemy, being apparently under the impression that at the hour of the attack all the officers of the fleet and army would be occupied in going through the ceremony of paying new

year congratulations to the Emperor's tablet at the Imperial temple at Liukungtao, which forms the northern barrier of the port, where is situated the Admiral's *yamén* and other government offices, state rooms, etc. The enemy probably thought that, as in the case of Pingyang, at the autumn equinox, our soldiers would be carousing or sleeping off the effects of their celebration of New Year's eve and that with the surprise and confusion arising from a night attack at that moment, they would be able to obtain a footing inside the port. They were apparently surprised in their turn. Vigilant watch is kept over land and sea, and our outposts are spread out several miles distant from the first defence lines. Our torpedo boats are also sent daily on scouting duty.

One can scarcely persuade oneself to believe that this entire tale is fiction; yet it is certain that no Japanese troops landed at Ninghai and that no attempt was made to capture Weihaiwei from the westward. The Chinese have surpassed themselves in this instance.

The *North China Daily News* publishes a translation of a proclamation to have been issued by Wu Tach'eng to the Japanese soldiers:—

Having perfected over fifty battalions of Hunan troops at Shanhaikwan for the last three months and given my men the rough drills and armed them with magazine rifles, I am now ready to proceed forth on my way to meet the enemy, and it is certain that within two months decisive battles will be fought. But how can you Japanese, exhausted by disease and cold stand up against my fresh troops? You Japanese have young wives and children at home who are weeping and longing for your safe return; you are but the tools of Otori; you have been forced by conscription to make your bodies the receptacles of our bullets. Where you are victorious your Generals get all the praise and honour; if you get defeated they escape while you common soldiers suffer. I am, however, also of a charitable state of mind, and I cannot bear to see you going to destruction before my fresh battalions in this severe cold, through no fault of your own. Hence, I hereby give you Japanese soldiers notice, if you should be defeated and have no place to run away to, wherever you should see my signal-boards bearing the words "Surrender and avoid death," you may at once present yourselves to the officers in charge, who are also delegated to the duty on account of their reputation for charity and justice; you must then throw down your arms and prostrate yourselves before the signal. You will then be received into our encampments and given two meals a day and exactly the same treatment as our own people. You will not be put to hard labour and when peace is restored you will be sent back in steamers to your homes to meet your wives and sons once more. I swear before Heaven, earth, and the gods that I will not go back on these words, for by so doing I will be injuring my own future life. But if you will not harken to my words, let us try conclusions with your best troops. Victory will rest with the best men in three battles. My experience of military matters for the past fifteen years makes me confident in the quality and ability of my troops.

Special proclamation of Wu, Assistant Imperial Commissioner of Defence, an officer of the Premier button, President of the Board of War, Vice-President of the Court of Censors, and Governor of Hunan."

Shanhaikwan, First Moon, 21st year of Kuanghsü.

General Sung telegraphs from the vicinity of Haicheng that the Japanese are suffering terribly from cold, and are either dying from its effects or committing suicide. It is often stated journalistically in this Settlement that a Japanese reverse would change the whole complexion of affairs, and put new heart into the Chinese. But the Japanese are perpetually meeting with terrible reverses according to Chinese accounts. There no lack of reverses. The "braves" of the Middle Kingdom ought to have hearts of magnificent dimensions. It will be remembered wholesale suicides were supposed to be taking place in Korea also during the early part of the war.

It has been shown to be a military idiosyncracy of the Chinese to re-capture towns that have passed out of their own occupation. Thus they re-captured Phyong-yang, long before the Japanese had reached its neighbourhood; then they recaptured Wiju, while their own troops were holding it, and thus they have now according to the Kuteau correspondent of the *North China Daily News*—re-captured Tienchwangtai, which has been in occupation by Sung's troops from first to last. The intelligence circulated and gravely published with reference to this war is supremely comical.

According to the *Pekin and Tientsin Times* the Coast Defences under General von Hanneken are to form part, administratively, of the Customs Service under Sir Robert Hart. It must be extremely difficult for Sir Robert Hart to withhold his active assistance from the efforts that certain foreigners are now making to organize some semblance of military capacity in China. His position is one of immense perplexity and anxiety, deserving of all sympathy.

THE KOREAN EX-PRISONERS.

Mrs. Okumura, says a Tokyo contemporary, is a lady well-known in this city, to which she has returned after sojourning for a considerable period in the Korean capital. She is a great friend of the present Korean Home Minister, Boku Yeiko, and has the following story to narrate about him:—When compelled to come as a political fugitive to Japan, in 1884, in company with the unfortunate Kim Ok-kyün and many others who were suspected of complicity in the *émeute* of that year, Boku left behind him a young wife. The vengeance of the party in power, according to Chinese as well as Korean custom, extended to even the female relatives of those who had fallen under the ban of their displeasure, and Boku's wife was hunted from post to pillar until further concealment became impossible. In the meantime she had given birth to a little girl. One night, in mid-winter, finding no helping hand to assist her, the poor woman resolved upon committing suicide. Wrapping up her baby as warmly as she could, she left the tiny bundle at the door of a peasant, and ran to a river that was close at hand. It was completely frozen over, but the desperate lady broke a hole through the ice and drowned herself, her body being recovered the next day. A document had been left with the child stating whose daughter she was, and on Boku's return to power the peasant brought him the little girl, now ten years old, whom he had reared as kindly as he could. The girl was passionately attached to her foster-father and refused at first to have anything to do with Boku, but she is now reconciled to the change in her fortunes. Boku intends sending his daughter to Japan shortly, where she will be given the advantages of a first-class education. So soon as the Home Minister entered upon the duties and responsibilities of his office, continues Mrs. Okumura, his first act was to liberate the prisoners that had been suspected of connection with the *émeute* of 1884, and incarcerated ever since. They were thirty in number, more than one-half being female-relatives of the former refugees. They were led at once to Boku's residence and the meeting is described as having been most pathetic. Gaunt skeletons, covered with vermin from head to foot, and clad in noisome rags, they looked as if resurrected from some living tomb. Boku had them fed and properly dressed, and is now doing everything in his power to make them forget their fearful sufferings. Among the number were the wife and daughter of the foully assassinated Kim Ok-kyün, who heard for the first time from Boku's lips the sad story of the death of their husband and father. The wife is described as looking like a woman of sixty, though only thirty-two or thirty-three years of age. The daughter, just seventeen, is said to be—as rumour had long ago reported—unusually fine-looking, and one whose spirit even the rigours of a Korean dungeon have failed to break. It is comforting to think that the two sufferers will be well-cared for in future. Mrs. Kim had been subjected to torture several times in order to make her confess the real or supposed misdeeds of her late husband, and she is now a mere cripple from the hideous treatment that she has undergone. Boku is warmly praised for his skill as an equestrian, he having no peer in Korea in the art. He was an excellent rider while in Japan, and excited the admiration even of Japanese military horsemen by his skill. The Home Minister is said to have told Mrs. Okumura, just before her departure, that he intended to devote his life to the work of Korean regeneration, but that he was almost in despair at the magnitude of the task. Everyone hitherto connected with the administration was tainted with the selfishness and rapacity of the Ming (Bin) faction; it was well-nigh impossible to find an honest, disinterested person to assist him in his labours. All looked forward to a continuence of the "spoils system" and seemed to regard the tax-payers as their legitimate prey, while it was most difficult to find any that would believe in his own sincerity and integrity of purpose, everybody, from the Court downwards, simply suspecting him of the desire to line his own pockets in the good, old-fashioned style. For all that he would not let himself lose heart wholly, and would try to make his country and countrymen follow the broad and humanizing lines of reform laid down by Count Inouye, for whom he expressed the warmest esteem and profoundest respect.

INVESTIGATIONS IN CONNECTION WITH THE ESTABLISHMENT OF AN IRON FOUNDRY.

Hitherto, says the vernacular press, opinions were divided as to whether an iron foundry should be established in Japan as a Government or a private concern. After mature deliberation the Government has decided to take the responsibility. Convinced that the matter is of extreme importance on account of the extension of military defences and the development of the country's industries, the Department of Agriculture and Commerce appointed, three years ago, a special Investigation Committee who prosecuted various enquiries into the subject. The result of those enquiries is embodied in the following statements. With regard to the quantity of raw material, the Committee's investigations at Kamaishi, and Sennin-yama of Iwate Prefecture, at Akadani of Niigata Prefecture, and in several districts of Hokkaido, were entirely satisfactory. As it was found that in those four parts alone the supply of raw material was sufficient for an iron foundry, investigations were not extended to other localities. It is already known, however, that in many other places, in Niigata, Shimane, Fukuoka, Okayama, Yamaguchi, and Hokkaido, iron is found abundantly, while the sand ore of Sanin and Sanyo and along the Pacific coast extending between Tokyo and Aomori is almost inexhaustible. Then again, the copper ore found in Kii, Shikoku, and Kyushu is adapted for the manufacture of iron according to experiments made at the Besshi Copper Mine. Japan may certainly be called an iron country, and the remark made by some to the effect that there is not sufficient ore in Japan, is entirely fallacious.

The iron ore of Japan is chiefly red or loadstone, both of which kinds yield iron of the best quality. After extensive analysis of the ore produced in various localities, it was found that the percentage of iron in most specimens is very rich, while that of injurious ingredients, such as phosporus, is very insignificant. Such an excellent ferrous ore is not easily found even in Europe and America.

The iron produced at Kamaishi and Nakakozaka is well adapted for practical requirements. In the Osaka Arsenal Kamaishi iron only has been used for some years in the manufacture of shot. In the casting of coast guns foreign pig iron has lately been superseded by the pig iron of Kamaishi, which is far cheaper though of as good quality. In the Naval Arsenal and the Nippon Casting Company, Kamaishi iron is now mixed with foreign iron in order to make it harder and less brittle. Pure Kamaishi iron is sold at a higher price than this compounded metal. Experiments conducted with the ore of Sennin-yama, Akadani, and that portion of the Kamaishi mine not yet worked, show that the same kind of excellent iron can be obtained

FAILURE OF THE PEACE EMBASSY.

THE hopes of peace that were based on the coming of the Chinese Envoys have proved abortive. On the 1st instant the Envoys met the Japanese Plenipotentiaries in the conference chamber of the Hiroshima Prefectural Offices, and the credentials of each side were submitted. Subsequently, the powers of the Chinese Embassy were examined, when it was found that they were signally defective. In the first place, no mention whatever was made about the object of the mission; in the second, the Envoys were not given power to conclude any arrangement; and in the third, they were distinctly instructed simply to act as conveyers of messages between the Japanese Government and the Tsung-li Yamên. Under these circumstances, it is plain that to open negotiations was out of the question. The Japanese Plenipotentiaries therefore invited the Chinese Envoys to another conference on the following day. At 4.40 p.m. their Excellencies CHANG and SHAO arrived at the Council Chamber, where Count ITO and Viscount MUTSU were already waiting. Some questions were addressed to the Envoys with reference to their credentials, and finally Count ITO informed them that as their powers were quite inadequate, the Japanese Plenipotentiaries must decline to confer with them. His Excellency added, however, that Japan would be willing to receive any plenipotentiaries coming duly accredited.

China's conduct in this matter seems open to one interpretation only; she is not in earnest. Yet even that explanation is insufficient. It is inconceivable that she can have expected to betray Japan into the flagrant blunder of negotiating with Envoys of such a character. She had received ample warning that the question of credentials would be carefully scrutinized. Communications on that very subject had passed between Pekin and Tokyo, their issue being an emphatic assurance from the Chinese Government that its Envoys were invested with due plenipotentiary authority. It follows, therefore, that China took the trouble of sending a peace embassy with full knowledge that it must fail on the threshold; fail, not because of Japan's greed, but because of China's deliberate neglect of essential technicalities. We say nothing of the insulting triviality of her assurances to Japan. That phase of the affair need not be discussed here. The perplexing point is that China should have put herself so palpably in the wrong. Her diplomacy is even worse than her military display. Those that did not believe in the integrity of her peaceful purpose—and we confess that we were among the number—imagined that she was merely playing to the European gallery. Her last resource lay in Western intervention. Could she have successfully posed as anxious for peace herself, while forcing Japan into the position of unjustly prosecuting the war, she would have established a strong claim upon the active sympathy of States already most desirous of seeing the sword sheathed. She might, perhaps, have managed to contrive such a situation. We do not think that she could, for we know well how reasonable is the mood of the statesmen now directing Japan's affairs. Still, the effort was worth making, and it was in pursuit of such an object, as we imagined, that she deputed their Excellencies CHANG and SHAO to come and talk peace at Hiroshima. But how could she hope for the smallest scintilla of success when she entrusted the unhappy Envoys with credentials obviously farcical? To choose men of comparatively insignificant rank was an intelligible part of the play, but to invest them with the functions of mere telegraph clerks was to reduce the whole business to the level of light comedy. We can scarcely imagine that the Chinese Government aspires to be pitied for ignorance of the alphabet of international etiquette. But what is its ambition? We can not tell. The incident must be added to the catalogue of incomprehensible items constituting the history of the present war. Infinitely regrettable, however, is this new obstacle needlessly thrust into the path to peace. Count ITO and Viscount MUTSU acted wisely in assuring China that, despite the unpleasant necessity imposed on them by her conduct in connection with this embassy, Japan would always be ready to receive duly accredited Envoys. But even that assurance will not appreciably lessen the greatly increased reluctance that China must feel to figure again as a suppliant.

A HANDFUL OF FOREIGNERS.

THE old saying that men readily believe what they wish to be true receives constant illustration in the writings of at least one Yokohama journal. Ever since the commencement of this war the *Japan Gazette* has given ready credence to every rumour of Japanese disaster, and has steadily laboured to represent the Japanese military position in a disheartening light. The results of such tactics have sometimes been very curious. Take the case of Port Arthur, for example. Port Arthur, as our readers remember, was attacked on November the 21st, and by the afternoon of November the 22nd the whole place was in Japanese possession. Here, however, are some of the *Japan Gazette's* predictions and comments about that stronghold:—

> We are of opinion that the reduction of the stronghold will be a task of weeks, perhaps even months, rather than of days. Sebastopol did not fall until after a year's seige, and Port Arthur, unless all reports are inaccurate, is much stronger than Sebastopol.—(*Japan Gazette*, Nov. 9th.)
>
> From the way in which Chinese transports have been coming to and from Port Arthur, the besieged ought not to suffer from lack of food, and the fact of foreigners leading them should give them courage. If they do not fight within Port Arthur, they never will. Upon their ability to resist a siege will depend the chance of China pulling herself together.—(*Japan Gazette*, Nov. 19th.)

As predictions, these utterances are amusing. Port Arthur was to stand a seige of "weeks, perhaps even months," yet it fell in 36 hours. Upon its "ability to resist a siege China's chance of pulling herself together" was to "depend," yet its signal inability to do anything of the kind did not in the least deter the *Japan Gazette* from placing credit in China's chances. Curiously as all that reads now, it is far surpassed by our contemporary's fiasco over the Weihaiwei affair. We really must be permitted to quote a little, the episode is so funny:—

> This which at the commencement of the war everyone looked for, that which everyone after the fall of Port Arthur thought to be impossible, has happened. The Chinese have at length made a resolute stand, and the war has entered upon a new phase. The reason is one which should convince the Japanese more than tons of newspaper argument ever could have done. Japan's easy successes led some sanguine men, amongst them no less a personage than Count Okuma, to make all kinds of preposterous statements. One of that gentleman's observations was to the effect that the Japanese troops were the best in the world. There was some ground for the remark. France found considerable difficulty in fighting the Chinese, whereas Japan conquered them with ease, and even Port Arthur, which ought to have been an impregnable stronghold, if held by determined men, fell almost without a struggle. But a change has come over the spirit of the scene. The Japanese attacked Weihaiwei. In that fortress were Chinese of the same calibre as those whom the Japanese encountered at Pingyang and Port Arthur, and the place was on the whole less powerful than the great arsenal on the Liaotung Peninsula. But, and the difference is a vital one, in Weihaiwei is a handful foreigners. They are not trained fighting men. The Japanese newspapers have told us, again and again, that these men are mere adventurers without technical knowledge, or experience of discipline. We do not doubt that statement, it is probably absolutely authentic. Yet the presence of these men has sufficed to inflict upon Japanese arms the first real disaster recorded in the present struggle. What the result would have been had Weihaiwei been garrisoned entirely by Europeans, instead of Chinese headed by a few European desperadoes, can be dimly imagined. But the few resolute men there have proved sufficient to stem the tide of unvarying success, and to give the Japanese the first taste they have had of what genuine fighting means. What is the actual extent of the reverse sustained cannot be ascertained. The Japanese official reports are silent as to the losses, and merely tell us that hostilities on both sides are suspended. . . . What the losses may have been there are no data to show. That they were considerable is demonstrated by the remarkable silence which the authorities observe in connection with them. We are inclined to believe they must have been very heavy, or the Japanese would never have suspended hostilities. . . . . Still there has been a check, and those who expected the Chinese when officered by Europeans, to be as pusillanimous as when left by cowardly commanders to their own devices, are much mistaken.—*Japan Gazette*, February 4th.

Nearly three days before the above appeared in print the whole of the Weihaiwei mainland forts were in Japanese possession. However, inasmuch as the news had come *viâ* Shanghai only, that point need not be much considered. But certain things were known beyond all question. It was known that on the forenoon of the 30th ultimo the Japanese had carried the Chinese entrenched positions as well as all the littoral forts on the east side of Weihaiwai. It was known that a force of blue-jackets and marines had landed from

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

the Japanese fleet and turned the guns of these forts upon the island fortifications. It was known that, from the evening of that day until the night of the 1st instant, a violent snow-storm raged in the Gulf of Pechili, completely obscuring everything, rendering military or naval operations impossible, and even compelling the greater part of the Japanese Squadrons to put into Yungcheng Bay. And it was consequently known that intelligence could not be carried across the sea to Talien until the storm abated. That was all—a simply story enough. Yet out of it the *Japan Gazette* manufactured the pretty tale quoted above; a tale having for its moral the immense value of foreign aid. Between Weihaiwei and Port Arthur there had been "a vital difference." The former possessed "a handful of foreigners." Our readers will observe that the same authority made almost the same statement about Port Arthur:—"The fact of foreigners leading the Chinese should give them courage." But when Port Arthur fell ignominiously the "foreigners" disappeared from the reckoning, only to be placed once more upon the scene, with a louder fanfare, at Weihaiwei. They were not trained military experts but "mere adventurers, without technical knowledge or experience of discipline." "Yet the presence of these men sufficed to inflict upon Japanese arms the first real disaster recorded in the present struggle." "The first real disaster!" "A few resolute foreigners in Weihaiwei had proved sufficient to stem the tide of unvarying successes, and to give the Japanese the first taste they had had of what genuine fighting means." Were such a statement, *mutatis mutandis*, published by a Japanese journal, what denunciations it would justly evoke. Suppose that England and France being at war, a Japanese newspaper were to declare that the presence or absence of a few Japanese "adventurers without technical knowledge or experience of discipline" would constitute a "vital difference" between the capacity or incapacity of a French fortress to resist a British assault. What a shout of derision would be raised against Japanese conceit! If the Fay of ROBERT BURNS chanced to visit Yokohama, he would find some folks sadly in want of his gifts. But he keeps obstinately at a distance, and so the penny trumpet continues to blow brazen blasts about the marvellous prowess of "handfuls of foreigners," unconscious of the supreme ridicule thus brought upon foreign heads. One more quotation:—

> Weihaiwei has offered, and apparently is offering, resistence (*sic*) of a manner totally different to anything the Japanese forces have yet experienced. We need not credit the Chinese accounts to believe that for the first time since July the Japanese have found that fighting China is really a very serious undertaking. That they will eventually reduce Weihaiwei is considered by many people certain. But the mere fact that they have not captured it will seem to the Chinese like victory, and will have the same inspiriting effect, so that its ultimate fall will be shorn of much of the *eclât* that would have been Japan's had it succumbed as readily as did Port Arthur. And in any case the bill is bound to be a heavy one. The silence of the Japanese as to their losses is more significant than any fictions the Chinese can invent. It is the only occasion in the war that an official report of an engagement has not contained some estimate of the numbers slain.—*Japan Gazette*, February 5th.

Before the above was published, official news of the capture of all the remaining Weihaiwei forts on the mainland had reached Tokyo. The fall of the second half of the stronghold had been delayed by a snow-storm, happy for the Chinese, in that it enabled them to run away unobserved. On what evidence did the *Japan Gazette* base its assertion that "Weihaiwei had offered, and was apparently offering resistance of a manner totally different to anything the Japanese forces had yet experienced?" "Chinese accounts" are explicitly excluded. What then was the foundation of an assertion one of the most ridiculously false ever published by a newspaper? The Chinese defended one half of the Weihaiwei forts, and then ran away without attempting to defend the remainder. Where were the handful of "foreign desperadoes?" Where were the "few resolute men," "mere adventurers without technical knowledge or experience of discipline," whose leadership saved the Chinese soldiers from yielding to the pusillanimity that they display "when left by cowardly commanders to their own devices?" Fate was horribly ironical when she decreed this vertigo for the *Japan Gazette*, with the intention of ruthlessly sweeping away in a few hours the whole fabric of that unhappy journal's diseased imagination. It will scarcely be claimed that "the handful of foreigners" contrived the snowstorm during which the Chinese troops ran away and the Japanese soldiers doubtless felt very damp and uncomfortable. But unless they be credited with that measure of meteorological ability, we really fail to discover any evidences of "the first real disaster" that their "presence sufficed to inflict upon Japanese arms." As for the "bill" "bound to be heavy," well, it turns out that only 150 were wounded, and the loss of killed must obviously have been very small. The moral of it all is that newspapers should not too readily believe what they wish to be true.

AN OLD, BUT STILL MISUNDERSTOOD, INCIDENT.

IN a leading article, generally temperate and impartial, the *London and China Express* impugns the accuracy of Japanese official reports, and gives two instances in support of its indictment. The first is that Japanese officials alleged that the *Naniwa Kan* did not at the outset know the *Kowshing* to be a British ship; the second, that "the officer commanding at Söul declared that there was any lady present with Mr. GARDNER'S party, although Mrs. GARDNER had been pushed into the ditch." With regard to the former item of evidence comment seems scarcely necessary. What the officers on the *Naniwa Kan* knew or did not know at first, they alone are competent to say. Certainly, after their visit to the *Kowshing* they did know her to be a British ship. But the GARDNER incident, so far from serving to impugn the truthfulness of Japanese officials, tends rather to show the pertinacity of errors that have once found their way into print. The *London and China Express* plainly believes that a bodily attack was made by Japanese soldiers upon and Mr. and Mrs. GARDNER, and that the lady was pushed into a ditch. The facts of this affair are, we believe, well established, though apparently the public remains unacquainted with them. Walking one day in the outskirts of Söul with a friend, Mr. GARDNER, the British Acting Consul-General, came to a place where sentries were stationed about the camp of the Japanese Army. The two gentlemen were challenged by the sentry on duty, but without paying any attention, they attempted to pass into the camp. Naturally they were not allowed to proceed, but it does not appear that in restraining them any rudeness or unnecessary violence was resorted to. They were shown out of the lines by the officers on duty, who presented their cards to Mr. GARDNER. It is always unpleasant for a gentleman enjoying a leisurely stroll in places to which he thinks he has a right of access, to be suddenly challenged by a sentry and obliged to restrict his wanderings. Mr. GARDNER probably felt that keenly, but there is nothing to show that he was not treated as politely as the circumstances permitted. As for Mrs. GARDNER, several eye-witnesses are unanimous in asserting that she was not one of the party attempting to pass into the Japanese military lines, but that she joined her husband and his friend after they had proceeded some distance on their return to the city. The story of the pushing into the ditch seems to have been a figment of somebody's imagination. It should be added that so soon as Mr. GARDNER preferred a complaint, the officer in command of the Japanese troops and the Japanese Representative in Söul expressed to him their regret that he had been subjected to inconvenience, but he declined, it is said, to be satisfied with their conciliatory efforts and demanded that the Japanese Minister should go in person to the British Consulate, tender an apology, and give an undertaking that the officers and soldiers concerned in the affair should be punished. It is not surprising that such a demand did not meet with compliance, but it is surprising that an affair so simple and so explicable should remain misunderstood to this day.

VINDICATIONS.

THE methods of Mr. JAMES CREELMAN'S vindicators are worthy of their object. One of the falsehoods for which that correspondent was apparently responsible is a statement that "the foreign correspondents, horrified by the spectacle, left the army in a body." The whole gravamen of the falsehood lay in the words "horrified by the spectacle, left the army in a body." Such an assertion indicated, as plainly as language could indicate, that the foreign correspondents were too much shocked by the excesses of the Japanese soldiery to remain with the army, and that they entered an indignant protest by leaving in a body. Nothing of the kind having occurred, the falsehood was exposed and justly denounced. Then Mr. CLEELMAN'S defenders came forward and explained that he had never made such a statement. Somebody in New York, expanding his telegram with more freedom than veracity, had quietly inserted the words "horrified by the spectacle, left the army in a body." This explanation was most explicit. We were told:—'Great stress is laid upon the alleged inaccuracy of that portion of his telegram in which it was made to read that the correspondents "horrified by the spectacle, left the Army in a body." * * * Mr. CREELMAN was too loyal to his paper to state that the words "horrified by the spectacle, left the Army in a body," were inserted in New York, but we consider ourselves at liberty to disclose * * * that the phrase was invented in New York?' Very well. There was an end of the matter. A sub-editor, or telegraph-expander, in New York had invented a lie and put it into the mouth of Mr. JAMES CREELMAN. One might reasonably suppose that the above disclosure of shameless fabrication would have terminated the attempt to vindicate this particular part of the episode. A man in New York had lied. *Voilà tout.* But no. There is a sequel. The explanation quoted above was published editorially on January 31st. Six days later the same journal, referring to the account given by the correspondent of *The Times*, wrote thus:—"Mr. COWEN begins by substantiating the statement that the foreign correspondents left the Army, and that they left it because they desired to escape to a place of freedom where they could safely describe what they had witnessed. * * * We may take it that the disgraceful charge of wilful lying brought against Mr. CREELMAN by the most virulent, because the most corrupt, of his assailants, will be withdrawn." Now the question, is by what form of explanation do Mr. CREELMAN'S vindicators propose to hold. At one moment, they excuse him by saying that he never wrote the falsehood attributed to him; that it was "invented" by a telegraph-expander in New York. The next, they announce that *The Times'* correspondent substantiates this particular statement, and call upon Mr. CREELMAN'S accusers to withdraw their disgraceful charge. Mr. CREELMAN'S accusers may well be pardoned if they find themselves a little bewildered. They can not hesitate to accept the revelation that the falsehood was invented in New York, and on the strength of that explanation they acquit Mr. CREELMAN, as a matter of course. But they are now asked to believe that the "invention" of the New York telegraph-expander is substantiated by *The Times'* correspondent, and that they are consequently bound to confess Mr. CREELMAN'S credibility, though he never had hand, act, or part in the New York "invention" substantiated by Mr. COWEN! Did ever casuists cling so clumsily to a palpable contradiction?

Quite apart from any question of Mr. JAMES CREELMAN, these methods are interesting. There is a thoroughness about them that commands admiration. Mr. CREELMAN must be proved to have been correct even in statements that he never made, and the very "invention" of a New York telegraph-expander must be shown to be corroborated by the correspondent of *The Times*. And then we have Mr. CREELMAN'S fine sense of loyalty. 'That gentleman was too loyal to his paper to state that the words "horrified by the spectacle, left the Army in a body," were inserted in New York.' Such loyalty is beyond praise. The words are a gross falsehood. As they stand they greatly heighten the effect of terrible charges brought against the soldiery of a country. They were admittedly "invented" by a subordinate in a news office. They were published in the columns of a journal recently convicted of probably the most shameless fraud ever perpetrated by a newspaper. Yet, loyalty to that subordinate and to such a newspaper restrained Mr. JAMES CREELMAN from exposing the falsehood for which he was publicly responsible. What matter about the victims of the lie. What matter about the tens of thousands of people deceived by it. Let us have "loyalty" before everything. That is *fin-du-siècle* morality with a vengeance.

SERFS AND SERFDOM IN OLD JAPAN.

OF the many strange customs that prevailed in Old Japan, one of the most interesting was serfdom. It constituted a recognised part of the social mechanism, and authenticated records establish beyond doubt that it remained in wide vogue for a considerable period. Its origin is lost in the shadows of antiquity, but its establishment as a regular system may be said to date from the *Taika* era (645-649 A.D.) when a social and administrative re-organization, almost as extensive as that of the *Meiji* Restoration, was inaugurated, and it received confirmation in the *Taiho* era (701-703 A.D.), when supplementary reforms, necessary for carrying out the *Taika* changes, were accomplished and embodied in the celebrated code known by the name of the era.

The English word "serf" does not appear to correspond strictly with the term used in that sense in Old Japan, for certainly the expression *Sen-min* (despised people), as distinguished from *Ryo-min* (respectable people), bore a wider sense than that conveyed by the English epithet. If the origin of serfdom is obscure, the records allege that the institution existed as early as the reign of the Emperor YURIAKU (457-479 A.D.), to say nothing of one or two cases referred by Japanese annalists to the regency of the Empress-Dowager JINGO (200-269 A.D.). The *Nippon-ki* (Japanese Annals, written by ONO YASUMARO in the year 612 A.D.) records that, during the reign of the Emperor YURIAKU, NE-NO OMI was detected plotting against the Court, and in consequence of that offence his posterity for eighty generations (the equivalent of "for ever") were degraded to the rank of common labourers. Thus, in ancient times, it is evident that the perpetration of grave crimes was sometimes punished by degrading the offenders and their posterity to the ranks of the despised classes. Six causes seem to have operated to produce serfs, or rather "despised people," namely, crime, subjugation, debt, special circumstances of birth, naturalization, and kidnapping.

In the section of the Law relating to Burglars and Brigands in the *Taiho* code, it was provided that persons charged with treason or murderous attempts against the SOVEREIGN, should be sentenced to capital punishment, and that all the other members of their families together with their property, should be confiscated. The example given above of NE-NO OMI may be cited as an instance of the first case, the persons confiscated to the Government becoming, in fact, State property, under the little of "*sen-min*." As for the process of subjugation it was divided into two kinds, foreign and domestic.

Foreign subjugation took place entirely in the case of Koreans. The Korean peninsula was a kind of vassal of Japan in ancient times. In the 53rd year of the reign of the Emperor NINTOKU (365 A.D.), General TAMICHI was despatched to Korea with an army to punish certain acts of insubordination. The country was soon reduced to subjection, and the inhabitants of four refractory villages, being carried back as prisoners, became serfs of the State. Subjugation of a weaker clan by a stronger and consequent reduction of the vanquished to the position of serfs of the victors, must have occurred frequently during the early periods of Japanese his-

tory, when the whole land was not yet brought under the sway of one ruler. That, however, is only an inference based on the sociological annals of other races. What is certain is that strife between hostile clans and reduction of the weaker to serfdom were frequent occurrences even after the country had been brought under the sway of one ruler, though it may be taken for granted that the cruelty of the triumphant clan was greatly mitigated by the control of a generally recognised SOVEREIGN. During the reign of the Emperor KIMMEI (540-571 A.D.), for instance, when the two clans MONONOBE and SOGA were deadly foes, OMURAJI KAWAKATSU, of the former clan, was defeated and killed, and 273 members of his family were condemned to be hereditary serfs of a certain temple, his estate, also, being handed over to the same temple.

Turning now to debt as a factor in the creation of serfs, there is reason to believe that its influence was considerable. But public opinion soon rebelled against it. In the first year of the reign of the Empress JITO (690-696 A.D.), proclamation was made that a creditor exacting serfdom as a condition of failure to discharge a debt could not charge interest on the principal. Definite laws regulating the relations of creditor and debtor were first settled by the *Taiho* Code. In the Miscellaneous Laws section of that remarkable instrument, it was provided that interest payable every sixtieth day should not exceed ⅓th of the principal; that even though a period of 480 days had expired, the interest should not aggregate more than the amount of the principal; and that when a debtor could not discharge his obligation in money, he was liable to become the serf of his creditor. Special circumstances of birth were another cause of serfdom, inasmuch as the issue of a serf remained a serf. It must further be noted that, owing to the strictness of class distinctions in those early periods, a child, either of whose parents was a serf, continued to be included in the list of the despised race.

Naturalization did not necessarily involve serfdom. In the Census Laws Section of the *Taiho* Code it was provided that, if a person holding the position of a serf in a foreign country passed over to Japan and become naturalized there, he should be emancipated and treated as belonging to the respectable class, but that, should an alien be degraded to serfdom after his naturalization in Japan, any relative of his subsequently coming over must be placed in the same category.

The last cause to be considered is seduction and kidnapping. Both seduction and kidnapping were forbidden by law, even in the most ancient times, but the language of the law shows that these outrages were frequent by adding (a) "*Kwan-nushi*," State serfs; and (5) "*Shinushi*," private serfs, or slaves. Among these five classes, the guards of the Imperial tombs were generally descendants of persons who, on account of treason or some such grave offences, had been either degraded or sentenced to capital punishment. Those coming under the second category seem to have belonged originally to the fourth, but to have been raised in the scale on account of old age or disease. Domestic servants whose masters were degraded on account of some serious crimes were also converted into servants of the second class—a curious fact. The servants belonging to the first and second grades did not greatly differ from ordinary subjects. Indeed they were very often rehabilitated—especially those of the second grade. Unlike other serfs, they had establishments of their own. "Domestic servants" were generally the descendants of persons belonging to the same stock as the masters of the houses in which they served. They were, in fact, poor relations, whose parents or ancestors, lacking financial capacity to maintain separate establishments, had been obliged to become dependents. State serfs, for the most part, had originally been domestic servants whose masters, convicted of some grave crimes, had lost their rank and possessions. The meanest and most despised class of all were the "private serfs." These were veritable slaves, sold or bought like cattle. It may be presumed that actual sale was the usual preliminary to this kind of serfdom, for the selling of men or women was legally acknowledged even as late as the reign of the Empress JITO (690-696 A.D.). A notification issued in March of the 5th year of her reign, provided that a farmer sold by his elder brother should be treated as an ordinary subject, but that a child sold by a parent should be regarded as a serf Coming to the reign of the next Emperor, MOMMU (697-707), however, when the *Taiko* Code was compiled and put into operation, such transactions in human beings were strictly limited to private serfs. In the Law for Brigands and Burglars we find a provision that, with respect to the purchase of serfs and cattle, a period of three days must be allowed during which a purchaser might lodge a complaint if he found that a serf or an animal bought by him had been diseased before the sale. The only difference between serfs and cattle in this respect was that, whereas the sale or purchase of a serf must be reported to the competent authorities, no such formality was required in the case of cattle. As to the price of a serf, an old document preserved in the *Seiso-in* gives very interesting information. It contains a list of serfs purchased at some remote period in the province of Mino, specifying their names, their ages, and the names of their masters, and giving some distinguishing features. The unit

to the ranks of serfdom. In the Brigands and Burglars Laws Section of the *Taiho* Code we find the following article:—"Any person kidnapping and selling another into serfdom shall be condemned to exile; namely, to three years penal servitude when the kidnapped person has been sold into domestic serfdom (a higher form of serfdom as we shall presently see)," &c. when seduction instead of kidnapping was employed, the punishment was commuted by one degree. We find, also, that the closer the consanguinity existing between the person sold and the seller, the milder the punishment inflicted. Thus, though a person selling into serfdom his own parent, or cousin, or grandchild on the maternal side, was sentenced to two and a half years penal servitude, the punishment for selling one's own child or grandchild was only one year. In February of the 5th year of the reign of the Empress JITO (694 A.D.), a notification was issued to the effect that a woman sold into serfdom by her husband or her elder brother, should be rehabilitated into her former status, but that a woman sold by her parent should not enjoy that privilege.
